

Picasso Application Access API – documentation

URL : <https://live.picassoemr.com/NIST/EMRLDWebService/ApplicationAccess.asmx>

All of the API's methods are **POST methods** that accept **URL encoded post data** . The API can be used by any client that can make POST requests to the given URL, followed by the name of the method. For example, to get the Authorization Token, you need to do

POST:

<https://live.picassoemr.com/NIST/EMRLDWebService/ApplicationAccess.asmx/GetAuthorizationToken>,

where username and password are URL encoded:

<https://live.picassoemr.com/NIST/EMRLDWebService/ApplicationAccess.asmx/GetAuthorizationToken?username=PicassoUsername&hashedPassword=PicassoMD5HashedPassword>

Also, for clients built on . **NET platform** , usual **Asmx Web Service** is also available, with **WSDL discovery** that contains all of the information about the methods definitions, parameters and return types.

Fields with a * are required.

Available Methods

1. GetAuthorizationToken (string username, string hashedPassword)

-input parameters:

String username* - Picasso username

String hashedPassword* - md5 hash of Picasso password

-output result:

Object AppAccessResponseOfString

```
{
    Boolean HasError
    Boolean ErrorMessage
    String Result
}
```

Success 2xx:

AppAccessResponseOfString

```
{
    HasError=false
    ErrorMessage=""
    Result=AuthToken
}
```

Error 5xx:

AppAccessResponseOfString

```
{
    HasError=true
}
```

```

        ErrorMessage=ServerGeneratedExceptionMessage
        Result=""
    }

```

2. **GetPatientId(string authToken, string firstName, string lastName, string gender, string dateOfBirth, string ssn, string zipCode)**

-input parameters:

String authToken* Generated from GetAuthorizationToken
 String firstName Patient First Name
 String lastName Patient Last Name
 String gender Patient Gender
 String dateOfBirth Patient DOB
 String ssn Patient SSN
 String zipCode Patient Zip Code

-output result:

```

Object AppAccessResponseOfInt32
{
    Boolean HasError
    Boolean ErrorMessage
    Int Result
}

```

Success 2xx:

```

AppAccessResponseOfInt32
{
    HasError=false
    ErrorMessage=""
    Result=Patient ID
}

```

Error 5xx:

```

AppAccessResponseOfInt32
{
    HasError=true
    ErrorMessage=ServerGeneratedExceptionMessage
    Result=""
}

```

Start Date and End Date for **GetPatientData** and **GetPatientCategoriesData** determines whether or not the patients is included (based on the absence/existence of an encounter during that date range).

3. **GetPatientData(string authToken, long patientId, string startDate, string endDate)**

This method will return a patient's USCDI compliant CCD in XML format. See Appendix A for a list of USCDI Data Components.

-input parameters:

String authToken* Generated from GetAuthorizationToken
 Long patientID* Patient ID - generated from GetPatientID
 String startDate Sequence Start Date

String endDate Sequence End Date

-output result:

Object AppAccessResponseOfListOfString

```
{
    Boolean HasError
    Boolean ErrorMessage
    List<string>Result
}
```

Success 2xx:

AppAccessResponseOfListOfString

```
{
    HasError=false
    ErrorMessage=""
    Result=Patient CCDs
}
```

Error 5xx:

AppAccessResponseOfListOfString

```
{
    HasError=true
    ErrorMessage=ServerGeneratedExceptionMessage
    Result=""
}
```

4. GetPatientCategoriesData(string authToken, long patientId, string startDate, string endDate, string categories) [Deprecated]

-input parameters:

String authToken* Generated from GetAuthorizationToken

Long patientID* Patient ID - generated from GetPatientID

String startDate Sequence Start Date

String endDate Sequence End Date

String categories* Comma delimited list of CCD categories (available below)

-output result:

Object AppAccessResponseOfListOfString

```
{
    Boolean HasError
    Boolean ErrorMessage
    List<string>Result
}
```

Success 2xx:

AppAccessResponseOfListOfString

```
{
    HasError=false
    ErrorMessage=""
    Result=Patient CCDs
}
```

Error 5xx:

AppAccessResponseOfListOfString

```
{
```

```
HasError=true
ErrorMessage=ServerGeneratedExceptionMessage
Result=""
}
```

- **List of categories (joined by comma):**

Demographics,
SmokingStatus,
Problems,
Medications,
MedicationAllergies,
LabTests,
LabResults,
VitalSigns,
Procedures,
CareTeamMembers,
Immunizations,
UniqueDeviceIds,
PlanOfTreatment,
Goals,
