Introduction

ezEMRx Certified EHR (ezEMRx 10.01) meets the certification criteria. This Health IT Module is compliant with the ONC Certification Criteria for Health IT and has been certified by an ONC-ACB in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services.

ezEMRx is committed to complying with the updates to the Health IT Certification Program made by the ONC Cures Act Final Rule. As required by the Communications Condition of Certification requirements, ezEMRx does not prohibit or restrict the following communications about certain aspects of their health IT, unless otherwise permitted to do so under 45 C.F.R. § 170.403 –

- The usability, interoperability, or security of the EHR
- ezEMRx' business practices related to exchanging electronic health information

ezEMRx offers access to the application and files that allow users of export files to access export format documentation to process EHI after it has been exported from its certifies EHR. ezEMRx EHR (Electronic Health Record) systems provide means for exporting PHI (Protected Health Information) to allow healthcare providers to share information efficiently while maintaining the privacy and security of patient data.

This documentation guide will provide the user an understanding of the resulting files from the PHI Export. It will explain how to read the files, understand the meaning behind fields and connections, and offer other insight to properly make use of this extensive amount of information. The document assumes the user has a technical understanding HL7 specifications such as C-CDA standards and formatting around CSV type files.

Executive Summary

ezEMRx products are designed to include components of care and billing for nursing programs, home health programs, wellness programs, specialty-based programs, physician driven care, employee health programs, public health programs and mental health programs in ambulatory facilities.

ezEMRx products are designed to comply with ONC standards and certifications, as well as Interoperability guidelines. In addition, ezEMRx has worked toward complying with the required state and federal requirements.

The ezEMRx product portfolio and services include the following:

Products	Services
Certified Health Information Technology – EHR	Revenue Cycle Management
Practice Management	Professional Services
Inventory Management	
Patient Portal	
Health Information Exchange	

ezEMRx comprises of healthcare technologists, who include clinicians, developers, testers, trainers, implementation engineers and support staff.

ezEMRx is committed to establishing, documenting, implementing, maintaining and continuously meet the certification requirements.

Understanding resulting EHI Export Files

The resulting export may contain one patient, or a full collection of patients. The result will be zip file/s. The zip file includes files containing the patient demographics, clinical records, billing records, scanned records, and more.

The files upon extraction from the zip will adhere to the following structure:

PID_INTERNALNUMBERING.EXT and/or
PID_INTERNALNUMBERING_TYPE.EXT

- **PID** refers to the Patient ID. This will be a unique number.
- **INTERNALNUMBERING** refers to an internal control number for the export. This can be ignored.
- **TYPE** refers to further describing the content of the file. These can be ClaimData or Echart or patNotes.
- **EXT** refers to the file extension of the resulting exported data. Extensions are XML (accompanied by a HTML file) and CSV (comma separated values data).

The files are further categorized as follows:

1. Patient Demographics and Clinical Data – HL7 C-CDA formatted
2. Patient Billing and Claims Data – CSV formatted
3. Adhoc Patient Notes such as documented telephone calls – CSV formatted
4. Scanned Records – HL7 CDA formatted

Format of the resulting EHI Export Files

In order to successfully use or import the exported EHI files, the user must understand the formatting of the resulting files.

Patient Demographics and Clinical Data

The resulting files follows the specification as set for HL7 C-CDA R2.1 specifications. These files will always result in a pair following an XML and HTML file extension. It must be noted there will **NOT be a TYPE** value in the filename. The format and specifications can be referenced at:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1380194/>

https://www.hl7.org/implement/standards/product_brief.cfm?product_id=447

Patient Billing and Claims Data

The resulting file is formatted using comma-separated values also known as CSV. This file will follow an CSV file extension. It must be noted there will **be a TYPE** value called **ClaimData** within the filename. The format and descriptors are described in the following table:

Column Number	Column Name	Description
1	PID	Data reflected under this column are patient IDs. These are unique.
2	DOS	Data reflected under this column refer to the date of service being billed.
3	Payor	Data reflected under this column refer to the insurance payor the for the data of service
3	Provider	Data reflected under this column refer to the rendering provider who performed the service.
4	CPT	Data reflected under this column refer to the CPT code billed.
5	ICD	Data reflected under this column refer to the ICD code being associated with the CPT code that is billed.
6	NDC	Data reflected under this column refers to the NDC code for drugs billed that have been administered or rendered.
7	Modifier	Data reflected under this column refers to the modifier code associated with the CPT code billed.
8	Charge	Data reflected under this column refer to the amount billed.
9	Pri Payment	Data reflected under this column refers to payment received from the primary insurance plan/payor.
10	Sec Payment	Data reflected under this column refers to payment received from the secondary insurance plan/payor.
11	TerPayment	Data reflected under this column refers to payment received from the tertiary insurance plan/payor.
12	Oth Payment	Data reflected under this column refers to payment received from other sources.
13	Pat Payment	Data reflected under this column refers to payment received from the patient.
14	Patient Resp	Data reflected under this column refers to patient outstanding balances.
15	Wri-Off/Adj	Data reflected under this column refers to balances that have been adjusted or written off.
16	Balance	Data reflected under this column refers to the patient account balances including pending claims.

Adhoc Patient Notes

Users within ezEMRx do have the ability to document telephone calls, adhoc notes related to the patient via a feature called as Patient Notes. This data is categorized as PHI and is included within EHI. The resulting files are formatted using comma-separated values also known as CSV. This file will follow an CSV file extension. It must be noted there will **be a TYPE** value called **patNotes** within the filename. The format and descriptors are described in the following table:

Column Number	Column Name	Description
1	PID	Data reflected under this column are patient IDs. These are unique.
2	Patient Notes ID	Data reflected under this column are patient note IDs. These are unique.
3	User Name	Data reflected under this column refer to the user who documented the note.
3	Subject	Data reflected under this column refer to the subject of the note. This field maybe blank.
4	Patient Notes Category	Data reflected under this column refer to the category associated with the note. These categories are user defined but available from a pick list for the user.
5	Patient Notes Date	Data reflected under this column refer to the date the note was created.
6	Patient Notes	Data reflected under this column refers to documented details of the patient note.

Scanned Records

The resulting files follows the specification as set for HL7 C-CDA R2.1 specifications. This file will follow an XML file extension. It must be noted there will there will **be a TYPE** value called **Echart** within the filename. This file contains all patient scanned and uploaded documents and is coded using Base64 encoding. It must be noted, this file could be large in size depending on the amount of scanned data. The format and specifications can be referenced at:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1380194/>

https://www.hl7.org/implement/standards/product_brief.cfm?product_id=447

Associated Fees

Usage of the EHI Export as listed above does not require any associated fees for export or setup or configuration, if performed by you as the user. This is included with the product capability. A valid user subscription is required for access.

In the event, you require ezEMRx to perform the EHI export function, there may be associated fees based time and effort for the export request.

Limitation of Liability & Indemnification

ezEMRx will not be responsible for certain losses or damages as permitted by law. Our total liability for any claim under the terms is limited to \$500.

You will defend, indemnify, and hold harmless ezEMRx and our partners, directors, officers, employees, and users against certain liabilities, damages, losses, costs, fees, and expenses relating to third-party legal proceedings arising from your misuse of the APIs, violation of the terms, or content used with any function.

Compliance Information

The function meets the requirements of the Electronic Health Information export criterion §170.315(b)(10).

Support and Contact

In the event of developer related questions with regard to the EHI export only, please feel free to contact us at support@ezemrx.com (any questions about the data or its content should be directed towards the data originating clinic or facility. ezEMRx will not be able to assist in these queries).
