Revision History

Version	Date	Comment
1.0	October 14,2023	170.315 (b)(10) Electronic Health Information Export - Original Document
2.0	October 24,2023	170.315 (b)(10) Electronic Health Information Export - Original Document

Introduction

E*HealthLine.com, Inc.'s EHI Export feature allows privileged users in Inpatient and ambulatory settings to efficiently export a single patient's EHI data in multiple formats. This capability streamlines the extraction of clinical and healthcare data, including demographics, billing information, encounters, notes, and more.

This document will inform users on how to perform the export features in EHR and describe the file structure and formats of the extracted files

170.315(b)(10) Electronic Health Information Export

E*HealthLine.com, Inc. Export Batch CCDA option is accessible from Data Maintenance Menu; meets the following requirements

(i)(A)(B)(D)(E) Single Patient Electronic Health Information Export:

The health IT developer attests that a user of the Health IT Module can perform an electronic health information (EHI) export for a single patient at any time the user chooses without developer assistance and that the export file(s):

- Is created in a timely fashion;
- Includes all the EHI for a single patient as described in § 170.315(b)(10)(i)(A);
- Is electronic and in a computable format; and
- Includes a publicly accessible hyperlink of the export's format.

(i)(C) Single Patient Electronic Health Information Export:

The health IT developer attests that the Health IT Module can limit users who can perform an EHI export for a single patient using one of the following methods:

- Grant a set of users the ability to perform the export; or
- Grant system administrator(s) the ability to perform the export.

Patient Population Electronic Health Information Export:

The health IT developer attests that a user of the Health IT Module can perform an EHI export for all electronic health information, and that the export:

- Includes all the EHI for a patient population as described in § 170.315(b)(10)(ii);
- Is electronic and in a computable format; and
- Includes a publicly accessible hyperlink of the export's format.

Documentation:

The health IT developer attests that the health IT developer has a process for keeping the export format(s) used to support paragraphs (b)(10)(i) and (ii) of this section up-to-date.

EXPORT FORMAT:

Single patient and patient population EHI is exported in the following format

File Structure and Description

The downloaded file is packaged in a .zip folder. The content of the zip file includes the patient's EHI data such as allergies, encounters, lab results, procedures, billing information, images etc. Below is an example of the extracted files and folders:

- Documents – this is a CDA XML DOC Export file containing the “Documents” folder containing patient’s supporting documents or attachments when available.
- Notes - this is a CDA XML DOC Export file folder containing all the notes recorded during the patient’s previous medical visits/encounters.
- BillingReport - this is a CSV file containing the patients financial transactions with their provider. The information includes the patient information, transaction dates, charges, claims and the description of transactions made with status.
- CCD - is an XML file export of a patient's clinical data. The system allows exports of HL7 CCD which complies with [United States Core Data for Interoperability \(USCDI\)](#), Version 1 requirements. The specifications for the CCD can be obtained from the [HL7 website](#).
- demographics - this is a CSV file that contains the patient's key information, identification details, contact information, insurance information etc.
- PatientDocumentFiles - this is a CSV mapping file that contains the list of patients documents. This file outlines the contents of the patients supporting attachments contained in the “Documents” folder.
- Schedule - a CSV file, that contains a record of the patient’s encounters with specific information including appointment date, provider, location, appointment type, workflow, notes and date on which notes are recorded.

Multi-Patient Data Export

E*HealthLine.com, Inc has the capability to export all data for a patient population, delivering the exported data in a .zip folder following the same format as described below. To obtain the data,

File Structure and Description

The downloaded file is packaged in a .zip folder. The content of the zip file includes the patient's EHI data such as allergies, encounters, lab results, procedures, billing information, images etc. Below is an example of the extracted files and folders:

- Documents – this is a CDA XML DOC Export file containing the “Documents” folder containing patient’s supporting documents or attachments when available.
- Notes - this is a CDA XML DOC Export file folder containing all the notes recorded during the patient’s previous medical visits/encounters.
- BillingReport - this is a CSV file containing the patients financial transactions with their provider. The information includes the patient information, transaction dates, charges, claims and the description of transactions made with status.
- CCDAs - is an XML file export of a patient's clinical data. The system allows exports of HL7 CCDAs which complies with [United States Core Data for Interoperability \(USCDI\)](#), Version 1 requirements. The specifications for the CCDAs can be obtained from the [HL7 website](#).
- demographics - this is a CSV file that contains the patient's key information, identification details, contact information, insurance information etc.
- PatientDocumentFiles - this is a CSV mapping file that contains the list of patients documents. This file outlines the contents of the patients supporting attachments contained in the “Documents” folder.
- Schedule - a CSV file, that contains a record of the patient’s encounters with specific information including appointment date, provider, location, appointment type, workflow, notes and date on which notes are recorded.

Export Batch CDA – Update

The CDA Export Screen has been updated to comply with 170.315(b)(10) Electronic Health Information Export criteria.

All documents from CDA Batch export screen will now be exported in a CCD format. New options include;

- <Clinic Logon>- For selecting a specific clinic to export from
- <Include Chart Document >- exports CDA and includes Chart Documents
- <Show Sticky Note on TIF docs> - Option to include Sticky Notes on TIF documents when choosing the <Include Chart Documents> Option
- Option to include or exclude Custom Patient Data Tables in the CDA

The rest of the functionality remains the same; please see the full Export Batch CCD documentation for additional information

The following features comply with 170.315(b)(10) Electronic Health Information Export criteria:

Limit users who can perform an EHI export

This functionality is not new, but applies to 170.315(b)(10) Electronic Health Information Export criteria; the logged-on user must have the following privileges granted by the E*HEALTHLINE.COM, INC Admin user.

To grant privileges;

1. Log in as the E*HealthLine.Com, Inc Admin user, edit <Security Roles> for the selected user
2. In the Security Roles Settings screen select the [Edit General Database Setup] privilege and check one (or both) of the following privileges; [Print Documents] or [Chart Reviewer]
3. Save Changes, Close
4. To remove this EHI Export access privilege, uncheck the <Edit General Database Setup> option OR uncheck the <Print Documents> and <Chart Reviewer> options

Excluding EHI as Formal Health Record (FHR)

The ability to exclude system Patient Data Tables is not new; but with this update, any **custom** (user created) Patient Data Tables will be included as part of the CDA whenever the export is done using the Batch CDA option, unless the custom Patient Data Table is set to be excluded as FHR

To exclude as FHR;

1. Open Patient Data Tables
2. Right-Click on any tab
3. Select <General Table Setup>
4. Check the box [Exclude FHR] for the Table Name to be excluded from the CDA
5. Close/Save

Single Patient EHI Export- CDA (& Chart Documents, if applicable)

Part of this functionality is not new, applies to 170.315(b)(10) Electronic Health Information Export criteria; the **new options** for single patient EHI export include selecting Clinic Logon and including Chart Documents

1. Log in as user with Export Privileges
2. Select the Provider- The selected patient and only documents where the provider selected is author or signor are exported
3. **(New)** Select the Clinic Logon (Clinic number)
4. Click on Patient Search to search by patient name
 - a. To export a CDA for a specific medical record number, enter the medical record number in both fields (Start MR#/End MR# fields)
5. Select the patient by checking off the box, click Close
6. **(New)** Option to include the Chart Documents and Sticky Notes, these are optional; if exporting CDA only (not the chart documents), leave the two unchecked.
 - a. If applicable, select the following options:
 - i. [Include Chart Documents]
 - ii. [Show Sticky Note on TIF docs]
7. Click on <Start Export >
8. Click OK to confirm that you've reviewed patient data tables that are part of FHR
9. Click OK to export
10. Click OK to acknowledge the Zip was file Exported Successfully
11. The export location: \\SERVERNAME\BarcodeScans\HL7ExportFiles\CDAexports
12. The CDAexports folder will contain a zipped folder "CDAXMLExport_8.Zip", containing the full CDA Summary
13. If the option to [Include Chart Documents] was checked, the "CDAXMLExport_8.Zip" folder will contain all the chart documents
14. For additional details on the export format and default paths,

Patient Population EHI Export- CDA (& Chart Documents, if applicable)

Part of this functionality is not new, applies to 170.315(b)(10) Electronic Health Information Export criteria; the **new options** for multiple patient EHI export include selecting Clinic Logon and including Chart Documents

1. Log in as user with Export Privileges
2. Select the Provider- The selected patients and only documents where the provider selected is author or signor are exported
3. **(New)** Select the Clinic Logon (Clinic number)
4. To export CDAs for a medical record number range, enter the starting medical record number and ending medical record numbers in the Start MR#/End MR# fields
5. Click on Patient Search to search by patient name
 - a. Multiple patients can be selected by checking the box to the left of the name
6. **(New)** Option to include the Chart Documents and Sticky Notes, these are optional; if exporting CDA only (not the chart documents), leave the two unchecked.
 - a. If applicable, select the following options:
 - i. [Include Chart Documents]
 - ii. [Show Sticky Note on TIF docs]
7. The list of selected medical record numbers displays in the <Custom MRnum List> field
8. Click on <Start Export >
9. Click OK to confirm that you've reviewed patient data tables that are part of FHR
10. Click OK to export
11. Click OK to acknowledge the Zip was file Exported Successfully
12. The export location: \\SERVERNAME\BarcodeScans\HL7ExportFiles\CDAexports
13. The CDAexports folder will contain a zipped folder "CDAXMLExport_8.Zip", containing the full CDA Summaries
14. If the option to [Include Chart Documents] was checked, the "CDAXMLExport_8.Zip" folder will contain all the chart documents
15. For additional details on the export format and default paths,
