'SS Leave Time 5'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Program_Transfer_(OutPatient)

Table Name: SYSTEM.episode_history

Table Description: This table returns Episode History.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

EPN_uniqueid

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode

Column Name: program_code

Column Type: varchar

Max Length: 10

Program

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with the program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date

Preadmit/Admission Date

Column Name: date_of_discharge

Column Type: date

Date Of Discharge

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: episode_select_for_query
Column Type: varchar
Max Length: 70
The field to use to select episodes in queries.

Column Name: v_patient_name
Column Type: varchar
Max Length: 100
Client name associated with the PATID.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 10
Program Treatment Setting

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 10
Program RRG Code

Column Name: program_X_type_code
Column Type: varchar
Max Length: 10
Program Type Code

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 40
Program Tax ID

Column Name: program_X_street_address
Column Type: varchar
Max Length: 40

Program Street Address

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 40

Place Of Service (HCFA 24-B)

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

Program Location

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: JOIN_TO_Enrollment

Column Type: integer

Join to Enrollment

Column Name: alert_access_options

Column Type: varchar

Max Length: 50

The description associated with the alert_access. See alert_access for more information.

Column Name: alert_access_type

Column Type: varchar

Max Length: 50

Alert Access Type

Column Name: data_entry_offset

Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: fill_gaps_code
Column Type: varchar
Max Length: 5
Program Fill gaps in service entry record for duration of service?

Column Name: fill_gaps_service_code
Column Type: varchar
Max Length: 50
Service Code to use to fill gaps

Column Name: fill_gaps_service_value
Column Type: varchar
Max Length: 50

The description associated with the fill_gaps_service_code. See fill_gaps_service_code for more information.

Column Name: fill_gaps_staff_id

Column Type: varchar

Max Length: 10

Program Service Practitioner to use to fill gaps

Column Name: fill_gaps_staff_name

Column Type: varchar

Max Length: 50

The description associated with the fill_gaps_staff_id. See fill_gaps_staff_id for more information.

Column Name: fill_gaps_value

Column Type: varchar

Max Length: 10

The description associated with the fill_gaps_code. See fill_gaps_code for more information.

Column Name: last_date_of_service

Column Type: date

Last Date Of Service

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 40

Program City, State Zip

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

Program HCO ID

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 40

Program Phone Number

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Program_Transfer_(OutPatient)

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: join_to_admission_data
Column Type: varchar
Max Length: 12
Joins table to admission data.

Column Name: join_to_discharge_data
Column Type: varchar
Max Length: 12
Joins table to discharge data.

Column Name: join_to_leave_history
Column Type: varchar
Max Length: 12
Joins table to leaves history out on.

Column Name: join_to_program_transfer
Column Type: varchar
Max Length: 50
Joins table to program transfer.

Column Name: join_to_return_from_leave
Column Type: varchar
Max Length: 12
Joins table to leaves history return.

Column Name: movement_date
Column Type: date
'Movement Date'

Column Name: movement_time
Column Type: varchar
Max Length: 10
'Movement Time'

Column Name: movement_type_code
Column Type: varchar
Max Length: 50
'Movement Type'

Column Name: movement_type_value
Column Type: varchar
Max Length: 20
The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid
Column Type: varchar
Max Length: 12
A unique ID used to identify a row of data.

Column Name: program_from
Column Type: varchar
Max Length: 20
'Program From'

Column Name: program_from_value
Column Type: varchar
Max Length: 40
The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to
Column Type: varchar
Max Length: 40
'Program To'

Column Name: program_to_value
Column Type: varchar
Max Length: 40
The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Program_Transfer_(OutPatient)

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM
Column Type: varchar
Max Length: 10
The program code in which the patient is active in.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODENUMBER
Column Type: integer
'Episode Number'

Documentation for form: Program_Transfer_(OutPatient)

Table Name: SYSTEM.view_episode_summary_current

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode Number'

Column Name: preadmit_admission_date

Column Type: date

'Preadmit/Admission Date'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: program_code

Column Type: varchar

Max Length: 10

The program code associated with the data.

Column Name: c_date_of_birth

Column Type: date

'Date Of Birth'

Column Name: c_age

Column Type: numeric

'Client Age'

Column Name: c_ss_number

Column Type: varchar

Max Length: 15

'Social Security Number'

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 50

A unique ID used to identify a row of data.

Column Name: c_address_state_code

Column Type: varchar

Max Length: 50

'Client's Address - State'

Column Name: c_address_state_value

Column Type: varchar

Max Length: 50

The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1

Column Type: varchar

Max Length: 50

'Client's Address - Street 1'

Column Name: c_address_str_2

Column Type: varchar

Max Length: 50

'Client's Address - Street 2'

Column Name: c_admit_practitioner_id

Column Type: varchar

Max Length: 50

'Admitting Practitioner'

Column Name: c_admit_practitioner_name

Column Type: varchar

Max Length: 50

The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code

Column Type: varchar

Max Length: 50

'Source of Admission'

Column Name: c_admit_source_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of

Column Type: varchar

Max Length: 50
'Preadmit/Admission Time'

Column Name: c_admit_type_of_code
Column Type: varchar
Max Length: 50
'Type Of Admission'

Column Name: c_admit_type_of_value
Column Type: varchar
Max Length: 50
The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id
Column Type: varchar
Max Length: 50
'Attending Practitioner'

Column Name: c_attend_practitioner_name
Column Type: varchar
Max Length: 50
The name associated with c_attend_practitioner_id.

Column Name: c_city
Column Type: varchar
Max Length: 50
'Client's Address - City'

Column Name: c_country_code
Column Type: varchar
Max Length: 50
'Client's Address - Country'

Column Name: c_country_value
Column Type: varchar
Max Length: 50
The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code
Column Type: varchar
Max Length: 50
'Client's Address - County'

Column Name: c_county_value
Column Type: varchar
Max Length: 50
The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age
Column Type: varchar

Max Length: 50
'Client Detail Age'

Column Name: c_ethnicity_code
Column Type: varchar
Max Length: 50
'Client Ethnicity'

Column Name: c_ethnicity_value
Column Type: varchar
Max Length: 50
The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value
Column Type: varchar
Max Length: 255
The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code
Column Type: varchar
Max Length: 50
'Client Legal Status'

Column Name: c_legal_status_value
Column Type: varchar
Max Length: 50
The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value
Column Type: varchar
Max Length: 40
The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code

Column Type: varchar

Max Length: 50

'Client Marital Status'

Column Name: c_marital_status_value

Column Type: varchar

Max Length: 50

The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value

Column Type: varchar

Max Length: 200

The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code

Column Type: varchar
Max Length: 50
'Client Race'

Column Name: c_race_value
Column Type: varchar
Max Length: 50
The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code
Column Type: varchar
Max Length: 50
'Client Religion'

Column Name: c_religion_value
Column Type: varchar
Max Length: 50
The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code
Column Type: varchar
Max Length: 10
'Unit'

Column Name: c_unit_value
Column Type: varchar
Max Length: 50
The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip
Column Type: varchar
Max Length: 60
'Client's Address - Zip'

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
'Facility Chart Number (148)'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 50
'Gender'

Column Name: patient_gender_value
Column Type: varchar
Max Length: 50
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone

Column Type: varchar
Max Length: 60
'Home Phone'

Column Name: patient_name
Column Type: varchar
Max Length: 100
'Client Name'

Column Name: patient_name_first
Column Type: varchar
Max Length: 50
'Client First Name'

Column Name: patient_name_last
Column Type: varchar
Max Length: 50
'Client Last Name'

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 50
'HCFA'

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 50
'RRG'

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 50
The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 50
'City, State, Zip Code'

Column Name: program_X_dflt_location_code
Column Type: varchar
Max Length: 50
'Location'

Column Name: program_X_dflt_location_value
Column Type: varchar
Max Length: 50
The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 50
'Phone Number'

Column Name: program_X_street_address
Column Type: varchar
Max Length: 50
'Street Address'

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 50
'Tax ID'

Column Name: program_X_tx_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'

Column Name: program_X_tx_service_value
Column Type: varchar
Max Length: 50
The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 50
'Treatment Setting'

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 50
The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code
Column Type: varchar
Max Length: 50
'Type'

Column Name: program_X_type_value
Column Type: varchar
Max Length: 50

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Risk_Level_Update

Table Name: SYSTEM.risk_level_update_data

Table Description: Risk Level Update Data

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored. FACILITY

Column Name: PATID

Column Type: varchar

Max Length: 20

The client Id

Column Name: comment

Column Type: varchar

Max Length: 32700
The risk level change comment.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: date_of_change
Column Type: date
The date on which the risk level is being changed.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: reason_for_change_code

Column Type: varchar

Max Length: 40

The reason for risk level change code.

Column Name: reason_for_change_value

Column Type: varchar

Max Length: 80

The dictionary value of reasonForChangeCode.

Column Name: risk_level_code

Column Type: varchar

Max Length: 80

The risk level associated with the table entry. Same as riskLevelFromCode by default, same as riskLevelToCode if present.

Column Name: risk_level_from_code

Column Type: varchar

Max Length: 40

The prior risk level code.

Column Name: risk_level_from_value

Column Type: varchar

Max Length: 80

The dictionary value of riskLevelFromCode.

Column Name: risk_level_to_code

Column Type: varchar

Max Length: 40

The updated risk level code.

Column Name: risk_level_to_value

Column Type: varchar

Max Length: 80

The dictionary value of riskLevelToCode.

Column Name: risk_level_value

Column Type: varchar

Max Length: 80

The dictionary value of riskLevelCode.

Column Name: status_code

Column Type: varchar

Max Length: 40

The status code of the row. Used to void rows.

Column Name: status_value

Column Type: varchar

Max Length: 80

The dictionary value of status.

Documentation for form: Risk_Level_Update

Table Name: SYSTEM.risk_level_update_data_audit

Table Description: Risk Level Update Data Audit

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored. FACILITY

Column Name: JOIN_TO_CURRENT

Column Type: integer

A pointer to the Current value

Column Name: PATID

Column Type: varchar

Max Length: 20

The client Id

Column Name: comment

Column Type: varchar

Max Length: 32700

The risk level change comment.

Column Name: data_entry_action

Column Type: varchar

Max Length: 40

The action that was performed.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: date_of_change
Column Type: date
The date on which the risk level is being changed.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: reason_for_change_code
Column Type: varchar
Max Length: 40
The reason for risk level change code.

Column Name: reason_for_change_value
Column Type: varchar
Max Length: 80
The dictionary value of reasonForChangeCode.

Column Name: risk_level_code
Column Type: varchar

Max Length: 80

The risk level associated with the table entry. Same as riskLevelFromCode by default, same as riskLevelToCode if present.

Column Name: risk_level_from_code

Column Type: varchar

Max Length: 40

The prior risk level code.

Column Name: risk_level_from_value

Column Type: varchar

Max Length: 80

The dictionary value of riskLevelFromCode.

Column Name: risk_level_to_code

Column Type: varchar

Max Length: 40

The updated risk level code.

Column Name: risk_level_to_value

Column Type: varchar

Max Length: 80

The dictionary value of riskLevelToCode.

Column Name: risk_level_value

Column Type: varchar

Max Length: 80

The dictionary value of riskLevelCode.

Column Name: status_code

Column Type: varchar

Max Length: 40

The status code of the row. Used to void rows.

Column Name: status_value

Column Type: varchar

Max Length: 80

The dictionary value of status.

Documentation for form: Diagnosis

Table Name: [SYSTEM.Audit_client_diagnosis_record](#)

Table Description: This table returns the previously information stored in the 'Diagnosis' form.

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: LINK_TO_HISTORIC
Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: audit_data_entry_by
Column Type: varchar
Max Length: 50
The user who last updated the audit row.

Column Name: audit_data_entry_by_option
Column Type: varchar
Max Length: 50
The user who last updated the audit row.

Column Name: audit_data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID that created the audit record.

Column Name: audit_data_entry_user_name
Column Type: varchar
Max Length: 50
The user name that created the audit record.

Column Name: audit_date
Column Type: date
The date the audit row was created.

Column Name: audit_option_desc
Column Type: varchar

Max Length: 255

The description of the form that created the audit row.

Column Name: audit_option_id

Column Type: varchar

Max Length: 50

The ID of the form that created the audit row.

Column Name: audit_time

Column Type: time

The time the audit row was created.

Column Name: axis_IV_eco_code

Column Type: varchar

Max Length: 5

'Axis IV: Economic'

Column Name: axis_IV_eco_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Economic Remarks'

Column Name: axis_IV_eco_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_eco_code. See axis_IV_eco_code for more information.

Column Name: axis_IV_educ_code

Column Type: varchar

Max Length: 5

'Axis IV: Educational'

Column Name: axis_IV_educ_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_educ_code. See axis_IV_educ_code for more information.

Column Name: axis_IV_edu_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Educational Remarks'

Column Name: axis_IV_health_serv_code

Column Type: varchar

Max Length: 5

'Axis IV: Health Care Services'

Column Name: axis_IV_health_serv_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Health Care Services Remarks'

Column Name: axis_IV_health_serv_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_health_serv_code. See axis_IV_health_serv_code for more information.

Column Name: axis_IV_housing_code

Column Type: varchar

Max Length: 5

'Axis IV: Housing'

Column Name: axis_IV_housing_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Housing Remarks'

Column Name: axis_IV_housing_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_housing_code. See axis_IV_housing_code for more information.

Column Name: axis_IV_legsys_code

Column Type: varchar

Max Length: 5

'Axis IV: Legal System/Crime'

Column Name: axis_IV_legsys_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Legal System/Crime Remarks'

Column Name: axis_IV_legsys_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_legsys_code. See axis_IV_legsys_code for more information.

Column Name: axis_IV_occ_code

Column Type: varchar

Max Length: 5

'Axis IV: Occupational'

Column Name: axis_IV_occ_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Occupational Remarks'

Column Name: axis_IV_occ_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_occ_code. See axis_IV_occ_code for more information.

Column Name: axis_IV_other_prob_code

Column Type: varchar

Max Length: 5

'Axis IV: Other Problems'

Column Name: axis_IV_other_prob_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Other Problems Remarks'

Column Name: axis_IV_other_prob_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_other_prob_code. See axis_IV_other_prob_code for more information.

Column Name: axis_IV_prim_sup_grp_code

Column Type: varchar

Max Length: 5

'Axis IV: Primary Support Group'

Column Name: axis_IV_prim_sup_grp_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Primary Support Group Remarks'

Column Name: axis_IV_prim_sup_grp_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_prim_sup_grp_code. See axis_IV_prim_sup_grp_code for more information.

Column Name: axis_IV_soc_env_code

Column Type: varchar

Max Length: 5

'Axis IV: Social Environment'

Column Name: axis_IV_soc_env_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Social Environment Remarks'

Column Name: axis_IV_soc_env_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_soc_env_code. See axis_IV_soc_env_code for more information.

Column Name: axis_V_gaf_code
Column Type: varchar
Max Length: 5
'Diagnosis - Axis V Current GAF Rating'

Column Name: axis_V_gaf_value
Column Type: varchar
Max Length: 90
The description associated with axis_V_gaf_code. See axis_V_gaf_code for more information.

Column Name: cgas_code
Column Type: varchar
Max Length: 20
'Children Global Assessment Scale (CGAS)'

Column Name: cgas_value
Column Type: varchar
Max Length: 40
The description associated with cgas_code. See cgas_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: date_of_diagnosis
Column Type: date
'Date Of Diagnosis'

Column Name: dc03_code
Column Type: varchar
Max Length: 20
'Diagnostic Classification Infancy and Early Childhood (DC03)'

Column Name: dc03_value
Column Type: varchar
Max Length: 40
The description associated with dc03_code. See dc03_code for more information.

Column Name: diagnosis_type_code
Column Type: varchar
Max Length: 5
'Type Of Diagnosis'

Column Name: diagnosis_type_value
Column Type: varchar
Max Length: 40
The description associated with diagnosis_type_code. See diagnosis_type_code for more information.

Column Name: drg10_code
Column Type: varchar
Max Length: 10
'DRG Code (ICD-10)'

Column Name: drg10_value
Column Type: varchar
Max Length: 50
The description associated with drg10_code. See drg10_code for more information.

Column Name: drg_code
Column Type: varchar
Max Length: 10
'DRG Code'

Column Name: drg_value
Column Type: varchar
Max Length: 50
The description associated with drg_code. See drg_code for more information.

Column Name: estimated_discharge_date
Column Type: date

'Estimated Discharge Date'

Column Name: gen_med_csi_code

Column Type: varchar

Max Length: 50

'General Medical Condition Summary Code (CSI)'

Column Name: gen_med_csi_value

Column Type: varchar

Max Length: 200

The description associated with gen_med_csi_code. See gen_med_csi_code for more information.

Column Name: la_diagnosis_unique_id

Column Type: varchar

Max Length: 40

LA diagnosis unique identifier.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: original_record_id

Column Type: varchar

Max Length: 50

The link to original SYSTEM.client_diagnosis_record row ID.

Column Name: prev_12_mos_highlev_code

Column Type: varchar

Max Length: 5

'GAF - Highest Level Last 12 Months'

Column Name: prev_12_mos_highlev_value

Column Type: varchar

Max Length: 90

The description associated with prev_12_mos_highlev_code. See prev_12_mos_highlev_code for more information.

Column Name: prev_12_mos_lowlev_code

Column Type: varchar

Max Length: 5

'GAF - Lowest Level Last 12 Months'

Column Name: prev_12_mos_lowlev_value

Column Type: varchar

Max Length: 90

The description associated with prev_12_mos_lowlev_code. See prev_12_mos_lowlev_code for more information.

Column Name: prognosis

Column Type: varchar

Max Length: 500

'Prognosis'

Column Name: ss_diagnosis_date_1

Column Type: date

'SS Diagnosis Date 1'

Column Name: ss_diagnosis_date_2

Column Type: date

'SS Diagnosis Date 2'

Column Name: ss_diagnosis_date_3

Column Type: date

'SS Diagnosis Date 3'

Column Name: ss_diagnosis_date_4

Column Type: date

'SS Diagnosis Date 4'

Column Name: ss_diagnosis_date_5

Column Type: date

'SS Diagnosis Date 5'

Column Name: ss_diagnosis_dict_10_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 10'

Column Name: ss_diagnosis_dict_10_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_10_code. See ss_diagnosis_dict_10_code for more information.

Column Name: ss_diagnosis_dict_11_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 11'

Column Name: ss_diagnosis_dict_11_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_11_code. See ss_diagnosis_dict_11_code for more information.

Column Name: ss_diagnosis_dict_12_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 12'

Column Name: ss_diagnosis_dict_12_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_12_code. See ss_diagnosis_dict_12_code for more information.

Column Name: ss_diagnosis_dict_13_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 13'

Column Name: ss_diagnosis_dict_13_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_13_code. See ss_diagnosis_dict_13_code for more information.

Column Name: ss_diagnosis_dict_14_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 14'

Column Name: ss_diagnosis_dict_14_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_14_code. See ss_diagnosis_dict_14_code for more information.

Column Name: ss_diagnosis_dict_15_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 15'

Column Name: ss_diagnosis_dict_15_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_15_code. See ss_diagnosis_dict_15_code for more information.

Column Name: ss_diagnosis_dict_16_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 16'

Column Name: ss_diagnosis_dict_16_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_16_code. See ss_diagnosis_dict_16_code for more information.

Column Name: ss_diagnosis_dict_17_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 17'

Column Name: ss_diagnosis_dict_17_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_17_code. See ss_diagnosis_dict_17_code for more information.

Column Name: ss_diagnosis_dict_18_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 18'

Column Name: ss_diagnosis_dict_18_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_18_code. See ss_diagnosis_dict_18_code for more information.

Column Name: ss_diagnosis_dict_19_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 19'

Column Name: ss_diagnosis_dict_19_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_19_code. See ss_diagnosis_dict_19_code for more information.

Column Name: ss_diagnosis_dict_1_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 1'

Column Name: ss_diagnosis_dict_1_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_1_code. See ss_diagnosis_dict_1_code for more information.

Column Name: ss_diagnosis_dict_20_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 20'

Column Name: ss_diagnosis_dict_20_value
Column Type: varchar
Max Length: 40
The description associated with ss_diagnosis_dict_20_code. See ss_diagnosis_dict_20_code for more information.

Column Name: ss_diagnosis_dict_2_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 2'

Column Name: ss_diagnosis_dict_2_value
Column Type: varchar
Max Length: 40
The description associated with ss_diagnosis_dict_2_code. See ss_diagnosis_dict_2_code for more information.

Column Name: ss_diagnosis_dict_3_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 3'

Column Name: ss_diagnosis_dict_3_value
Column Type: varchar
Max Length: 40
The description associated with ss_diagnosis_dict_3_code. See ss_diagnosis_dict_3_code for more information.

Column Name: ss_diagnosis_dict_4_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 4'

Column Name: ss_diagnosis_dict_4_value
Column Type: varchar
Max Length: 40
The description associated with ss_diagnosis_dict_4_code. See ss_diagnosis_dict_4_code for more information.

Column Name: ss_diagnosis_dict_5_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 5'

Column Name: ss_diagnosis_dict_5_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_5_code. See ss_diagnosis_dict_5_code for more information.

Column Name: ss_diagnosis_dict_6_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 6'

Column Name: ss_diagnosis_dict_6_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_6_code. See ss_diagnosis_dict_6_code for more information.

Column Name: ss_diagnosis_dict_7_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 7'

Column Name: ss_diagnosis_dict_7_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_7_code. See ss_diagnosis_dict_7_code for more information.

Column Name: ss_diagnosis_dict_8_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 8'

Column Name: ss_diagnosis_dict_8_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_8_code. See ss_diagnosis_dict_8_code for more information.

Column Name: ss_diagnosis_dict_9_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 9'

Column Name: ss_diagnosis_dict_9_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_9_code. See ss_diagnosis_dict_9_code for more information.

Column Name: ss_diagnosis_freetxt_20_1

Column Type: varchar
Max Length: 20
'SS Diagnosis Free Text (20) 1'

Column Name: ss_diagnosis_freetxt_20_2
Column Type: varchar
Max Length: 20
'SS Diagnosis Free Text (20) 2'

Column Name: ss_diagnosis_freetxt_20_3
Column Type: varchar
Max Length: 20
'SS Diagnosis Free Text (20) 3'

Column Name: ss_diagnosis_freetxt_20_4
Column Type: varchar
Max Length: 20
'SS Diagnosis Free Text (20) 4'

Column Name: ss_diagnosis_freetxt_20_5
Column Type: varchar
Max Length: 20
'SS Diagnosis Free Text (20) 5'

Column Name: ss_diagnosis_freetxt_40_1
Column Type: varchar
Max Length: 40
'SS Diagnosis Free Text (40) 1'

Column Name: ss_diagnosis_freetxt_40_2
Column Type: varchar
Max Length: 40
'SS Diagnosis Free Text (40) 2'

Column Name: ss_diagnosis_freetxt_40_3
Column Type: varchar
Max Length: 40
'SS Diagnosis Free Text (40) 3'

Column Name: ss_diagnosis_freetxt_40_4
Column Type: varchar
Max Length: 40
'SS Diagnosis Free Text (40) 4'

Column Name: ss_diagnosis_freetxt_40_5
Column Type: varchar
Max Length: 40
'SS Diagnosis Free Text (40) 5'

Column Name: ss_diagnosis_mult_1_code

Column Type: varchar
Max Length: 255
'SS Diagnosis Multiple Select Dictionary 1'

Column Name: ss_diagnosis_mult_1_shval
Column Type: varchar
Max Length: 255
The description associated with ss_diagnosis_mult_1_code limited to 255 characters. See ss_diagnosis_mult_1_code for more information.

Column Name: ss_diagnosis_mult_1_value
Column Type: longvarchar
Max Length: 2147483647
The description associated with ss_diagnosis_mult_1_code. See ss_diagnosis_mult_1_code for more information.

Column Name: ss_diagnosis_mult_2_code
Column Type: varchar
Max Length: 255
'SS Diagnosis Multiple Select Dictionary 2'

Column Name: ss_diagnosis_mult_2_shval
Column Type: varchar
Max Length: 255
The description associated with ss_diagnosis_mult_2_code limited to 255 characters. See ss_diagnosis_mult_2_code for more information.

Column Name: ss_diagnosis_mult_2_value
Column Type: longvarchar
Max Length: 2147483647
The description associated with ss_diagnosis_mult_2_code. See ss_diagnosis_mult_2_code for more information.

Column Name: ss_diagnosis_mult_3_code
Column Type: varchar
Max Length: 255
'SS Diagnosis Multiple Select Dictionary 3'

Column Name: ss_diagnosis_mult_3_shval
Column Type: varchar
Max Length: 255
The description associated with ss_diagnosis_mult_3_code limited to 255 characters. See ss_diagnosis_mult_3_code for more information.

Column Name: ss_diagnosis_mult_3_value
Column Type: longvarchar
Max Length: 2147483647
The description associated with ss_diagnosis_mult_3_code. See ss_diagnosis_mult_3_code for more information.

Column Name: ss_diagnosis_mult_4_code
Column Type: varchar
Max Length: 255
'SS Diagnosis Multiple Select Dictionary 4'

Column Name: ss_diagnosis_mult_4_shval
Column Type: varchar
Max Length: 255
The description associated with ss_diagnosis_mult_4_code limited to 255 characters. See ss_diagnosis_mult_4_code for more information.

Column Name: ss_diagnosis_mult_4_value
Column Type: longvarchar
Max Length: 2147483647
The description associated with ss_diagnosis_mult_4_code. See ss_diagnosis_mult_4_code for more information.

Column Name: ss_diagnosis_mult_5_code
Column Type: varchar
Max Length: 255
'SS Diagnosis Multiple Select Dictionary 5'

Column Name: ss_diagnosis_mult_5_shval
Column Type: varchar
Max Length: 255
The description associated with ss_diagnosis_mult_5_code limited to 255 characters. See ss_diagnosis_mult_5_code for more information.

Column Name: ss_diagnosis_mult_5_value
Column Type: longvarchar
Max Length: 2147483647
The description associated with ss_diagnosis_mult_5_code. See ss_diagnosis_mult_5_code for more information.

Column Name: ss_diagnosis_time_1
Column Type: varchar
Max Length: 10
'SS Diagnosis Time 1'

Column Name: ss_diagnosis_time_2
Column Type: varchar
Max Length: 10
'SS Diagnosis Time 2'

Column Name: ss_diagnosis_time_3
Column Type: varchar
Max Length: 10
'SS Diagnosis Time 3'

Column Name: ss_diagnosis_time_4

Column Type: varchar
Max Length: 10
'SS Diagnosis Time 4'

Column Name: ss_diagnosis_time_5
Column Type: varchar
Max Length: 10
'SS Diagnosis Time 5'

Column Name: ss_diag_scrolling_text_1
Column Type: varchar
Max Length: 32768
'SS Diagnosis Scrolling Text 1'

Column Name: ss_diag_scrolling_text_2
Column Type: varchar
Max Length: 32768
'SS Diagnosis Scrolling Text 2'

Column Name: ss_diag_scrolling_text_3
Column Type: varchar
Max Length: 32768
'SS Diagnosis Scrolling Text 3'

Column Name: ss_diag_scrolling_text_4
Column Type: varchar
Max Length: 32768
'SS Diagnosis Scrolling Text 4'

Column Name: ss_diag_scrolling_text_5
Column Type: varchar
Max Length: 32768
'SS Diagnosis Scrolling Text 5'

Column Name: sub_ab_dep_csi_code
Column Type: varchar
Max Length: 50
'Substance Abuse / Dependence (CSI)'

Column Name: sub_ab_dep_csi_value
Column Type: varchar
Max Length: 50
The description associated with sub_ab_dep_csi_code. See sub_ab_dep_csi_code for more information.

Column Name: sub_dep_diag
Column Type: varchar
Max Length: 150
'Substance Abuse / Dependence Diagnosis (CSI)'

Column Name: sub_dep_icd10_diag

Column Type: varchar
Max Length: 150
'Substance Abuse / Dependence Diagnosis (CSI) [ICD-10]'

Column Name: sub_dep_icd10_diag_val
Column Type: varchar
Max Length: 150
The description associated with sub_dep_icd10_diag. See sub_dep_icd10_diag for more information.

Column Name: sub_dep_icd9_diag
Column Type: varchar
Max Length: 150

Column Name: sub_dep_icd9_diag_val
Column Type: varchar
Max Length: 150
The description associated with sub_dep_icd9_diag. See sub_dep_icd9_diag for more information.

Column Name: time_of_diagnosis
Column Type: varchar
Max Length: 40
'Time Of Diagnosis'

Column Name: trauma_csi_code
Column Type: varchar
Max Length: 50
'Trauma (CSI)'

Column Name: trauma_csi_value
Column Type: varchar
Max Length: 50
The description associated with trauma_csi_code. See trauma_csi_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Diagnosis

Table Name: SYSTEM.client_diagnosis_entry

Table Description: This table returns the history of client diagnoses.

Column Name: DiagnosisRecord

Column Type: integer
The 'DiagnosisRecord'

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The Episode Number

Column Name: FACILITY
Column Type: integer
The Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
The PATID

Column Name: add_prob_list_code
Column Type: varchar
Max Length: 20
The Add to Problem List Code

Column Name: add_prob_list_value
Column Type: varchar
Max Length: 40
The Add to Problem List Value
Column Name: axis_code
Column Type: varchar
Max Length: 50
The Axis Code

Column Name: axis_value
Column Type: varchar
Max Length: 50
The Axis Value

Column Name: billing_order
Column Type: varchar
Max Length: 50
The Billing Order

Column Name: classification_code
Column Type: varchar
Max Length: 50
The Classification Code

Column Name: classification_value
Column Type: varchar
Max Length: 50
The Classification Value

Column Name: clinical_search_term
Column Type: varchar
Max Length: 4096
The Clinical Search Term

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The Data Entry By Option

Column Name: data_entry_date
Column Type: date
The Data Entry Date

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The 'data_entry_source'

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The Data Entry Time

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The Date Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The Data Entry User Name

Column Name: date_resolved
Column Type: date
The Date Resolved

Column Name: diagnosing_clinician_code
Column Type: varchar

Max Length: 20
The Diagnosing Clinician Code

Column Name: diagnosing_clinician_value
Column Type: varchar
Max Length: 40
The Diagnosing Clinician Value

Column Name: diagnosis_status_code
Column Type: varchar
Max Length: 50
The Diagnosis Status Code

Column Name: diagnosis_status_value
Column Type: varchar
Max Length: 50
The Diagnosis Status Value

Column Name: first_ever_dx_code
Column Type: varchar
Max Length: 50
Is this the first ever diagnosis?

Column Name: first_ever_dx_value
Column Type: varchar
Max Length: 50
The description for 'Is this the first ever diagnosis?'

Column Name: icd_code
Column Type: varchar
Max Length: 50
The 'icd_code'

Column Name: imo_code
Column Type: varchar
Max Length: 50
The 'imo_code'

Column Name: imo_date
Column Type: varchar
Max Length: 50
The 'imo_date'

Column Name: la_row_id
Column Type: varchar
Max Length: 50
The DOCUMENTATION la_row_id - Populated from the 'LA Provider Integration Module' field "DiagnosisCodeEntryRowID" with the LA County Unique Row ID.

Column Name: onset_date

Column Type: date
The Onset Date

Column Name: onset_time
Column Type: varchar
Max Length: 50
The Onset Time

Column Name: option_desc
Column Type: varchar
Max Length: 80
The Option Description

Column Name: option_id
Column Type: varchar
Max Length: 40
The Option Id

Column Name: pc_diag_ongoing
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Ongoing

Column Name: pc_diag_rank_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Rank Code

Column Name: pc_diag_rank_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Rank Value

Column Name: pc_diag_severity_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Severity Code

Column Name: pc_diag_severity_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Severity Value

Column Name: pc_diag_status_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Status Code

Column Name: pc_diag_status_value
Column Type: varchar

Max Length: 50
The Primary Care Diagnosis Status Value

Column Name: pc_diag_terminated
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Terminated

Column Name: pc_diag_type_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Type Code

Column Name: pc_diag_type_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Type Value

Column Name: pclassification_code
Column Type: varchar
Max Length: 50
The Problem Classification Code

Column Name: pclassification_value
Column Type: varchar
Max Length: 50
The Problem Classification Value

Column Name: present_on_admission_code
Column Type: varchar
Max Length: 50
The Present On Admission Code

Column Name: present_on_admission_value
Column Type: varchar
Max Length: 50
The Present On Admission Value

Column Name: ranking_code
Column Type: varchar
Max Length: 50
The Ranking Code

Column Name: ranking_value
Column Type: varchar
Max Length: 50
The Ranking Value

Column Name: remarks
Column Type: varchar

Max Length: 32000

The Remarks

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: childsub

Column Type: integer

Documentation for form: Diagnosis

Table Name: SYSTEM.client_diagnosis_record

Table Description: This table returns the information stored in the 'Diagnosis' form.

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: LINK_TO_HISTORIC

Column Type: varchar

Max Length: 50

A unique ID used to identify a row of data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: axis_IV_eco_code

Column Type: varchar

Max Length: 5

'Axis IV: Economic'

Column Name: axis_IV_eco_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Economic Remarks'

Column Name: axis_IV_eco_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_eco_code. See axis_IV_eco_code for more information.

Column Name: axis_IV_educ_code

Column Type: varchar

Max Length: 5

'Axis IV: Educational'

Column Name: axis_IV_educ_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_educ_code. See axis_IV_educ_code for more information.

Column Name: axis_IV_edu_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Educational Remarks'

Column Name: axis_IV_health_serv_code

Column Type: varchar

Max Length: 5

'Axis IV: Health Care Services'

Column Name: axis_IV_health_serv_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Health Care Services Remarks'

Column Name: axis_IV_health_serv_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_health_serv_code. See axis_IV_health_serv_code for more information.

Column Name: axis_IV_housing_code

Column Type: varchar

Max Length: 5

'Axis IV: Housing'

Column Name: axis_IV_housing_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Housing Remarks'

Column Name: axis_IV_housing_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_housing_code. See axis_IV_housing_code for more information.

Column Name: axis_IV_legsys_code

Column Type: varchar

Max Length: 5

'Axis IV: Legal System/Crime'

Column Name: axis_IV_legsys_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Legal System/Crime Remarks'

Column Name: axis_IV_legsys_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_legsys_code. See axis_IV_legsys_code for more information.

Column Name: axis_IV_occ_code

Column Type: varchar

Max Length: 5

'Axis IV: Occupational'

Column Name: axis_IV_occ_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Occupational Remarks'

Column Name: axis_IV_occ_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_occ_code. See axis_IV_occ_code for more information.

Column Name: axis_IV_other_prob_code

Column Type: varchar

Max Length: 5

'Axis IV: Other Problems'

Column Name: axis_IV_other_prob_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Other Problems Remarks'

Column Name: axis_IV_other_prob_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_other_prob_code. See axis_IV_other_prob_code for more information.

Column Name: axis_IV_prim_sup_grp_code

Column Type: varchar
Max Length: 5
'Axis IV: Primary Support Group'

Column Name: axis_IV_prim_sup_grp_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Primary Support Group Remarks'

Column Name: axis_IV_prim_sup_grp_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_prim_sup_grp_code. See axis_IV_prim_sup_grp_code for more information.

Column Name: axis_IV_soc_env_code
Column Type: varchar
Max Length: 5
'Axis IV: Social Environment'

Column Name: axis_IV_soc_env_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Social Environment Remarks'

Column Name: axis_IV_soc_env_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_soc_env_code. See axis_IV_soc_env_code for more information.

Column Name: axis_V_gaf_code
Column Type: varchar
Max Length: 5
'Diagnosis - Axis V Current GAF Rating'

Column Name: axis_V_gaf_value
Column Type: varchar
Max Length: 90
The description associated with axis_V_gaf_code. See axis_V_gaf_code for more information.

Column Name: cgas_code
Column Type: varchar
Max Length: 20
'Children Global Assessment Scale (CGAS)'

Column Name: cgas_value
Column Type: varchar
Max Length: 40
The description associated with cgas_code. See cgas_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_diagnosis

Column Type: date

'Date Of Diagnosis'

Column Name: dc03_code

Column Type: varchar

Max Length: 20

'Diagnostic Classification Infancy and Early Childhood (DC03)'

Column Name: dc03_value

Column Type: varchar

Max Length: 40

The description associated with dc03_code. See dc03_code for more information.

Column Name: diagnosis_type_code

Column Type: varchar

Max Length: 5

'Type Of Diagnosis'

Column Name: diagnosis_type_value

Column Type: varchar

Max Length: 40

The description associated with diagnosis_type_code. See diagnosis_type_code for more information.

Column Name: drg10_code

Column Type: varchar

Max Length: 10

'DRG Code (ICD-10)'

Column Name: drg10_value

Column Type: varchar

Max Length: 50

The description associated with drg10_code. See drg10_code for more information.

Column Name: drg_code

Column Type: varchar

Max Length: 10

'DRG Code'

Column Name: drg_value

Column Type: varchar

Max Length: 50

The description associated with drg_code. See drg_code for more information.

Column Name: estimated_discharge_date
Column Type: date
'Estimated Discharge Date'

Column Name: gen_med_csi_code
Column Type: varchar
Max Length: 50
'General Medical Condition Summary Code (CSI)'

Column Name: gen_med_csi_value
Column Type: varchar
Max Length: 200
The description associated with gen_med_csi_code. See gen_med_csi_code for more information.

Column Name: la_diagnosis_unique_id
Column Type: varchar
Max Length: 40
LA diagnosis unique identifier.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: prev_12_mos_highlev_code
Column Type: varchar
Max Length: 5
'GAF - Highest Level Last 12 Months'

Column Name: prev_12_mos_highlev_value
Column Type: varchar
Max Length: 90
The description associated with prev_12_mos_highlev_code. See prev_12_mos_highlev_code for more information.

Column Name: prev_12_mos_lowlev_code
Column Type: varchar
Max Length: 5
'GAF - Lowest Level Last 12 Months'

Column Name: prev_12_mos_lowlev_value
Column Type: varchar
Max Length: 90
The description associated with prev_12_mos_lowlev_code. See prev_12_mos_lowlev_code for more information.

Column Name: prognosis
Column Type: varchar
Max Length: 4096
'Prognosis'

Column Name: ss_diagnosis_date_1
Column Type: date
'SS Diagnosis Date 1'

Column Name: ss_diagnosis_date_2
Column Type: date
'SS Diagnosis Date 2'

Column Name: ss_diagnosis_date_3
Column Type: date
'SS Diagnosis Date 3'

Column Name: ss_diagnosis_date_4
Column Type: date
'SS Diagnosis Date 4'

Column Name: ss_diagnosis_date_5
Column Type: date
'SS Diagnosis Date 5'

Column Name: ss_diagnosis_dict_10_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 10'

Column Name: ss_diagnosis_dict_10_value
Column Type: varchar
Max Length: 40
The description associated with ss_diagnosis_dict_10_code. See ss_diagnosis_dict_10_code for more information.

Column Name: ss_diagnosis_dict_11_code
Column Type: varchar
Max Length: 20
'SS Diagnosis Dictionary 11'

Column Name: ss_diagnosis_dict_11_value
Column Type: varchar
Max Length: 40
The description associated with ss_diagnosis_dict_11_code. See ss_diagnosis_dict_11_code for more information.

Column Name: ss_diagnosis_dict_12_code
Column Type: varchar
Max Length: 20

'SS Diagnosis Dictionary 12'

Column Name: ss_diagnosis_dict_12_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_12_code. See ss_diagnosis_dict_12_code for more information.

Column Name: ss_diagnosis_dict_13_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 13'

Column Name: ss_diagnosis_dict_13_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_13_code. See ss_diagnosis_dict_13_code for more information.

Column Name: ss_diagnosis_dict_14_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 14'

Column Name: ss_diagnosis_dict_14_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_14_code. See ss_diagnosis_dict_14_code for more information.

Column Name: ss_diagnosis_dict_15_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 15'

Column Name: ss_diagnosis_dict_15_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_15_code. See ss_diagnosis_dict_15_code for more information.

Column Name: ss_diagnosis_dict_16_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 16'

Column Name: ss_diagnosis_dict_16_value

Column Type: varchar

Max Length: 40

The description associated with `ss_diagnosis_dict_16_code`. See `ss_diagnosis_dict_16_code` for more information.

Column Name: `ss_diagnosis_dict_17_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 17'

Column Name: `ss_diagnosis_dict_17_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_17_code`. See `ss_diagnosis_dict_17_code` for more information.

Column Name: `ss_diagnosis_dict_18_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 18'

Column Name: `ss_diagnosis_dict_18_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_18_code`. See `ss_diagnosis_dict_18_code` for more information.

Column Name: `ss_diagnosis_dict_19_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 19'

Column Name: `ss_diagnosis_dict_19_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_19_code`. See `ss_diagnosis_dict_19_code` for more information.

Column Name: `ss_diagnosis_dict_1_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 1'

Column Name: `ss_diagnosis_dict_1_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_1_code`. See `ss_diagnosis_dict_1_code` for more information.

Column Name: `ss_diagnosis_dict_20_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 20'

Column Name: ss_diagnosis_dict_20_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_20_code. See ss_diagnosis_dict_20_code for more information.

Column Name: ss_diagnosis_dict_2_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 2'

Column Name: ss_diagnosis_dict_2_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_2_code. See ss_diagnosis_dict_2_code for more information.

Column Name: ss_diagnosis_dict_3_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 3'

Column Name: ss_diagnosis_dict_3_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_3_code. See ss_diagnosis_dict_3_code for more information.

Column Name: ss_diagnosis_dict_4_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 4'

Column Name: ss_diagnosis_dict_4_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_4_code. See ss_diagnosis_dict_4_code for more information.

Column Name: ss_diagnosis_dict_5_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 5'

Column Name: ss_diagnosis_dict_5_value

Column Type: varchar

Max Length: 40

The description associated with `ss_diagnosis_dict_5_code`. See `ss_diagnosis_dict_5_code` for more information.

Column Name: `ss_diagnosis_dict_6_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 6'

Column Name: `ss_diagnosis_dict_6_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_6_code`. See `ss_diagnosis_dict_6_code` for more information.

Column Name: `ss_diagnosis_dict_7_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 7'

Column Name: `ss_diagnosis_dict_7_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_7_code`. See `ss_diagnosis_dict_7_code` for more information.

Column Name: `ss_diagnosis_dict_8_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 8'

Column Name: `ss_diagnosis_dict_8_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_8_code`. See `ss_diagnosis_dict_8_code` for more information.

Column Name: `ss_diagnosis_dict_9_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 9'

Column Name: `ss_diagnosis_dict_9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_9_code`. See `ss_diagnosis_dict_9_code` for more information.

Column Name: `ss_diagnosis_freetxt_20_1`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Free Text (20) 1'

Column Name: ss_diagnosis_freetxt_20_2

Column Type: varchar

Max Length: 20

'SS Diagnosis Free Text (20) 2'

Column Name: ss_diagnosis_freetxt_20_3

Column Type: varchar

Max Length: 20

'SS Diagnosis Free Text (20) 3'

Column Name: ss_diagnosis_freetxt_20_4

Column Type: varchar

Max Length: 20

'SS Diagnosis Free Text (20) 4'

Column Name: ss_diagnosis_freetxt_20_5

Column Type: varchar

Max Length: 20

'SS Diagnosis Free Text (20) 5'

Column Name: ss_diagnosis_freetxt_40_1

Column Type: varchar

Max Length: 40

'SS Diagnosis Free Text (40) 1'

Column Type: varchar

Max Length: 40

'SS Diagnosis Free Text (40) 3'

Column Name: ss_diagnosis_freetxt_40_4

Column Type: varchar

Max Length: 40

'SS Diagnosis Free Text (40) 4'

Column Name: ss_diagnosis_freetxt_40_5

Column Type: varchar

Max Length: 40

'SS Diagnosis Free Text (40) 5'

Column Name: ss_diagnosis_mult_1_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 1'

Column Name: ss_diagnosis_mult_1_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_1_code limited to 255 characters. See ss_diagnosis_mult_1_code for more information.

Column Name: ss_diagnosis_mult_1_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_1_code. See ss_diagnosis_mult_1_code for more information.

Column Name: ss_diagnosis_mult_2_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 2'

Column Name: ss_diagnosis_mult_2_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_2_code limited to 255 characters. See ss_diagnosis_mult_2_code for more information.

Column Name: ss_diagnosis_mult_2_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_2_code. See ss_diagnosis_mult_2_code for more information.

Column Name: ss_diagnosis_mult_3_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 3'

Column Name: ss_diagnosis_mult_3_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_3_code limited to 255 characters. See ss_diagnosis_mult_3_code for more information.

Column Name: ss_diagnosis_mult_3_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_3_code. See ss_diagnosis_mult_3_code for more information.

Column Name: ss_diagnosis_mult_4_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 4'

Column Name: ss_diagnosis_mult_4_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_4_code limited to 255 characters. See ss_diagnosis_mult_4_code for more information.

Column Name: ss_diagnosis_mult_4_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_4_code. See ss_diagnosis_mult_4_code for more information.

Column Name: ss_diagnosis_mult_5_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 5'

Column Name: ss_diagnosis_mult_5_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_5_code limited to 255 characters. See ss_diagnosis_mult_5_code for more information.

Column Name: ss_diagnosis_mult_5_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_5_code. See ss_diagnosis_mult_5_code for more information.

Column Name: ss_diagnosis_time_1

Column Type: varchar

Max Length: 10

Column Type: varchar

Max Length: 50

'Substance Abuse / Dependence (CSI)'

Column Name: sub_ab_dep_csi_value

Column Type: varchar

Max Length: 50

The description associated with sub_ab_dep_csi_code. See sub_ab_dep_csi_code for more information.

Column Name: sub_dep_diag

Column Type: varchar

Max Length: 150

'Substance Abuse / Dependence Diagnosis (CSI)'

Column Name: sub_dep_icd10_diag

Column Type: varchar

Max Length: 150

'Substance Abuse / Dependence Diagnosis (CSI) [ICD-10]'

Column Name: sub_dep_icd10_diag_val

Column Type: varchar

Max Length: 150

The description associated with sub_dep_icd10_diag. See sub_dep_icd10_diag for more information.

Column Name: sub_dep_icd9_diag

Column Type: varchar

Max Length: 150

Column Name: sub_dep_icd9_diag_val

Column Type: varchar

Max Length: 150

The description associated with sub_dep_icd9_diag. See sub_dep_icd9_diag for more information.

Column Name: time_of_diagnosis

Column Type: varchar

Max Length: 40

'Time Of Diagnosis'

Column Name: trauma_csi_code

Column Type: varchar

Max Length: 50

'Trauma (CSI)'

Column Name: trauma_csi_value

Column Type: varchar

Max Length: 50

The description associated with trauma_csi_code. See trauma_csi_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Diagnosis

Table Name: [SYSTEM.pce_record_mapping](#)

Table Description: This table returns information on ProviderConnect Enterprise general record mappings (e.g., Diagnosis).

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored

Column Name: external_PATID

Column Type: varchar

Max Length: 20

The client ID used in the external PCE system.

Column Name: external_RECORD_ID

Column Type: varchar

Max Length: 100

The external record ID associated with the local record mapped here.

Column Name: local_EPISODE_NUMBER

Column Type: integer

The episode number used in the local system.

Column Name: local_PATID

Column Type: varchar

Max Length: 20

The client ID used in the local system.

Column Name: local_RECORD_ID

Column Type: varchar

Max Length: 100

The local ID of the data (NOTE: If the ID contains | it will be translated to ! to store in the index)

Column Name: managing_organization_ID

Column Type: integer

The external PCE organization.

Column Name: record_type

Column Type: varchar

Max Length: 50

The type of data being mapped here

Documentation for form: Enrollment_Diagnosis

Table Name: SYSTEM.client_diagnosis_entry

Table Description: This table returns the history of client diagnoses.

Column Name: DiagnosisRecord

Column Type: integer

The 'DiagnosisRecord'

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The Episode Number

Column Name: FACILITY
Column Type: integer
The Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
The PATID

Column Name: add_prob_list_code
Column Type: varchar
Max Length: 20
The Add to Problem List Code

Column Name: add_prob_list_value
Column Type: varchar
Max Length: 40
The Add to Problem List Value

Column Name: axis_code
Column Type: varchar
Max Length: 50
The Axis Code

Column Name: axis_value
Column Type: varchar
Max Length: 50
The Axis Value

Column Name: billing_order
Column Type: varchar
Max Length: 50
The Billing Order

Column Name: classification_code
Column Type: varchar
Max Length: 50
The Classification Code

Column Name: classification_value

Column Type: varchar
Max Length: 50
The Classification Value

Column Name: clinical_search_term
Column Type: varchar
Max Length: 4096
The Clinical Search Term

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The Data Entry By Option

Column Name: data_entry_date
Column Type: date
The Data Entry Date

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The 'data_entry_source'

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The Data Entry Time
Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The Date Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The Data Entry User Name

Column Name: date_resolved
Column Type: date
The Date Resolved

Column Name: diagnosing_clinician_code
Column Type: varchar
Max Length: 20
The Diagnosing Clinician Code

Column Name: diagnosing_clinician_value

Column Type: varchar

Max Length: 40

The Diagnosing Clinician Value

Column Name: diagnosis_status_code

Column Type: varchar

Max Length: 50

The Diagnosis Status Code

Column Name: diagnosis_status_value

Column Type: varchar

Max Length: 50

The Diagnosis Status Value

Column Name: first_ever_dx_code

Column Type: varchar

Max Length: 50

Is this the first ever diagnosis?

Column Name: first_ever_dx_value

Column Type: varchar

Max Length: 50

The description for 'Is this the first ever diagnosis?'

Column Name: icd_code

Column Type: varchar

Max Length: 50

The 'icd_code'

Column Name: imo_code

Column Type: varchar

Max Length: 50

The 'imo_code'

Column Name: imo_date

Column Type: varchar

Max Length: 50

The 'imo_date'

Column Name: la_row_id

Column Type: varchar

Max Length: 50

The DOCUMENTATION la_row_id - Populated from the 'LA Provider Integration Module' field "DiagnosisCodeEntryRowID" with the LA County Unique Row ID.

Column Name: onset_date

Column Type: date

The Onset Date

Column Name: onset_time
Column Type: varchar
Max Length: 50
The Onset Time

Column Name: option_desc
Column Type: varchar
Max Length: 80
The Option Description

Column Name: option_id
Column Type: varchar
Max Length: 40
The Option Id

Column Name: pc_diag_ongoing
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Ongoing

Column Name: pc_diag_rank_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Rank Code

Column Name: pc_diag_rank_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Rank Value

Column Name: pc_diag_severity_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Severity Code

Column Name: pc_diag_severity_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Severity Value

Column Name: pc_diag_status_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Status Code

Column Name: pc_diag_status_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Status Value

Column Name: pc_diag_terminated
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Terminated

Column Name: pc_diag_type_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Type Code

Column Name: pc_diag_type_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Type Value

Column Name: pclassification_code
Column Type: varchar
Max Length: 50
The Problem Classification Code

Column Name: pclassification_value
Column Type: varchar
Max Length: 50
The Problem Classification Value

Column Name: present_on_admission_code
Column Type: varchar
Max Length: 50
The Present On Admission Code

Column Name: present_on_admission_value
Column Type: varchar
Max Length: 50
The Present On Admission Value

Column Name: ranking_code
Column Type: varchar
Max Length: 50
The Ranking Code

Column Name: ranking_value
Column Type: varchar
Max Length: 50
The Ranking Value

Column Name: remarks
Column Type: varchar
Max Length: 32000
The Remarks

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: childsub

Column Type: integer

Documentation for form: Enrollment_Diagnosis

Table Name: SYSTEM.client_enroll_diag_entry

Table Description: This table returns the history of client enrollment diagnoses.

Column Name: DiagnosisRecord

Column Type: integer

The 'DiagnosisRecord'

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: ENROLLMENT_NUMBER

Column Type: integer

The enrollment number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored. Facility

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID.

Column Name: add_prob_list_code

Column Type: varchar

Max Length: 20

The Add to Problem List Code

Column Name: add_prob_list_value

Column Type: varchar

Max Length: 40

The Add to Problem List Value

Column Name: axis_code
Column Type: varchar
Max Length: 50
The Axis Code

Column Name: axis_value
Column Type: varchar
Max Length: 50
The Axis Value

Column Name: billing_order
Column Type: varchar
Max Length: 50
The Billing Order

Column Name: classification_code
Column Type: varchar
Max Length: 50
The Classification Code

Column Name: classification_value
Column Type: varchar
Max Length: 50
The Classification Value

Column Name: clinical_search_term
Column Type: varchar
Max Length: 4096
The Clinical Search Term

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: date_resolved
Column Type: date
The Date Resolved

Column Name: diagnosing_clinician_code
Column Type: varchar
Max Length: 20
The Diagnosing Clinician Code

Column Name: diagnosing_clinician_value
Column Type: varchar
Max Length: 40
The Diagnosing Clinician Value

Column Name: diagnosis_status_code
Column Type: varchar
Max Length: 50
The Diagnosis Status Code

Column Name: diagnosis_status_value
Column Type: varchar
Max Length: 50
The Diagnosis Status Value

Column Name: first_ever_dx_code
Column Type: varchar
Max Length: 50
Is this the first ever diagnosis?

Column Name: first_ever_dx_value
Column Type: varchar
Max Length: 50
The description for 'Is this the first ever diagnosis?'

Column Name: icd_code
Column Type: varchar
Max Length: 50
The 'icd_code'

Column Name: imo_code
Column Type: varchar
Max Length: 50
The 'imo_code'

Column Name: imo_date
Column Type: varchar
Max Length: 50
The 'imo_date'

Column Name: la_row_id
Column Type: varchar
Max Length: 50
Populated from the 'LA Provider Integration Module' field "DiagnosisCodeEntryRowID" with the LA County Unique Row ID.

Column Name: onset_date
Column Type: date
The Onset Date

Column Name: onset_time
Column Type: varchar
Max Length: 50
The Onset Time

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 40
Option Id

Column Name: pc_diag_ongoing
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Ongoing

Column Name: pc_diag_rank_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Rank Code

Column Name: pc_diag_rank_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Rank Value

Column Name: pc_diag_severity_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Severity Code

Column Name: pc_diag_severity_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Severity Value

Column Name: pc_diag_status_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Status Code

Column Name: pc_diag_status_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Status Value

Column Name: pc_diag_terminated
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Terminated

Column Name: pc_diag_type_code
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Type Code

Column Name: pc_diag_type_value
Column Type: varchar
Max Length: 50
The Primary Care Diagnosis Type Value

Column Name: pclassification_code
Column Type: varchar
Max Length: 50
The Problem Classification Code

Column Name: childsub
Column Type: integer

Documentation for form: Enrollment_Diagnosis

Table Name: SYSTEM.client_enroll_diag_record

Table Description: This table returns the information stored in the 'Enrollment Diagnosis' form.

Column Name: ID
Column Type: integer

Column Name: ENROLLMENT_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: LINK_TO_HISTORIC
Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: axis_IV_eco_code
Column Type: varchar
Max Length: 5
'Axis IV: Economic'

Column Name: axis_IV_eco_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Economic Remarks'

Column Name: axis_IV_eco_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_eco_code. See axis_IV_eco_code for more information.

Column Name: axis_IV_educ_code
Column Type: varchar
Max Length: 5
'Axis IV: Educational'

Column Name: axis_IV_educ_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_educ_code. See axis_IV_educ_code for more information.

Column Name: axis_IV_edu_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Educational Remarks'

Column Name: axis_IV_health_serv_code
Column Type: varchar
Max Length: 5
'Axis IV: Health Care Services'

Column Name: axis_IV_health_serv_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Health Care Services Remarks'

Column Name: axis_IV_health_serv_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_health_serv_code. See axis_IV_health_serv_code for more information.

Column Name: axis_IV_housing_code
Column Type: varchar
Max Length: 5
'Axis IV: Housing'

Column Name: axis_IV_housing_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Housing Remarks'

Column Name: axis_IV_housing_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_housing_code. See axis_IV_housing_code for more information.

Column Name: axis_IV_legsys_code
Column Type: varchar
Max Length: 5
'Axis IV: Legal System/Crime'

Column Name: axis_IV_legsys_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Legal System/Crime Remarks'

Column Name: axis_IV_legsys_value
Column Type: varchar
Max Length: 40
The description associated with axis_IV_legsys_code. See axis_IV_legsys_code for more information.

Column Name: axis_IV_occ_code
Column Type: varchar
Max Length: 5
'Axis IV: Occupational'

Column Name: axis_IV_occ_remarks
Column Type: varchar
Max Length: 80
'Axis IV: Occupational Remarks'

Column Name: axis_IV_occ_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_occ_code. See axis_IV_occ_code for more information.

Column Name: axis_IV_other_prob_code

Column Type: varchar

Max Length: 5

'Axis IV: Other Problems'

Column Name: axis_IV_other_prob_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Other Problems Remarks'

Column Name: axis_IV_other_prob_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_other_prob_code. See axis_IV_other_prob_code for more information.

Column Name: axis_IV_prim_sup_grp_code

Column Type: varchar

Max Length: 5

'Axis IV: Primary Support Group'

Column Name: axis_IV_prim_sup_grp_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Primary Support Group Remarks'

Column Name: axis_IV_prim_sup_grp_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_prim_sup_grp_code. See axis_IV_prim_sup_grp_code for more information.

Column Name: axis_IV_soc_env_code

Column Type: varchar

Max Length: 5

'Axis IV: Social Environment'

Column Name: axis_IV_soc_env_remarks

Column Type: varchar

Max Length: 80

'Axis IV: Social Environment Remarks'

Column Name: axis_IV_soc_env_value

Column Type: varchar

Max Length: 40

The description associated with axis_IV_soc_env_code. See axis_IV_soc_env_code for more information.

Column Name: axis_V_gaf_code

Column Type: varchar

Max Length: 5

'Diagnosis - Axis V Current GAF Rating'

Column Name: axis_V_gaf_value

Column Type: varchar

Max Length: 90

The description associated with axis_V_gaf_code. See axis_V_gaf_code for more information.

Column Name: cgas_code

Column Type: varchar

Max Length: 20

'Children Global Assessment Scale (CGAS)'

Column Name: cgas_value

Column Type: varchar

Max Length: 40

The description associated with cgas_code. See cgas_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: date_of_diagnosis
Column Type: date
'Date Of Diagnosis'

Column Name: dc03_code
Column Type: varchar
Max Length: 20
'Diagnostic Classification Infancy and Early Childhood (DC03)'

Column Name: dc03_value
Column Type: varchar
Max Length: 40
The description associated with dc03_code. See dc03_code for more information.

Column Name: diagnosis_type_code
Column Type: varchar
Max Length: 5
'Type Of Diagnosis'

Column Name: diagnosis_type_value
Column Type: varchar
Max Length: 40
The description associated with diagnosis_type_code. See diagnosis_type_code for more information.

Column Name: drg10_code
Column Type: varchar
Max Length: 10
'DRG Code (ICD-10)'

Column Name: drg10_value
Column Type: varchar
Max Length: 50
The description associated with drg10_code. See drg10_code for more information.

Column Name: drg_code
Column Type: varchar
Max Length: 10
'DRG Code'

Column Name: drg_value
Column Type: varchar
Max Length: 50
The description associated with drg_code. See drg_code for more information.

Column Name: estimated_discharge_date
Column Type: date
'Estimated Discharge Date'

Column Name: gen_med_csi_code
Column Type: varchar
Max Length: 50
'General Medical Condition Summary Code (CSI)'

Column Name: gen_med_csi_value
Column Type: varchar
Max Length: 200
The description associated with gen_med_csi_code. See gen_med_csi_code for more information.

Column Name: la_diagnosis_unique_id
Column Type: varchar
Max Length: 40
LA diagnosis unique identifier.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: prev_12_mos_highlev_code
Column Type: varchar
Max Length: 5
'GAF - Highest Level Last 12 Months'

Column Name: prev_12_mos_highlev_value
Column Type: varchar
Max Length: 90
The description associated with prev_12_mos_highlev_code. See prev_12_mos_highlev_code for more information.

Column Name: prev_12_mos_lowlev_code
Column Type: varchar
Max Length: 5
'GAF - Lowest Level Last 12 Months'

Column Name: prev_12_mos_lowlev_value
Column Type: varchar
Max Length: 90
The description associated with prev_12_mos_lowlev_code. See prev_12_mos_lowlev_code for more information.

Column Name: prognosis
Column Type: varchar
Max Length: 4096
'Prognosis'

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_20_code. See ss_diagnosis_dict_20_code for more information.

Column Name: ss_diagnosis_dict_2_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 2'

Column Name: ss_diagnosis_dict_2_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_2_code. See ss_diagnosis_dict_2_code for more information.

Column Name: ss_diagnosis_dict_3_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 3'

Column Name: ss_diagnosis_dict_3_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_3_code. See ss_diagnosis_dict_3_code for more information.

Column Name: ss_diagnosis_dict_4_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 4'

Column Name: ss_diagnosis_dict_4_value

Column Type: varchar

Max Length: 40

The description associated with ss_diagnosis_dict_4_code. See ss_diagnosis_dict_4_code for more information.

Column Name: ss_diagnosis_dict_5_code

Column Type: varchar

Max Length: 20

'SS Diagnosis Dictionary 5'

Column Name: ss_diagnosis_dict_5_value

Column Type: varchar

Max Length: 40

The description associated with `ss_diagnosis_dict_5_code`. See `ss_diagnosis_dict_5_code` for more information.

Column Name: `ss_diagnosis_dict_6_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 6'

Column Name: `ss_diagnosis_dict_6_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_6_code`. See `ss_diagnosis_dict_6_code` for more information.

Column Name: `ss_diagnosis_dict_7_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 7'

Column Name: `ss_diagnosis_dict_7_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_7_code`. See `ss_diagnosis_dict_7_code` for more information.

Column Name: `ss_diagnosis_dict_8_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 8'

Column Name: `ss_diagnosis_dict_8_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_8_code`. See `ss_diagnosis_dict_8_code` for more information.

Column Name: `ss_diagnosis_dict_9_code`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Dictionary 9'

Column Name: `ss_diagnosis_dict_9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `ss_diagnosis_dict_9_code`. See `ss_diagnosis_dict_9_code` for more information.

Column Name: `ss_diagnosis_freetxt_20_1`

Column Type: `varchar`

Max Length: 20

'SS Diagnosis Free Text (20) 1'

Column Name: ss_diagnosis_freetxt_20_2

Column Type: varchar

Max Length: 20

'SS Diagnosis Free Text (20) 2'

Column Type: varchar

Max Length: 40

'SS Diagnosis Free Text (40) 5'

Column Name: ss_diagnosis_mult_1_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 1'

Column Name: ss_diagnosis_mult_1_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_1_code limited to 255 characters. See ss_diagnosis_mult_1_code for more information.

Column Name: ss_diagnosis_mult_1_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_1_code. See ss_diagnosis_mult_1_code for more information.

Column Name: ss_diagnosis_mult_2_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 2'

Column Name: ss_diagnosis_mult_2_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_2_code limited to 255 characters. See ss_diagnosis_mult_2_code for more information.

Column Name: ss_diagnosis_mult_2_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_2_code. See ss_diagnosis_mult_2_code for more information.

Column Name: ss_diagnosis_mult_3_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 3'

Column Name: ss_diagnosis_mult_3_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_3_code limited to 255 characters. See ss_diagnosis_mult_3_code for more information.

Column Name: ss_diagnosis_mult_3_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_3_code. See ss_diagnosis_mult_3_code for more information.

Column Name: ss_diagnosis_mult_4_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 4'

Column Name: ss_diagnosis_mult_4_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_4_code limited to 255 characters. See ss_diagnosis_mult_4_code for more information.

Column Name: ss_diagnosis_mult_4_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_4_code. See ss_diagnosis_mult_4_code for more information.

Column Name: ss_diagnosis_mult_5_code

Column Type: varchar

Max Length: 255

'SS Diagnosis Multiple Select Dictionary 5'

Column Name: ss_diagnosis_mult_5_shval

Column Type: varchar

Max Length: 255

The description associated with ss_diagnosis_mult_5_code limited to 255 characters. See ss_diagnosis_mult_5_code for more information.

Column Name: ss_diagnosis_mult_5_value

Column Type: varchar

Max Length: 4096

The description associated with ss_diagnosis_mult_5_code. See ss_diagnosis_mult_5_code for more information.

Column Name: ss_diagnosis_time_1

Column Type: varchar

Max Length: 10

'SS Diagnosis Time 1'

Column Name: ss_diagnosis_time_2

Column Type: varchar

Max Length: 10

'SS Diagnosis Time 2'

Column Name: ss_diagnosis_time_3

Column Type: varchar

Max Length: 10

'SS Diagnosis Time 3'

Column Name: ss_diagnosis_time_4

Column Type: varchar

Max Length: 10

'SS Diagnosis Time 4'

Column Name: ss_diagnosis_time_5

Column Type: varchar

Max Length: 10

'SS Diagnosis Time 5'

Column Name: ss_diag_scrolling_text_1

Column Type: varchar

Max Length: 32768

'SS Diagnosis Scrolling Text 1'

Column Name: ss_diag_scrolling_text_2

Column Type: varchar

Max Length: 32768

'SS Diagnosis Scrolling Text 2'

Column Name: ss_diag_scrolling_text_3

Column Type: varchar

Max Length: 32768

'SS Diagnosis Scrolling Text 3'

Column Name: ss_diag_scrolling_text_4

Column Type: varchar

Max Length: 32768

'SS Diagnosis Scrolling Text 4'

Column Name: ss_diag_scrolling_text_5

Column Type: varchar

Max Length: 32768

'SS Diagnosis Scrolling Text 5'

Column Name: sub_ab_dep_csi_code

Column Type: varchar

Max Length: 50

'Substance Abuse / Dependence (CSI)'

Column Name: sub_ab_dep_csi_value

Column Type: varchar

Max Length: 50

The description associated with sub_ab_dep_csi_code. See sub_ab_dep_csi_code for more information.

Column Name: sub_dep_diag

Column Type: varchar

Max Length: 150

'Substance Abuse / Dependence Diagnosis (CSI)'

Column Name: sub_dep_icd9_diag

Column Type: varchar

Max Length: 150

Column Name: time_of_diagnosis
Column Type: varchar
Max Length: 40
'Time Of Diagnosis'

Column Name: trauma_csi_code
Column Type: varchar
Max Length: 50
'Trauma (CSI)'

Column Name: trauma_csi_value
Column Type: varchar
Max Length: 50
The description associated with trauma_csi_code. See trauma_csi_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Delete_Last_Movement

Table Name: SYSTEM.audit_deleted_mvmt

Table Description: Delete Last Movement

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code where this is being defined in.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID.

Column Name: staff_name
Column Type: varchar
Max Length: 40
Deleted movement's associated staff name.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: STAFFID
Column Type: varchar
Max Length: 40
The staff ID associated with the data.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
Data Control Identifier.

Column Name: deleted_by_user
Column Type: varchar
Max Length: 20
The user who deleted the movement.

Column Name: deleted_date
Column Type: date
Date of delete.

Column Name: deleted_time
Column Type: varchar
Max Length: 50
Time of delete.

Column Name: index1
Column Type: varchar
Max Length: 50
Deleted movement unique ID
Column Name: index2
Column Type: varchar
Max Length: 50
Deletion date and time (julian)

Column Name: mvmt_date
Column Type: date
Deleted movement's date.

Column Name: mvmt_time
Column Type: varchar
Max Length: 10
Deleted movement's time.

Column Name: mvmt_type_code
Column Type: varchar
Max Length: 5

Deleted movement's type code.

Column Name: mvmt_type_value

Column Type: varchar

Max Length: 20

Deleted movement's type value.

Column Name: patient_name

Column Type: varchar

Max Length: 100

Client Name

Column Name: program_code

Column Type: varchar

Max Length: 10

Deleted movement's program code.

Column Name: program_value

Column Type: varchar

Max Length: 50

Deleted movement's program value.

Column Name: treatment_setting_code

Column Type: varchar

Max Length: 3

Deleted movement's treatment setting code.

Column Name: treatment_setting_value

Column Type: varchar

Max Length: 15

Deleted movement's treatment setting value.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Delete_Last_Movement

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM
Column Type: varchar
Max Length: 10
The program code in which the patient is active in.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODENUMBER
Column Type: integer
'Episode Number'

Documentation for form: Recurring_Client_Charge_Input

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254
Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar
Max Length: 40
The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Recurring_Client_Charge_Input

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Recurring_Client_Charge_Input

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge

Column Type: numeric

The full charge for the service.

Column Name: total_payments

Column Type: numeric

Total payments for service

Column Name: date_charge_closed

Column Type: date

Date the service was closed.

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Recurring_Client_Charge_Input

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.
Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service

Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code
Column Type: varchar
Max Length: 15
'Program Type' for the program_code of the service.

Column Name: program_X_location_value
Column Type: varchar
Max Length: 40
The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 40
The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value
Column Type: varchar
Max Length: 40
The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name
Column Type: varchar
Max Length: 40
The name of the PATID of the service.

Column Name: age_on_date_of_service_
Column Type: numeric
The client's age at the time of service.
Column Name: appt_site_name
Column Type: varchar
Max Length: 40
The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC
Column Type: varchar
Max Length: 40
The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV
Column Type: varchar
Max Length: 100
The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID
Column Type: varchar
Max Length: 20
The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number
Column Type: varchar
Max Length: 15
The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid
Column Type: varchar
Max Length: 20
Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50

The 'Appointment End Time' related to this service.

Column Name: appt_group_id

Column Type: varchar

Max Length: 50

The 'Group #' related to this service.

Column Name: apt_group_name

Column Type: varchar

Max Length: 40

The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id

Column Type: varchar

Max Length: 50

The 'Appointment Site' related to this service.

Column Name: appt_start_time

Column Type: varchar

Max Length: 50

The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val

Column Type: varchar

Max Length: 50

The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code

Column Type: varchar

Max Length: 50

'Service Status'.

Column Name: billing_status_value

Column Type: varchar

Max Length: 50

The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units

Column Type: numeric

'Cal Billing Units'

Column Name: confidential_service_code

Column Type: varchar

Max Length: 50

'Confidential Service' from Avatar PH.

Column Name: confidential_service_val

Column Type: varchar

Max Length: 50

The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration

Column Type: numeric

'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member

Column Type: varchar

Max Length: 15

The 'Co-Practitioner' of the service.

Column Name: data_control_identifier

Column Type: varchar

Max Length: 40

'Data Control Identifier'.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_accident

Column Type: date

'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date

Date To Bill Roll-Up Service.

Column Name: delay_reason_code

Column Type: varchar

Max Length: 15

'Delay Reason Code '.

Column Name: delay_reason_value

Column Type: varchar

Max Length: 50

The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc

Column Type: varchar

Max Length: 50

The client's age in days, months and years at the time of service.

Column Name: discipline_code

Column Type: varchar

Max Length: 255

'Discipline'.

Column Name: discipline_value

Column Type: varchar

Max Length: 255

The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code

Column Type: varchar

Max Length: 255

'Evidence Based Practices'

Column Name: ebps_sh_val

Column Type: varchar

Max Length: 255

'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value

Column Type: varchar

Max Length: 4096

'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code

Column Type: varchar

Max Length: 50

'Emergency Indicator'.

Column Name: emergency_ind_value

Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes
Column Type: varchar
Max Length: 32766
'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.
Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date
Column Type: date
The date the service was first entered into the system.

Column Name: orig_entry_option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 50
The time the service was first entered into the system.

Column Name: orig_entry_user
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_user_id
Column Type: varchar
Max Length: 50
The user ID that first entered the service into the system.

Column Name: original_tx_code
Column Type: varchar
Max Length: 10
'Original Scheduled Service'.

Column Name: original_tx_value
Column Type: varchar
Max Length: 40
The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date
Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor
Column Type: varchar
Max Length: 40
'Primary Guarantor'.

Column Name: prior_placement_date
Column Type: date
'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.
Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value

Column Type: varchar

Max Length: 255

The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS

Column Type: varchar

Max Length: 40

The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp

the End of Service as UTC date and time.

Column Name: service_start_utc

Column Type: timestamp

the Start of Service as UTC date and time.

Column Name: service_status_code

Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Recurring_Client_Charge_Input

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40

The description associated with `medical_diagnosis2_code`. See `medical_diagnosis2_code` for more information.

Column Name: `medical_diag_1_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: `medical_diag_1_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_1_icd10_code`. See `medical_diag_1_icd10_code` for more information.

Column Name: `medical_diag_1_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: `medical_diag_1_icd9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_1_icd9_code`. See `medical_diag_1_icd9_code` for more information.

Column Name: `medical_diag_1_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: `medical_diag_2_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: `medical_diag_2_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_2_icd10_code`. See `medical_diag_2_icd10_code` for more information.

Column Name: `medical_diag_2_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: `medical_diag_2_icd9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_2_icd9_code`. See `medical_diag_2_icd9_code` for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

'Referring Practitioner Name'

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider Code'

Column Name: referring_provider_name

Column Type: varchar

Max Length: 50

'Referring Provider Name'

Column Name: start_time

Column Type: varchar

Max Length: 10

'Service Start Time (60021)'

Column Name: units_of_service

Column Type: numeric

'Units Of Service (10014)'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date

The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability
Column Type: numeric
The guarantor's liability.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number assigned to a client's service.

Column Name: guarantor_total_payments
Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date
Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc
Column Type: varchar
Max Length: 50
This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar
Max Length: 50
'Authorization Number'

Column Name: billing_units
Column Type: numeric
'Billing Units'

Column Name: claimed_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number
Column Type: varchar
Max Length: 50
'Claimed Authorization Number'

Column Name: date_of_svc_close
Column Type: date
'Date of Service Closed'

Column Name: re_bill_claim_number
Column Type: varchar
Max Length: 50
This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance
Column Type: double
Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level
Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar

Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value
Column Type: varchar
Max Length: 40
The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge

Column Type: numeric

The full charge for the service.

Column Name: total_payments

Column Type: numeric

Total payments for service

Column Name: date_charge_closed

Column Type: date

Date the service was closed.

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code

Column Type: varchar

Max Length: 15

The program of the service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name of the PROVIDER_ID of the service.

Column Name: date_of_service
Column Type: date
The date of the service.

Column Name: billable_value
Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier

Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.
Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code

Column Type: varchar

Max Length: 5

Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value

Column Type: varchar

Max Length: 10

The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi

Column Type: bit

Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 100

The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes
Column Type: varchar
Max Length: 32766
'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration

Column Type: integer

'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner'.

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

The name of the referring_practitioner_code.

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider'.

Column Name: referring_provider_name

Column Type: varchar

Max Length: 50

The name of the referring_provider_code.

Column Name: related_causes_code

Column Type: varchar

Max Length: 50

'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value

Column Type: varchar

Max Length: 255

The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS

Column Type: varchar

Max Length: 40

The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp

the End of Service as UTC date and time.

Column Name: service_start_utc

Column Type: timestamp

the Start of Service as UTC date and time.

Column Name: service_status_code

Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1

Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Diagnosis_Entry)

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode number.

Column Name: total_closed_charges

Column Type: numeric

Total dollar amount for all closed services in the episode.

Column Name: total_open_charges

Column Type: numeric

Total dollar amount for all open services in the episode.

Column Name: total_payments

Column Type: numeric

Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance

Column Type: numeric

Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date

Column Type: date

The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Diagnosis_Entry)

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc
Column Type: varchar
Max Length: 50
This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number
Column Type: varchar
Max Length: 50
'Authorization Number'

Column Name: billing_units
Column Type: numeric
'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar
Max Length: 50
This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number
Column Type: varchar
Max Length: 50
'Claimed Authorization Number'

Column Name: date_of_svc_close
Column Type: date
'Date of Service Closed'

Column Name: re_bill_claim_number
Column Type: varchar
Max Length: 50
This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance
Column Type: double
Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level
Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar
Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value
Column Type: varchar
Max Length: 40
The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form:

[Recurring_Client_Charge_Input_\(Diagnosis_Entry\)](#)

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service
Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Diagnosis_Entry)

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_accident

Column Type: date

'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date

Date To Bill Roll-Up Service.

Column Name: delay_reason_code

Column Type: varchar

Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar

Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.
Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the `tooth_surface_code`. See `tooth_surface_code` for more information.

Column Name: `total_duration_crisis_svc`

Column Type: `varchar`

Max Length: 40

Total duration if 'Service Code Type' of `SERVICE_CODE` is "Crisis".

Column Name: `total_duration_other_svc`

Column Type: `varchar`

Max Length: 40

Total duration if 'Service Code Type' of `SERVICE_CODE` is "Other".

Column Name: `transferred_service`

Column Type: `varchar`

Max Length: 10

Is this a transfer service.

Column Name: `treatment_service_code`

Column Type: `varchar`

Max Length: 50

'Treatment Service' for the `program_code` of the service.

Column Name: `treatment_service_value`

Column Type: `varchar`

Max Length: 50

The description for the `treatment_service_code`. See `treatment_service_code` for more information.

Column Name: `units_of_service`

Column Type: `numeric`

The units of the service.

Column Name: `user_row_access_code`

Column Type: `integer`

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: `v_deleted_service_value`

Column Type: `varchar`

Max Length: 40

The description for the `deleted_service_code`. See `deleted_service_code` for more information.

Documentation for form:

Recurring_Client_Charge_Input_(Diagnosis_Entry)

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar

Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

[Recurring_Client_Charge_Input_\(Charge_Fee_Access_and_Diagnosis_Entry\)](#)

Table Name: [SYSTEM.billing_episode_totals](#)

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access_and_Diagnosis_Entry)

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc
Column Type: varchar
Max Length: 50
This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number
Column Type: varchar
Max Length: 50
'Authorization Number'

Column Name: billing_units
Column Type: numeric
'Billing Units'

Column Name: claimed_CER_uniqueid
Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form:

[Recurring_Client_Charge_Input_\(Charge_Fee_Access_and_Diagnosis_Entry\)](#)

Table Name: [SYSTEM.billing_tx_charge_totals](#)

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.
Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access_and_Diagnosis_Entry)

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code

Column Type: varchar

Max Length: 15

The program of the service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15

The practitioner ID of the service.

Column Name: duration

Column Type: numeric

The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.
Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.
Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code

Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_accident

Column Type: date

'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date

Date To Bill Roll-Up Service.

Column Name: delay_reason_code

Column Type: varchar

Max Length: 15

'Delay Reason Code '.

Column Name: delay_reason_value

Column Type: varchar

Max Length: 50

The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc

Column Type: varchar

Max Length: 50

The client's age in days, months and years at the time of service.

Column Name: discipline_code

Column Type: varchar

Max Length: 255

'Discipline'.

Column Name: discipline_value

Column Type: varchar

Max Length: 255

The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code

Column Type: varchar

Max Length: 255

'Evidence Based Practices'

Column Name: ebps_sh_val

Column Type: varchar

Max Length: 255

'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value

Column Type: varchar

Max Length: 4096

'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code

Column Type: varchar

Max Length: 50

'Emergency Indicator'.

Column Name: emergency_ind_value

Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code

Column Type: varchar

Max Length: 5

Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value

Column Type: varchar

Max Length: 10

The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi

Column Type: bit

Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code

Column Type: varchar

Max Length: 5

Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration

Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the `tooth_surface_code`. See `tooth_surface_code` for more information.

Column Name: `total_duration_crisis_svc`

Column Type: `varchar`

Max Length: 40

Total duration if 'Service Code Type' of `SERVICE_CODE` is "Crisis".

Column Name: `total_duration_other_svc`

Column Type: `varchar`

Max Length: 40

Total duration if 'Service Code Type' of `SERVICE_CODE` is "Other".

Column Name: `transferred_service`

Column Type: `varchar`

Max Length: 10

Is this a transfer service.

Column Name: `treatment_service_code`

Column Type: `varchar`

Max Length: 50

'Treatment Service' for the `program_code` of the service.

Column Name: `treatment_service_value`

Column Type: `varchar`

Max Length: 50

The description for the `treatment_service_code`. See `treatment_service_code` for more information.

Column Name: `units_of_service`

Column Type: `numeric`

The units of the service.

Column Name: `user_row_access_code`

Column Type: `integer`

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: `v_deleted_service_value`

Column Type: `varchar`

Max Length: 40

The description for the `deleted_service_code`. See `deleted_service_code` for more information.

Documentation for form:

Recurring_Client_Charge_Input_(Charge_Fee_Access_and_Diagnosis_Entry)

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service

Column Type: varchar

Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1

Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Women's_Health_History

Table Name: SYSTEM.client_condition_delivery

Table Description: This table returns data stored by the 'Woman Health History' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: birth_weight
Column Type: varchar

Max Length: 20
The delivery birth weight

Column Name: DEL_uniqueid
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: Data_Entry_By_Login
Column Type: varchar
Max Length: 40
The name of the user that last updated this row of data.

Column Name: Data_Entry_By_Option
Column Type: varchar
Max Length: 40
The name of the user that last updated this row of data.

Column Name: Data_Entry_Date
Column Type: date
The date this row of data was last updated.

Column Name: Data_Entry_Time
Column Type: varchar
Max Length: 10
The time this row of data was last updated.

Column Name: Data_Entry_User_Id
Column Type: varchar
Max Length: 40
The user ID that last updated this row of data.

Column Name: delivery_date
Column Type: date
The date of delivery.

Column Name: delivery_method
Column Type: varchar
Max Length: 20
The method of delivery.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated to the pregnancy condition.

Column Name: FACILITY
Column Type: integer
The system code the client is defined in.

Column Name: Option_Desc

Column Type: varchar
Max Length: 80
The description of the option that last updated the row of data.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The ID of the form that last updated the row of data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client's ID.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated this row of data.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: delivery_outcome_code
Column Type: varchar
Max Length: 50
Delivery Outcome Code

Column Name: delivery_outcome_value
Column Type: varchar
Max Length: 50
Delivery Outcome Value

Column Name: ethnicity_code
Column Type: varchar
Max Length: 32000
Ethnicity code

Column Name: ethnicity_value
Column Type: varchar
Max Length: 32000
Race value

Column Name: race_code
Column Type: varchar
Max Length: 32000
Race code

Column Name: race_value
Column Type: varchar
Max Length: 32000
Race value

Documentation for form: Women's_Health_History

Table Name: SYSTEM.client_condition_preg

Table Description: This table returns data stored by the 'Woman Health History' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: abortions
Column Type: varchar
Max Length: 40
The client's abortion(s) value.

Column Name: abortions_value
Column Type: varchar
Max Length: 50
Abortion(s)

Column Name: assessment_date
Column Type: date
The client's assessment date.

Column Name: been_pregnant
Column Type: varchar
Max Length: 10

Has the client been pregnant.

Column Name: been_pregnant_value

Column Type: varchar

Max Length: 50

Have you ever been pregnant?

Column Name: contraception

Column Type: varchar

Max Length: 40

The client's contraception used.

Column Name: contraception_value

Column Type: varchar

Max Length: 50

The client's contraception used.

Column Name: Data_Entry_By_Login

Column Type: varchar

Max Length: 40

The name of the user that last updated this row of data.

Column Name: Data_Entry_By_Option

Column Type: varchar

Max Length: 40

The name of the user that last updated this row of data.

Column Name: Data_Entry_Date

Column Type: date

The date this row of data was last updated.

Column Name: Data_Entry_Time

Column Type: varchar

Max Length: 10

The time this row of data was last updated.

Column Name: Data_Entry_User_Id

Column Type: varchar

Max Length: 40

The user ID that last updated this row of data.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated to the pregnancy condition.

Column Name: expected_due_date

Column Type: date

The client's expected due date.

Column Name: FACILITY

Column Type: integer
The system code the client is defined in.

Column Name: gravida
Column Type: varchar
Max Length: 40
The client's gravida value.

Column Name: initial_treatment_date
Column Type: date
The date the client was initially seen in regards to their pregnancy.

Column Name: lactating_status
Column Type: varchar
Max Length: 40
The client's lactating status.

Column Name: lactating_status_value
Column Type: varchar
Max Length: 50
Lactating Status

Column Name: last_menstrual_date
Column Type: date
The date of the client's last menstruation.

Column Name: living_children
Column Type: varchar
Max Length: 40
The client's living childred.

Column Name: Imp_date
Column Type: date
The client's Imp date.

Column Name: Imp_frequency
Column Type: varchar
Max Length: 10
The client's last know menstrual period frequency measurement code.

Column Name: Imp_frequency_value
Column Type: varchar
Max Length: 50
The client's last know menstrual period frequency measurement value.

Column Name: Imp_unit
Column Type: integer
The client's last know menstrual period value.

Column Name: Imp_unknown

Column Type: integer

The client's Imp flag.

Column Name: Imp_unknown_value

Column Type: varchar

Max Length: 50

The client's Imp flag value.

Column Name: menarche

Column Type: varchar

Max Length: 40

The client's menarche value.

Column Name: menopause

Column Type: varchar

Max Length: 40

The client's menopause code.

Column Name: menopause_value

Column Type: varchar

Max Length: 50

The client's menopause value.

Column Name: miscarriage

Column Type: varchar

Max Length: 40

Have you ever had a miscarriage code.

Column Name: miscarriage_value

Column Type: varchar

Max Length: 50

Have you ever had a miscarriage value.

Column Name: notes

Column Type: varchar

Max Length: 32000

The client's notes.

Column Name: number_of_abortions

Column Type: varchar

Max Length: 40

Number of Abortion(s)

Column Name: number_of_miscarriages

Column Type: varchar

Max Length: 40

Number of Miscarriages

Column Name: onset_age

Column Type: integer

The client's onset age.

Column Name: Option_Desc

Column Type: varchar

Max Length: 80

The description of the option that last updated the row of data.

Column Name: Option_Id

Column Type: varchar

Max Length: 20

The ID of the form that last updated the row of data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client's ID.

Column Name: PRG_uniqueid

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: para

Column Type: varchar

Max Length: 40

The client's to term deliveries.

Column Name: preg_end_date

Column Type: date

The client's pregnancy end date, if applicable.

Column Name: preg_start_date

Column Type: date

The client's pregnancy start date.

Column Name: pregnant_status

Column Type: varchar

Max Length: 40

The client's current pregnancy status code.

Column Name: pregnant_status_value

Column Type: varchar

Max Length: 50

The client's current pregnancy status value.

Column Name: premenstrual_symptoms

Column Type: varchar

Max Length: 40

The client's premenstrual symptoms.

Column Name: premenstrual_sympto_value
Column Type: varchar
Max Length: 50
Premenstrual Symptoms

Column Name: std
Column Type: varchar
Max Length: 40
The client's STDs.

Column Name: std_value
Column Type: varchar
Max Length: 50
Have you ever been treated for a sexually transmitted disease?

Column Name: sexually_active
Column Type: varchar
Max Length: 10
Is client sexually active.

Column Name: sexually_active_value
Column Type: varchar
Max Length: 50
Sexually Active

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated this row of data.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_last_mammogram
Column Type: date
Date of Last Mammogram

Column Name: date_of_last_pap
Column Type: date
Date Of Last PAP

Column Name: date_of_prenatal_care
Column Type: date
Date of prenatal care (at other facility)

Column Name: ectopic_pregnancy_code
Column Type: varchar
Max Length: 50
Have you ever had an ectopic pregnancy?

Column Name: ectopic_pregnancy_value
Column Type: varchar
Max Length: 50
'Have you ever had an ectopic pregnancy?' value

Column Name: hpv_vaccine_code
Column Type: varchar
Max Length: 50
Received HPV Vaccine?

Column Name: hpv_vaccine_value
Column Type: varchar
Max Length: 50
'Received HPV Vaccine?' value

Column Name: la_pregnancy_unique_id
Column Type: varchar
Max Length: 50
LA Provider Integration pointer associated with this row of data.

Column Name: mammogram_performing
Column Type: varchar
Max Length: 50
Performing Provider/Site

Column Name: mammogram_results_code
Column Type: varchar
Max Length: 50
Results

Column Name: mammogram_results_value

Column Type: varchar
Max Length: 50
'Results' value

Column Name: pap_performing
Column Type: varchar
Max Length: 50
Performing Provider/Site

Column Name: pap_results_code
Column Type: varchar
Max Length: 50
Results

Column Name: pap_results_value
Column Type: varchar
Max Length: 50
'Results' value

Column Name: prenatal_care_code
Column Type: varchar
Max Length: 50
Have you started prenatal care at another facility?

Column Name: prenatal_care_value
Column Type: varchar
Max Length: 50
'Have you started prenatal care at another facility?' value

Column Name: ss_whh_date_1

Column Name: ss_whh_time_8
Column Type: varchar

Max Length: 50
SS Women's Health History Time 8

Column Name: ss_whh_time_9
Column Type: varchar
Max Length: 50
SS Women's Health History Time 9

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Women's_Health_History

Table Name: SYSTEM.patient_current_demographics

Table Description: Patient Current Demographics

Column Name: patient_current_demographics
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: date_of_birth
Column Type: date
Patient Date of birth

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
Patient Ethnic origin

Column Name: patient_add_city
Column Type: varchar
Max Length: 40
Patient address city

Column Name: patient_add_county_code
Column Type: varchar
Max Length: 5
Patient address county

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient home phone

Column Name: patient_name
Column Type: varchar
Max Length: 100
Patient Name

Column Name: patient_add_state_code
Column Type: varchar
Max Length: 10
Patient address state code

Column Name: patient_add_street_1
Column Type: varchar
Max Length: 40
Patient street address 1

Column Name: patient_add_street_2
Column Type: varchar
Max Length: 40
Patients address street 2

Column Name: patient_add_zipcode
Column Type: varchar
Max Length: 60
Patients address zipcode

Column Name: patient_sex_code
Column Type: varchar
Max Length: 5
Patients sex

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: patient_ssn
Column Type: varchar
Max Length: 15
Patient's social security number

Column Name: religion_code
Column Type: varchar
Max Length: 20
Patient's religion code

Column Name: marital_status_code
Column Type: varchar
Max Length: 15
Patient's marital status

Column Name: patient_work_phone
Column Type: varchar
Max Length: 60
Patient's work phone

Column Name: patient_maiden_name
Column Type: varchar
Max Length: 40
Patient's maiden name

Column Name: race_code
Column Type: varchar
Max Length: 20
Patient's race code

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility chart number

Column Name: patient_place_of_birth
Column Type: varchar
Max Length: 40
Patient's place of birth

Column Name: patient_sex_value
Column Type: varchar
Max Length: 40
Patient's sex value

Column Name: ethnic_origin_value
Column Type: varchar
Max Length: 255
Ethnic Origin

Column Name: religion_value
Column Type: varchar
Max Length: 255
Patient's Religion

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Patient's Marital Status

Column Name: race_value
Column Type: varchar

Column Type: varchar

Max Length: 40

The description associated with rec_mil_va_ben_code. See rec_mil_va_ben_code for more information.

Column Name: other_benefits_code

Column Type: varchar

Max Length: 5

'Other Benefits'

Column Name: other_benefits_value

Column Type: varchar

Max Length: 40

The description associated with other_benefits_code. See other_benefits_code for more information.

Column Name: bho_code

Column Type: varchar

Max Length: 5

'Behavioral Health Organization'

Column Name: bho_value
Column Type: varchar
Max Length: 40
The description associated with bho_code. See bho_code for more information.

Column Name: mco_code
Column Type: varchar
Max Length: 5
'Managed Care Organization'

Column Name: mco_value
Column Type: varchar
Max Length: 40
The description associated with mco_code. See mco_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: fin_invest_eff_date
Column Type: date
'Financial Investigation Effective Date'

Column Name: number_of_dependents
Column Type: varchar
Max Length: 10
'Number Of Dependents'

Column Name: value_of_allowable_assets
Column Type: varchar
Max Length: 12
'Value Of Allowable Assets'

Column Name: annual_valid_expenses
Column Type: varchar
Max Length: 12
'Annual Valid Expenses'

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_offset

Column Type: numeric

The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The form the service was last edited on.

Column Name: data_entry_time_j

Column Type: time

The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

The time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

The short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the 'User ID'

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: family_size

Column Type: integer

'Family Size'

Column Name: program_code

Column Type: varchar

Max Length: 10

The program code information associated with the 'SYSTEM.billing_tx_history' table.

Column Name: program_shval

Column Type: varchar

Max Length: 255

The description associated with program_code limited to 255 characters. See program_code for more information.

Column Name: program_val

Column Type: varchar

Max Length: 4096

The description associated with program_code limited to 4096 characters. See program_code for more information.

Column Name: sliding_fee_family_size

Column Type: varchar

Max Length: 50

'Sliding Fee Family Size'

Column Name: sliding_fee_fmsizerec_code

Column Type: varchar

Max Length: 50

Divide Sliding Fee Scale Amount by Number of Family Members Receiving Services

Column Name: sliding_fee_fmsizerec_num

Column Type: varchar

Max Length: 50

Sliding Fee Scale - Number of Family Members Receiving Services

Column Name: sliding_fee_fmsizerec_value

Column Type: varchar

Max Length: 40

The description associated with the column 'sliding_fee_fmsizerec_code'.

Column Name: sliding_fee_income

Column Type: numeric

'Sliding Fee Income'

Column Name: sliding_fee_num_of_depend

Column Type: integer

'Sliding Fee Number Of Dependents'

Documentation for form: Client_Enrollment

Table Name: SYSTEM.client_enrollment

Table Description: Client Enrollment Information

Column Name: ID

Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description'.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored. FACILITY

Column Name: JOINTOEnrollment
Column Type: integer
'JOINTOEnrollment'

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The username that last updated the row.

Column Name: end_date
Column Type: date
'Enrollment End Date'.

Column Name: start_date
Column Type: date
'Enrollment Start Date'.

Column Name: type_code
Column Type: varchar
Max Length: 50
'Enrollment Type'.

Column Name: type_value
Column Type: varchar
Max Length: 50
The description associated with type_code. See type_value for more information.

Documentation for form: Client_Charge_Input

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments

Column Type: numeric

Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance

Column Type: numeric

Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date

Column Type: date

The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Client_Charge_Input

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge

Column Type: numeric

The full charge for the service.

Column Name: total_payments

Column Type: numeric

Total payments for service

Column Name: date_charge_closed

Column Type: date

Date the service was closed.

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar

Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name of the PROVIDER_ID of the service.

Column Name: date_of_service
Column Type: date
The date of the service.

Column Name: billable_value
Column Type: varchar
Max Length: 20
The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state
Column Type: varchar
Max Length: 40
'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code
Column Type: varchar
Max Length: 40
'Location' for the program_code of the service.

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 15
'RRG' for the program_code of the service.

Column Name: program_X_address_street
Column Type: varchar
Max Length: 40
'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 40
'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 15
'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code
Column Type: varchar
Max Length: 15
'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar

Max Length: 32768

'Add-On Notes'.

Column Name: add_svc_info_code

Column Type: varchar

Max Length: 50

'Additional Service Information'.

Column Name: add_svc_info_shval

Column Type: varchar

Max Length: 255

The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value

Column Type: varchar

Max Length: 4096

The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program

Column Type: varchar

Max Length: 10

The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time

Column Type: varchar

Max Length: 50

The 'Appointment End Time' related to this service.

Column Name: appt_group_id

Column Type: varchar

Max Length: 50

The 'Group #' related to this service.

Column Name: apt_group_name

Column Type: varchar

Max Length: 40

The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id

Column Type: varchar

Max Length: 50

The 'Appointment Site' related to this service.

Column Name: appt_start_time

Column Type: varchar

Max Length: 50

The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val

Column Type: varchar

Max Length: 50

The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code

Column Type: varchar

Max Length: 50

'Service Status'.

Column Name: billing_status_value

Column Type: varchar

Max Length: 50

The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units

Column Type: numeric

'Cal Billing Units'

Column Name: confidential_service_code

Column Type: varchar

Max Length: 50

'Confidential Service' from Avatar PH.

Column Name: confidential_service_val

Column Type: varchar

Max Length: 50

The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration

Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096

'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code

Column Type: varchar

Max Length: 50

'Emergency Indicator'.

Column Name: emergency_ind_value

Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code

Column Type: varchar

Max Length: 5

Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value

Column Type: varchar

Max Length: 10

The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi

Column Type: bit

Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code

Column Type: varchar

Max Length: 5

Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code

Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes
Column Type: varchar
Max Length: 32766
'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar
Max Length: 50
'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date
Column Type: date
'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar

Max Length: 40

The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp

the End of Service as UTC date and time.

Column Name: service_start_utc

Column Type: timestamp

the Start of Service as UTC date and time.

Column Name: service_status_code

Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Client_Charge_Input

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service

Column Type: varchar

Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar

Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar

Max Length: 40
'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID

Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID
Column Type: varchar
Max Length: 10
'Practitioner'

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 100
The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value
Column Type: varchar
Max Length: 40
The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service'

Column Name: v_accounting_period
Column Type: date
The accounting period for the service.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date
Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number
Column Type: varchar
Max Length: 50
'Claimed Authorization Number'

Column Name: date_of_svc_close
Column Type: date
'Date of Service Closed'

Column Name: re_bill_claim_number
Column Type: varchar
Max Length: 50
This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance
Column Type: double
Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level
Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar
Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value
Column Type: varchar
Max Length: 40
The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration

Column Type: varchar

Max Length: 20

'Duration'

Column Name: v_location_code

Column Type: varchar

Max Length: 20

'Location'

Column Name: v_modifiers

Column Type: varchar

Max Length: 20

'Modifiers'

Documentation for form: Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar

Max Length: 32768

'Add-On Notes'.

Column Name: add_svc_info_code

Column Type: varchar

Max Length: 50

'Additional Service Information'.

Column Name: add_svc_info_shval

Column Type: varchar

Max Length: 255

The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value

Column Type: varchar

Max Length: 4096

The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program

Column Type: varchar

Max Length: 10

The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time

Column Type: varchar

Max Length: 50

The 'Appointment End Time' related to this service.

Column Name: appt_group_id

Column Type: varchar

Max Length: 50

The 'Group #' related to this service.

Column Name: apt_group_name

Column Type: varchar

Max Length: 40

The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id

Column Type: varchar

Max Length: 50

The 'Appointment Site' related to this service.

Column Name: appt_start_time

Column Type: varchar

Max Length: 50

The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val

Column Type: varchar

Max Length: 50

The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code

Column Type: varchar

Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar
Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40

'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar
Max Length: 50
The user ID that first entered the service into the system.

Column Name: original_tx_code
Column Type: varchar
Max Length: 10
'Original Scheduled Service'.

Column Name: original_tx_value
Column Type: varchar
Max Length: 40
The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date
Column Type: date
'Orthodontic Banding Date'.

Column Name: primary_guarantor
Column Type: varchar
Max Length: 40
'Primary Guarantor'.

Column Name: prior_placement_date
Column Type: date
'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the service used to determine the offset from UTC.

Column Name: start_time
Column Type: varchar

Max Length: 10
The start time of the service.

Column Name: task_event_id
Column Type: varchar
Max Length: 40
The id of the task list event that created this service

Column Name: tooth_number
Column Type: varchar
Max Length: 50
'Tooth Number'.

Column Name: tooth_status_code
Column Type: varchar
Max Length: 50
'Tooth Status Code'.

Column Name: tooth_status_value
Column Type: varchar
Max Length: 50
The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code
Column Type: varchar
Max Length: 50
'Tooth Surface Code'.

Column Name: tooth_surface_shvalue
Column Type: varchar
Max Length: 255
The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value
Column Type: varchar
Max Length: 4096
The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar
Max Length: 10
Is this a transfer service.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value
Column Type: varchar
Max Length: 50
The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service
Column Type: numeric
The units of the service.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value
Column Type: varchar
Max Length: 40
The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Client_Charge_Input_(Charge_Fee_Access)

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the service.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: accounting_period

Column Type: date

'Accounting Period (10032)'

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

'Deleted Service Code (10033)'

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the service

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the service.

Column Name: duration

Column Type: varchar

Max Length: 50

'Duration'

Column Name: end_time

Column Type: varchar

Max Length: 10

'Service End Time (60022)'

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

'Referring Practitioner Name'

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider Code'

Column Name: referring_provider_name

Column Type: varchar

Max Length: 50

'Referring Provider Name'

Column Name: start_time

Column Type: varchar

Max Length: 10

'Service Start Time (60021)'

Column Name: units_of_service

Column Type: numeric

'Units Of Service (10014)'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input_With_Diagnosis_Entry

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode number.

Column Name: total_closed_charges

Column Type: numeric

Total dollar amount for all closed services in the episode.

Column Name: total_open_charges

Column Type: numeric

Total dollar amount for all open services in the episode.

Column Name: total_payments

Column Type: numeric

Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance

Column Type: numeric

Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date

Column Type: date

The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input_With_Diagnosis_Entry

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability
Column Type: numeric
The guarantor's liability.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number assigned to a client's service.

Column Name: guarantor_total_payments
Column Type: numeric
The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code'

Column Name: v_program_of_visit_code
Column Type: varchar
Max Length: 40
'Program'

Column Name: v_PROVIDER_ID
Column Type: varchar
Max Length: 10
'Practitioner'

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 100
The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value
Column Type: varchar
Max Length: 40
The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date
'Date Of Service'

Column Name: v_accounting_period
Column Type: date
The accounting period for the service.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date
Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration

Column Type: varchar

Max Length: 20

'Duration'

Column Name: v_location_code

Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Client_Charge_Input_With_Diagnosis_Entry

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Charge_Input_With_Diagnosis_Entry

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar

Max Length: 15

The 'Covered Charge Category' for the service code.

Column Name: accounting_period

Column Type: date

The accounting period of the service.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid
Column Type: varchar
Max Length: 20
Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar

Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar

Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar
Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by
Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the service used to determine the offset from UTC.

Column Name: start_time
Column Type: varchar
Max Length: 10
The start time of the service.

Column Name: task_event_id
Column Type: varchar
Max Length: 40
The id of the task list event that created this service

Column Name: tooth_number
Column Type: varchar
Max Length: 50
'Tooth Number'.

Column Name: tooth_status_code
Column Type: varchar
Max Length: 50
'Tooth Status Code'.

Column Name: tooth_status_value
Column Type: varchar
Max Length: 50
The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code
Column Type: varchar
Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Client_Charge_Input_With_Diagnosis_Entry

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date

Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10

'Service End Time (60022)'

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Client_Charge_Input_(Charge_Fee_Access_and_Diagnosis_Entry)

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Client_Charge_Input_(Charge_Fee_Access_and_Diagnosis_Entry)

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code
Column Type: varchar
Max Length: 40
'Program'

Column Name: v_PROVIDER_ID
Column Type: varchar
Max Length: 10
'Practitioner'

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 100
The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value
Column Type: varchar
Max Length: 40
The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service'

Column Name: v_accounting_period
Column Type: date
The accounting period for the service.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc
Column Type: varchar
Max Length: 50
This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number
Column Type: varchar
Max Length: 50
'Authorization Number'

Column Name: billing_units
Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form:

[Client_Charge_Input_\(Charge_Fee_Access_and_Diagnosis_Entry\)](#)

Table Name: [SYSTEM.billing_tx_charge_totals](#)

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Client_Charge_Input_(Charge_Fee_Access_and_Diagnosis_Entry)

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_accident

Column Type: date

'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date

Date To Bill Roll-Up Service.

Column Name: delay_reason_code

Column Type: varchar

Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar

Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form:

[Client_Charge_Input_\(Charge_Fee_Access_and_Diagnosis_Entry\)](#)

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service

Column Type: varchar

Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2

Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name

Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Edit_Service_Information

Table Name: SYSTEM.audit_deleted_treatment

Table Description: This table represents audit trail data of client specific deleted services.

Column Name: deleted_treatment_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service that was deleted.

Column Name: deleted_service_index
Column Type: varchar
Max Length: 10
This is an unique ID for the deleted service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 40
The practitioner ID who performed the service which was deleted.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the deleted service.

Column Name: date_of_service
Column Type: date
The date of service associated with the deleted service.

Column Name: date_service_deleted
Column Type: date
The date the service was deleted.

Column Name: time_service_deleted
Column Type: varchar
Max Length: 10
The time the service was deleted.

Column Name: user_who_deleted_service
Column Type: varchar
Max Length: 40
The user name who deleted the service.

Documentation for form: Edit_Service_Information

Table Name: SYSTEM.billing_claim_address

Table Description: This table returns any alternative service locations filed in the 'Facility Location' fields of the 'Edit Service Information' or 'Edit Service Information (Charge Fee Access)' forms.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the alternative service location was entered.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 20

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the alternative service location was filed.

Column Name: address_1

Column Type: varchar

Max Length: 50

'Facility Location Address - Street'

Column Name: address_2

Column Type: varchar

Max Length: 50

'Facility Location Address - Street 2'

Column Name: city

Column Type: varchar

Max Length: 50

'Facility Location City'

Column Name: id_code

Column Type: varchar

Max Length: 50

'Facility Location Code Identifier'

Column Name: id_code_qual

Column Type: varchar

Max Length: 50

'Facility Location Code Qualifier'

Column Name: name

Column Type: varchar

Max Length: 50

'Facility Location Name'

Column Name: state

Column Type: varchar

Max Length: 50

'Facility Location State'

Column Name: zip_code

Column Type: varchar

Max Length: 50

'Facility Location Zip Code'

Documentation for form: Edit_Service_Information

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar
Max Length: 40
The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The client's name.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Edit_Service_Information

Table Name: SYSTEM.billing_tx_address

Table Description: This table returns any alternative service locations filed in the 'Facility Location' fields of the 'Edit Service Information' or 'Edit Service Information (Charge Fee Access)' forms.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the alternative service location was entered.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 20

The unique ID assigned to the specific client's service. It will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the alternative service location was filed.

Column Name: address_1

Column Type: varchar

Max Length: 50

'Facility Location Address - Street'

Column Name: address_2

Column Type: varchar

Max Length: 50

'Facility Location Address - Street 2'

Column Name: city

Column Type: varchar

Max Length: 50

'Facility Location City'

Column Name: id_code

Column Type: varchar

Max Length: 50

'Facility Location Code Identifier'

Column Name: id_code_qual

Column Type: varchar

Max Length: 50

'Facility Location Code Qualifier'

Column Name: name

Column Type: varchar

Max Length: 50

'Facility Location Name'

Column Name: state

Column Type: varchar

Max Length: 50

'Facility Location State'

Column Name: zip_code

Column Type: varchar

Max Length: 50

'Facility Location Zip Code'

Documentation for form: Edit_Service_Information

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code

Column Type: varchar

Max Length: 15

The program of the service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name of the PROVIDER_ID of the service.

Column Name: date_of_service
Column Type: date
The date of the service.

Column Name: billable_value
Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar
Max Length: 40
Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar

Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code

Column Type: varchar

Max Length: 5

Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value

Column Type: varchar

Max Length: 10

The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi

Column Type: bit

Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 100

The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes
Column Type: varchar
Max Length: 32766
'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration

Column Type: integer

'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner'.

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

The name of the referring_practitioner_code.

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider'.

Column Name: referring_provider_name

Column Type: varchar

Max Length: 50

The name of the referring_provider_code.

Column Name: related_causes_code

Column Type: varchar

Max Length: 50

'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value

Column Type: varchar

Max Length: 255

The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS

Column Type: varchar

Max Length: 40

The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp

the End of Service as UTC date and time.

Column Name: service_start_utc

Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the service used to determine the offset from UTC.

Column Name: start_time
Column Type: varchar
Max Length: 10
The start time of the service.

Column Name: task_event_id
Column Type: varchar
Max Length: 40
The id of the task list event that created this service

Column Name: tooth_number
Column Type: varchar
Max Length: 50
'Tooth Number'.

Column Name: tooth_status_code
Column Type: varchar
Max Length: 50
'Tooth Status Code'.

Column Name: tooth_status_value
Column Type: varchar
Max Length: 50
The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code
Column Type: varchar
Max Length: 50
'Tooth Surface Code'.

Column Name: tooth_surface_shvalue
Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form:

Edit_Service_Information_(Charge_Fee_Access)

Table Name: SYSTEM.audit_deleted_treatment

Table Description: This table represents audit trail data of client specific deleted services.

Column Name: deleted_treatment_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service that was deleted.

Column Name: deleted_service_index

Column Type: varchar

Max Length: 10

This is an unique ID for the deleted service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 40

The practitioner ID who performed the service which was deleted.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code associated with the deleted service.

Column Name: date_of_service

Column Type: date

The date of service associated with the deleted service.

Column Name: date_service_deleted

Column Type: date

The date the service was deleted.

Column Name: time_service_deleted

Column Type: varchar

Max Length: 10

The time the service was deleted.

Column Name: user_who_deleted_service
Column Type: varchar
Max Length: 40
The user name who deleted the service.

Documentation for form:

Edit_Service_Information_(Charge_Fee_Access)

Table Name: SYSTEM.billing_claim_address

Table Description: This table returns any alternative service locations filed in the 'Facility Location' fields of the 'Edit Service Information' or 'Edit Service Information (Charge Fee Access)' forms.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the alternative service location was entered.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 20
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the alternative service location was filed.

Column Name: address_1
Column Type: varchar
Max Length: 50
'Facility Location Address - Street'

Column Name: address_2
Column Type: varchar
Max Length: 50
'Facility Location Address - Street 2'

Column Name: city
Column Type: varchar
Max Length: 50
'Facility Location City'

Column Name: id_code
Column Type: varchar
Max Length: 50
'Facility Location Code Identifier'

Column Name: id_code_qual
Column Type: varchar
Max Length: 50
'Facility Location Code Qualifier'

Column Name: name
Column Type: varchar
Max Length: 50
'Facility Location Name'

Column Name: state
Column Type: varchar
Max Length: 50
'Facility Location State'

Column Name: zip_code
Column Type: varchar
Max Length: 50
'Facility Location Zip Code'

Documentation for form:

Edit_Service_Information_(Charge_Fee_Access)

Table Name: SYSTEM.billing_tx_address

Table Description: This table returns any alternative service locations filed in the 'Facility Location' fields of the 'Edit Service Information' or 'Edit Service Information (Charge Fee Access)' forms.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the alternative service location was entered.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 20
The unique ID assigned to the specific client's service. It will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the alternative service location was filed.

Column Name: address_1
Column Type: varchar
Max Length: 50
'Facility Location Address - Street'

Column Name: address_2
Column Type: varchar
Max Length: 50
'Facility Location Address - Street 2'

Column Name: city
Column Type: varchar
Max Length: 50
'Facility Location City'

Column Name: id_code
Column Type: varchar
Max Length: 50
'Facility Location Code Identifier'

Column Name: id_code_qual
Column Type: varchar
Max Length: 50
'Facility Location Code Qualifier'

Column Name: name
Column Type: varchar
Max Length: 50
'Facility Location Name'

Column Name: state
Column Type: varchar
Max Length: 50
'Facility Location State'

Column Name: zip_code
Column Type: varchar
Max Length: 50
'Facility Location Zip Code'

Documentation for form: [Service_Panel_Charge_Input](#)

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Service_Panel_Charge_Input

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability
Column Type: numeric
The guarantor's liability.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number assigned to a client's service.

Column Name: guarantor_total_payments
Column Type: numeric
The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar
Max Length: 20
'Service Code'

Column Name: v_program_of_visit_code
Column Type: varchar
Max Length: 40
'Program'

Column Name: v_PROVIDER_ID
Column Type: varchar
Max Length: 10
'Practitioner'

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 100
The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value
Column Type: varchar
Max Length: 40
The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service'

Column Name: v_accounting_period
Column Type: date
The accounting period for the service.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration

Column Type: varchar

Max Length: 20

'Duration'

Column Name: v_location_code

Column Type: varchar

Max Length: 20

'Location'

Column Name: v_modifiers

Column Type: varchar

Max Length: 20

'Modifiers'

Documentation for form: Service_Panel_Charge_Input

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge

Column Type: numeric

The full charge for the service.

Column Name: total_payments

Column Type: numeric

Total payments for service

Column Name: date_charge_closed

Column Type: date

Date the service was closed.

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Service_Panel_Charge_Input

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code

Column Type: varchar

Max Length: 15

The program of the service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15

The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name of the PROVIDER_ID of the service.

Column Name: date_of_service
Column Type: date
The date of the service.

Column Name: billable_value
Column Type: varchar
Max Length: 20
The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_accident

Column Type: date

'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date

Date To Bill Roll-Up Service.

Column Name: delay_reason_code

Column Type: varchar

Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar

Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Service_Panel_Charge_Input

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the service.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3

Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40

The description associated with `medical_diag_1_icd9_code`. See `medical_diag_1_icd9_code` for more information.

Column Name: `medical_diag_1_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: `medical_diag_2_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: `medical_diag_2_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_2_icd10_code`. See `medical_diag_2_icd10_code` for more information.

Column Name: `medical_diag_2_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: `medical_diag_2_icd9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_2_icd9_code`. See `medical_diag_2_icd9_code` for more information.

Column Name: `medical_diag_2_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: `medical_diag_3_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: `medical_diag_3_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_3_icd10_code`. See `medical_diag_3_icd10_code` for more information.

Column Name: `medical_diag_3_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code

Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Medical_Coding

Table Name: SYSTEM.coding_chart

Table Description: Medical coding chart main table.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
Episode number.

Column Name: FACILITY
Column Type: integer
System code.

Column Name: PATID
Column Type: varchar
Max Length: 20
Avatar patient identifier.

Column Name: STAFFID

Column Type: varchar
Max Length: 20
Service/encounter performing staff member.

Column Name: corrections_comments
Column Type: longvarchar
Max Length: 2147483647
Corrections comments added when the chart was marked for corrections.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was submitted

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 40
the time zone information for when the data was saved

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved

Column Name: date_of_service
Column Type: date
Service/encounter date.

Column Name: diag_record_date
Column Type: date
Date the diagnosis record was generated after the coding chart was submitted.

Column Name: diag_record_id
Column Type: varchar
Max Length: 20
Id of the related record in SYSTEM.client_diagnosis_record.

Column Name: diag_record_time
Column Type: varchar
Max Length: 40
Time the diagnosis record was generated after the coding chart was submitted.

Column Name: diag_record_time_h
Column Type: time
Time the diagnosis record was generated after the coding chart was submitted.

Column Name: in_corrections
Column Type: bit
Whether or not the coding chart has been marked for correction via the 'Coding Chart Corrections' form and is editable.

Column Name: location_code
Column Type: varchar
Max Length: 50
Service/encounter location.

Column Name: location_value
Column Type: varchar
Max Length: 40
Service/encounter location value.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: program_code
Column Type: varchar
Max Length: 50
Service/encounter program.

Column Name: program_value
Column Type: varchar
Max Length: 40
Service/encounter program value.

Column Name: supp_service_flag
Column Type: varchar
Max Length: 20
Supplemental service

Documentation for form: Medical_Coding

Table Name: SYSTEM.coding_chart_audit

Table Description: Medical coding chart audit table.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
Episode number.

Column Name: FACILITY
Column Type: integer
System code.

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 50
A pointer to the Current value

Column Name: PATID
Column Type: varchar
Max Length: 20
Avatar patient identifier.

Column Name: STAFFID
Column Type: varchar
Max Length: 20
Service/encounter performing staff member.

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: date_of_service

Column Type: date
Service/encounter date.

Column Name: location_code
Column Type: varchar
Max Length: 50
Service/encounter location.

Column Name: location_value
Column Type: varchar
Max Length: 40
Service/encounter location value.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: program_code
Column Type: varchar
Max Length: 50
Service/encounter program.

Column Name: program_value
Column Type: varchar
Max Length: 40
Service/encounter program value.

Documentation for form: Medical_Coding

Table Name: SYSTEM.coding_diagnoses

Table Description: Diagnosis recorded as part of the medical coding chart (SYSTEM.coding_chart).

Column Name: chartid
Column Type: integer

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer

System code.

Column Name: bill_order
Column Type: varchar
Max Length: 5
Diagnosis bill order position in the claim.

Column Name: classification_code
Column Type: varchar
Max Length: 50
The Classification Code

Column Name: classification_value
Column Type: varchar
Max Length: 255
The Classification Value

Column Name: diag_icd10_code
Column Type: varchar
Max Length: 40
The ICD10 diagnosis code.

Column Name: diag_icd10_value
Column Type: varchar
Max Length: 255
The ICD10 diagnosis code value.

Column Name: diag_imo_code
Column Type: varchar
Max Length: 255
The IMO diagnosis code.

Column Name: diag_imo_value
Column Type: varchar
Max Length: 255
The IMO diagnosis code value.

Column Name: inc_dxchg_to_dx_code
Column Type: varchar
Max Length: 10
Include Diagnosis Changes to Existing Diagnosis Record

Column Name: inc_dxchg_to_dx_value
Column Type: varchar
Max Length: 50
Description for 'inc_dxchg_to_dx_code'

Column Name: matches_int_care_dx
Column Type: varchar
Max Length: 255

Matches Integrated Care Diagnosis ID (SYSTEM.client_diagnosis_entry)

Column Name: page

Column Type: varchar

Max Length: 200

Encounter document page that contains evidence for the diagnosis.

Column Name: remarks

Column Type: varchar

Max Length: 32000

Diagnosis additional remarks

Column Name: status_code

Column Type: varchar

Max Length: 40

The Status Code

Column Name: status_value

Column Type: varchar

Column Type: integer
System code.

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 50
A pointer to the Current value

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 50

The unique ID that joins the chart item to the charge entry (SYSTEM.billing_tx_history)

Column Name: data_entry_action

Column Type: varchar

Max Length: 40

The action that was performed.

Column Name: diagnosis_pointer_1

Column Type: integer

Service diagnosis pointer (position 1).

Column Name: diagnosis_pointer_2

Column Type: integer

Service diagnosis pointer (position 2).

Column Name: diagnosis_pointer_3

Column Type: integer

Service diagnosis pointer (position 3).

Column Name: diagnosis_pointer_4

Column Type: integer

Service diagnosis pointer (position 4).

Column Name: duration

Column Type: varchar

Max Length: 10

Service duration (in minutes).

Column Name: modifiers

Column Type: varchar

Max Length: 50

Service modifiers.

Column Name: service_code

Column Type: varchar

Max Length: 50

Service code.

Column Name: service_value

Column Type: varchar

Max Length: 40

Service code value.

Documentation for form: Client_Alerts

Table Name: SYSTEM.RADplus_client_alerts

Table Description: Client Alerts

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: Disabled_code
Column Type: varchar
Max Length: 50
Set to "Y" if alert is disabled.

Column Name: Disabled_value
Column Type: varchar
Max Length: 50
Description for Disabledcode

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: Option_Desc
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: Option_Id
Column Type: varchar
Max Length: 50
The unique ID of the form that last updated the row.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID.

Column Name: SYSTEM_ALERT_ID
Column Type: varchar
Max Length: 50
Alert Id defined in 'Alerty Types'

Column Name: USER_ALERT_ID
Column Type: varchar
Max Length: 10
User alert Id

Column Name: active_range_code
Column Type: varchar
Max Length: 50
Active Range Code

Column Name: active_range_value
Column Type: varchar
Max Length: 50
Description for Active Range Code field.

Column Name: alert_type_code
Column Type: varchar
Max Length: 50
Alert type code

Column Name: alert_type_value
Column Type: varchar
Max Length: 50
The description for the alert type code

Column Name: applicable_opts_code
Column Type: varchar
Max Length: 32000
Applicable form codes

Column Name: applicable_opts_value
Column Type: varchar
Max Length: 32000
Applicable form names

Column Name: community_alert_code
Column Type: varchar
Max Length: 50
Set to "Y" if alert is community alert.

Column Name: community_alert_value
Column Type: varchar
Max Length: 50
Description for communityalertcode

Column Name: custom_message
Column Type: varchar
Max Length: 200
Custom Message

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row. data entry source

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: end_date
Column Type: date
End date of alert.

Column Name: selected_episodes
Column Type: varchar
Max Length: 500
Selected episode numbers

Column Name: start_date
Column Type: date
Start date for the alert to appear.

Column Name: system_alert_desc
Column Type: varchar
Max Length: 50
System alert description

Column Name: uniqueid
Column Type: varchar
Max Length: 50
Alert unique id.

Column Name: user_alert_desc
Column Type: varchar
Max Length: 40
User alert description

Documentation for form: Internal_Client_Conse

Table Name: SYSTEM.RADplus_client_conse

Table Description: This table returns all data filed via the 'Client Consent' Form

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUID
Column Type: varchar
Max Length: 50
Used by ProviderConnect.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data

Column Name: allow_all_users
Column Type: bit
'Allow Consent for all users'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_time
Column Type: time
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: expiration_date
Column Type: date
Date the consent is valid through.

Column Name: organizations_code
Column Type: varchar
Max Length: 32000
'Organization'

Column Name: organization_values
Column Type: varchar
Max Length: 32000
The descriptions associated to organizations_code.

Column Name: org_facilities_code
Column Type: varchar
Max Length: 32000
'Organization Facilities'

Column Name: org_facilities_value
Column Type: varchar
Max Length: 32000
The descriptions associated to org_facilities_code.

Column Name: user_ids
Column Type: varchar
Max Length: 32000
'Currently Selected Users'

Documentation for form: Routing_Worklist_Item

Table Name: DocR.assignment_tracking

Table Description: This table tracks the history of document routing assignments made by the system.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the patient.

Column Name: FACILITY
Column Type: integer
The system code where this is being defined in.

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient id that the document belongs to.

Column Name: action_from_id
Column Type: varchar
Max Length: 40
The action ID that triggered this assignment to be made.

Column Name: assignment_error_msg
Column Type: varchar
Max Length: 32000
Message detailing why an assignment error occurred.

Column Name: assignment_error_occurred
Column Type: bit
Boolean representing whether an assignment error occurred.

Column Name: assignment_warning_msg
Column Type: varchar
Max Length: 32000
Message detailing why an alternative assignment occurred.

Column Name: assignments_searched
Column Type: varchar
Max Length: 4096
A list of assignments/alternative assignment IDs searched (not including the one that got used).

Column Name: auto_assignment_id
Column Type: varchar
Max Length: 40
Auto-reassignment assignment ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 40
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar

Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: document_historic
Column Type: varchar
Max Length: 40
The historic of the finalized DocR.Document ID that this workflow item is related to.

Column Name: document_id
Column Type: varchar
Max Length: 256
The document ID which the assignment involves.

Column Name: last_assignment_id
Column Type: varchar
Max Length: 40
The assignment definition via which the assignment was assigned.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: queue_from_id
Column Type: varchar
Max Length: 40
The queue ID from which the assignment was made.

Column Name: queue_to_id
Column Type: varchar
Max Length: 40
The queue ID to which the assignment was assigned (if any).

Column Name: rule_based_routing_id
Column Type: varchar
Max Length: 40
The rule based routing ID which the assignment was born from.

Column Name: status_id
Column Type: varchar

Max Length: 40

The current status ID of the assignment.

Column Name: user_from

Column Type: varchar

Max Length: 80

The user from which the assignment was made.

Column Name: user_from_link

Column Type: varchar

Max Length: 40

The active linked user calculated from user_from

Column Name: user_to

Column Type: varchar

Max Length: 80

The user to which the assignment was assigned.

Column Name: user_to_link

Column Type: varchar

Max Length: 40

The active linked user calculated from user_to

Documentation for form: Routing_Worklist_Item

Table Name: DocR.query_definition

Table Description: This tables stores user-defined queries created via the 'Query Definition' GSI for Rule-Based Routing.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code where this is being defined in.

Column Name: JOIN_TO_CURRENT

Column Type: varchar

Max Length: 1000

A pointer to the Current value, only used by Audit table

Column Name: appends_added

Column Type: bit

Checkbox that indicates whether or not a question was addressed via an amendment.

Column Name: data_entry_action

Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: document_id
Column Type: varchar
Max Length: 256
The document ID associated with this query.

Column Name: grid_row_num
Column Type: varchar
Max Length: 40
The row in the TDE in which the query resides.

Column Name: option_desc
Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: query_reason_code

Column Type: varchar

Max Length: 40

Dictionary code for the query reason.

Column Name: query_reason_value

Column Type: varchar

Max Length: 80

Dictionary value for 'query_reason_code'.

Column Name: question_text

Column Type: varchar

Max Length: 500

The question for the query that will be displayed to the user

Column Name: queue_id

Column Type: varchar

Max Length: 40

The queue associated with this query.

Column Name: response_text

Column Type: varchar

Max Length: 500

The response text for the query.

Documentation for form: Routing_Worklist_Item

Table Name: DocR.query_definition_audit

Table Description: This table contains audit information for the 'DocR.query_definition' table.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code where this is being defined in.

Column Name: JOIN_TO_CURRENT

Column Type: varchar
Max Length: 1000
A pointer to the Current value, only used by Audit table

Column Name: appends_added
Column Type: bit
Checkbox that indicates whether or not a question was addressed via an amendment.

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: document_id
Column Type: varchar
Max Length: 256

The document ID associated with this query.

Column Name: grid_row_num

Column Type: varchar

Max Length: 40

The row in the TDE in which the query resides.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: query_reason_code

Column Type: varchar

Max Length: 40

Dictionary code for the query reason.

Column Name: query_reason_value

Column Type: varchar

Max Length: 80

Dictionary value for 'query_reason_code'.

Column Name: question_text

Column Type: varchar

Max Length: 500

The question for the query that will be displayed to the user

Column Name: queue_id

Column Type: varchar

Max Length: 40

The queue associated with this query.

Column Name: response_text

Column Type: varchar

Max Length: 500

The response text for the query.

Documentation for form: Routing_Worklist_Item

Table Name: DocR.rule_based_forms

Table Description: This table maintains the relationship between the rule based document and the form data filed from worklist item form.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the patient.

Column Name: FACILITY
Column Type: integer
The system code where this is being defined in.

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 1000
A pointer to the Current value, only used by Audit table

Column Name: JOIN_TO_UNIQUE_ID
Column Type: varchar
Max Length: 40
The row id of the data filed from the form (historic).

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient id that the form belongs to.

Column Name: QUEUEID
Column Type: varchar
Max Length: 40
The queue id that the document was in when the form was filed.

Column Name: chart_id
Column Type: varchar
Max Length: 40
The chart id that was filed (if the core form was used).

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: original_USERID
Column Type: varchar
Max Length: 40
The id of the user that first filed the form.

Column Name: original_USERID_link
Column Type: varchar
Max Length: 40
The active linked user calculated from original_USERID

Column Name: queue_option_id
Column Type: varchar
Max Length: 40

The option id of the form filed from the queue.

Column Name: rule_based_doc_id

Column Type: varchar

Max Length: 40

The rule based routing document id that this form data belongs to.

Documentation for form: Routing_Worklist_Item

Table Name: DocR.rule_based_forms_audit

Table Description: This table maintains the audit of the relationship between the rule based document and the form data filed from worklist item form.

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the patient.

Column Name: FACILITY

Column Type: integer

The system code where this is being defined in.

Column Name: JOIN_TO_CURRENT

Column Type: varchar

Max Length: 1000

A pointer to the Current value, only used by Audit table

Column Name: JOIN_TO_UNIQUE_ID

Column Type: varchar

Max Length: 40

The row id of the data filed from the form (historic).

Column Name: PATID

Column Type: varchar

Max Length: 20

The patient id that the form belongs to.

Column Name: QUEUEID

Column Type: varchar

Max Length: 40

The queue id that the document was in when the form was filed.

Column Name: chart_id

Column Type: varchar

Max Length: 40

The chart id that was filed (if the core form was used).

Column Name: data_entry_action

Column Type: varchar

Max Length: 40

The action that was performed, only used by Audit table

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 40

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 80

The user name who last updated the row.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: original_USERID

Column Type: varchar

Max Length: 40

The id of the user that first filed the form.

Column Name: original_USERID_link

Column Type: varchar

Max Length: 40

The active linked user calculated from original_USERID

Column Name: queue_option_id

Column Type: varchar

Max Length: 40

The option id of the form filed from the queue.

Column Name: rule_based_doc_id

Column Type: varchar

Max Length: 40

The rule based routing document id that this form data belongs to.

Documentation for form: Routing_Worklist_Item

Table Name: DocR.rule_based_routing

Table Description: This is the main tracking table for document routing documents in the rule based workflow.

Column Name: ID

Column Type: integer

Column Name: DOCUMENTID

Column Type: varchar

Max Length: 256

The finalized DocR.Document ID that this workflow item is related to.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the patient.

Column Name: JOIN_TO_CURRENT

Column Type: varchar

Max Length: 1000

A pointer to the Current value, only used by Audit table

Column Name: PATID

Column Type: varchar
Max Length: 20
The patient id that the document belongs to.

Column Name: USERID
Column Type: varchar
Max Length: 40
The currently assigned user id for the document.

Column Name: USERID_link
Column Type: varchar
Max Length: 40
The active linked user calculated from USREID

Column Name: current_QUEUEID
Column Type: varchar
Max Length: 40
The queue that the document is currently in.

Column Name: current_STATUSID
Column Type: varchar
Max Length: 40
The status that the document is currently in.

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The form the row was updated by

Column Name: data_entry_date
Column Type: date
The date the last row was updated

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was submitted

Column Name: data_entry_source
Column Type: varchar
Max Length: 40

the name of the last form that updated the row

Column Name: data_entry_time

Column Type: varchar

Max Length: 40

The time the row was last updated

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 40

the time zone information for when the data was saved

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

the user id that last filed a row

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

the username of the last filed row

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved

Column Name: doc_author_USERID

Column Type: varchar

Max Length: 40

The ID of the user who originally finalized the document.

Column Name: doc_author_USERID_link

Column Type: varchar

Max Length: 40

The active linked user calculated from USREID

Column Name: doc_finalization_date

Column Type: date

The date the document was originally finalized.

Column Name: doc_historic

Column Type: varchar

Max Length: 40

The historic of the finalized DocR.Document ID that this workflow item is related to.

Column Name: doc_option_id

Column Type: varchar

Max Length: 40

The option id of the assessment that originally generated the document.

Column Name: doc_program_code

Column Type: varchar

Max Length: 40

The program code that the document was originally filed under.

Column Name: doc_program_value

Column Type: varchar

Max Length: 80

The dictionary value of the program code that the document was originally filed under.

Column Name: encounter_date

Column Type: date

The encounter date calculated from the original Document Routing document.

Column Name: is_complete

Column Type: bit

Whether or not this document has completed all stages in the workflow.

Column Name: last_ACTIONID

Column Type: varchar

Max Length: 40

The last action that modified the document.

Column Name: last_ASSIGNMENTID

Column Type: varchar

Max Length: 40

The last assignment that modified the document.

Column Name: last_action_reason

Column Type: varchar

Max Length: 256

The reason the last action was applied (if any).

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

the unique ID of the form that last updated the row

Documentation for form: Routing_Worklist_Item

Table Name: DocR.rule_based_routing_audit

Table Description: This is the audit for the main tracking table for document routing documents in the rule based workflow.

Column Name: ID

Column Type: integer

Column Name: DOCUMENTID

Column Type: varchar

Max Length: 256

The finalized DocR.Document ID that this workflow item is related to.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the patient.

Column Name: JOIN_TO_CURRENT

Column Type: varchar

Max Length: 1000

A pointer to the Current value, only used by Audit table

Column Name: PATID

Column Type: varchar

Max Length: 20

The patient id that the document belongs to.

Column Name: USERID

Column Type: varchar

Max Length: 40

The currently assigned user id for the document.

Column Name: USERID_link

Column Type: varchar

Max Length: 40

The active linked user calculated from USREID

Column Name: current_QUEUEID

Column Type: varchar

Max Length: 40

The queue that the document is currently in.

Column Name: current_STATUSID

Column Type: varchar
Max Length: 40
The status that the document is currently in.

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The form the row was updated by

Column Name: data_entry_date
Column Type: date
The date the last row was updated

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was submitted

Column Name: data_entry_source
Column Type: varchar
Max Length: 40
the name of the last form that updated the row

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 40
the time zone information for when the data was saved

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
the user id that last filed a row

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
the username of the last filed row

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved

Column Name: doc_author_USERID
Column Type: varchar
Max Length: 40
The ID of the user who originally finalized the document.

Column Name: doc_author_USERID_link
Column Type: varchar
Max Length: 40
The active linked user calculated from USREID

Column Name: doc_finalization_date
Column Type: date
The date the document was originally finalized.

Column Name: doc_historic
Column Type: varchar
Max Length: 40
The historic of the finalized DocR.Document ID that this workflow item is related to.

Column Name: doc_option_id
Column Type: varchar
Max Length: 40
The option id of the assessment that originally generated the document.

Column Name: doc_program_code
Column Type: varchar
Max Length: 40
The program code that the document was originally filed under.

Column Name: doc_program_value
Column Type: varchar
Max Length: 80
The dictionary value of the program code that the document was originally filed under.

Column Name: encounter_date
Column Type: date

The encounter date calculated from the original Document Routing document.

Column Name: is_complete

Column Type: bit

Whether or not this document has completed all stages in the workflow.

Column Name: last_ACTIONID

Column Type: varchar

Max Length: 40

The last action that modified the document.

Column Name: last_ASSIGNMENTID

Column Type: varchar

Max Length: 40

The last assignment that modified the document.

Column Name: last_action_reason

Column Type: varchar

Max Length: 256

The reason the last action was applied (if any).

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

the unique ID of the form that last updated the row

Documentation for form: Client_Acuity

Table Name: SYSTEM.acuity_comment

Table Description: This table returns client acuity comment data.

Column Name: Compile

Column Type: integer

The compile record id for this comment.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: comment

Column Type: longvarchar

Max Length: 2147483647
Acuity comment for this compile record and client ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: childsub

Column Type: integer

Documentation for form: Client_Acuity

Table Name: SYSTEM.acuity_compile

Table Description: This table returns acuity compile metadata.

Column Name: ID

Column Type: integer

Column Name: compile_date

Column Type: date

The date that this compile record was run for.

Column Name: compile_end_time

Column Type: varchar

Max Length: 50

The date/time when this compile record completed compiling.

Column Name: compile_start_time

Column Type: varchar

Max Length: 50

The date/time when this compile record started compiling.

Column Name: compile_time

Column Type: varchar

Max Length: 50

The time that this compile record was run for.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient identification number. Present if the compile was run for an individual patient record.

Column Name: post_end_time
Column Type: varchar
Max Length: 50
The date/time when this compile record completed posting.

Column Name: post_start_time
Column Type: varchar
Max Length: 50
The date/time when this compile record started posting.

Column Name: program
Column Type: varchar
Max Length: 3200
The '&' delimited list of program codes that this compile was run for.

Column Name: status
Column Type: varchar
Max Length: 50
The current status of this compile record.

Column Name: unit
Column Type: varchar
Max Length: 500
The '&' delimited list of unit codes that this compile was run for.

Column Name: data_entry_offset

Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Documentation for form: Client_Acuity

Table Name: SYSTEM.acuity_compile_error

Table Description: This table returns errors produced by the acuity compile process.

Column Name: Compile
Column Type: integer
The compile record id which produced this error.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: action
Column Type: varchar

Max Length: 400

The compile action that was executing when this error occurred.

Column Name: error

Column Type: varchar

Max Length: 400

The error message.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: rule_id

Column Type: varchar

Max Length: 50

The rule id (if applicable) that this error occurred for.

Column Name: childsub

Column Type: integer

Documentation for form: Client_Acuity

Table Name: SYSTEM.acuity_domain_score

Table Description: This view returns acuity score totals by practitioner category and acuity domain.

Column Name: FACILITY

Column Type: integer

Column Name: practitioner_cat_code

Column Type: varchar

Max Length: 50

Column Name: practitioner_cat_value

Column Type: varchar

Max Length: 50

Column Name: PATID

Column Type: varchar

Max Length: 20

Column Name: compile
Column Type: integer

Column Name: compile_date
Column Type: date

Column Name: posted
Column Type: bit

Column Name: domain_code
Column Type: varchar
Max Length: 50

Column Name: domain_value
Column Type: varchar
Max Length: 50

Column Name: rule_id
Column Type: integer

Column Name: uncalculated_score
Column Type: double

Column Name: score
Column Type: double

Documentation for form: Client_Acuity

Table Name: SYSTEM.acuity_score

Table Description: The table returns acuity scores created by the acuity compile process.

Column Name: ID
Column Type: integer

Column Name: compile
Column Type: integer
The compile record id which produced this score.

Column Name: compile_date
Column Type: date
The date this score was created for.

Column Name: domain_code
Column Type: varchar
Max Length: 50
The domain that this score is categorized under.

Column Name: domain_value
Column Type: varchar
Max Length: 50
The dictionary value for the domain code.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient identification number for this score record.

Column Name: posted
Column Type: bit
The posted (finalized) status of this score record.

Column Name: practitioner_cat_code
Column Type: varchar
Max Length: 50
Practitioner category dictionary code for the acuity rule that produced this score.

Column Name: practitioner_cat_value
Column Type: varchar
Max Length: 50
Practitioner category dictionary value.

Column Name: rule_id
Column Type: integer
The acuity rule record id which produced this score.

Column Name: score
Column Type: numeric
The score value.

Column Name: subdomain
Column Type: varchar
Max Length: 50
The subdomain of the acuity rule that produced this score.

Column Name: uncalculated_score
Column Type: double
The uncalculated score value.

Documentation for form: Client_Acuity

Table Name: SYSTEM.acuity_subdomain_score

Table Description: This view returns acuity conditionally grouped score by facility, PATID, compile, domain, sub-domain, practitioner category.

Column Name: FACILITY
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20

Column Name: compile
Column Type: integer

Column Name: compile_date
Column Type: date

Column Name: posted
Column Type: bit

Column Name: domain_code
Column Type: varchar
Max Length: 50

Column Name: domain_value
Column Type: varchar
Max Length: 50

Column Name: subdomain
Column Type: varchar
Max Length: 50

Column Name: practitioner_cat_code
Column Type: varchar
Max Length: 50

Column Name: practitioner_cat_value
Column Type: varchar
Max Length: 50

Column Name: rule_id
Column Type: integer

Column Name: uncalculated_score
Column Type: double

Column Name: score
Column Type: varchar
Max Length: 20

Documentation for form: Change_Program/Admission_Date

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM
Column Type: varchar
Max Length: 10
The program code in which the patient is active in.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODENUMBER
Column Type: integer
'Episode Number'

Documentation for form: Post_Residential/Inpatient_Worklist

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date

Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10

'Service End Time (60022)'

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Post_Partial_Hospitalization/Day_Worklist

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

'Referring Practitioner Name'

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form:

Compile_And_Post_Residential/Inpatient_Charges

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: 99999_Services_Report

Table Name: SYSTEM.billing_tx_dist_fail_reason

Table Description: This table stores guarantors for which some or all liability failed to distribute, and the reasons why. This will only be stored if at least some liability ends up distributing to the guarantor of last resort.

Column Name: ID

Column Type: integer

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 10

The ID of the guarantor to which the service liability either partially or fully failed to distribute.

Column Name: PLAN_ID

Column Type: varchar

Max Length: 10

The ID of the benefit plan to which the service liability either partially or fully failed to distribute.

Column Name: PLAN_LEVEL

Column Type: varchar

Max Length: 10

The number of the benefit plan level to which the service liability either partially or fully failed to distribute.

Column Name: messagecount

Column Type: integer

The unique ID for this distribution failure message.

Column Name: reason

Column Type: varchar

Max Length: 255

The explanation for why service liability partially or fully failed to distribute to the associated guarantor.

Documentation for form: Client_Admission_Report_(PAS_44N)

Table Name: STATEFORM.nys_pas44_admit

Table Description: This table returns data filed using the 'Client Admission Report (PAS 44N)' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

Client episode.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PADuniqueid

Column Type: varchar

Max Length: 50

The unique ID for the current row of data.

Column Name: PATID

Column Type: varchar

Max Length: 20

Client ID.

Column Name: active_cps_case_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Active CPS Case' field.

Column Name: active_cps_case_value

Column Type: varchar

Max Length: 50
Dictionary value for the 'Active CPS Case' field.

Column Name: admission_date
Column Type: date
Date of client admission.

Column Name: admit_disposition_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Admission Disposition' field.

Column Name: admit_disposition_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Admission Disposition' field.

Column Name: alt_incarceration_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Alternative to Incarceration' field.

Column Name: alt_incarceration_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Alternative to Incarceration' field.

Column Name: arrests_6_mos_prior
Column Type: varchar
Max Length: 50
Value of the 'Arrests in Prior 6 Months' field.

Column Name: asi_alcohol
Column Type: varchar
Max Length: 50
Value of the 'ASI Composite Scores - Alcohol' field.

Column Name: asi_drug
Column Type: varchar
Max Length: 50
Value of the 'ASI Composite Scores - Drug' field.

Column Name: asi_employment
Column Type: varchar
Max Length: 50
Value of the 'ASI Composite Scores - Employment' field.

Column Name: asi_family_social
Column Type: varchar
Max Length: 50

Value of the 'ASI Composite Scores - Family/Social' field.

Column Name: asi_legal

Column Type: varchar

Max Length: 50

Value of the 'ASI Composite Scores - Legal' field.

Column Name: asi_medical

Column Type: varchar

Max Length: 50

Value of the 'ASI Composite Scores - Medical' field.

Column Name: asi_psychological

Column Type: varchar

Max Length: 50

Value of the 'ASI Composite Scores - Psychological' field.

Column Name: assess_visits_days

Column Type: varchar

Max Length: 50

Value of the 'Number Of Assessment Visits Or Days' field.

Column Name: asthma_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Asthma' field.

Column Name: asthma_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Asthma' field.

Column Name: brain_injury_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'ACQ Or Traumatic Brain Injury' field.

Column Name: brain_injury_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'ACQ Or Traumatic Brain Injury' field.

Column Name: case_child_proc_svc_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Case With Child Protective Services' field.

Column Name: case_child_proc_svc_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Case With Child Protective Services' field.

Column Name: child_foster_care_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Children Foster Care' field.

Column Name: child_foster_care_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Children Foster Care' field.

Column Name: child_in_foster_care

Column Type: integer

Value of the 'No. Of Children Living In Foster Care' field.

Column Name: child_of_alcoholsubs_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Child Of Alcohol/Substance Abuser' field.

Column Name: child_of_alcoholsubs_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Child Of Alcohol/Substance Abuser' field.

Column Name: cj_consent_date

Column Type: date

Value of the 'CJ Consent Date' field.

Column Name: cj_consent_revoke_date

Column Type: date

Value of the 'CJ Consent Revoke Date' field.

Column Name: client_id_no

Column Type: varchar

Max Length: 50

Value of the 'Client ID No.' field.

Column Name: county_of_residence_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'County Of Residence' field.

Column Name: county_of_residence_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'County Of Residence' field.

Column Name: criminal_just_stat_code

Column Type: varchar
Max Length: 50
Dictionary code for the 'Current Criminal Justice Status' field.

Column Name: criminal_just_value_long
Column Type: varchar
Max Length: 4096
Long dictionary value for the 'Current Criminal Justice Status' field.

Column Name: criminal_just_value_short
Column Type: varchar
Max Length: 255
Short dictionary value for the 'Current Criminal Justice Status' field.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date that the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time that the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_birth
Column Type: date
Value of the 'Date Of Birth' field.

Column Name: date_sent
Column Type: date
Value of the 'Date Sent' field.

Column Name: default_client_id_no_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Default Client Id No.' field.

Column Name: default_client_id_no_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Default Client Id No.' field.

Column Name: default_pru_no_from_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Default PRU No. From' field.

Column Name: default_pru_no_from_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Default PRU No. From' field.

Column Name: diabetes_code
Column Type: varchar
Max Length: 10

Dictionary code for the 'Diabetes' field.

Column Name: diabetes_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Diabetes' field.

Column Name: dsmiv_axis_i_diag_1

Column Type: varchar

Max Length: 50

Value of the 'DSM IV Axis I Diagnosis 1' field.

Column Name: dsmiv_axis_i_diag_2

Column Type: varchar

Max Length: 50

Value of the 'DSM IV Axis I Diagnosis 2' field.

Column Name: dsmiv_axis_i_diag_3

Column Type: varchar

Max Length: 50

Value of the 'DSM IV Axis I Diagnosis 3' field.

Column Name: element_of_care_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Element of Care' field.

Column Name: element_of_care_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Element of Care' field.

Column Name: employment_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Employment Status' field.

Column Name: employment_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Employment Status' field.

Column Name: ever_used_tobacco_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Ever Used Tobacco' field.

Column Name: ever_used_tobacco_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Ever Used Tobacco' field.

Column Name: experienced_trauma_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Client Ever Experience/Witness Trauma That Impacts Current Life Experience?' field.

Column Name: experienced_trauma_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Client Ever Experience/Witness Trauma That Impacts Current Life Experience?' field.

Column Name: first_name_current

Column Type: varchar

Max Length: 50

Value of the 'First Name Current' field.

Column Name: gambling_screening_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Gambling Screening Positive' field.

Column Name: gambling_screening_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Gambling Screening Positive' field.

Column Name: gender_identity_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Gender Identity' field.

Column Name: gender_identity_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Gender Identity' field.

Column Name: hearing_impairment_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Hearing Impairment' field.

Column Name: hearing_impairment_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Hearing Impairment' field.

Column Name: hepatitis_b_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Hepatitis B Status' field.

Column Name: hepatitis_b_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Hepatitis B Status' field.

Column Name: hepatitis_c_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Hepatitis C Status' field.

Column Name: hepatitis_c_status_value

Column Type: varchar

Max Length: 50

Dictionary code for the 'Hepatitis C Status' field.

Column Name: highest_grade_compl_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Highest Grade Completed' field.

Column Name: highest_grade_compl_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Highest Grade Completed' field.

Column Name: hispanic_origin_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Hispanic Origin' field.

Column Name: hispanic_origin_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Hispanic Origin' field.

Column Name: hiv_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'HIV Status' field.

Column Name: hiv_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'HIV Status' field.

Column Name: hypertension_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Hypertension' field.

Column Name: hypertension_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Hypertension' field.

Column Name: icd10_diagnosis

Column Type: varchar

Max Length: 50

'ICD-10 Code'.

Column Name: id_consent_date

Column Type: date

Value of the 'ID Consent Date' field.

Column Name: id_consent_revoke_date

Column Type: date

Value of the 'ID Consent Revoke Date' field.

Column Name: incarc_6_mos_prior

Column Type: varchar

Max Length: 50

Value of the 'Days Incarcerated 6 Mos. Prior To Admission' field.

Column Name: income_src_admit_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Primary Source Of Income At Admission' field.

Column Name: income_src_admit_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Primary Source Of Income At Admission' field.

Column Name: indiv_edu_plan_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Individual Education Plan' field.

Column Name: indiv_edu_plan_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Individual Education Plan' field.

Column Name: last_name_birth

Column Type: varchar

Max Length: 50

Value of the 'Last Name At Birth' field.

Column Name: last_name_current
Column Type: varchar
Max Length: 50
Value of the 'Last Name Current' field.

Column Name: last_name_first_2
Column Type: varchar
Max Length: 50
Value of the 'First Two Letters Of Last Name At Birth' field.

Column Name: last_name_first_2_current
Column Type: varchar
Max Length: 50
Value of the 'First Two Letters Of Current Last Name' field.

Column Name: last_tx_sa_emerg_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Last Alc/Subs Abuse Treatment or Emerg Svc.' field.

Column Name: last_tx_sa_emerg_code1
Column Type: varchar
Max Length: 50
Dictionary code for the 'Time Since Last Alc/Subs Abuse Treatment or Emerg Svc.' field.

Column Name: last_tx_sa_emerg_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Last Alc/Subs Abuse Treatment or Emerg Svc.' field.

Column Name: last_tx_sa_emerg_value1
Column Type: varchar
Max Length: 50
Dictionary value for the 'Time Since Last Alc/Subs Abuse Treatment or Emerg Svc.' field.

Column Name: living_arrangements_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Living Arrangements' field.

Column Name: living_arrangements_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Living Arrangements' field.

Column Name: locadtr_asmt_date
Column Type: date
'LOCADTR Assessment Date'.

Column Name: locadtr_asmt_id

Column Type: varchar
Max Length: 9
'LOCADTR Assessment ID'.

Column Name: marital_status_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Marital Status' field.

Column Name: marital_status_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Marital Status' field.

Column Name: mats_consent_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Consent Granted' field.

Column Name: mats_consent_eff_date
Column Type: date
Value of the 'Effective Date' field.

Column Name: mats_consent_exp_date
Column Type: date
Value of the 'Expiration Date' field.

Column Name: mats_consent_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Consent Granted' field.

Column Name: mats_county_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'County Of Residence Is A MATS County' field.

Column Name: mats_county_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'County Of Residence Is A MATS County' field.

Column Name: med_assist_opioid_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Medical Assistance Opioid Therapy' field.

Column Name: med_assist_opioid_value
Column Type: varchar
Max Length: 50

Dictionary value for the 'Medical Assistance Opioid Therapy' field.

Column Name: medicaid_client_id

Column Type: varchar

Max Length: 50

Value of the 'Medicaid Client ID' field.

Column Name: mental_illness_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Mental Illness(Co-existing Psychiatric Disorder)' field.

Column Name: mental_illness_hosp_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Ever Hospitalized For Mental Illness' field.

Column Name: mental_illness_hosp_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Ever Hospitalized For Mental Illness' field.

Column Name: mental_illness_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Mental Illness(Co-existing Psychiatric Disorder)' field.

Column Name: mental_illnes_tx_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Ever Treated For Mental Illness Problem' field.

Column Name: mental_illnes_tx_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Ever Treated For Mental Illness Problem' field.

Column Name: mental_retardation_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Intellectual Disability/Developmental Disability' field.

Column Name: mental_retardation_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Intellectual Disability/Developmental Disability' field.

Column Name: ment_ill_hosp_30_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Ever Hospitalized 30 Days Or More For Mental Illness' field.

Column Name: ment_ill_hosp_30_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Ever Hospitalized 30 Days Or More For Mental Illness' field.

Column Name: military_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Military Status' field.

Column Name: military_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Military Status' field.

Column Name: mobility_impairment_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Mobility Impairment' field.

Column Name: mobility_impairment_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Mobility Impairment' field.

Column Name: no_arrests_in_30days

Column Type: varchar

Max Length: 50

Value of the 'No. Of Arrests In Prior 30 Days To Admission' field.

Column Name: no_child_living_with_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Client's Children/No. Of Children Living With Client' field.

Column Name: no_child_living_with_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Client's Children/No. Of Children Living With Client' field.

Column Name: no_days_inpat_detox

Column Type: varchar

Max Length: 50

Value of the '6 Mo. Prior No. Of Days In Inpatient Detox' field.

Column Name: no_emerg_room_epis

Column Type: varchar

Max Length: 50

Value of the '6 Mo. Prior No. Of Emergency Room Episodes' field.

Column Name: no_hosp_non_detox_tx

Column Type: varchar

Max Length: 50

Value of the '6 Mo. Prior No. Days Hospitalized For Non-Detox Services' field.

Column Name: no_prior_tx_epis_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'No. Of Prior Treatment Episodes' field.

Column Name: no_prior_tx_epis_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'No. Of Prior Treatment Episodes' field.

Column Name: number_of_children_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Client's Children/Total Number Of Children' field.

Column Name: number_of_children_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Client's Children/Total Number Of Children' field.

Column Name: nysid

Column Type: varchar

Max Length: 50

Value of the 'NYSID' field.

Column Name: orient_to_change_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Orientation To Change (RRYP Providers Only)' field.

Column Name: orient_to_change_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Orientation To Change (RRYP Providers Only)' field.

Column Name: other_health_cond_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Other Major Phys. Health Conditions' field.

Column Name: other_health_cond_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Other Major Phys. Health Conditions' field.

Column Name: other_tobacco_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Other Tobacco' field.

Column Name: other_tobacco_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Other Tobacco' field.

Column Name: perp_dv_ipv_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Client Ever a Perpetrator of Domestic Violence/Intimate Partner Violence?' field.

Column Name: perp_dv_ipv_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Client Ever a Perpetrator of Domestic Violence/Intimate Partner Violence?' field.

Column Name: pregnant_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Pregnant' field.

Column Name: pregnant_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Pregnant' field.

Column Name: primary_lang_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Primary Language' field.

Column Name: primary_lang_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Primary Language' field.

Column Name: prim_substance_age

Column Type: varchar

Max Length: 50

Value of the 'Problem Substances Primary Age' field.

Column Name: prim_substance_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Frequency' field.

Column Name: prim_substance_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Frequency' field.

Column Name: prim_substance_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Route' field.

Column Name: prim_substance_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Route' field.

Column Name: prim_substance_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Type' field.

Column Name: prim_substance_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Type' field.

Column Name: princ_referral_src_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Principal Referral Source' field.

Column Name: princ_referral_src_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Principal Referral Source' field.

Column Name: pru_no

Column Type: varchar

Max Length: 50

Value of the 'PRU No.' field.

Column Name: race_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Race' field.

Column Name: race_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Race' field.

Column Name: reason_for_hospital_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Reason For Hospitalization' field.

Column Name: reason_for_hospital_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Reason For Hospitalization' field.

Column Name: reintegration_setng_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Reintegration Setting' field.

Column Name: reintegration_setng_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Reintegration Setting' field.

Column Name: resend_form_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Re-Send Form' field.

Column Name: resend_form_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Re-Send Form' field.

Column Name: sec_substance_age

Column Type: varchar

Max Length: 50

Value of the 'Problem Substances Secondary Age' field.

Column Name: sec_substance_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Secondary Frequency' field.

Column Name: sec_substance_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Secondary Frequency' field.

Column Name: sec_substance_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Secondary Route' field.

Column Name: sec_substance_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Secondary Route' field.

Column Name: sec_substance_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Secondary Type' field.

Column Name: sec_substance_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Secondary Type' field.

Column Name: self_help_ref_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Self Help Referral' field.

Column Name: self_help_ref_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Self Help Referral' field.

Column Name: sex_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Sex' field.

Column Name: sexual_orientation_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Sexual Orientation' field.

Column Name: sexual_orientation_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Sexual Orientation' field.

Column Name: sex_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Sex' field.

Column Name: sight_impairment_leg_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Sight Impairment (legally blind)' field.

Column Name: sight_impairment_leg_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Sight Impairment (legally blind)' field.

Column Name: significant_other_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Significant Other' field.

Column Name: significant_other_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Significant Other' field.

Column Name: smoked_tobacco_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Smoked Tobacco In Last Week' field.

Column Name: smoked_tobacco_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Smoked Tobacco In Last Week' field.

Column Name: smokeless_tobacco_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Used Smokeless Tobacco In Last Week' field.

Column Name: smokeless_tobacco_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Used Smokeless Tobacco In Last Week' field.

Column Name: special_project_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Special Project Code' field.

Column Name: special_project_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Special Project Code' field.

Column Name: speech_impairment_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Speech Impairment' field.

Column Name: speech_impairment_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Speech Impairment' field.

Column Name: ssn

Column Type: varchar

Max Length: 50

Value of the 'Social Security Number' field.

Column Name: ssn_last_4

Column Type: varchar

Max Length: 50

Value of the 'Last Four Digits Of Soc. Sec. No.' field.

Column Name: tb_test_result_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Result of TB Test' field.

Column Name: tb_test_result_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Result of TB Test' field.

Column Name: tert_substance_age

Column Type: varchar

Max Length: 50

Value of the 'Problem Substances Tertiary Age' field.

Column Name: tert_substance_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Tertiary Frequency' field.

Column Name: tert_substance_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Tertiary Frequency' field.

Column Name: tert_substance_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Tertiary Route' field.

Column Name: tert_substance_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Tertiary Route' field.

Column Name: tert_substance_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Tertiary Type' field.

Column Name: tert_substance_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Tertiary Type' field.

Column Name: tobacco_age_first_use

Column Type: varchar

Max Length: 50

Value of the 'Tobacco Age Of First Use' field.

Column Name: tobacco_frequ_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Tobacco Frequency' field.

Column Name: tobacco_frequ_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Tobacco Frequency' field.

Column Name: tobacco_last_u_date

Column Type: date

Value of the 'Tobacco Last Used Date' field.

Column Name: tobacco_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Tobacco Route' field.

Column Name: tobacco_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Tobacco Route' field.

Column Name: transaction_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Transaction Type' field.

Column Name: transaction_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Transaction Type' field.

Column Name: type_of_residence_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Type Of Residence' field.

Column Name: type_of_residence_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Type Of Residence' field.

Column Name: veteran_status_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Veteran Status' field.

Column Name: veteran_status_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Veteran Status' field.

Column Name: victim_dv_ipv_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Client Ever a Victim of Domestic Violence/Intimate Partner Violence?' field.

Column Name: victim_dv_ipv_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Client Ever a Victim of Domestic Violence/Intimate Partner Violence?' field.

Column Name: zip_code_of_residenc
Column Type: varchar
Max Length: 50
Value of the 'ZIP Code Of Residence' field.

Documentation for form: Client_Discharge_Report_(PAS_45N)

Table Name: STATEFORM.nys_pas45_discharge

Table Description: This table returns data filed using the 'Client Discharge Report (PAS 45N)' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer
Client episode.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID.

Column Name: PDSuniqueid
Column Type: varchar
Max Length: 50
The unique ID for the current row of data.

Column Name: add_med_used_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Addiction Medication Used' field.

Column Name: add_med_used_value_long
Column Type: varchar
Max Length: 4096
Long dictionary value for the 'Addiction Medication Used' field.

Column Name: add_med_used_value_short
Column Type: varchar
Max Length: 255
Short dictionary value for the 'Addiction Medication Used' field.

Column Name: admission_date
Column Type: date
Date of client admission.

Column Name: alcohol_use_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Alcohol Use' field.

Column Name: alcohol_use_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Alcohol Use' field.

Column Name: asthma_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Asthma' field.

Column Name: asthma_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Asthma' field.

Column Name: client_id_no
Column Type: varchar
Max Length: 50
Value of the 'Client ID No.' field.

Column Name: criminal_just_st_adm_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Criminal Justice Status At Admission' field.

Column Name: criminal_just_value_long
Column Type: varchar
Max Length: 4096
Long dictionary value for the 'Criminal Justice Status At Admission' field.

Column Name: criminal_just_value_short
Column Type: varchar
Max Length: 255
Short dictionary value for the 'Criminal Justice Status At Admission' field.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date that the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar

Max Length: 50

The time that the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_last_treated

Column Type: date

Value of the 'Date Last Treated' field.

Column Name: date_of_birth

Column Type: date

Value of the 'Date Of Birth' field.

Column Name: date_sent

Column Type: date

Value of the 'Date Sent' field.

Column Name: days_hosp_detox

Column Type: varchar

Max Length: 50

Value of the 'No. Of Days Client Hospitalized For Drug And/Or Alc. Inpatient Detox, in past 6 months' field.

Column Name: days_hosp_non_detox

Column Type: varchar

Max Length: 50

Value of the 'No. Of Days Client Hospitalized For Non-Detox Services, in past 6 months' field.

Column Name: days_incarcerated

Column Type: varchar

Max Length: 50

Value of the 'No. Of Days Client Incarcerated, in past 6 months' field.

Column Name: default_client_id_no_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Default Client ID No. From' field.

Column Name: default_client_id_no_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Default Client ID No. From' field.

Column Name: default_pru_no_from_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Default PRU No. From' field.

Column Name: default_pru_no_from_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Default PRU No. From' field.

Column Name: diabetes_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Diabetes' field.

Column Name: diabetes_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Diabetes' field.

Column Name: discharge_date

Column Type: date

Value of the 'Discharge Date' field.

Column Name: discharge_disp_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Discharge Disposition' field.

Column Name: discharge_disp_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Discharge Disposition' field.

Column Name: discharge_reason_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Discharge Reason' field.

Column Name: discharge_reason_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Discharge Reason' field.

Column Name: discharge_stat_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Discharge Status' field.

Column Name: discharge_stat_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Discharge Status' field.

Column Name: domestic_viol_ptr_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Domestic Violence Perpetrator' field.

Column Name: domestic_viol_ptr_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Domestic Violence Perpetrator' field.

Column Name: domestic_viol_vtm_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Domestic Violence Victim' field.

Column Name: domestic_viol_vtm_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Domestic Violence Victim' field.

Column Name: drug_use_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Drug Use' field.

Column Name: drug_use_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Drug Use' field.

Column Name: emotional_functionin_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Emotional Functioning' field.

Column Name: emotional_functionin_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Emotional Functioning' field.

Column Name: employment_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Employment Status' field.

Column Name: employment_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Employment Status' field.

Column Name: experienced_trauma_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Client Ever Experience/Witness Trauma That Impacts Current Life Experience?' field.

Column Name: experienced_trauma_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Client Ever Experience/Witness Trauma That Impacts Current Life Experience?' field.

Column Name: family_counsel_sessions

Column Type: varchar

Max Length: 50

Value of the 'Family Counseling Sessions' field.

Column Name: family_situation_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Family Situation' field.

Column Name: family_situation_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Family Situation' field.

Column Name: first_subs_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Frequency' field for the 'First Problem Substance'.

Column Name: first_subs_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Frequency' field for the 'First Problem Substance'.

Column Name: first_subs_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Route' field for the 'First Problem Substance'.

Column Name: first_subs_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Route' field for the 'First Problem Substance'.

Column Name: first_subs_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Type' field.

Column Name: first_subs_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Type' field.

Column Name: gambling_screen_adm_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Gambling Screening Positive' field.

Column Name: gambling_screen_adm_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Gambling Screening Positive' field.

Column Name: gambl_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Gambling Status' field.

Column Name: gambl_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Gambling Status' field.

Column Name: group_counsel_sessions

Column Type: varchar

Max Length: 50

Value of the 'Group Counseling Sessions' field.

Column Name: hepatitis_b_status_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Hepatitis B Status' field.

Column Name: hepatitis_b_status_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Hepatitis B Status' field.

Column Name: hepatitis_b_test_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Hepatitis B Test' field.

Column Name: hepatitis_b_test_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Hepatitis B Test' field.

Column Name: hepatitis_c_status_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Hepatitis C Status' field.

Column Name: hepatitis_c_status_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Hepatitis C Status' field.

Column Name: hepatitis_c_test_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Hepatitis C Test' field.

Column Name: hepatitis_c_test_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Hepatitis C Test' field.

Column Name: highest_grade_comp_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Highest Grade Completed At Admission' field.

Column Name: highest_grade_comp_value
Column Type: varchar
Max Length: 50

Dictionary value for the 'Highest Grade Completed At Admission' field.

Column Name: high_grade_at_dis_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Highest Grade Completed At Discharge' field.

Column Name: high_grade_at_dis_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Highest Grade Completed At Discharge' field.

Column Name: hiv_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'HIV Status Code' field.

Column Name: hiv_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'HIV Status Code' field.

Column Name: hiv_test_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Test For HIV' field.

Column Name: hiv_test_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Test For HIV' field.

Column Name: hypertension_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Hypertension' field.

Column Name: hypertension_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Hypertension' field.

Column Name: indiv_counsel_sessions

Column Type: varchar

Max Length: 50

Value of the 'Individual Counseling Sessions' field.

Column Name: last_name_first_2

Column Type: varchar

Max Length: 50

Value of the 'First Two Letters Of Last Name' field.

Column Name: legal_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Legal Status' field.

Column Name: legal_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Legal Status' field.

Column Name: lgth_employment_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Length Of Employment' field.

Column Name: lgth_employment_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Length Of Employment' field.

Column Name: living_arrangements_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Living Arrangements' field.

Column Name: living_arrangements_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Living Arrangements' field.

Column Name: locadtr_asmt_date

Column Type: date

'LOCADTR Assessment Date'.

Column Name: locadtr_asmt_id

Column Type: varchar

Max Length: 9

'LOCADTR Assessment ID'.

Column Name: medical_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Medical' field.

Column Name: medical_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Medical' field.

Column Name: mental_hosp_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Mental Hospitalized' field.

Column Name: mental_hosp_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Mental Hospitalized' field.

Column Name: mental_treat_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Mental Treatment' field.

Column Name: mental_treat_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Mental Treatment' field.

Column Name: ment_hosp_gt_thirty_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Mental Hospitalized > 30 days' field.

Column Name: ment_hosp_gt_thirty_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Mental Hospitalized > 30 days' field.

Column Name: no_arrests_in_30days
Column Type: varchar
Max Length: 50
Value of the 'No. Of Arrest In Prior 30 Days' field.

Column Name: no_er_epis_tx
Column Type: varchar
Max Length: 50
Value of the 'No. Of Emergency Room Episodes Client Received Treatment, in past 6 months' field.

Column Name: no_times_arrested
Column Type: varchar
Max Length: 50
Value of the 'Number Of Times Client Arrested, in past 6 months' field.

Column Name: orient_to_change_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Orientation To Change (RRYP Providers Only)' field.

Column Name: orient_to_change_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Orientation To Change (RRYP Providers Only)' field.

Column Name: prim_payment_source_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Primary Payment Source' field.

Column Name: prim_payment_source_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Primary Payment Source' field.

Column Name: prim_sub_reported_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Primary Substance Reported At Admission' field.

Column Name: prim_sub_reported_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Primary Substance Reported At Admission' field.

Column Name: program_goals_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Clients Overall Program Goals' field.

Column Name: program_goals_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Clients Overall Program Goals' field.

Column Name: pru_no
Column Type: varchar
Max Length: 50
Value of the 'PRU No.' field.

Column Name: psychiatric_dis_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Psychiatric Disorder' field.

Column Name: psychiatric_dis_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Psychiatric Disorder' field.

Column Name: referral_category_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Referral Category' field.

Column Name: referral_category_value
Column Type: varchar
Max Length: 80
Dictionary value for the 'Referral Category' field.

Column Name: referral_disp_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Referral Disposition' field.

Column Name: referral_disp_value_long
Column Type: varchar
Max Length: 4096
Long dictionary value for the 'Referral Disposition' field.

Column Name: referral_disp_value_short
Column Type: varchar
Max Length: 255
Short dictionary value for the 'Referral Disposition' field.

Column Name: resend_form_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Re-Send Form' field.

Column Name: resend_form_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Re-Send Form' field.

Column Name: sec_sub_reported_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Secondary Substance Reported At Admission' field.

Column Name: sec_sub_reported_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Secondary Substance Reported At Admission' field.

Column Name: sec_subs_freq_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Frequency' field for the 'Second Problem Substance'.

Column Name: sec_subs_freq_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Frequency' field for the 'Second Problem Substance'.

Column Name: sec_subs_route_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Route' field for the 'Second Problem Substance'.

Column Name: sec_subs_route_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Route' field for the 'Second Problem Substance'.

Column Name: sec_subs_type_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Problem Substances Secondary Type' field.

Column Name: sec_subs_type_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Problem Substances Secondary Type' field.

Column Name: self_help_ref_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Self Help Referral' field.

Column Name: self_help_ref_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Self Help Referral' field.

Column Name: sex_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Sex' field.

Column Name: sex_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Sex' field.

Column Name: social_functioning_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Social Functioning' field.

Column Name: social_functioning_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Social Functioning' field.

Column Name: ssn_last_4
Column Type: varchar
Max Length: 50
Value of the 'Last 4 SSN' field.

Column Name: status_prim_adm_sub_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Frequency Of Use Of Primary Admission Substance' field.

Column Name: status_prim_adm_sub_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Frequency Of Use Of Primary Admission Substance' field.

Column Name: status_sec_adm_sub_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Frequency Of Use Of Secondary Admission Substance' field.

Column Name: status_sec_adm_sub_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Frequency Of Use Of Secondary Admission Substance' field.

Column Name: tb_test_result_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Result of TB Test' field.

Column Name: tb_test_result_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Result of TB Test' field.

Column Name: tert_freq_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Frequency Of Use Of Tertiary Admission Substance' field.

Column Name: tert_freq_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Frequency Of Use Of Tertiary Admission Substance' field.

Column Name: tert_sub_reported_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Tertiary Substance Reported At Admission' field.

Column Name: tert_sub_reported_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Tertiary Substance Reported At Admission' field.

Column Name: third_subs_freq_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Frequency' field for the 'Third Problem Substance'.

Column Name: third_subs_freq_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Frequency' field for the 'Third Problem Substance'.

Column Name: third_subs_route_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Route' field for the 'Third Problem Substance'.

Column Name: third_subs_route_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Route' field for the 'Third Problem Substance'.

Column Name: third_subs_type_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Problem Substances Tertiary Type' field.

Column Name: third_subs_type_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Problem Substances Tertiary Type' field.

Column Name: tobacco_frequ_30_day_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Tobacco Frequency (Last 30 Days)' field.

Column Name: tobacco_frequ_30_day_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Tobacco Frequency (Last 30 Days)' field.

Column Name: tobacco_frequ_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Tobacco Frequency At Admission' field.

Column Name: tobacco_frequ_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Tobacco Frequency At Admission' field.

Column Name: tobacco_last_30_day_date
Column Type: date
Value of the 'Tobacco Last Used Date (Last 30 Days)' field.

Column Name: tobacco_last_u_date
Column Type: date
Value of the 'Tobacco Last Used Date At Admission' field.

Column Name: tobacco_rout_30_day_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Tobacco Route (Last 30 Days)' field.

Column Name: tobacco_rout_30_day_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Tobacco Route (Last 30 Days)' field.

Column Name: tobacco_sta_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Tobacco Use Status' field.

Column Name: tobacco_sta_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Tobacco Use Status' field.

Column Name: total_tx_visits
Column Type: varchar
Max Length: 50
Value of the 'Total Treatment Visits' field.

Column Name: treated_asthma_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Treated for Asthma' field.

Column Name: treated_asthma_value
Column Type: varchar

Max Length: 50
Dictionary value for the 'Treated for Asthma' field.

Column Name: treated_diabetes_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Treated for Diabetes' field.

Column Name: treated_diabetes_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Treated for Diabetes' field.

Column Name: treated_for_tb_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Treated for Latent TB' field.

Column Name: treated_for_tb_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Treated for Latent TB' field.

Column Name: treated_for_trauma_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Client Treated for Trauma?' field.

Column Name: treated_for_trauma_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Client Treated for Trauma?' field.

Column Name: treated_hyprtension_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Treated for Hypertension' field.

Column Name: treated_hyprtension_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Treated for Hypertension' field.

Column Name: treated_perp_dv_ipv_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Client Treated for Perpetrating Domestic Violence/Intimate Partner Violence?' field.

Column Name: treated_perp_dv_ipv_value
Column Type: varchar

Max Length: 50

Dictionary value for the 'Client Treated for Perpetrating Domestic Violence/Intimate Partner Violence?' field.

Column Name: treated_vict_dv_ipv_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Client Treated for Domestic Violence/Intimate Partner Violence?' field.

Column Name: treated_vict_dv_ipv_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Client Treated for Domestic Violence/Intimate Partner Violence?' field.

Column Name: type_of_residence_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Type Of Residence' field.

Column Name: type_of_residence_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Type Of Residence' field.

Column Name: vocationaleducationa_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Vocational/Educational' field.

Column Name: vocationaleducationa_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Vocational/Educational' field.

Documentation for form:

Crisis_Episode_Client_Admission/Discharge_Report_(PAS_46N)

Table Name: STATEFORM.nys_pas46_crisis_episode

Table Description: This table returns data filed using the 'Crisis Episode Client Admission/Discharge Report (PAS 46N)' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer
Client episode.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID.

Column Name: PCEuniqueid
Column Type: varchar
Max Length: 50
The unique ID for the current row of data.

Column Name: add_med_used_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Addiction Medication Used' field.

Column Name: add_med_used_value_long
Column Type: varchar
Max Length: 4096
Long dictionary value for the 'Addiction Medication Used' field.

Column Name: add_med_used_value_short
Column Type: varchar
Max Length: 255
Short dictionary value for the 'Addiction Medication Used' field.

Column Name: admission_date
Column Type: date
Date of client admission.

Column Name: alt_incarceration_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Alternative to Incarceration' field.

Column Name: alt_incarceration_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Alternative to Incarceration' field.

Column Name: cj_consent_date
Column Type: date
Value of the 'CJ Consent Date' field.

Column Name: cj_consent_revoke_date
Column Type: date
Value of the 'CJ Consent Revoke Date' field.

Column Name: client_id_no
Column Type: varchar
Max Length: 50
Value of the 'Client ID No.' field.

Column Name: county_of_residence_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'County Of Residence' field.

Column Name: county_of_residence_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'County Of Residence' field.

Column Name: criminal_just_stat_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Current Criminal Justice Status' field.

Column Name: criminal_just_value_long
Column Type: varchar
Max Length: 4096
Long dictionary value for the 'Current Criminal Justice Status' field.

Column Name: criminal_just_value_short
Column Type: varchar
Max Length: 255
Short dictionary value for the 'Current Criminal Justice Status' field.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date that the row was last updated.

Column Name: data_entry_offset
Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time that the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_last_treated

Column Type: date

Value of the 'Date Last Treated' field.

Column Name: date_of_birth

Column Type: date

Value of the 'Date Of Birth' field.

Column Name: date_sent

Column Type: date

Value of the 'Date Sent' field.

Column Name: default_pru_no_from_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Default PRU No. From' field.

Column Name: default_pru_no_from_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Default PRU No. From' field.

Column Name: deflt_client_id_no_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Default Client ID No. From' field.

Column Name: deflt_client_id_no_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Default Client ID No. From' field.

Column Name: discharge_disp_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Discharge Disposition' field.

Column Name: discharge_disp_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Discharge Disposition' field.

Column Name: discharge_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Discharge Status' field.

Column Name: discharge_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Discharge Status' field.

Column Name: employment_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Employment Status' field.

Column Name: employment_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Employment Status' field.

Column Name: ever_used_tobacco_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Ever Used Tobacco' field.

Column Name: ever_used_tobacco_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Ever Used Tobacco' field.

Column Name: first_name_current

Column Type: varchar

Max Length: 50

Value of the 'First Name Current' field.

Column Name: gender_identity_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Gender Identity' field.

Column Name: gender_identity_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Gender Identity' field.

Column Name: highest_grade_compl_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Highest Grade Completed' field.

Column Name: highest_grade_compl_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Highest Grade Completed' field.

Column Name: hispanic_origin_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Hispanic Origin' field.

Column Name: hispanic_origin_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Hispanic Origin' field.

Column Name: icd10_diagnosis

Column Type: varchar

Max Length: 50

'ICD-10 Code'.

Column Name: id_consent_date

Column Type: date

Value of the 'ID Consent Date' field.

Column Name: id_consent_revoke_date

Column Type: date

Value of the 'ID Consent Revoke Date' field.

Column Name: income_src_admit_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Primary Source Of Income At Admission' field.

Column Name: income_src_admit_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Primary Source Of Income At Admission' field.

Column Name: indiv_edu_plan_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Individual Education Plan' field.

Column Name: indiv_edu_plan_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Individual Education Plan' field.

Column Name: last_name_birth

Column Type: varchar

Max Length: 50

Value of the 'Last Name At Birth' field.

Column Name: last_name_current

Column Type: varchar

Max Length: 50

Value of the 'Last Name Current' field.

Column Name: last_name_first_2

Column Type: varchar

Max Length: 50

Value of the 'First Two Letters Of Last Name At Birth' field.

Column Name: last_name_first_2_current

Column Type: varchar

Max Length: 50

Value of the 'First Two Letters Of Current Last Name' field.

Column Name: locadtr_asmt_date
Column Type: date
'LOCADTR Assessment Date'.

Column Name: locadtr_asmt_id
Column Type: varchar
Max Length: 9
'LOCADTR Assessment ID'.

Column Name: mats_consent_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Consent Granted' field.

Column Name: mats_consent_eff_date
Column Type: date
Value of the 'Effective Date' field.

Column Name: mats_consent_exp_date
Column Type: date
Value of the 'Expiration Date' field.

Column Name: mats_consent_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Consent Granted' field.

Column Name: mats_county_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'County Of Residence Is A MATS County' field.

Column Name: mats_county_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'County Of Residence Is A MATS County' field.

Column Name: medicaid_client_id
Column Type: varchar
Max Length: 50
Value of the 'Medicaid Client ID' field.

Column Name: med_manage_detox_bed
Column Type: varchar
Max Length: 50
Value of the 'Med Managed Detox Bed' field.

Column Name: med_sup_wdrawal_bed
Column Type: varchar
Max Length: 50

Value of the 'Med Sup Withdrawal Bed' field.

Column Name: military_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Military Status' field.

Column Name: military_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Military Status' field.

Column Name: nysid

Column Type: varchar

Max Length: 50

Value of the 'NYSID' field.

Column Name: observation_bed

Column Type: varchar

Max Length: 50

Value of the 'Observation Bed' field.

Column Name: prim_payment_source_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Primary Payment Source' field.

Column Name: prim_payment_source_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Primary Payment Source' field.

Column Name: prim_substance_age

Column Type: varchar

Max Length: 50

Value of the 'Problem Substances Primary Age' field.

Column Name: prim_substance_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Frequency' field.

Column Name: prim_substance_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Frequency' field.

Column Name: prim_substance_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Route' field.

Column Name: prim_substance_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Route' field.

Column Name: prim_substance_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Primary Type' field.

Column Name: prim_substance_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Primary Type' field.

Column Name: princ_referral_src_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Principal Referral Source' field.

Column Name: princ_referral_src_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Principal Referral Source' field.

Column Name: pru_no

Column Type: varchar

Max Length: 50

Value of the 'PRU No.' field.

Column Name: race_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Race' field.

Column Name: race_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Race' field.

Column Name: referral_category_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Referral Category' field.

Column Name: referral_category_value

Column Type: varchar

Max Length: 80

Dictionary value for the 'Referral Category' field.

Column Name: referral_disp_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Referral Disposition' field.

Column Name: referral_disp_value_long

Column Type: varchar

Max Length: 4096

Long dictionary value for the 'Referral Disposition' field.

Column Name: referral_disp_value_short

Column Type: varchar

Max Length: 255

Short dictionary value for the 'Referral Disposition' field.

Column Name: resend_form_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Re-Send Form' field.

Column Name: resend_form_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Re-Send Form' field.

Column Name: sec_substance_age

Column Type: varchar

Max Length: 50

Value of the 'Problem Substances Secondary Age' field.

Column Name: sec_substance_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Secondary Frequency' field.

Column Name: sec_substance_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Secondary Frequency' field.

Column Name: sec_substance_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Secondary Route' field.

Column Name: sec_substance_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Secondary Route' field.

Column Name: sec_substance_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Secondary Type' field.

Column Name: sec_substance_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Secondary Type' field.

Column Name: self_help_ref_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Currently Attending Self Help Group Meetings (Last 30 days)' field.

Column Name: self_help_ref_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Currently Attending Self Help Group Meetings (Last 30 days)' field.

Column Name: sex_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Sex' field.

Column Name: sexual_orientation_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Sexual Orientation' field.

Column Name: sexual_orientation_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Sexual Orientation' field.

Column Name: sex_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Sex' field.

Column Name: special_project_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Special Project Code' field.

Column Name: special_project_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Special Project Code' field.

Column Name: ssn

Column Type: varchar

Max Length: 50

Value of the 'Social Security Number' field.

Column Name: ssn_last_4

Column Type: varchar

Max Length: 50

Value of the 'Last Four Digits Of Soc. Sec. No.' field.

Column Name: tert_substance_age

Column Type: varchar

Max Length: 50

Value of the 'Problem Substances Tertiary Age' field.

Column Name: tert_substance_freq_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Tertiary Frequency' field.

Column Name: tert_substance_freq_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Tertiary Frequency' field.

Column Name: tert_substance_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Tertiary Route' field.

Column Name: tert_substance_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Tertiary Route' field.

Column Name: tert_substance_type_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Problem Substances Tertiary Type' field.

Column Name: tert_substance_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Problem Substances Tertiary Type' field.

Column Name: tobacco_age_first_use

Column Type: varchar

Max Length: 50

Value of the 'Tobacco Age Of First Use' field.

Column Name: tobacco_frequ_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Tobacco Frequency' field.

Column Name: tobacco_frequ_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Tobacco Frequency' field.

Column Name: tobacco_last_u_date

Column Type: date

Value of the 'Tobacco Last Used Date' field.

Column Name: tobacco_route_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Tobacco Route' field.

Column Name: tobacco_route_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Tobacco Route' field.

Column Name: type_of_residence_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Type Of Residence' field.

Column Name: type_of_residence_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Type Of Residence' field.

Column Name: veteran_status_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Veteran Status' field.

Column Name: veteran_status_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Veteran Status' field.

Column Name: zip_code_of_residenc

Column Type: varchar

Max Length: 50

Value of the 'Zip Code Of Residence' field.

Documentation for form: Client_Transfer_Report_(PAS_47)

Table Name: STATEFORM.nys_pas47_transfer

Table Description: This table returns data filed using the 'Client Transfer Report (PAS 47)' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
Client episode.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID.

Column Name: PXFuniqueid
Column Type: varchar
Max Length: 50
The unique ID for the current row of data.

Column Name: client_id_no
Column Type: varchar
Max Length: 50
Value of the 'Client ID No.' field.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date that the row was last updated.

Column Name: data_entry_offset
Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time that the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_transfer

Column Type: date

Value of the 'Date Of Transfer' field.

Column Name: date_sent

Column Type: date

Value of the 'Date Sent' field.

Column Name: default_client_id_no_code

Column Type: varchar

Max Length: 50
Dictionary code for the 'Default Client ID No. From' field.

Column Name: default_client_id_no_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Default Client ID No. From' field.

Column Name: def_pru_xfer_from_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Default PRU No. Transferred From' field.

Column Name: def_pru_xfer_from_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Default PRU No. Transferred From' field.

Column Name: def_pru_xfer_to_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Default PRU No. Transferred To' field.

Column Name: def_pru_xfer_to_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Default PRU No. Transferred To' field.

Column Name: element_of_care_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Element of Care' field.

Column Name: element_of_care_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Element of Care' field.

Column Name: locadtr_asmt_date
Column Type: date
'LOCADTR Assessment Date'.

Column Name: locadtr_asmt_id
Column Type: varchar
Max Length: 9
'LOCADTR Assessment ID'.

Column Name: pru_no_xfer_from
Column Type: varchar
Max Length: 50

Value of the 'PRU No. Transferred From' field.

Column Name: pru_no_xfer_to

Column Type: varchar

Max Length: 50

Value of the 'PRU No. Transferred To' field.

Column Name: reintegration_setng_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Reintegration Setting' field.

Column Name: reintegration_setng_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Reintegration Setting' field.

Column Name: resend_form_code

Column Type: varchar

Max Length: 50

Dictionary code for the 'Re-Send Form' field.

Column Name: resend_form_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Re-Send Form' field.

Column Name: transfer_record

Column Type: varchar

Max Length: 50

Value of the 'Transfer Record' field.

Documentation for form: [Element_Transition_Report_\(PAS_125\)](#)

Table Name: [STATEFORM.nys_pas125_element_trans](#)

Table Description: This table returns data filed using the 'Element Transfer Report (PAS 125)' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

Client episode.

Column Name: FACILITY

Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID.

Column Name: PETuniqueid
Column Type: varchar
Max Length: 50
The unique ID for the current row of data.

Column Name: client_id_no
Column Type: varchar
Max Length: 50
Value of the 'Client ID No.' field.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date that the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time that the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_birth
Column Type: date
Value of the 'Date Of Birth' field.

Column Name: date_sent
Column Type: date
Value of the 'Date Sent' field.

Column Name: default_client_id_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Default Client Id No.' field.

Column Name: default_client_id_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Default Client Id No.' field.

Column Name: default_pru_no_from_code
Column Type: varchar
Max Length: 50
Dictionary code for the 'Default PRU No. From' field.

Column Name: default_pru_no_from_value
Column Type: varchar
Max Length: 50

Dictionary value for the 'Default PRU No. From' field.

Column Name: element_of_care_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Element of Care' field.

Column Name: element_of_care_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Element of Care' field.

Column Name: last_name_first_two

Column Type: varchar

Max Length: 50

Value of the 'First Two Letters of Last Name at Birth' field.

Column Name: locadtr_asmt_date

Column Type: date

'LOCADTR Assessment Date'.

Column Name: locadtr_asmt_id

Column Type: varchar

Max Length: 9

'LOCADTR Assessment ID'.

Column Name: pru_no

Column Type: varchar

Max Length: 50

Value of the 'Current PRU No.' field.

Column Name: reintegration_setng_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Reintegration Setting' field.

Column Name: reintegration_setng_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Reintegration Setting' field.

Column Name: resend_form_code

Column Type: varchar

Max Length: 10

Dictionary code for the 'Re-Send Form' field.

Column Name: resend_form_value

Column Type: varchar

Max Length: 50

Dictionary value for the 'Re-Send Form' field.

Column Name: sex_code
Column Type: varchar
Max Length: 10
Dictionary code for the 'Sex' field.

Column Name: sex_value
Column Type: varchar
Max Length: 50
Dictionary value for the 'Sex' field.

Column Name: ssn_last_four
Column Type: varchar
Max Length: 50
Value of the 'Last Four Digits of SSN' field.

Column Name: transition_date
Column Type: date
Value of the 'Transition Date' field.

Documentation for form: Ohio_BH_Admission

Table Name: STATEFORM.oh_bh_admission

Table Description: This table returns client data filed by the 'Ohio BH Admission' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: BHAuniqueid
Column Type: varchar
Max Length: 50
Row unique ID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was filed.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID.

Column Name: add_edit_sent_del_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Add/Edit/Sent/Delete' field.

Column Name: add_edit_sent_del_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Add/Edit/Sent/Delete' field.

Column Name: admission_type_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Admission Type' field.

Column Name: admission_type_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Admission Type' field.

Column Name: ads_rehab_episodes
Column Type: varchar
Max Length: 50
Value of the 'BH #ADA Rehab Episodes' field.

Column Name: age_first_intox
Column Type: varchar
Max Length: 50
Value of the 'BH Age of First Alcohol Intoxication' field.

Column Name: aod_involvement
Column Type: integer
Value of the 'AOD Involvement' field.

Column Name: arrested
Column Type: integer
Value of the 'Arrested' field.

Column Name: arrests_30_days
Column Type: varchar
Max Length: 50
Value of the 'BH # of Arrests in Past 30 Days' field.

Column Name: ass_com_treat_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Assertive Community Treatment' field.

Column Name: ass_com_treat_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Assertive Community Treatment' field.

Column Name: bh_admission_date
Column Type: date

Value of the 'BH Admission Date' field.

Column Name: bmi_type_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'BMI Type' field.

Column Name: bmi_type_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'BMI Type' field.

Column Name: bowel_obstruction_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Bowel Obstruction' field.

Column Name: bowel_obstruction_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Bowel Obstruction' field.

Column Name: cancer_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Cancer' field.

Column Name: cancer_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Cancer' field.

Column Name: cardiovas_disease_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Cardiovascular Disease' field.

Column Name: cardiovas_disease_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Cardiovascular Disease' field.

Column Name: cgas

Column Type: integer

Value of the 'CGAS' field.

Column Name: child_birth_5_years_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Child Birth Within The Last 5 Years?' field.

Column Name: child_birth_5_years_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Child Birth Within The Last 5 Years?' field.

Column Name: children_removed_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Were Children Removed From Home?' field.

Column Name: children_removed_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Were Children Removed From Home?' field.

Column Name: children_under_18

Column Type: varchar

Max Length: 50

Value of the 'BH # of Children Under 18 in Household' field.

Column Name: client_group_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Client Group' field.

Column Name: client_group_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Client Group' field.

Column Name: codepend_collat_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'BH Codependent/Collateral' field.

Column Name: codepend_collat_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'BH Codependent/Collateral' field.

Column Name: consistent_assess_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Consistent With Assessment (AOD Only)' field.

Column Name: consistent_assess_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Consistent With Assessment (AOD Only)' field.

Column Name: consistent_reason_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'If No, Select Reason Below' field.

Column Name: consistent_reason_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'If No, Select Reason Below' field.

Column Name: curr_living_arrang_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Avatar Admission Current Living Arrangements' field.

Column Name: curr_living_arrang_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Avatar Admission Current Living Arrangements' field.

Column Name: custody_odhs_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Is Child in Custody of ODHS/Child Srv' field.

Column Name: custody_odhs_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Is Child in Custody of ODHS/Child Srv' field.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date that the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time that the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_service_request

Column Type: date

Value of the 'Date of First Contact' field.

Column Name: day_of_service_1

Column Type: date

Value of the '1st Day Of Service' field.

Column Name: days_from_ref_by_pcp

Column Type: varchar

Max Length: 50

Value of the 'Days from ref by PCP for SA Assessment' field.

Column Name: dental_visits

Column Type: varchar
Max Length: 50
Value of the 'BH # Regular Visits to Dentist' field.

Column Name: diabetes_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Diabetes' field.

Column Name: diabetes_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Diabetes' field.

Column Name: diagnosis_quater_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Quaternary Diagnosis' field.

Column Name: diagnosis_quater_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Quaternary Diagnosis' field.

Column Name: diagnosis_secondary_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Secondary Diagnosis' field.

Column Name: diagnosis_secondary_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Secondary Diagnosis' field.

Column Name: diagnosis_tertiary_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Tertiary Diagnosis' field.

Column Name: diagnosis_tertiary_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Tertiary Diagnosis' field.

Column Name: drug_use_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Drug Use' field.

Column Name: drug_use_value

Column Type: varchar
Max Length: 50
The dictionary value for the 'Drug Use' field.

Column Name: dual_eligible
Column Type: integer
Value of the 'Dual Eligible' field.

Column Name: education_enroll_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Education Enrollment' field.

Column Name: education_enroll_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Education Enrollment' field.

Column Name: education_level_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Education Level' field.

Column Name: education_level_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Education Level' field.

Column Name: education_type_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Education Type (MH Only,K-12th Enrollment)' field.

Column Name: education_type_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Education Type (MH Only,K-12th Enrollment)' field.

Column Name: emergency_room_admit
Column Type: varchar
Max Length: 50
Value of the 'BH # Emergency Room Admissions' field.

Column Name: employment_status_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Employment Status' field.

Column Name: employment_status_value
Column Type: varchar

Max Length: 50
The dictionary value for the 'Employment Status' field.

Column Name: family_pscho_edu_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Family Psycho Education' field.

Column Name: family_pscho_edu_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Family Psycho Education' field.

Column Name: function_fam_ther_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Functional Family Therapy' field.

Column Name: function_fam_ther_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Functional Family Therapy' field.

Column Name: gaf_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'GAF' field.

Column Name: gaf_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'GAF' field.

Column Name: gamb_disord_assess_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Gambling Disorder Assessment' field.

Column Name: gamb_disord_assess_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Gambling Disorder Assessment' field.

Column Name: gamb_disord_screen_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Gambling Disorder Screening' field.

Column Name: gamb_disord_screen_value
Column Type: varchar

Max Length: 50
The dictionary value for the 'Gambling Disorder Screening' field.

Column Name: gen_outpatient_eps
Column Type: varchar
Max Length: 50
Value of the 'BH #ADA General Outpatient Episodes' field.

Column Name: hb_484_participant_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'HB-484 Participant' field.

Column Name: hb_484_participant_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'HB-484 Participant' field.

Column Name: height_feet
Column Type: integer
Value of the 'Height Feet' field.

Column Name: height_inches
Column Type: integer
Value of the 'Height Inches' field.

Column Name: high_blood_pressure_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'High Blood Pressure' field.

Column Name: high_blood_pressure_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'High Blood Pressure' field.

Column Name: high_cholesterol_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'High Cholesterol' field.

Column Name: high_cholesterol_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'High Cholesterol' field.

Column Name: hospital_admits
Column Type: varchar
Max Length: 50
Value of the 'BH # of Hospital Admissions' field.

Column Name: illness_self_manage_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Illness Self Management' field.

Column Name: illness_self_manage_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Illness Self Management' field.

Column Name: income_source_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Primary Source Of Income/Support' field.

Column Name: income_source_shval
Column Type: varchar
Max Length: 255
The short dictionary value for the 'Primary Source Of Income/Support' field.

Column Name: income_source_value
Column Type: varchar
Max Length: 4096
The full dictionary value for the 'Primary Source Of Income/Support' field.

Column Name: inpatient_episodes
Column Type: varchar
Max Length: 50
Value of the 'BH #ADA Inpatient Episodes' field.

Column Name: integ_treatment_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Integrated Treatment' field.

Column Name: integ_treatment_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Integrated Treatment' field.

Column Name: int_home_base_treat_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Intensive Home Based Treatment' field.

Column Name: int_home_base_treat_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Intensive Home Based Treatment' field.

Column Name: kidney_disease_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Kidney Disease' field.

Column Name: kidney_disease_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Kidney Disease' field.

Column Name: last_grade_completed_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Avatar Admission Education' field.

Column Name: last_grade_completed_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Avatar Admission Education' field.

Column Name: legal_status_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Legal Status' field.

Column Name: legal_status_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Legal Status' field.

Column Name: level_of_care_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Level of Care' field.

Column Name: level_of_care_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Level of Care' field.

Column Name: living_arrangement_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Living Arrangements' field.

Column Name: living_arrangement_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Living Arrangements' field.

Column Name: med_dental_visits
Column Type: integer
Value of the 'Dental Visits' field.

Column Name: med_emergency_room_visits
Column Type: integer
Value of the 'Emergency Room Visits' field.

Column Name: med_hospital_visits
Column Type: integer
Value of the 'Hospital Visits' field.

Column Name: medicaid_hmo_ppo_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Is Client Medicaid/HMO/PPO?' field.

Column Name: medicaid_hmo_ppo_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Is Client Medicaid/HMO/PPO?' field.

Column Name: med_management_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Medication Management' field.

Column Name: med_management_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Medication Management' field.

Column Name: med_outpatient_visits
Column Type: integer
Value of the 'Outpatient Visits' field.

Column Name: mental_health_hist_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Select If MH Problem In Addition To AOD Problem' field.

Column Name: mental_health_hist_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Select If MH Problem In Addition To AOD Problem' field.

Column Name: methadone_used_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Opioid Replacement Therapy' field.

Column Name: methadone_used_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Opioid Replacement Therapy' field.

Column Name: mh_update_date
Column Type: date
Value of the 'Update Date' field.

Column Name: military_status_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Military Status' field.

Column Name: military_status_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Military Status' field.

Column Name: monthly_income
Column Type: numeric
Value of the 'Individual Monthly Income' field.

Column Name: multi_system_ther_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Multi Systemic Therapy' field.

Column Name: multi_system_ther_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Multi Systemic Therapy' field.

Column Name: none_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'None' field.

Column Name: none_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'None' field.

Column Name: outpat_care_visits
Column Type: varchar
Max Length: 50
Value of the 'BH # Outpatient Health Care Visits' field.

Column Name: outpatient_episodes
Column Type: varchar

Max Length: 50
Value of the 'BH #ADA Intensive Outpatient Episodes' field.

Column Name: paying_board_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Paying Board' field.

Column Name: paying_board_shval
Column Type: varchar
Max Length: 255
The short dictionary value for the 'Paying Board' field.

Column Name: paying_board_value
Column Type: varchar
Max Length: 4096
The full dictionary value for the 'Paying Board' field.

Column Name: physician_visits
Column Type: varchar
Max Length: 50
Value of the 'BH # Regular Visits to Physician' field.

Column Name: pregnant_admission_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Client Pregnant on Admission' field.

Column Name: pregnant_admission_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Client Pregnant on Admission' field.

Column Name: primary_reimburse_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Primary Reimbursement' field.

Column Name: primary_reimburse_shval
Column Type: varchar
Max Length: 255
The short dictionary value for the 'Primary Reimbursement' field.

Column Name: primary_reimburse_value
Column Type: varchar
Max Length: 4096
The full dictionary value for the 'Primary Reimbursement' field.

Column Name: prim_care_physician_code
Column Type: varchar

Max Length: 50

The dictionary code for the 'Primary Care Physician (1st Visit)' field.

Column Name: prim_care_physician_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Primary Care Physician (1st Visit)' field.

Column Name: principal_diagnosis_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Primary Diagnosis' field.

Column Name: principal_diagnosis_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Primary Diagnosis' field.

Column Name: prior_aod_tx_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Prior AOD Treatment Episodes With Any Agency' field.

Column Name: prior_aod_tx_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Prior AOD Treatment Episodes With Any Agency' field.

Column Name: referred_by_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Referred By' field.

Column Name: referred_by_upin

Column Type: varchar

Max Length: 50

Value of the 'Referred by MACSIS Universal Provider ID (UPID)' field.

Column Name: referred_by_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Referred By' field.

Column Name: referred_to_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'BH Referred To' field.

Column Name: referred_to_macsis

Column Type: varchar

Max Length: 50
Value of the 'BH Referred to MACSIS Provider ID' field.

Column Name: referred_to_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Referred To' field.

Column Name: reimburse_source1_code
Column Type: varchar
Max Length: 50
The dictionary code of the first 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source1_value
Column Type: varchar
Max Length: 50
The dictionary value of the first 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source2_code
Column Type: varchar
Max Length: 50
The dictionary code of the second 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source2_value
Column Type: varchar
Max Length: 50
The dictionary value of the second 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source3_code
Column Type: varchar
Max Length: 50
The dictionary code of the third 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source3_value
Column Type: varchar
Max Length: 50
The dictionary value of the third 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source4_code
Column Type: varchar
Max Length: 50
The dictionary code of the fourth 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source4_value
Column Type: varchar
Max Length: 50
The dictionary value of the fourth 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source5_code
Column Type: varchar

Max Length: 50

The dictionary code of the fifth 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source5_value

Column Type: varchar

Max Length: 50

The dictionary value of the fifth 'BH Expected Source of Reimbursement'.

Column Name: reimburse_source_all

Column Type: varchar

Max Length: 50

Value of the 'BH Expected Source of Reimbursement' field.

Column Name: respiratory_disease_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Respiratory Disease' field.

Column Name: respiratory_disease_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Respiratory Disease' field.

Column Name: self_help_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Participation In Self-Help Groups, Support Groups, etc. (e.g. AA, NA, etc) In The Past 30 Days' field.

Column Name: self_help_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Participation In Self-Help Groups, Support Groups, etc. (e.g. AA, NA, etc) In The Past 30 Days' field.

Column Name: serv_paid_by_mcaid_code

Column Type: varchar

Max Length: 50

The dictionary code for the 'Services Completely Paid by Medicaid' field.

Column Name: serv_paid_by_mcaid_value

Column Type: varchar

Max Length: 50

The dictionary value for the 'Services Completely Paid by Medicaid' field.

Column Name: source_of_income1_code

Column Type: varchar

Max Length: 50

The dictionary code for the first 'Client's Source Of Income'.

Column Name: source_of_income1_value
Column Type: varchar
Max Length: 50
The dictionary value for the first 'Client's Source Of Income'.

Column Name: source_of_income2_code
Column Type: varchar
Max Length: 50
The dictionary code for the second 'Client's Source Of Income'.

Column Name: source_of_income2_value
Column Type: varchar
Max Length: 50
The dictionary value for the second 'Client's Source Of Income'.

Column Name: source_of_income3_code
Column Type: varchar
Max Length: 50
The dictionary code for the third 'Client's Source Of Income'.

Column Name: source_of_income3_value
Column Type: varchar
Max Length: 50
The dictionary value for the third 'Client's Source Of Income'.

Column Name: source_of_income4_code
Column Type: varchar
Max Length: 50
The dictionary code for the fourth 'Client's Source Of Income'.

Column Name: source_of_income4_value
Column Type: varchar
Max Length: 50
The dictionary value for the fourth 'Client's Source Of Income'.

Column Name: source_of_income5_code
Column Type: varchar
Max Length: 50
The dictionary code for the fifth 'Client's Source Of Income'.

Column Name: source_of_income5_value
Column Type: varchar
Max Length: 50
The dictionary value for the fifth 'Client's Source Of Income'.

Column Name: source_of_income_all
Column Type: varchar
Max Length: 50
Value of the 'Client's Source Of Income' field.

Column Name: special_pop_group_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Special Population Group' field.

Column Name: special_pop_group_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Special Population Group' field.

Column Name: stage_of_pregnancy_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Stage Of Pregnancy (If Client Is Pregnant)' field.

Column Name: stage_of_pregnancy_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Stage Of Pregnancy (If Client Is Pregnant)' field.

Column Name: star_si_participant_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'STAR-SI Participant?' field.

Column Name: star_si_participant_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'STAR-SI Participant?' field.

Column Name: supp_employment_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Supported Employment' field.

Column Name: supp_employment_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Supported Employment' field.

Column Name: supp_housing_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Supportive Housing' field.

Column Name: supp_housing_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Supportive Housing' field.

Column Name: suspended_expelled
Column Type: integer
Value of the 'Suspended Expelled' field.

Column Name: therap_foster_care_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Therapeutic Foster Care' field.

Column Name: therap_foster_care_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Therapeutic Foster Care' field.

Column Name: tobacco_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Tobacco' field.

Column Name: tobacco_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Tobacco' field.

Column Name: total_births
Column Type: varchar
Max Length: 50
Value of the 'Total Number Of Births (Live And Still)' field.

Column Name: type_referral_source_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Type of Referral Source' field.

Column Name: type_referral_source_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Type of Referral Source' field.

Column Name: unknown_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Unknown' field.

Column Name: unknown_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Unknown' field.

Column Name: upi_code

Column Type: varchar
Max Length: 50
The dictionary code for the 'UPI' field.

Column Name: upi_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'UPI' field.

Column Name: urinalysis_request_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'BH Urinalysis Requested' field.

Column Name: urinalysis_request_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'BH Urinalysis Requested' field.

Column Name: veteran_afghan_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Afghanistan Veteran' field.

Column Name: veteran_afghan_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Afghanistan Veteran' field.

Column Name: veteran_iraq_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Iraqi Veteran' field.

Column Name: veteran_iraq_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Iraqi Veteran' field.

Column Name: veteran_status_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Veteran Status' field.

Column Name: veteran_status_value
Column Type: varchar
Max Length: 50
The dictionary field for the 'Veteran Status' field.

Column Name: weight

Column Type: integer
Value of the 'Weight' field.

Column Name: women_interim_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Was Interim Services Provider Due To Client Being On Waiting List?' field.

Column Name: women_interim_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Was Interim Services Provider Due To Client Being On Waiting List?' field.

Column Name: women_percent_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'At Time Of Admission Was Program At Or Above 90%?' field.

Column Name: women_percent_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'At Time Of Admission Was Program At Or Above 90%?' field.

Column Name: women_program_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Involved In A Women's Program?' field.

Column Name: women_program_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Involved In A Women's Program?' field.

Column Name: women_waiting_list_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Is There A Waiting List?' field.

Column Name: women_waiting_list_value
Column Type: varchar
Max Length: 50
The dictionary value for the 'Is There A Waiting List?' field.

Documentation for form:

State_of_Illinois_DHS/DASA_Pharmacy_System

Table Name: STATEFORM.illinois_pharmacy

Table Description: This table returns data stored by the 'State of Illinois DHS/DASA Pharmacy System' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The Episode Number.

Column Name: FACILITY
Column Type: integer
The Facility.

Column Name: IPMUniqueid
Column Type: varchar
Max Length: 50
The IPM Unique Id.

Column Name: PATID
Column Type: varchar
Max Length: 20
The PATID.

Column Name: address
Column Type: varchar
Max Length: 50
The Address.

Column Name: city
Column Type: varchar
Max Length: 50
The City.

Column Name: client_id
Column Type: varchar
Max Length: 50
The Client Id.

Column Name: clinic_code
Column Type: varchar
Max Length: 50

The Clinic Code.

Column Name: clinic_value

Column Type: varchar

Max Length: 50

The Clinic Value.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user that entered the data.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The form identifier.

Column Name: data_entry_date

Column Type: date

The Data Entry Date.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The form the data was filed from.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The Data Entry Time.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_sent
Column Type: date
The Date the file was sent.

Column Name: dispense_code
Column Type: varchar
Max Length: 50
The Dispensing Code.

Column Name: dispense_value
Column Type: varchar
Max Length: 50
The Dispensing Value.

Column Name: funding_code
Column Type: varchar
Max Length: 50
The Funding Code.

Column Name: funding_value
Column Type: varchar
Max Length: 50
The Funding Value.

Column Name: medication_code
Column Type: varchar
Max Length: 50
The Medication Code.

Column Name: medication_type
Column Type: varchar
Max Length: 50
The Medication Type.

Column Name: medication_value
Column Type: varchar
Max Length: 50

The Medication Value.

Column Name: modality_code
Column Type: varchar
Max Length: 50
The Modality Code.

Column Name: modality_value
Column Type: varchar
Max Length: 50
The Modality Value.

Column Name: mondays_date
Column Type: date
Mondays Date..

Column Name: name
Column Type: varchar
Max Length: 50
Client Name.

Column Name: patient_id
Column Type: varchar
Max Length: 50
The Patient Id.

Column Name: pregnant_status_code
Column Type: varchar
Max Length: 50
The Pregnant Status Code.

Column Name: pregnant_status_value
Column Type: varchar
Max Length: 50
The Pregnant Status Value.

Column Name: social_security_num
Column Type: varchar
Max Length: 50
The Social Security Number.

Column Name: state_code
Column Type: varchar
Max Length: 50
The State Code.

Column Name: state_value
Column Type: varchar
Max Length: 50
The TPL Status Code.

Column Name: tpl_due_patient
Column Type: varchar
Max Length: 50
The Amount Due from Patient.

Column Name: tpl_guar_code
Column Type: varchar
Max Length: 50
The TPL Guarantor Code.

Column Name: tpl_guar_name
Column Type: varchar
Max Length: 40
The TPL Guarantor Name.

Column Name: tpl_payer_amt
Column Type: varchar
Max Length: 50
The TPL Payer Amount.

Column Name: tpl_payer_date
Column Type: date
The TPL Payer Date.

Column Name: tpl_status_code
Column Type: varchar
Max Length: 50
The TPL Status Code.

Column Name: tpl_status_value
Column Type: varchar
Max Length: 50
The TPL Status Value.

Column Name: transaction_type_code
Column Type: varchar
Max Length: 50
The Transaction Type Code.

Column Name: transaction_type_value
Column Type: varchar
Max Length: 50
The Transaction Type Value.

Column Name: zip
Column Type: varchar
Max Length: 50
The Zip Code.

Documentation for form: PROS_Encounter_Form

Table Name: STATEFORM.PROS_Audit_Program_Part

Table Description: This table returns the audit information of the 'Program Participation' grid in the 'PROS Encounter Form'

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOINTOAuditProgramPartHistory
Column Type: integer
The table row id of the record.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: Program_Part_History_Id
Column Type: varchar
Max Length: 50
Link to the original STATEFORM.PROS_Program_Part_History table row id.

Column Name: audit_data_entry_by
Column Type: varchar
Max Length: 50
The user who last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: audit_data_entry_source
Column Type: varchar
Max Length: 50

The name of the form that last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: audit_data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: audit_data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: audit_data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_data_entry_user_name

Column Type: varchar

Max Length: 50

The user name who last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: audit_date

Column Type: date

The date the row was last updated on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_option_desc

Column Type: varchar

Max Length: 255

The name of the form that last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row on the original STATEFORM.PROS_Program_Part_History table.

Column Name: audit_time

Column Type: time

The time the row was last updated on the original STATEFORM.PROS_Program_Part_History table.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: days_code

Column Type: varchar

Max Length: 50

The days code of Program Participation. The associated codes are defined in the 'State Form Table' file, field #10253.

Column Name: days_value

Column Type: varchar

Max Length: 80

The description for the days_code. The associated descriptions are defined in the 'State Form Table' file, field #10253.

Column Name: effective_date

Column Type: varchar

Max Length: 50

Projected effective date for the participation.

Column Name: end_date

Column Type: date

Projected end date for the participation.

Column Name: end_time

Column Type: varchar

Max Length: 50

Projected end time for the Program Participation.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: participation_date

Column Type: date

Program Participation date.

Column Name: participation_row

Column Type: varchar

Max Length: 10

Program Participation row.

Column Name: participation_type
Column Type: varchar
Max Length: 80
Program Participation type.

Column Name: program
Column Type: varchar
Max Length: 50
The program code associated with the participation.

Column Name: selection_code
Column Type: varchar
Max Length: 50
The selection code of Program Participation. The associated codes are defined in the 'State Form Table' file, field #10250.

Column Name: selection_value
Column Type: varchar
Max Length: 80
The description for the selection_code. The associated descriptions are defined in the 'State Form Table' file, field #10250.

Column Name: start_time
Column Type: varchar
Max Length: 50
Start time for the Program Participation.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: PROS_Encounter_Form

Table Name: STATEFORM.PROS_Encounter_Prog_Part

Table Description: This table returns the information of the 'Program Participation' grid in the 'PROS Encounter Form'

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: date
Column Type: date
Program Participation date.

Column Name: days_code
Column Type: varchar
Max Length: 50
The days code of Program Participation. The associated codes are defined in the 'State Form Table' file, field #10253.

Column Name: days_value
Column Type: varchar
Max Length: 80
The description for the days_code. The associated descriptions are defined in the 'State Form Table' file, field #10253.

Column Name: effective_date
Column Type: varchar
Max Length: 50
Projected effective date for the participation.

Column Name: end_date
Column Type: date
Projected end date for the participation.

Column Name: end_time
Column Type: varchar
Max Length: 50
Projected end time for the Program Participation.

Column Name: program
Column Type: varchar
Max Length: 50
The program code associated with the participation.

Column Name: row
Column Type: varchar
Max Length: 10
Program Participation row.

Column Name: selection_code

Column Type: varchar

Max Length: 50

The selection code of Program Participation. The associated codes are defined in the 'State Form Table' file, field #10250.

Column Name: selection_value

Column Type: varchar

Max Length: 80

The description for the selection_code. The associated descriptions are defined in the 'State Form Table' file, field #10250.

Column Name: start_time

Column Type: varchar

Max Length: 50

Start time for the Program Participation.

Column Name: type

Column Type: varchar

Max Length: 80

Program Participation type.

Documentation for form: PROS_Encounter_Form

Table Name: STATEFORM.PROS_Program_Part_History

Table Description: This table returns the information of the 'Program Participation' grid with the audit fields in the 'PROS Encounter Form'

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOINTOProgramPartHistory

Column Type: integer

The table row id of the record.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: days_code

Column Type: varchar

Max Length: 50

The days code of Program Participation. The associated codes are defined in the 'State Form Table' file, field #10253.

Column Name: days_value

Column Type: varchar

Max Length: 80

The description for the days_code. The associated descriptions are defined in the 'State Form Table' file, field #10253.

Column Name: effective_date

Column Type: varchar

Max Length: 50

Projected effective date for the participation.

Column Name: end_date

Column Type: date

Projected end date for the participation.

Column Name: end_time

Column Type: varchar

Max Length: 50

Projected end time for the Program Participation.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: participation_date

Column Type: date

Program Participation date.

Column Name: participation_row

Column Type: varchar

Max Length: 10

Program Participation row.

Column Name: participation_type
Column Type: varchar
Max Length: 80
Program Participation type.

Column Name: program
Column Type: varchar
Max Length: 50
The program code associated with the participation.

Column Name: selection_code
Column Type: varchar
Max Length: 50
The selection code of Program Participation. The associated codes are defined in the 'State Form Table' file, field #10250.

Column Name: selection_value
Column Type: varchar
Max Length: 80
The description for the selection_code. The associated descriptions are defined in the 'State Form Table' file, field #10250.

Column Name: start_time
Column Type: varchar
Max Length: 50
Start time for the Program Participation.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: PROS_Compile/Post

Table Name: STATEFORM.PROS_Compile_Data

Table Description: This table returns the PROS Compile data.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: HCPCS_code

Column Type: varchar

Max Length: 20

The HCPCS code.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: billing_category_code

Column Type: varchar

Max Length: 50

The billing tier code.

Column Name: billing_category_value

Column Type: varchar

Max Length: 50

The description for the billing_category_code. See billing_category_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 80

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: medicaid_code

Column Type: varchar

Max Length: 20

The Medicaid code.

Column Name: modifier

Column Type: varchar

Max Length: 20

The Modifier code.

Column Name: month

Column Type: date

The compile month.

Column Name: number_of_units

Column Type: varchar

Max Length: 20

The number of units.

Column Name: option_desc

Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that last updated the row.

Column Name: pass_fail
Column Type: varchar
Max Length: 20
Indicates whether pass or fail.

Column Name: patient_name
Column Type: varchar
Max Length: 50
The name of the PATID of the service.

Column Name: program_code
Column Type: varchar
Max Length: 50
The program of the service.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: reason_for_fail
Column Type: varchar
Max Length: 255
The reason why the service failed.

Column Name: service_code
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: service_fee
Column Type: varchar
Max Length: 20
The fee for the service.

Column Name: status
Column Type: varchar
Max Length: 50
The status of the compiled data.

Column Name: target_pop_member_code

Column Type: varchar
Max Length: 50
Target population member code.

Column Name: target_pop_member_value
Column Type: varchar
Max Length: 50
The description for the target_pop_member_code. See target_pop_member_code for more information.

Column Name: total_units
Column Type: integer
The total number of units.

Documentation for form: PROS_Compile/Post

Table Name: STATEFORM.pros_note_plan_reject_services

Table Description: returns rejected services from the PROS Compile

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
%CC

Column Name: compilation_date
Column Type: date
date that the PROS compile was ran

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: EPISODE_NUMBER
Column Type: integer
episode number of the service

Column Name: exclusion_reason
Column Type: varchar

Max Length: 200

reason a given service is excluded based on the filing in the form Pros Note And Plan Requirements

Column Name: patient_name

Column Type: varchar

Max Length: 100

The name of the PATID of the service.

Column Name: program_code

Column Type: varchar

Max Length: 50

the service program of the service

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: service_code

Column Type: varchar

Max Length: 50

the service code of the service

Column Name: service_date

Column Type: varchar

Max Length: 20

the service date of the service

Column Name: service_value

Column Type: varchar

Max Length: 100

the value of the service

Documentation for form: Indiana_MRO

Table Name: STATEFORM.mro_file_record

Table Description: This table returns the data contained in Indiana MRO response files.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar
Max Length: 20
The Client ID for which this record will be submitted.

Column Name: RID
Column Type: varchar
Max Length: 12
The number that identifies the Medicaid program recipient.

Column Name: act_indicator
Column Type: varchar
Max Length: 1
ACT service package indicator.

Column Name: assessment_date
Column Type: date
Recipient assessment date.

Column Name: assess_tool_code
Column Type: varchar
Max Length: 1
Dictionary code for the Tool ID number (1,4,5,7 = CANS; 8 = ANSA).

Column Name: assess_tool_value
Column Type: varchar
Max Length: 50
Dictionary value for the Tool ID number.

Column Name: date_of_birth
Column Type: date
Client's Date of Birth from the MRO file.

Column Name: diagnosis_1
Column Type: varchar
Max Length: 8
Client diagnosis code 1.

Column Name: diagnosis_2
Column Type: varchar
Max Length: 8
Client diagnosis code 2.

Column Name: diagnosis_3
Column Type: varchar
Max Length: 8
Client diagnosis code 3.

Column Name: diagnosis_4
Column Type: varchar
Max Length: 8

Client diagnosis code 4.

Column Name: diagnosis_5

Column Type: varchar

Max Length: 8

Client diagnosis code 5.

Column Name: effective_date

Column Type: date

Effective date of the MRO PA.

Column Name: end_date

Column Type: date

End date of the MRO PA.

Column Name: error_code

Column Type: varchar

Max Length: 4

Code indicating the error value, if necessary; spaces if no error.

Column Name: file_id

Column Type: integer

Internal ID number for the MRO file in question.

Column Name: first_name

Column Type: varchar

Max Length: 25

Client's first name from the MRO file.

Column Name: gender

Column Type: varchar

Max Length: 1

Client's gender from the MRO file.

Column Name: last_name

Column Type: varchar

Max Length: 30

Client's last name from the MRO file.

Column Name: level_of_need_code

Column Type: varchar

Max Length: 2

Dictionary code for the Level of Need (LON) indicator.

Column Name: level_of_need_value

Column Type: varchar

Max Length: 50

Dictionary value for the Level of Need (LON) indicator.

Column Name: line_number

Column Type: integer
The line number on which this record appeared in its MRO file.

Column Name: package_status_code
Column Type: varchar
Max Length: 3
Indicates the resulting PA status.

Column Name: pa_number
Column Type: varchar
Max Length: 10
The unique number used to identify the PA segment.

Column Name: provider_id
Column Type: varchar
Max Length: 15
MCD/LPI provider ID.

Column Name: reason
Column Type: varchar
Max Length: 75
Description of package status or error/status code.

Column Name: social_security_number
Column Type: varchar
Max Length: 11
Client's social security number from the MRO file.

Column Name: submission_date
Column Type: date
Date segment was submitted on the daily MRO file.

Documentation for form: Michigan_County_Bill

Table Name: STATEFORM.mich_county_bill_census

Table Description: This table returns the census information for the Michigan County Bill

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The facility the bill was run for.

Column Name: FILE_NUMBER
Column Type: varchar

Max Length: 50

The file ID number associated with the compile.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The guarantor ID associated with the data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: claim_numbers

Column Type: varchar

Max Length: 50

Claim numbers for the charges/transfers/payments/adjustments.

Column Name: client_active

Column Type: varchar

Max Length: 40

Is client active in any episodes during billing period.

Column Name: client_name

Column Type: varchar

Max Length: 40

'Client Name'

Column Name: current_admit_date

Column Type: date

The current admit date for the client.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

'Entry Person'.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

'Data Entry By (Option)'.

Column Name: data_entry_date

Column Type: date

'Date Of Entry'.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Source.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
'Data Entry Time'.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
User ID.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
User Name.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: financial_class_code
Column Type: varchar
Max Length: 10
'Financial Class'

Column Name: financial_class_value
Column Type: varchar
Max Length: 40
The description associated with financial_class_code. See financial_class_code for more information.

Column Name: forensic
Column Type: varchar

Max Length: 10
'Forensic'.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that last updated the row.

Column Name: previous_balance
Column Type: numeric
The previous balance for the client/guarantor.

Documentation for form: Michigan_County_Bill

Table Name: STATEFORM.mich_county_bill_detail

Table Description: This table returns the detail information for the Michigan County Bill

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The facility the bill was run for.

Column Name: FILE_NUMBER
Column Type: varchar
Max Length: 50
The file ID number associated with the compile.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The guarantor ID associated with the data.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id for a service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: amount

Column Type: numeric

The amount of the charge/transfer/payment/adjustment.

Column Name: chg_tra_pay_adj_date

Column Type: date

The date of the charge, transfer, payment, or adjustment.

Column Name: claim_number

Column Type: varchar

Max Length: 40

'Claim Number'

Column Name: client_name

Column Type: varchar

Max Length: 40

'Client Name'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

'Entry Person'.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

'Data Entry By (Option)'.

Column Name: data_entry_date

Column Type: date

'Date Of Entry'.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Source.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
'Data Entry Time'.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
User ID.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
User Name.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: financial_class_code
Column Type: varchar
Max Length: 10
'Financial Class'

Column Name: financial_class_value
Column Type: varchar
Max Length: 40
The description associated with financial_class_code. See financial_class_code for more information.

Column Name: guarantor_name
Column Type: varchar

Max Length: 40

The name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: option_desc

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row.

Column Name: payadj_unique_row_id2

Column Type: varchar

Max Length: 15

The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: type

Column Type: varchar

Max Length: 50

"Charges", "Transfers", "Pay", or "Adj".

Documentation for form: Michigan_County_Bill

Table Name: STATEFORM.mich_county_bill_header

Table Description: This table returns the header information for the Michigan County Bill

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The facility the bill was run for.

Column Name: FILE_NUMBER

Column Type: varchar

Max Length: 50

The file ID number associated with the compile.

Column Name: INTERIM_BATCH_NUMBER

Column Type: numeric

'Interim Batch Number'.

Column Name: claim_date

Column Type: date
'Date Of Claim'.

Column Name: compile_thru_date
Column Type: date
'Print Charges Thru'.

Column Name: create_claims_code
Column Type: varchar
Max Length: 10
'Create Claims Y/N'.

Column Name: create_claims_value
Column Type: varchar
Max Length: 40
The description for the associated create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
'Entry Person'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
'Data Entry By (Option)'.

Column Name: data_entry_date
Column Type: date
'Date Of Entry'.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Source.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
'Data Entry Time'.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
User ID.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
User Name.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: file_deleted
Column Type: varchar
Max Length: 50
This is set to "Y" when a claimed file is deleted from within the 'Michigan County Bill' form.

Column Name: forensic_guar_code
Column Type: varchar
Max Length: 50
The Forensic Guarantor(s) selected in the form during compile.

Column Name: forensic_guar_shval
Column Type: varchar
Max Length: 256
The name(s) associated with forensic_guar_code. See forensic_guar_code for more information.

Column Name: forensic_guar_value
Column Type: varchar
Max Length: 4096
The name(s) associated with forensic_guar_code. See forensic_guar_code for more information.

Column Name: guarantor_code
Column Type: varchar
Max Length: 50
The guarantor(s) selected in the form during compile.

Column Name: guarantor_shval
Column Type: varchar

Max Length: 256

The name(s) associated with guarantor_code. See guarantor_code for more information.

Column Name: guarantor_value

Column Type: varchar

Max Length: 4096

The name(s) associated with guarantor_code. See guarantor_code for more information.

Column Name: individual_client_id

Column Type: varchar

Max Length: 20

The client ID selected in the form during compile.

Column Name: option_desc

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row.

Column Name: program_code

Column Type: varchar

Max Length: 2048

'Program'.

Column Name: program_shval

Column Type: varchar

Max Length: 255

The description associated with program_code limited to 255 characters. See program_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 4096

The description associated with program_code. See program_code for more information.

Column Name: statement_date

Column Type: date

Statement date calculated based on compile_thru_date.

Documentation for form: Michigan_County_Bill

Table Name: STATEFORM.mich_county_bill_leaves

Table Description: This table returns the leave information for the Michigan County Bill

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The facility the bill was run for.

Column Name: FILE_NUMBER
Column Type: varchar
Max Length: 50
The file ID number associated with the compile.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The guarantor ID associated with the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: client_name
Column Type: varchar
Max Length: 40
'Client Name'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
'Entry Person'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
'Data Entry By (Option)'.

Column Name: data_entry_date
Column Type: date
'Date Of Entry'.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Source.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
'Data Entry Time'.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
User ID.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
User Name.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: financial_class_code
Column Type: varchar
Max Length: 10
'Financial Class'

Column Name: financial_class_value
Column Type: varchar
Max Length: 40
The description associated with financial_class_code. See financial_class_code for more information.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: leave_date
Column Type: date

Date client went on leave.

Column Name: option_desc

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row.

Column Name: return_date

Column Type: date

Date client returned from leave.

Documentation for form: Michigan_County_Bill

Table Name: STATEFORM.mich_county_bill_stmt

Table Description: This table returns the bill information for the Michigan County Bill

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The facility the bill was run for.

Column Name: FILE_NUMBER

Column Type: varchar

Max Length: 50

The file ID number associated with the compile.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The guarantor ID associated with the data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: amount

Column Type: numeric

The amount of the charge/transfer/payment/adjustment.

Column Name: begin_date

Column Type: date

The begin date of the charges/transfers or posting date of payments/adjustments.

Column Name: client_name

Column Type: varchar

Max Length: 40

'Client Name'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

'Entry Person'.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

'Data Entry By (Option)'.

Column Name: data_entry_date

Column Type: date

'Date Of Entry'.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Source.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

'Data Entry Time'.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
User ID.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
User Name.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: days
Column Type: varchar
Max Length: 50
Number of service days.

Column Name: end_date
Column Type: date
The end date of the charges/transfers.

Column Name: financial_class_code
Column Type: varchar
Max Length: 10
'Financial Class'.

Column Name: financial_class_value
Column Type: varchar
Max Length: 40
The description associated with financial_class_code. See financial_class_code for more information.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that last updated the row.

Column Name: type
Column Type: varchar

Max Length: 50
"Charges", "Transfers", "Pay", or "Adj".

Documentation for form: MA_Opiates_Client_Information

Table Name: STATEFORM.ma_opiate_client

Table Description: This table stores the ESM identifiers returned by the MA Opiates process

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number.

Column Name: FACILITY
Column Type: integer
Facility.

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 1000
A pointer to the Current value, only used by Audit table

Column Name: PATID
Column Type: varchar
Max Length: 20
Client Id.

Column Name: agency_enrollment_id
Column Type: varchar
Max Length: 50
Agency Enrollment ID.

Column Name: client_primary_id
Column Type: varchar
Max Length: 50
Client Primary ID.

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by

Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: encounter_id
Column Type: integer
Encounter Id. Used to generate the agency enrollment id

Column Name: enrolling_organization_id
Column Type: varchar
Max Length: 50
Enrolling Organization ID.

Column Name: enrollment_date
Column Type: date
Enrollment Date.

Column Name: esm_client_id
Column Type: varchar
Max Length: 50
ESM Client ID. Used to identify the client when sending A08 messages.

Column Name: esm_enrollment_id
Column Type: varchar
Max Length: 50
ESM Enrollment ID. Used to identify the client when sending A08 messages.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: submission_date
Column Type: date
Submission Date.

Documentation for form: MA_Opiates_Client_Information

Table Name: STATEFORM.ma_opiate_client_audit

Table Description: This table stores an audit of the ESM identifiers returned by the MA Opiates process

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number.

Column Name: FACILITY
Column Type: integer
Facility.

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 1000
A pointer to the Current value, only used by Audit table

Column Name: PATID
Column Type: varchar
Max Length: 20
Client Id.

Column Name: agency_enrollment_id
Column Type: varchar
Max Length: 50
Agency Enrollment ID.

Column Name: client_primary_id
Column Type: varchar
Max Length: 50
Client Primary ID.

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: encounter_id
Column Type: integer
Encounter Id. Used to generate the agency enrollment id

Column Name: enrolling_organization_id
Column Type: varchar
Max Length: 50
Enrolling Organization ID.

Column Name: enrollment_date
Column Type: date
Enrollment Date.

Column Name: esm_client_id
Column Type: varchar
Max Length: 50
ESM Client ID. Used to identify the client when sending A08 messages.

Column Name: esm_enrollment_id
Column Type: varchar
Max Length: 50
ESM Enrollment ID. Used to identify the client when sending A08 messages.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: submission_date
Column Type: date
Submission Date.

Documentation for form: CA_DCR_Results_File_Import

Table Name: STATEFORM.ca_dcr_result_assessment

Table Description: This table stores a single assessment from a CA DCR Result File

Column Name: Header
Column Type: integer
DCR Result Header

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: PATID
Column Type: varchar
Max Length: 20
The Avatar Client Id.

Column Name: assessment_date
Column Type: varchar
Max Length: 50
Assessment Date.

Column Name: assessment_guid
Column Type: varchar
Max Length: 50
Assessment GUID.

Column Name: form_type
Column Type: varchar
Max Length: 50
Form Type (Child PAF, TAY KET, etc).

Column Name: operation
Column Type: varchar
Max Length: 50
Operation (New, Update, etc).

Column Name: status
Column Type: varchar
Max Length: 50
Status (Succeed, Failed).

Column Name: status_message
Column Type: varchar
Max Length: 200
Status Message.

Column Name: childsub
Column Type: integer

Documentation for form: CA_DCR_Results_File_Import

Table Name: STATEFORM.ca_dcr_result_error

Table Description: This table stores the errors for a single assessment from a CA DCR Result File

Column Name: Assessment
Column Type: varchar
Max Length: 254
DCR Result Assessment

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: category
Column Type: varchar
Max Length: 50
Error Category.

Column Name: message
Column Type: varchar
Max Length: 1000
Error Message.

Column Name: type
Column Type: varchar
Max Length: 50
Error Type (Fatal, Warning).

Column Name: childsub
Column Type: integer

Documentation for form: CA_DCR_Results_File_Import

Table Name: STATEFORM.ca_dcr_result_header

Table Description: This table stores the header information for a CA DCR Result File

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
Facility.

Column Name: batch_date_time
Column Type: timestamp
Datetime the batch was sent.

Column Name: batch_header
Column Type: varchar
Max Length: 50
Batch Header.

Column Name: batch_number
Column Type: varchar
Max Length: 50

Batch Number.

Column Name: batch_processed_date_time
Column Type: timestamp
Datetime the batch was processed.

Column Name: filename
Column Type: varchar
Max Length: 50
Filename of the loaded file.

Column Name: loaded_by
Column Type: varchar
Max Length: 50
User that loaded the file.

Column Name: loaded_by_user_id
Column Type: varchar
Max Length: 40
User ID of the user that loaded the file.

Column Name: loaded_by_user_name
Column Type: varchar
Max Length: 40
User name of the user that loaded the file.

Column Name: loaded_date
Column Type: date
Date the compile was completed.

Column Name: loaded_time
Column Type: varchar
Max Length: 50
Time the compile was completed.

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_compile_data

Table Description: This table stores data created by the 'Kansas AIMS Compile' form.

Column Name: Header
Column Type: integer

Column Name: ID
Column Type: varchar

Max Length: 254

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client Id the data belongs to.

Column Name: data

Column Type: varchar

Max Length: 4096

The data created by the compile.

Column Name: childsub

Column Type: integer

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_compile_error

Table Description: This table stores errors found during a compile done by the 'Kansas AIMS Compile' form.

Column Name: Header

Column Type: integer

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: PATID

Column Type: varchar

Max Length: 20

The client id associated with the error.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with the error.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 50

The guarantor number associated with the error.

Column Name: program

Column Type: varchar

Max Length: 50

The program code associated with the error.

Column Name: priority
Column Type: varchar
Max Length: 50
The error priority code.

Column Name: error_index
Column Type: varchar
Max Length: 50
The index level of the error.

Column Name: error_info
Column Type: varchar
Max Length: 4096
The error information.

Column Name: childsub
Column Type: integer

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_compile_flag

Table Description: This table stores flagging information for the 'Kansas AIMS Compile' form.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with the flag.

Column Name: FACILITY
Column Type: integer
The Facility number associated with the flag.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client id associated with the flag.

Column Name: file_id
Column Type: varchar
Max Length: 20
The unique file id of the file this flag was included in.

Column Name: file_types

Column Type: varchar

Max Length: 32749

The file types associated with the flag ([A]dmission, [U]pdate, [D]ischarge).

Column Name: flag_date

Column Type: date

The date the flag was created.

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_compile_header

Table Description: This table stores the header information for compiles generated by the 'Kansas AIMS Compile' form.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The Facility number associated with the compile.

Column Name: compile_date

Column Type: date

The date the file was compiled.

Column Name: compiled_by_user_id

Column Type: varchar

Max Length: 50

The user id of the user that ran the compile.

Column Name: compiled_by_user_name

Column Type: varchar

Max Length: 40

The user name of the user that ran the compile.

Column Name: compile_time

Column Type: varchar

Max Length: 50

The time the file was compiled.

Column Name: end_date

Column Type: date

The end date of the compile.

Column Name: file_description
Column Type: varchar
Max Length: 50
The file description of the compile.

Column Name: status
Column Type: varchar
Max Length: 50
The status of the compile ([C]ompile, [P]osted).

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_flag_data

Table Description: This table stores data that was flagged for the 'Kansas AIMS Compile' form.

Column Name: Flag
Column Type: integer
Foreign Key to STATEFORM.ks_aims_compile_flag table.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: discharge_date
Column Type: date
Discharge Date.

Column Name: discharge_type
Column Type: varchar
Max Length: 50
Discharge Type.

Column Name: education
Column Type: varchar
Max Length: 50
Education code.

Column Name: last_contact_date
Column Type: date
Last Contact Date.

Column Name: payment_sources
Column Type: varchar
Max Length: 32749
List of payment sources.

Column Name: receiving_ssdi
Column Type: varchar
Max Length: 50
Receiving SSDI.

Column Name: receiving_ssi
Column Type: varchar
Max Length: 50
Receiving SSI.

Column Name: resident_county
Column Type: varchar
Max Length: 50
Resident County.

Column Name: responsible_county
Column Type: varchar
Max Length: 50
Responsible County

Column Name: services
Column Type: varchar
Max Length: 32749
List of services

Column Name: spmi_sed
Column Type: varchar
Max Length: 50
SPMI/SED code.

Column Name: spmi_sed_date
Column Type: date
SPMI/SED Date.

Column Name: services_override
Column Type: varchar
Max Length: 20
Flag indicating whether or not we will force services to be present in the file.

Column Name: targeted_change
Column Type: varchar
Max Length: 20
Flag indicating whether or not the client has had a change in their 'Targeted' status.

Column Name: childsub
Column Type: integer

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_flag_data_diag

Table Description: This table stores diagnosis data that was flagged for the 'Kansas AIMS Compile' form.

Column Name: Data
Column Type: varchar
Max Length: 254

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: row_id
Column Type: varchar
Max Length: 50
Diagnosis row identifier.

Column Name: primary_diagnosis
Column Type: varchar
Max Length: 50
Primary diagnosis.

Column Name: secondary_diagnosis
Column Type: varchar
Max Length: 50
Secondary diagnosis.

Column Name: current_gaf
Column Type: varchar
Max Length: 50
Current GAF code.

Column Name: diagnosis_date
Column Type: date
Diagnosis date.

Column Name: childsub
Column Type: integer

Documentation for form: Kansas_AIMS_Compile

Table Name: STATEFORM.ks_aims_save_flag_data

Table Description: This table stores data the most recent value for various flag fields to compare to when determining whether new data should be flagged.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The Facility number associated with the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client Id associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with the data

Column Name: spmi_sed
Column Type: varchar
Max Length: 50
The SPMI/SED value.

Column Name: payment_sources
Column Type: varchar
Max Length: 32749
A list of payment sources.

Documentation for form: CIMOR_Historic_Data_Import

Table Name: STATEFORM.mo_cimor_historic_file

Table Description: This table stores the high level information for a CIMOR Historic File

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
Facility.

Column Name: file_name
Column Type: varchar
Max Length: 50

File name of the loaded file.

Column Name: loaded_by
Column Type: varchar
Max Length: 50
User that loaded the file.

Column Name: loaded_by_user_id
Column Type: varchar
Max Length: 40
User ID of the user that loaded the file.

Column Name: loaded_by_user_name
Column Type: varchar
Max Length: 40
User name of the user that loaded the file.

Column Name: loaded_date
Column Type: date
Date the compile was completed.

Column Name: loaded_time
Column Type: varchar
Max Length: 50
Time the compile was completed.

Documentation for form: CIMOR_Historic_Data_Import

Table Name: STATEFORM.mo_cimor_historic_record

Table Description: This table stores a single record from a CIMOR Historic File

Column Name: CIMORFile
Column Type: integer
Parent CIMOR Historic File

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: PATID
Column Type: varchar
Max Length: 20
The Avatar Client Id.

Column Name: admission_date
Column Type: date

Admission Date.

Column Name: admission_time
Column Type: varchar
Max Length: 50
Admission Time.

Column Name: discharge_date
Column Type: date
Discharge Date.

Column Name: discharge_time
Column Type: varchar
Max Length: 50
Discharge Time.

Column Name: division
Column Type: varchar
Max Length: 50
Division.

Column Name: dmh_id
Column Type: varchar
Max Length: 50
The DMH Id.

Column Name: error
Column Type: varchar
Max Length: 50
Error message, if an error was encountered.

Column Name: historic_import_date
Column Type: varchar
Max Length: 50
The Historic Import Date.

Column Name: program
Column Type: varchar
Max Length: 50
Program.

Column Name: program_from_date
Column Type: date
Program From Date.

Column Name: program_from_time
Column Type: varchar
Max Length: 50
Program From Time.

Column Name: program_level
Column Type: varchar
Max Length: 50
Program Level.

Column Name: program_level_from_date
Column Type: date
Program Level From Date.

Column Name: program_level_from_time
Column Type: varchar
Max Length: 50
Program Level From Time.

Column Name: program_level_to_date
Column Type: date
Program Level To Date.

Column Name: program_to_date
Column Type: date
Program To Date.

Column Name: childsub
Column Type: integer

Documentation for form: BHHF_File_Import

Table Name: STATEFORM.wv_bhbf_file

Table Description: This table stores the high level information for a BHHF File

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
Facility.

Column Name: file_name
Column Type: varchar
Max Length: 50
File name of the loaded file.

Column Name: loaded_by
Column Type: varchar

Max Length: 50
User that loaded the file.

Column Name: loaded_by_user_id
Column Type: varchar
Max Length: 40
User ID of the user that loaded the file.

Column Name: loaded_by_user_name
Column Type: varchar
Max Length: 40
User name of the user that loaded the file.

Column Name: loaded_date
Column Type: date
Date the compile was completed.

Column Name: loaded_time
Column Type: varchar
Max Length: 50
Time the compile was completed.

Documentation for form: BHHF_File_Import

Table Name: STATEFORM.wv_bhhf_record

Table Description: This table stores a single record from a BHHF File

Column Name: BHHFFile
Column Type: integer
Parent BHHF File

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: PATID
Column Type: varchar
Max Length: 20
The Avatar Client Id.

Column Name: agency_id
Column Type: varchar
Max Length: 50
The Agency Id.

Column Name: begin_date
Column Type: date
Eligibility Begin Date.

Column Name: bhhf_id
Column Type: varchar
Max Length: 50
The BHHF Id.

Column Name: consumer_id
Column Type: varchar
Max Length: 50
The Consumer Id.

Column Name: eligible
Column Type: varchar
Max Length: 50
Is This Person Eligible (Y/N)?.

Column Name: end_date
Column Type: date
Eligibility End Date.

Column Name: error
Column Type: varchar
Max Length: 200
Error message, if record is invalid for any reason.

Column Name: medicaid_id
Column Type: varchar
Max Length: 50
Client's Medicaid Id.

Column Name: reason
Column Type: varchar
Max Length: 50
Reason for ineligibility.

Column Name: childsub
Column Type: integer

Table Name: STATEFORM.va_wams_outbound_file

Table Description: This table stores the response files returned by WaMS

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client Id.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data entry user name

Column Name: file_type_code
Column Type: varchar
Max Length: 50
File Type Code.

Column Name: file_type_value
Column Type: varchar
Max Length: 50
File Type Value.

Column Name: modeled_form_id
Column Type: varchar
Max Length: 40
Unique identifier for the modeled form row that created the data

Column Name: record_id
Column Type: varchar
Max Length: 20
Unique id for the record.

Column Name: response_file_id
Column Type: integer
ID of the response file tied to this outbound file.

Column Name: send_date

Column Type: date
Date the file was sent.

Column Name: success
Column Type: bit
Flag indicating whether the response file contains any errors.

Column Name: xml_error
Column Type: varchar
Max Length: 50
XML Error.

Documentation for form: WaMS_Response_File_Report

Table Name: STATEFORM.va_wams_response_file

Table Description: This table stores the response files returned by WaMS

Column Type: varchar
Max Length: 50
User that loaded the file.

Column Name: loaded_by_user_id
Column Type: varchar
Max Length: 40
User ID of the user that loaded the file.

Column Name: loaded_by_user_name
Column Type: varchar
Max Length: 40
User name of the user that loaded the file.

Column Name: loaded_date
Column Type: date
Date the compile was completed.

Column Name: loaded_time
Column Type: varchar
Max Length: 50
Time the compile was completed.

Documentation for form: CMBHS_Response_File_Import

Table Name: STATEFORM.tx_cmbhs_response_file_record

Table Description: This table stores a single record from a CMBHS Response File

Column Name: CMBHSFile
Column Type: integer
Parent CMBHS Response File

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: PATID
Column Type: varchar
Max Length: 20
The Avatar Client Id.

Column Name: cmbhs_id

Column Type: varchar
Max Length: 20
The CMBHS Id.

Column Name: prior_alias_7_value
Column Type: varchar
Max Length: 20
The old value of the 'Client Alias 7' field.

Column Name: childsub
Column Type: integer

Documentation for form: FSR_Demographic_File_Generation

Table Name: STATEFORM.florida_fsr_dem_file_dump

Table Description: This table stores raw record data created by the 'FSR Demographic File Generation' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The Facility number associated with the compile.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client Id the record belongs to.

Column Name: contractor_id
Column Type: varchar
Max Length: 50
The Contractor ID the record belongs to.

Column Name: contractor_npi
Column Type: varchar
Max Length: 50
The Contractor NPI the record belongs to.

Column Name: file_name
Column Type: varchar
Max Length: 255
The file name on the server the record is included in.

Column Name: file_number
Column Type: integer
The internal file number.

Column Name: fsr_record_code
Column Type: varchar
Max Length: 50
The FSR record code.

Column Name: fsr_record_value
Column Type: varchar
Max Length: 50
The value of 'fsr_record_code'.

Column Name: historic_identifier
Column Type: varchar
Max Length: 50
The internal historic unique index associated to the record.

Column Name: record_data
Column Type: varchar
Max Length: 32000
The raw data created by the compile.

Column Name: record_type
Column Type: varchar
Max Length: 50
The record type of the record.

Column Name: reporting_entity_code
Column Type: varchar
Max Length: 50
The reporting entity code the record belongs to.

Column Name: reporting_entity_value
Column Type: varchar
Max Length: 50
The value of 'reporting_entity_code'.

Column Name: site_number
Column Type: varchar
Max Length: 50
The Site Number the record belongs to.

Column Name: unique_index_1
Column Type: varchar
Max Length: 50
The internal counter 1.

Column Name: unique_index_2
Column Type: varchar
Max Length: 50
The internal counter 2.

Documentation for form: FSR_Demographic_File_Generation

Table Name: STATEFORM.florida_fsr_dem_file_hdr

Table Description: This table stores header data created by the 'FSR Demographic File Generation' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The Facility number associated with the compile.

Column Name: compiled_by
Column Type: varchar
Max Length: 40
The user that ran the compile.

Column Name: compiled_by_user_id
Column Type: varchar
Max Length: 40
The user id of the user that ran the compile.

Column Name: compiled_by_user_name
Column Type: varchar
Max Length: 40
The user name of the user that ran the compile.

Column Name: compiled_date
Column Type: date
The date the file was compiled.

Column Name: compiled_time
Column Type: varchar
Max Length: 10
The time the file was compiled.

Column Name: created_by
Column Type: varchar
Max Length: 40

The user that created the file on the server.

Column Name: created_by_user_id

Column Type: varchar

Max Length: 40

The user id of the user that created the file on the server.

Column Name: created_by_user_name

Column Type: varchar

Max Length: 40

The user name of the user that created the file on the server.

Column Name: created_date

Column Type: date

The date the file was created on the server.

Column Name: created_time

Column Type: varchar

Max Length: 10

The time the file was created on the server.

Column Name: file_description

Column Type: varchar

Max Length: 50

The file description of the compile.

Column Name: file_number

Column Type: integer

The internal file number.

Column Name: from_date

Column Type: date

The from date of the compile.

Column Name: header_record

Column Type: varchar

Max Length: 255

The header record created by the compile.

Column Name: reporting_entity_code

Column Type: varchar

Max Length: 50

The reporting entities selected on compile.

Column Name: reporting_entity_shvalue

Column Type: varchar

Max Length: 255

The short value of 'reporting_entity_code'.

Column Name: reporting_entity_value

Column Type: varchar
Max Length: 4096
The value of 'reporting_entity_code'.

Column Name: through_date
Column Type: date
The through date of the compile.

Documentation for form: FSR_Demographic_File_Generation

Table Name: STATEFORM.florida_fsr_dem_file_rpt

Table Description: This table stores report data created by the 'FSR Demographic File Generation' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The Facility number associated with the compile.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client Id the record belongs to.

Column Name: contractor_id
Column Type: varchar
Max Length: 50
The Contractor ID the record belongs to.

Column Name: contractor_npi
Column Type: varchar
Max Length: 50
The Contractor NPI the record belongs to.

Column Name: counter
Column Type: integer
The internal counter.

Column Name: file_name
Column Type: varchar
Max Length: 255
The file name on the server the record is included in.

Column Name: file_number
Column Type: integer
The internal file number.

Column Name: fsr_record_code
Column Type: varchar
Max Length: 50
The FSR record code.

Column Name: fsr_record_value
Column Type: varchar
Max Length: 50
The value of 'fsr_record_code'.

Column Name: full_id
Column Type: varchar
Max Length: 50
The full id for the client/practitioner the record belongs to.

Column Name: name
Column Type: varchar
Max Length: 40
The name of the client/practitioner the record belongs to.

Column Name: record_data
Column Type: varchar
Max Length: 32000
The single report line created by the compile.

Column Name: report_category_code
Column Type: varchar
Max Length: 50
The report category code associated to the record.

Column Name: report_category_value
Column Type: varchar
Max Length: 50
The value of 'report_category_code'.

Column Name: reporting_entity_code
Column Type: varchar
Max Length: 50
The reporting entity code the record belongs to.

Column Name: reporting_entity_value
Column Type: varchar
Max Length: 50
The value of 'reporting_entity_code'.

Column Name: site_number

Column Type: varchar
Max Length: 50
The Site Number the record belongs to.

Column Name: unique_index_1
Column Type: varchar
Max Length: 50
The internal counter 1.

Column Name: unique_index_2
Column Type: varchar
Max Length: 50
The internal counter 2.

Documentation for form: Georgia_ASO_Response_File_Processing

Table Name: STATEFORM.ga_aso_authorization

Table Description: This table stores a single authorization record generated from the 'Georgia ASO Response File Processing' form

Column Name: AsoFile
Column Type: integer

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client Id.

Column Name: consumer_id
Column Type: varchar
Max Length: 9
Consumer ID (CID)

Column Name: exported_record
Column Type: varchar
Max Length: 8163

Authorization exported record

Column Name: level_of_care

Column Type: varchar

Max Length: 50

Level Of Care.

Column Name: level_of_service

Column Type: varchar

Max Length: 2

Level Of Service (IP/OP)

Column Name: level_of_service_value

Column Type: varchar

Max Length: 50

Level Of Service Description (Inpatient/Outpatient)

Column Name: provider_internal_tag_id

Column Type: varchar

Max Length: 50

Provider Tag Id.

Column Name: provider_local_client_id

Column Type: varchar

Max Length: 15

Provider Local Client Id

Column Name: service_group_1

Column Type: varchar

Max Length: 3

Service Group 1

Column Name: service_group_10

Column Type: varchar
Max Length: 50
Client Gender (If bed is occupied it represents the client who is occupying the bed, if bed is reserved it represents the client who the bed is reserved for. If bed is empty this value is empty.

Column Name: client_gender_value
Column Type: varchar
Max Length: 40
Client Gender (If bed is occupied it represents the client who is occupying the bed, if bed is reserved it represents the client who the bed is reserved for. If bed is empty this value is unknown.

Column Name: client_name
Column Type: varchar
Max Length: 100
The name of the client identified by PATID. See PATID for more information. Client Name

Column Name: medicaid_certified_code
Column Type: varchar
Max Length: 50

Medicaid Certified

Column Name: medicaid_certified_value

Column Type: varchar

Max Length: 50

Medicaid Certified

Column Name: medicare_certified_code

Column Type: varchar

Max Length: 50

Medicare Certified

Column Name: medicare_certified_value

Column Type: varchar

Max Length: 50

Medicare Certified

Column Name: room_notes

Column Type: varchar

Max Length: 80

The notes for the room.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: [Advanced_Billing_Failed_Compliance_Report](#)

Table Name: [SYSTEM.billing_tx_failed_compliance](#)

Table Description: This table returns information filed in 'Advanced Billing Failed Compliance Report' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

Episode Number

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar
Max Length: 20
Patient ID

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
Guarantor ID

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
JOIN_TO_TX_HISTORY

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: v_patient_name
Column Type: varchar
Max Length: 100
Client Name

Column Name: RuleUniqueId
Column Type: varchar
Max Length: 50
Rule Unique ID

Column Name: TFCUniqueId
Column Type: varchar
Max Length: 50
TFC Unique ID

Column Name: data_entry_offset
Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_service
Column Type: date
Date of Service

Column Name: fail_270_reason
Column Type: varchar
Max Length: 100
Failed reason from 270 compile

Column Name: fail_reason_code
Column Type: varchar
Max Length: 50
Failed reason

Column Name: fail_reason_value

Column Type: varchar

Max Length: 50

The description associated with the fail_reason_code. See fail_reason_code for more information.

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: override_rule_code

Column Type: varchar

Max Length: 50

Override Rule Code

Column Name: override_rule_value

Column Type: varchar

Max Length: 50

The description associated with the override_rule_code. See override_rule_code for more information.

Column Name: rule_override_comm

Column Type: varchar

Max Length: 32766

Rule Override Comments

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_allow_chrg_close_code

Column Type: varchar

Max Length: 50

Allow Charge Closure Code

Column Name: v_allow_chrg_close_value

Column Type: varchar

Max Length: 50

The description associated with the v_allow_chrg_close_code. See v_allow_chrg_close_code for more information.

Column Name: v_diagnosis_input_code

Column Type: varchar

Max Length: 50

Diagnosis Input code

Column Name: v_diagnosis_input_value

Column Type: varchar

Max Length: 50

The description associated with the v_diagnosis_input_code. See v_diagnosis_input_code for more information.

Column Name: v_diagnosis_source_code

Column Type: varchar

Max Length: 50

Diagnosis Source Code

Column Name: v_diagnosis_source_value

Column Type: varchar

Max Length: 100

The description associated with the v_diagnosis_source_code. See v_diagnosis_source_code for more information.

Column Name: v_medi_diag_input_code

Column Type: varchar

Max Length: 50

Medical Diagnosis Input code

Column Name: v_medi_diag_input_value

Column Type: varchar

Max Length: 50

The description associated with the v_medi_diag_input_code. See v_medi_diag_input_code for more information.

Column Name: v_pat_det_age_date_of_svc

Column Type: varchar

Max Length: 50

Patient Detailed Age At Date Of Service

Column Name: v_patient_age_on_date_of_svc

Column Type: numeric

Patient Age On Date Of Service

Column Name: v_patient_gender_code

Column Type: varchar

Max Length: 50

Patient Gender Code

Column Name: v_patient_gender_value

Column Type: varchar

Max Length: 50

The description associated with the v_patient_gender_code. See v_patient_gender_code for more information.

Column Name: v_patient_svc_diagnosis_code

Column Type: varchar

Max Length: 50

Dynamically show all diagnoses

Column Name: v_patient_svc_diagnosis_value

Column Type: varchar

Max Length: 50

The description associated with the v_patient_svc_diagnosis_code. See v_patient_svc_diagnosis_code for more information.

Column Name: v_primary_svc_diag_code

Column Type: varchar

Max Length: 50

Primary Service Diagnosis code

Column Name: v_primary_svc_diag_value

Column Type: varchar

Max Length: 50

The description associated with the v_primary_svc_diag_code. See v_primary_svc_diag_code for more information.

Column Name: v_quatnry_svc_diag_code

Column Type: varchar

Max Length: 50

Quaternary Service Diagnosis code

Column Name: v_quatnry_svc_diag_value

Column Type: varchar

Max Length: 50

The description associated with the v_quatnry_svc_diag_code. See v_quatnry_svc_diag_code for more information.

Column Name: v_rule_applies_to_code

Column Type: varchar

Max Length: 50

Rule Applies To Code

Column Name: v_rule_applies_to_value

Column Type: varchar

Max Length: 50

The description associated with the v_rule_applies_to_code. See v_rule_applies_to_code for more information.

Column Name: v_rule_category_code

Column Type: varchar

Max Length: 50

Rule Category Code

Column Name: v_rule_category_value

Column Type: varchar

Max Length: 50

The description associated with the v_rule_category_code. See v_rule_category_code for more information.

Column Name: v_rule_description

Column Type: varchar
Max Length: 50
Rule description

Column Name: v_rule_results_in_code
Column Type: varchar
Max Length: 50
Rule Results In Code

Column Name: v_rule_results_in_value
Column Type: varchar
Max Length: 50
The description associated with the v_rule_results_in_code. See v_rule_results_in_code for more information.

Column Name: v_second_svc_diag_code
Column Type: varchar
Max Length: 50
Secondary Service Diagnosis code.

Column Name: v_second_svc_diag_value
Column Type: varchar
Max Length: 50
The description associated with the v_second_svc_diag_code. See v_second_svc_diag_code for more information.

Column Name: v_service_code
Column Type: varchar
Max Length: 50
Secondary Service Diagnosis code.

Column Name: v_service_value
Column Type: varchar
Max Length: 50
The description associated with the v_service_code. See v_service_code for more information.

Column Name: v_tertry_svc_diag_code
Column Type: varchar
Max Length: 50
Tertiary Service Diagnosis code

Column Name: v_tertry_svc_diag_value
Column Type: varchar
Max Length: 50
The description associated with the v_tertry_svc_diag_code. See v_tertry_svc_diag_code for more information.

Documentation for form: CCBHC_PPS_Compile

Table Name: SYSTEM.ccbhc_service_audit

Table Description: This table returns the CCBHC PPS and component services and errors produced by the 'CCBHC PPS Compile' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: ERRORS
Column Type: varchar
Max Length: 1
A "Y" or "N" value based on ccbhc_error_message. See ccbhc_error_message for more information.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: JOIN_TO_CCBHC
Column Type: varchar
Max Length: 40
The unique service ID for the CCBHC PPS Service

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique ID of service for the client and episode.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for the service.

Column Name: ccbhc_error_message
Column Type: varchar
Max Length: 255
The error message associated with the CCBHC audit row.

Column Name: ccbhc_service_charge
Column Type: numeric
The cost of the service.

Column Name: ccbhc_service_code
Column Type: varchar
Max Length: 50
Service code of the CCBHC service

Column Name: ccbhc_service_date
Column Type: date
The date of service.

Column Name: ccbhc_service_episode
Column Type: integer
The episode number assigned to the CCBHC PPS service.

Column Name: ccbhc_service_value
Column Type: varchar
Max Length: 50
The description associated with ccbhc_service_code. See ccbhc_service_code for more information.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name of the client.

Column Name: compile_date
Column Type: date
The date the PPS Compile was run.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time of day when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The ID of the user who last updated this row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The name of the user who last updated this row.

Column Name: deleted_service
Column Type: varchar
Max Length: 50
Flag indicating that the service has been deleted.

Column Name: is_ccbhc_service
Column Type: varchar
Max Length: 50

Column Name: pps_guarantor_charge
Column Type: numeric
The liability charge to the PPS guarantor.

Column Name: pps_guarantor_id
Column Type: varchar
Max Length: 40
The guarantor ID associated with the PPS service.

Column Name: pps_guarantor_name
Column Type: varchar
Max Length: 40
The name associated with guarantor_ID. See guarantor_ID for more information.

Column Name: pps_practitioner_id
Column Type: varchar
Max Length: 50
The ID of the practitioner assigned to the PPS service.

Column Name: pps_service_code
Column Type: varchar
Max Length: 50
Service code of the PPS service

Column Name: pps_service_value
Column Type: varchar
Max Length: 50
The description associated with ccbhc_service_code. See ccbhc_service_code for more information.

Column Name: practitioner_id
Column Type: varchar
Max Length: 50
The ID of the practitioner who provided the service.

Documentation for form: Front_Desk

Table Name: SYSTEM.AppointmentData

Table Description: Appointment Scheduling Data

Column Name: ID
Column Type: integer

Column Name: CO_STAFFID_1
Column Type: varchar
Max Length: 10
Co Staffid 1

Column Name: CO_STAFFID_2
Column Type: varchar
Max Length: 10
Co Staff Id 2

Column Name: duration
Column Type: varchar
Max Length: 10
Duration

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored. FACILITY

Column Name: GROUP_ID
Column Type: varchar
Max Length: 10
Group Id associated with the appointment.

Column Name: JOIN_TO_CO_STAFF_TX_HISTORY
Column Type: varchar
Max Length: 15
JOIN TO CO-STAFF TX STRING

Column Name: JOIN_TO_FOLLOW_UP_APD
Column Type: varchar
Max Length: 50

Join To Follow-up Appointment Link

Column Name: JOIN_TO_PREV_APD

Column Type: varchar

Max Length: 50

Join To Previous Appointment Link

Column Name: JOIN_TO_SECOND_CO_STAFF_TX_HISTORY

Column Type: varchar

Max Length: 15

JOIN TO SECOND CO-STAFF TX STRING

Column Name: JOIN_TO_STAFF_TX_HISTORY

Column Type: varchar

Max Length: 15

JOIN TO STAFF TX STRING

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

JOIN to Service Documentation (99970)

Column Name: ROOMID

Column Type: varchar

Max Length: 40

The room associated with the appointment.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 40

Service code.

Column Name: SITEID

Column Type: varchar

Max Length: 10

Site Id.

Column Name: STAFFID

Column Type: varchar

Max Length: 40

The staff ID associated with the appointment.

Column Name: add_on_notes

Column Type: varchar

Max Length: 4096

Add-On Notes (11507)

Column Name: add_on_notes_stream

Column Type: longvarchar

Max Length: 2147483647

Add-On Notes Stream

Column Name: add_svc_info_code

Column Type: varchar

Max Length: 50

Additional Service Information - Code (11505)

Column Name: add_svc_info_shval

Column Type: varchar

Max Length: 255

Additional Service Information - Short Value

Column Name: add_svc_info_value

Column Type: varchar

Max Length: 4096

Additional Service Information - Value

Column Name: add_svcs_grp_indicator

Column Type: varchar

Max Length: 32000

The individualized group members for the additional service entry

Column Name: add_svcs_indicator

Column Type: varchar

Max Length: 32000

The individualized group members for the additional service entry (recurring appointment)

Column Name: appointment_date

Column Type: date

Appointment date

Column Name: appointment_end_time

Column Type: varchar

Max Length: 50

Appointment end time

Column Name: appointment_end_time_j

Column Type: varchar

Max Length: 50

Appointment end time (julian)

Column Name: appointment_end_utc

Column Type: timestamp

the Appointment End as UTC date and time.

Column Name: appointment_notes

Column Type: varchar

Max Length: 4096

Appointment Notes (10100)

Column Name: appointment_notes_stream
Column Type: longvarchar
Max Length: 2147483647
Appointment Notes Stream

Column Name: appointment_start_time
Column Type: varchar
Max Length: 50
Appointment start time

Column Name: appointment_start_time_j
Column Type: varchar
Max Length: 50
Appointment start time (julian)

Column Name: appointment_start_utc
Column Type: timestamp
the Appointment Start as UTC date and time.

Column Name: appointment_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the appointment used to determine the offset from UTC.

Column Name: appt_req_follow_up_code
Column Type: varchar
Max Length: 5
Appointment Requires Follow-up

Column Name: appt_req_follow_up_value
Column Type: varchar
Max Length: 50
Appointment Requires Follow-up

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
Billing Status code

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The value of the 'billing_status_code'

Column Name: cancellation_reason_code
Column Type: varchar
Max Length: 40
The code for the appointment cancellation reason.

Column Name: cancellation_reason_value

Column Type: varchar
Max Length: 255
The description associated with cancellation reason_code.

Column Name: client_willing_pay_code
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: client_willing_pay_value
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: clinic_indicator
Column Type: integer
The clinical appointment flag. Set to 1 if this is a clinical appointment.

Column Name: costaff1_duration_min
Column Type: varchar
Max Length: 10
Duration (in minutes) - CoStaff

Column Name: co_staff_1_name
Column Type: varchar
Max Length: 40
Co Staff 1 Name

Column Name: costaff2_duration_min
Column Type: varchar
Max Length: 10
Duration (in minutes) - CoStaff2

Column Name: co_staff_2_name
Column Type: varchar
Max Length: 40
Co Staff 2 Name

Column Name: cost_of_service
Column Type: numeric
Cost of Service (field 19998)

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: duration_minutes

Column Type: varchar

Max Length: 10
Duration (in minutes)

Column Name: ebpss_csi_code
Column Type: varchar
Max Length: 200
Evidence-based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value
Column Type: varchar
Max Length: 200
Evidence-Based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value_long
Column Type: varchar
Max Length: 4096
Evidence-Based Practices / Service Strategies (CSI)

Column Name: external_appt_id
Column Type: varchar
Max Length: 4096
Appointment ID for the external source appointment (for example EVV sources)

Column Name: follow_up_appt_due_date
Column Type: date
Follow-up Appointment Due Date

Column Name: follow_up_status_code
Column Type: varchar
Max Length: 50
Follow-up Status

Column Name: follow_up_status_value
Column Type: varchar
Max Length: 50
Follow-up Status value

Column Name: group_name
Column Type: varchar
Max Length: 40
Group name

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Medical Diagnosis 1 JOIN (10050) and associated values

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40

Medical Diagnosis 2 JOIN (10051) and associated values

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Medical Diagnosis 3 JOIN (10080) and associated values

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Medical Diagnosis 4 JOIN (10081) and associated values

Column Name: location_code

Column Type: varchar

Max Length: 20

Appointment location code.

Column Name: location_value

Column Type: varchar

Max Length: 40

Appointment location description.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

Medical Diagnosis 1 Code

Column Name: medical_diagnosis1_DSM_value

Column Type: varchar

Max Length: 80

Medical Diagnosis 1 DSM Value

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 80

Medical Diagnosis 1 Value

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

Medical Diagnosis 2 Code

Max Length: 80

Medical Diagnosis 3 DSM Value

Column Name: medical_diagnosis4_DSM_value

Column Type: varchar

Max Length: 80

Medical Diagnosis 4 DSM Value

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

ICD10 code for the medical diagnosis 1

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

ICD10 description for the medical diagnosis 1

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

ICD9 code for the medical diagnosis 1

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

ICD9 description for the medical diagnosis 1

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

IMO description for the medical diagnosis 1

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

ICD10 code for the medical diagnosis 2

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

ICD10 description for the medical diagnosis 2

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

ICD9 code for the medical diagnosis 2

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

ICD9 description for the medical diagnosis 2

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

IMO description for the medical diagnosis2

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

ICD10 code for the medical diagnosis 3

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

ICD10 description for the medical diagnosis 3

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

ICD9 code for the medical diagnosis 3

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

ICD9 description for the medical diagnosis 3

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

IMO description for the medical diagnosis3

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

ICD9 code for the medical diagnosis 4

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

ICD9 description for the medical diagnosis 4

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

IMO description for the medical diagnosis4

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

Medical Diagnosis 3 Code

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 80

Medical Diagnosis 3 Value

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

Medical Diagnosis 4 Code

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 80

Medical Diagnosis 4 Value

Column Name: minute_time_override

Column Type: integer

When the appointment has an end time of 12:00 AM this will be set to 1.

Column Name: modifiers

Column Type: varchar

Max Length: 50

Billing modifiers

Column Name: number_of_clients

Column Type: varchar

Max Length: 10

Number of clients (members) of the appointment

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: orig_entry_date
Column Type: date
Original creation date of the appointment.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 15
Original creation time of the appointment.

Column Name: orig_entry_user_name
Column Type: varchar
Max Length: 40
Original creator of the appointment.

Column Name: orig_sched_end_time
Column Type: varchar
Max Length: 50
Original end time of the appointment.

Column Name: orig_sched_start_time
Column Type: varchar
Max Length: 50
Original start time of the appointment.

Column Name: posted_as_service_code
Column Type: varchar
Max Length: 2
Posted as a service ?

Column Name: posted_as_service_value
Column Type: varchar
Max Length: 50
Posted as a service value

Column Name: posted_code
Column Type: varchar
Max Length: 2
Posted Appointment?

Column Name: posted_data_entry_by
Column Type: varchar
Max Length: 40
Appointment posted entry_by

Column Name: posted_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment posted entry_by_option

Column Name: posted_data_entry_date
Column Type: date
Appointment posted entry_date

Column Name: posted_data_entry_time
Column Type: varchar
Max Length: 15
Appointment posted entry_time

Column Name: posted_option_desc
Column Type: varchar
Max Length: 80
Appointment posted Option Description

Column Name: posted_option_id
Column Type: varchar
Max Length: 20
Appointment posted Option Id

Column Name: posted_value
Column Type: varchar
Max Length: 50
Posted appointment value

Column Name: posting_in_progress
Column Type: varchar
Max Length: 50
Posting in progress, this is for group appointments

Column Name: priority_code
Column Type: varchar
Max Length: 50
Appointment priority code

Column Name: priority_description
Column Type: varchar
Max Length: 50
Appointment priority description

Column Name: program_code
Column Type: varchar
Max Length: 10
Program Code

Column Name: program_value

Column Type: varchar
Max Length: 40
Program Value

Column Name: psycho_add_on_duration
Column Type: integer
Psychotherapy Add-On Duration (11506)

Column Name: reason_for_follow_up
Column Type: varchar
Max Length: 4096
Reason For Follow-up - String

Column Name: reason_for_follow_up_stream
Column Type: longvarchar
Max Length: 2147483647
Reason For Follow-up - Stream

Column Name: reason_svc_not_posted_code
Column Type: varchar
Max Length: 40
Reason Service Not Posted - Code

Column Name: reason_svc_not_posted_value
Column Type: varchar
Max Length: 50
Reason Service Not Posted - Value

Column Name: recurring_indicator
Column Type: integer
Flag for determining if this is a recurring appointment.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
Referring Practitioner Code

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
Referring Practitioner Name

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
Referring Provider Code

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50

Referring Provider Name

Column Name: room_number

Column Type: varchar

Max Length: 50

Appointment room number

Column Name: service_description

Column Type: varchar

Max Length: 40

Service Description

Column Name: service_documentation_ns

Column Type: varchar

Max Length: 40

Service Documentation Namespace (99971)

Column Name: site_name

Column Type: varchar

Max Length: 40

Site Name

Column Name: staff_name

Column Type: varchar

Max Length: 40

The staff name associated with STAFFID.

Column Name: status_code

Column Type: varchar

Max Length: 40

The code for the appointment status.

Column Name: status_value

Column Type: varchar

Max Length: 40

The description associated with status_code.

Column Name: team_description

Column Type: varchar

Max Length: 50

Team description

Column Name: team_id

Column Type: varchar

Max Length: 50

Team

Column Name: units_of_service

Column Type: numeric

Units of Service (field 10014)

Column Name: unsigned_appointment
Column Type: bit
Flag for determining if this is an unsigned appointment.

Column Name: verified_code
Column Type: varchar
Max Length: 2
Appointment Verified ?

Column Name: verified_data_entry_by
Column Type: varchar
Max Length: 40
Appointment Verified entry_by

Column Name: verified_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment Verified entry_by_option

Column Name: verified_data_entry_date
Column Type: date
Appointment Verified entry_date

Column Name: verified_data_entry_time
Column Type: varchar
Max Length: 15
Appointment Verified entry_time

Column Name: verified_option_desc
Column Type: varchar
Max Length: 80
Appointment Verified Option Description

Column Name: verified_option_id
Column Type: varchar
Max Length: 20
Appointment Verified Option Id

Column Name: verified_value
Column Type: varchar
Max Length: 50
Appointment Verified value

Documentation for form: Front_Desk

Column Type: varchar
Max Length: 40
The description associated with program_code.

Column Name: self_pay_amount
Column Type: varchar
Max Length: 50
Self-Pay Amount

Column Name: site_name
Column Type: varchar
Max Length: 40
The description associated with SITEID.

Column Name: start_end_time_of_appt
Column Type: varchar
Max Length: 50
Start Time - End Time

Column Name: time_of_arrival
Column Type: varchar
Max Length: 50
Time Of Arrival

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code.

Documentation for form: Front_Desk

Table Name: SYSTEM.front_desk_payment_entry

Table Description: This table contains the payment information filed in 'Payment Entry Only' section of 'Front Desk' form

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the payment was filed.

Column Name: PATID
Column Type: varchar
Max Length: 20
'Client'

Column Name: SITEID
Column Type: varchar
Max Length: 10
'Site'

Column Name: check_ref_num
Column Type: varchar
Max Length: 50
'Check / Reference #'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description'.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The username that last updated the row.

Column Name: join_to_pay_adj_history
Column Type: varchar
Max Length: 40
Unique ID used as a link to SYSTEM.billing_pay_adj_history table. The format is "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: join_to_tx_history
Column Type: varchar
Max Length: 40
Unique ID used as a link to the 'SYSTEM.billing_tx_history' table. The format is date of service in Julian date format followed by a counter starting with ".001".

Column Name: option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that last updated the row.

Column Name: payment_amount
Column Type: varchar
Max Length: 50
'Payment Amount'

Column Name: payment_date
Column Type: date
The date the payment was made.

Column Name: posting_code
Column Type: varchar
Max Length: 50

'Posting Code'

Column Name: service_program_code

Column Type: varchar

Max Length: 15

'Service Program'

Column Name: service_program_value

Column Type: varchar

Max Length: 40

The value of service_program_code

Column Name: site_name

Column Type: varchar

Max Length: 40

The name associated to SITEID

Documentation for form: Front_Desk

Table Name: SYSTEM.site_specific_check_in

Table Description: Site Specific Client Check-In

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

Service Code.

Column Name: SITEID

Column Type: varchar
Max Length: 20
Site ID.

Column Name: appointment_date
Column Type: date
The date of the appointment.

Column Name: appointment_object_id
Column Type: varchar
Max Length: 50
Appointment Object ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_1
Column Type: date
Site specific date.

Column Name: date_10
Column Type: date
Site specific date.

Column Name: date_2
Column Type: date
Site specific date.

Column Name: date_3
Column Type: date
Site specific date.

Column Name: date_4
Column Type: date
Site specific date..

Column Name: date_5
Column Type: date
Site specific date.

Column Name: date_6
Column Type: date
Site specific date.

Column Name: date_7
Column Type: date
Site specific date.

Column Name: date_8
Column Type: date
Site specific date.

Column Name: date_9
Column Type: date
Site specific date.

Column Name: dictionary_10_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_10_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_1_code
Column Type: varchar
Max Length: 50
Dictionary Y/N.

Column Name: dictionary_1_value
Column Type: varchar
Max Length: 50
The description associated with dictionary_2_code. See dictionary_2_code for more information.

Column Name: dictionary_2_code
Column Type: varchar
Max Length: 50
Dictionary Y/N.

Column Name: dictionary_2_value
Column Type: varchar
Max Length: 50
The description associated with dictionary_2_code. See dictionary_2_code for more information.

Column Name: dictionary_3_code
Column Type: varchar
Max Length: 50
Dictionary Y/N.

Column Name: dictionary_3_value
Column Type: varchar
Max Length: 50
The description associated with dictionary_3_code. See dictionary_3_code for more information.

Column Name: dictionary_4_code

Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_4_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_5_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_5_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value

Column Name: dictionary_6_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_6_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value

Column Name: dictionary_7_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_7_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_8_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_8_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_9_code

Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_9_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: free_text_20_1
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_10
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_2
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_3
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_4
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_5
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_6
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_7
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_8

Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_9
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_1
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_10
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_2
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_3
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_4
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_5
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_6
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_7
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_8

Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_9
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_1
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_10
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_2
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_3
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_4
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_5
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_6
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_7
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_8

Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_9
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: multi_dictionary_10_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_10_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_10_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_1_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_1_shval
Column Type: varchar
Max Length: 255
Site specific property.

Column Name: multi_dictionary_1_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_2_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_2_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_2_value

Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_3_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_3_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_3_value
Column Type: varchar
Max Length: 4096
Site specific property.

Column Name: multi_dictionary_4_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_4_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_4_value
Column Type: varchar
Max Length: 4096
Site specific property.

Column Name: multi_dictionary_5_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_5_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_5_value
Column Type: varchar
Max Length: 4096
Site specific property.

Column Name: multi_dictionary_6_code

Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_6_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_6_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_7_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_7_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_7_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_8_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_8_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_8_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_9_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_9_shval

Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_9_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: scrolling_text_1
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_10
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_2
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_3
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_4
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_5
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_6
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_7
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_8

Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_9
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Documentation for form: Front_Desk

Table Name: SYSTEM.site_specific_check_out

Table Description: Site Spesific Client Check-out

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Joins table to treatment history.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
Service Code.

Column Name: SITEID
Column Type: varchar

Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict4_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict4_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict4_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict5_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict5_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict5_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict6_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict6_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict6_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict7_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict7_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict7_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict8_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict8_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict8_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict9_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict9_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict9_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_scrollingtext_1
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_10
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_2
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_3
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_4
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_5
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_6
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_7
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_8
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_9
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Documentation for form: Service_Fee/Cross_Reference_Maintenance

Table Description: This table returns the audit information stored in the 'Service Fee/Cross Reference Maintenance' section of the 'Service Fee/Cross Reference Maintenance' form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the fee definition.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The staff ID associated with the fee definition.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the fee definition.

Column Name: age_range
Column Type: varchar
Max Length: 20
Age range associated with the fee definition.

Column Name: alt_rev_code_desc
Column Type: varchar
Max Length: 50
'Alternate Revenue Code Description'

Column Name: charge
Column Type: numeric
Dollar amount of the fee definition.

Column Name: cpt_code
Column Type: varchar
Max Length: 50

CPT code associated with the fee definition.

Column Name: cpt_value

Column Type: varchar

Max Length: 120

The description associated with cpt_code. See cpt_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: duration_range
Column Type: varchar
Max Length: 20
Duration range associated with the fee definition.

Column Name: effective_date
Column Type: date
Effective date of the fee definition.

Column Name: end_date
Column Type: date
End date of the fee definition.

Column Name: fee_type_code
Column Type: varchar
Max Length: 15
'Fee Type'

Column Name: fee_type_value
Column Type: varchar
Max Length: 40
The description associated with fee_type_code. See fee_type_code for more information.

Column Name: file_information
Column Type: varchar
Max Length: 50
'File Information (2400-K3-01)'

Column Name: fixed_fee_units
Column Type: varchar
Max Length: 50
Fixed fee unites of the fee definition.

Column Name: inc_cov_cat_code
Column Type: varchar
Max Length: 32000
'Incident-To Category For Coverage'

Column Name: inc_cov_cat_value_long

Column Type: varchar

Max Length: 4096

The description associated with inc_cov_cat_code up to 4096 characters. See inc_cov_cat_code for more information.

Column Name: inc_cov_cat_value_short

Column Type: varchar

Max Length: 255

The description associated with inc_cov_cat_code up to 255 characters. See inc_cov_cat_code for more information.

Column Name: incident_to_svc_code

Column Type: varchar

Max Length: 50

'Is This An Incident-To Service?'

Column Name: incident_to_svc_value

Column Type: varchar

Max Length: 50

The description associated with incident_to_svc_code. See incident_to_svc_code for more information.

Column Name: inc_to_prac_cred_code

Column Type: varchar

Max Length: 15

'Incident-To Practitioner Credentials'

Column Name: inc_to_prac_cred_shval

Column Type: varchar

Max Length: 255

The description associated with inc_to_prac_cred_code up to 255 characters. See inc_to_prac_cred_code for more information.

Column Name: inc_to_prac_cred_value

Column Type: varchar

Max Length: 4096

The description associated with inc_to_prac_cred_code up to 4096 characters. See inc_to_prac_cred_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: medicaid_rate_code_brf
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Brief'

Column Name: medicaid_rate_code_fam
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Family'

Column Name: medicaid_rate_code_grp
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Group'

Column Name: medicaid_rate_code_reg
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Regular'

Column Name: modifier
Column Type: varchar
Max Length: 2
Modifiers specific to the fee definition.

Column Name: modifier_x_ref
Column Type: varchar
Max Length: 50
'CPT-4 / HCPCS Modifier'

Column Name: mod_x_ref_frst_instance
Column Type: varchar
Max Length: 50
'CPT-4 / HCPCS Modifier If Not First Instance For Service Date'

Column Name: note_ref_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'

Column Name: note_ref_text
Column Type: varchar
Max Length: 50
'Note Reference Text (2400-NTE-02)'

Column Name: note_ref_value
Column Type: varchar
Max Length: 50
The description associated with note_ref_code. See note_ref_code for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: practitioner_category_code
Column Type: varchar
Max Length: 50
'Practitioner Category'

Column Name: practitioner_category_value
Column Type: varchar
Max Length: 50
The description associated with practitioner_category_code. See practitioner_category_code for more information.

Column Name: practitioner_name
Column Type: varchar
Max Length: 40
The description associated with practitioner_category_code. See practitioner_category_code for more information.

Column Name: pricing_method_code
Column Type: varchar
Max Length: 50
'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_method_value
Column Type: varchar
Max Length: 50
The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_org_id
Column Type: varchar
Max Length: 50
'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: program_code
Column Type: varchar
Max Length: 15
The program code associated with the data.

Column Name: program_value
Column Type: varchar
Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: prorate_calc_code
Column Type: varchar
Max Length: 50
'Pro-Rated Fee Calculation'

Column Name: prorate_calc_value
Column Type: varchar
Max Length: 50
The description associated with prorate_calc_code. See prorate_calc_code for more information.

Column Name: prorate_code
Column Type: varchar
Max Length: 50
'Pro-Rate Fee For'

Column Name: prorate_value
Column Type: varchar
Max Length: 50
The description associated with prorate_code. See prorate_code for more information.

Column Name: prorate_year_code
Column Type: varchar
Max Length: 50
'Yearly Days Calculation'

Column Name: prorate_year_value
Column Type: varchar
Max Length: 50
The description associated with prorate_year_code. See prorate_year_code for more information.

Column Name: qual_ccbhc_service_code
Column Type: varchar
Max Length: 50
'Qualifies as a CCBHC Enumerated Service'

Column Name: qual_ccbhc_service_value
Column Type: varchar
Max Length: 40
The description associated with qual_ccbhc_service_code. See qual_ccbhc_service_code for more information.

Column Name: quantity
Column Type: varchar
Max Length: 50
'Quantity'

Column Name: service_code_description
Column Type: varchar

Max Length: 40

The description associated with SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: state_rp_code_1

Column Type: varchar

Max Length: 50

'State Reporting Code 1'

Column Name: state_rp_code_2

Column Type: varchar

Max Length: 50

'State Reporting Code 2'

Column Name: state_rp_code_3

Column Type: varchar

Max Length: 50

'State Reporting Code 3'

Column Name: state_rp_code_4

Column Type: varchar

Max Length: 50

'State Reporting Code 4'

Column Name: svc_id

Column Type: varchar

Max Length: 50

'Service ID (837P-2400-SV1-01)'

Column Name: svc_id_qual_code

Column Type: varchar

Max Length: 50

'Product/Service ID Qualifier (2400-SV101-1)'

Column Name: svc_id_qual_value

Column Type: varchar

Max Length: 50

The description associated with svc_id_qual_code. See svc_id_qual_code for more information.

Column Name: svc_unit_meas_837i_code

Column Type: varchar

Max Length: 50

'Service Unit Of Measurement Code (837I)'

Column Name: svc_unit_meas_837i_value

Column Type: varchar

Max Length: 50

The description associated with svc_unit_meas_837i_code. See svc_unit_meas_837i_code for more information.

Column Name: svc_unit_meas_code

Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837P)'

Column Name: svc_unit_meas_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_code. See svc_unit_meas_code for more information.

Column Name: ub_04_code
Column Type: varchar
Max Length: 50
UB-04 code associated with the fee definition.

Column Name: ub_04_value
Column Type: varchar
Max Length: 50
The description associated with ub_04_code. See ub_04_code for more information.

Column Name: x_ref_name
Column Type: varchar
Max Length: 50
'Service Code Cross Reference Name'

Documentation for form: Service_Fee/Cross_Reference_Maintenance

Table Name: SYSTEM.billing_tx_master_fee_table

Table Description: This table returns the information stored in the 'Service Fee/Cross Reference Maintenance' section of the 'Service Fee/Cross Reference Maintenance' form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the fee definition.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15

The staff ID associated with the fee definition.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code associated with the fee definition.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the fee definition.

Column Name: age_range

Column Type: varchar

Max Length: 20

Age range associated with the fee definition.

Column Name: alt_rev_code_desc

Column Type: varchar

Max Length: 50

'Alternate Revenue Code Description'

Column Name: charge

Column Type: numeric

Dollar amount of the fee definition.

Column Name: cpt_code

Column Type: varchar

Max Length: 50

CPT code associated with the fee definition.

Column Name: cpt_value

Column Type: varchar

Max Length: 120

The description associated with cpt_code. See cpt_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: duration_range
Column Type: varchar
Max Length: 20
Duration range associated with the fee definition.

Column Name: effective_date
Column Type: date
Effective date of the fee definition.

Column Name: end_date
Column Type: date
End date of the fee definition.

Column Name: fee
Column Type: numeric
Dollar amount of the fee definition.

Column Name: fee_type_code
Column Type: varchar
Max Length: 15
'Fee Type'

Column Name: fee_type_value
Column Type: varchar
Max Length: 40
The description associated with fee_type_code. See fee_type_code for more information.

Column Name: file_information
Column Type: varchar
Max Length: 50
'File Information (2400-K3-01)'

Column Name: fixed_fee_units
Column Type: varchar
Max Length: 50
Fixed fee unites of the fee definition.

Column Name: inc_cov_cat_code
Column Type: varchar
Max Length: 32000
'Incident-To Category For Coverage'

Column Name: inc_cov_cat_value_long
Column Type: varchar
Max Length: 4096
The description associated with inc_cov_cat_code up to 4096 characters. See inc_cov_cat_code for more information.

Column Name: inc_cov_cat_value_short
Column Type: varchar
Max Length: 255
The description associated with inc_cov_cat_code up to 255 characters. See inc_cov_cat_code for more information.

Column Name: incident_to_svc_code
Column Type: varchar
Max Length: 50
'Is This An Incident-To Service?'

Column Name: incident_to_svc_value

Column Type: varchar

Max Length: 50

The description associated with incident_to_svc_code. See incident_to_svc_code for more information.

Column Name: inc_to_prac_cred_code

Column Type: varchar

Max Length: 15

'Incident-To Practitioner Credentials'

Column Name: inc_to_prac_cred_shval

Column Type: varchar

Max Length: 255

The description associated with inc_to_prac_cred_code up to 255 characters. See inc_to_prac_cred_code for more information.

Column Name: inc_to_prac_cred_value

Column Type: varchar

Max Length: 4096

The description associated with inc_to_prac_cred_code up to 4096 characters. See inc_to_prac_cred_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: medicaid_rate_code_brif

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Brief'

Column Name: medicaid_rate_code_fam

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Regular'

Column Name: modifier

Column Type: varchar

Max Length: 2

Modifiers specific to the fee definition.

Column Name: modifier_x_ref

Column Type: varchar

Max Length: 50

'CPT-4 / HCPCS Modifier'

Column Name: mod_x_ref_frst_instance

Column Type: varchar

Max Length: 50

'CPT-4 / HCPCS Modifier If Not First Instance For Service Date'

Column Name: note_ref_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'

Column Name: note_ref_text

Column Type: varchar

Max Length: 50

'Note Reference Text (2400-NTE-02)'

Column Name: note_ref_value

Column Type: varchar

Max Length: 50

The description associated with note_ref_code. See note_ref_code for more information.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: practitioner_category_code

Column Type: varchar

Max Length: 50

'Practitioner Category'

Column Name: practitioner_category_value

Column Type: varchar

Max Length: 50

The description associated with practitioner_category_code. See practitioner_category_code for more information.

Column Name: practitioner_name
Column Type: varchar
Max Length: 40
Name associated with the staff ID.

Column Name: pricing_method_code
Column Type: varchar
Max Length: 50
'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_method_value
Column Type: varchar
Max Length: 50
The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_org_id
Column Type: varchar
Max Length: 50
'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: program_code
Column Type: varchar
Max Length: 15
The program code associated with the data.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: prorate_calc_code
Column Type: varchar
Max Length: 50
'Pro-Rated Fee Calculation'

Column Name: prorate_calc_value
Column Type: varchar
Max Length: 50
The description associated with prorate_calc_code. See prorate_calc_code for more information.

Column Name: prorate_code
Column Type: varchar
Max Length: 50
'Pro-Rate Fee For'

Column Name: prorate_value
Column Type: varchar

Max Length: 50

The description associated with `prorate_code`. See `prorate_code` for more information.

Column Name: `prorate_year_code`

Column Type: `varchar`

Max Length: 50

'Yearly Days Calculation'

Column Name: `prorate_year_value`

Column Type: `varchar`

Max Length: 50

The description associated with `prorate_year_code`. See `prorate_year_code` for more information.

Column Name: `qual_ccbhc_service_code`

Column Type: `varchar`

Max Length: 50

'Qualifies as a CCBHC Enumerated Service'

Column Name: `qual_ccbhc_service_value`

Column Type: `varchar`

Max Length: 40

The description associated with `qual_ccbhc_service_code`. See `qual_ccbhc_service_code` for more information.

Column Name: `quantity`

Column Type: `varchar`

Max Length: 50

'Quantity'

Column Name: `service_code_description`

Column Type: `varchar`

Max Length: 40

The description associated with `SERVICE_CODE`. See `SERVICE_CODE` for more information.

Column Name: `service_value`

Column Type: `varchar`

Max Length: 40

The description associated with `SERVICE_CODE`. See `SERVICE_CODE` for more information.

Column Name: `state_rp_code_1`

Column Type: `varchar`

Max Length: 50

'State Reporting Code 1'

Column Name: `state_rp_code_2`

Column Type: `varchar`

Max Length: 50

'State Reporting Code 2'

Column Name: `state_rp_code_3`

Column Type: varchar
Max Length: 50
'State Reporting Code 3'

Column Name: state_rp_code_4
Column Type: varchar
Max Length: 50
'State Reporting Code 4'

Column Name: svc_id
Column Type: varchar
Max Length: 50
'Service ID (837P-2400-SV1-01)'

Column Name: svc_id_qual_code
Column Type: varchar
Max Length: 50
'Product/Service ID Qualifier (2400-SV101-1)'

Column Name: svc_id_qual_value
Column Type: varchar
Max Length: 50
The description associated with svc_id_qual_code. See svc_id_qual_code for more information.

Column Name: svc_unit_meas_837i_code
Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837I)'

Column Name: svc_unit_meas_837i_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_837i_code. See svc_unit_meas_837i_code for more information.

Column Name: svc_unit_meas_code
Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837P)'

Column Name: svc_unit_meas_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_code. See svc_unit_meas_code for more information.

Column Name: ub_04_code
Column Type: varchar
Max Length: 50
UB-04 code associated with the fee definition.

Column Name: ub_04_value

Column Type: varchar

Max Length: 50

The description associated with ub_04_code. See ub_04_code for more information.

Column Name: x_ref_name

Column Type: varchar

Max Length: 50

'Service Code Cross Reference Name'

Documentation for form: Service_Fee/Cross_Reference_Maintenance

Table Name: SYSTEM.billing_tx_max_liab_by_guar

Table Description: This table returns the information stored in the 'Guarantor Definitions' section of the 'Service Fee/Cross Reference Maintenance' form.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The guarantor ID associated with the guarantor distribution definition.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15

The staff ID associated with the guarantor distribution definition.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code associated with the guarantor distribution definition.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the guarantor distribution definition.

Column Name: age_range

Column Type: varchar

Max Length: 20
Age range associated with the guarantor distribution definition.

Column Name: alt_rev_code_desc
Column Type: varchar
Max Length: 50
'Alternate Revenue Code Description'

Column Name: amt_to_distribute
Column Type: numeric
'Maximum Amount To Distribute Per Unit'

Column Name: amt_to_distribute_per_unit
Column Type: numeric
'Maximum Amount To Distribute Per Unit'

Column Name: contract_rate
Column Type: numeric
The contracted rate for the service

Column Name: cpt_code
Column Type: varchar
Max Length: 50
CPT code associated with the guarantor distribution definition.

Column Name: cpt_value
Column Type: varchar
Max Length: 120
The description associated with cpt_code. See cpt_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: duration_range

Column Type: varchar

Max Length: 20

Duration range associated with the guarantor distribution definition.

Column Name: effective_date

Column Type: date

Effective date of the guarantor distribution definition.

Column Name: end_date

Column Type: date

End date of the guarantor distribution definition.

Column Name: fee

Column Type: numeric
Dollar amount of the guarantor distribution definition.

Column Name: file_information
Column Type: varchar
Max Length: 50
'File Information (2400-K3-01)'

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
'Financial Class'

Column Name: financial_class_value
Column Type: varchar
Max Length: 40
The description associated with financial_class_code. See financial_class_code for more information.

Column Name: fin_class_for_query
Column Type: varchar
Max Length: 50
'Financial Class'

Column Name: fixed_fee_units
Column Type: varchar
Max Length: 50
Fixed fee unites of the guarantor distribution definition.

Column Name: guarantor_description
Column Type: varchar
Max Length: 50
Description associated with the GUARANTOR_ID.

Column Name: ignore_for_liab_dis_code
Column Type: varchar
Max Length: 50
'Ignore Specified Amounts When Distributing Liability'

Column Name: ignore_for_liab_dis_value
Column Type: varchar
Max Length: 40
The description associated with ignore_for_liab_dis_code. See ignore_for_liab_dis_code for more information.

Column Name: inc_cov_cat_code
Column Type: varchar
Max Length: 32000
'Incident-To Category For Coverage'

Column Name: inc_cov_cat_value_long

Column Type: varchar

Max Length: 4096

The description associated with inc_cov_cat_code up to 4096 characters. See inc_cov_cat_code for more information.

Column Name: inc_cov_cat_value_short

Column Type: varchar

Max Length: 255

The description associated with inc_cov_cat_code up to 255 characters. See inc_cov_cat_code for more information.

Column Name: incident_to_svc_code

Column Type: varchar

Max Length: 50

'Is This An Incident-To Service?'

Column Name: incident_to_svc_value

Column Type: varchar

Max Length: 50

The description associated with incident_to_svc_code. See incident_to_svc_code for more information.

Column Name: inc_to_prac_cred_code

Column Type: varchar

Max Length: 15

'Incident-To Practitioner Credentials'

Column Name: inc_to_prac_cred_shval

Column Type: varchar

Max Length: 255

The description associated with inc_to_prac_cred_code up to 255 characters. See inc_to_prac_cred_code for more information.

Column Name: inc_to_prac_cred_value

Column Type: varchar

Max Length: 4096

The description associated with inc_to_prac_cred_code up to 4096 characters. See inc_to_prac_cred_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: max_amt_assoc_guar_value_long

Column Type: varchar

Max Length: 4096

The description associated with max_amt_associated_guarantors up to 4096 characters. See max_amt_associated_guarantors for more information.

Column Name: max_amt_assoc_guar_value_short

Column Type: varchar

Max Length: 255

The description associated with max_amt_associated_guarantors up to 255 characters. See max_amt_associated_guarantors for more information.

Column Name: max_amt_associated_guarantors

Column Type: varchar

Max Length: 32768

'Associated Guarantor(s) Whose Liability In Combination With This Guarantor Will Not Exceed Maximum Amount To Distribute Per Service'

Column Name: max_amt_to_dist_per_month

Column Type: numeric

'Maximum Amount To Distribute Per Month'

Column Name: max_amt_to_distribute

Column Type: numeric

'Maximum Amount To Distribute Per Service'

Column Name: max_amt_to_distribute_per_svc

Column Type: numeric

'Maximum Amount To Distribute Per Service'

Column Name: medicaid_rate_code_brf

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Brief'

Column Name: medicaid_rate_code_fam

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Family'

Column Name: medicaid_rate_code_grp

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Group'

Column Name: medicaid_rate_code_reg

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Regular'

Column Name: min_amt_to_dist_per_unit

Column Type: numeric

'Minimum Amount To Distribute Per Unit'

Column Name: min_amt_to_distr_per_svc

Column Type: numeric

'Minimum Amount To Distribute Per Service'

Column Name: modifier_x_ref

Column Type: varchar

Max Length: 50

'CPT-4 / HCPCS Modifier'

Column Name: mod_x_ref_frst_instance

Column Type: varchar

Max Length: 50

'CPT-4 / HCPCS Modifier If Not First Instance For Service Date'

Column Name: note_ref_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'

Column Name: note_ref_text

Column Type: varchar

Max Length: 50

'Note Reference Text (2400-NTE-02)'

Column Name: note_ref_value

Column Type: varchar

Max Length: 50

The description associated with note_ref_code. See note_ref_code for more information.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: practitioner_category_code

Column Type: varchar

Max Length: 50

'Practitioner Category'

Column Name: practitioner_category_value

Column Type: varchar

Max Length: 50

The description associated with practitioner_category_code. See practitioner_category_code for more information.

Column Name: practitioner_name

Column Type: varchar

Max Length: 40

Name associated with the staff ID.

Column Name: pricing_method_code

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_method_value

Column Type: varchar

Max Length: 50

The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_org_id

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: program_code

Column Type: varchar

Max Length: 15

The program code associated with the data.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: qual_ccbhc_service_code

Column Type: varchar

Max Length: 50

'Qualifies as a CCBHC Enumerated Service'

Column Name: qual_ccbhc_service_value

Column Type: varchar

Max Length: 40

The description associated with qual_ccbhc_service_code. See qual_ccbhc_service_code for more information.

Column Name: quantity

Column Type: varchar

Max Length: 50

'Quantity'

Column Name: service_value

Column Type: varchar

Max Length: 40

The description associated with SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: staff_name

Column Type: varchar

Max Length: 10

Name associated with the staff ID.

Column Name: state_rp_code_1

Column Type: varchar

Max Length: 50

'State Reporting Code 1'

Column Name: state_rp_code_2

Column Type: varchar

Max Length: 50

'State Reporting Code 2'

Column Name: state_rp_code_3

Column Type: varchar

Max Length: 50

'State Reporting Code 3'

Column Name: state_rp_code_4

Column Type: varchar

Max Length: 50

'State Reporting Code 4'

Column Name: svc_id

Column Type: varchar

Max Length: 50

'Service ID (837P-2400-SV1-01)'

Column Name: svc_id_qual_code

Column Type: varchar

Max Length: 50

'Product/Service ID Qualifier (2400-SV101-1)'

Column Name: svc_id_qual_value

Column Type: varchar

Max Length: 50

The description associated with svc_id_qual_code. See svc_id_qual_code for more information.

Column Name: svc_unit_meas_837i_code

Column Type: varchar

Max Length: 50

'Service Unit Of Measurement Code (837I)'

Column Name: svc_unit_meas_837i_value

Column Type: varchar

Max Length: 50

The description associated with svc_unit_meas_837i_code. See svc_unit_meas_837i_code for more information.

Column Name: svc_unit_meas_code

Column Type: varchar

Max Length: 50

'Service Unit Of Measurement Code (837P)'

Column Name: svc_unit_meas_value

Column Type: varchar

Max Length: 50

The description associated with svc_unit_meas_code. See svc_unit_meas_code for more information.

Column Name: ub_04_code

Column Type: varchar

Max Length: 50

UB-04 code associated with the guarantor distribution definition.

Column Name: ub_04_value

Column Type: varchar

Max Length: 120

The description associated with ub_04_code. See ub_04_code for more information.

Column Name: write_off_remaining

Column Type: varchar

Max Length: 2

'Write-off Remaining Balance (Contract Guarantors Only)'

Column Name: write_off_remaining_value

Column Type: varchar

Max Length: 40

The description associated with write_off_remaining. See write_off_remaining for more information.

Column Name: x_ref_name

Column Type: varchar

Max Length: 50

'Service Code Cross Reference Name'

Documentation for form: Service_Fee/Cross_Reference_Maintenance

Table Name: SYSTEM.billing_tx_max_liab_by_guar_audit

Table Description: This table returns the audit information for entries edited in the 'Guarantor Definitions' section of the 'Service Fee/Cross Reference Maintenance' form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The guarantor ID associated with the guarantor distribution definition.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The staff ID associated with the guarantor distribution definition.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the guarantor distribution definition.

Column Name: age_range
Column Type: varchar
Max Length: 20
Age range associated with the guarantor distribution definition.

Column Name: alt_rev_code_desc
Column Type: varchar
Max Length: 50
'Alternate Revenue Code Description'

Column Name: amt_to_distribute_per_unit
Column Type: numeric
'Maximum Amount To Distribute Per Unit'

Column Name: contract_rate
Column Type: numeric
The contracted rate for the service

Column Name: cpt_code
Column Type: varchar
Max Length: 50
CPT code associated with the guarantor distribution definition.

Column Name: cpt_value
Column Type: varchar
Max Length: 120
The description associated with cpt_code. See cpt_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: duration_range

Column Type: varchar

Max Length: 20

Duration range associated with the guarantor distribution definition.

Column Name: effective_date

Column Type: date

Effective date of the guarantor distribution definition.

Column Name: end_date

Column Type: date

End date of the guarantor distribution definition.

Column Name: fee

Column Type: numeric

Dollar amount of the guarantor distribution definition.

Column Name: file_information

Column Type: varchar

Max Length: 50

'File Information (2400-K3-01)'

Column Name: financial_class_code

Column Type: varchar

Max Length: 50

'Financial Class'

Column Name: financial_class_value

Column Type: varchar

Max Length: 40

The description associated with financial_class_code. See financial_class_code for more information.

Column Name: fin_class_for_query

Column Type: varchar

Max Length: 50

'Financial Class'

Column Name: fixed_fee_units

Column Type: varchar

Max Length: 50

Fixed fee unites of the guarantor distribution definition.

Column Name: guarantor_description

Column Type: varchar
Max Length: 50
Description associated with the GUARANTOR_ID.

Column Name: ignore_for_liab_dis_code
Column Type: varchar
Max Length: 50
'Ignore Specified Amounts When Distributing Liability'

Column Name: ignore_for_liab_dis_value
Column Type: varchar
Max Length: 40
The description associated with ignore_for_liab_dis_code. See ignore_for_liab_dis_code for more information.

Column Name: inc_cov_cat_code
Column Type: varchar
Max Length: 32000
'Incident-To Category For Coverage'

Column Name: inc_cov_cat_value_long
Column Type: varchar
Max Length: 4096
The description associated with inc_cov_cat_code up to 4096 characters. See inc_cov_cat_code for more information.

Column Name: inc_cov_cat_value_short
Column Type: varchar
Max Length: 255
The description associated with inc_cov_cat_code up to 255 characters. See inc_cov_cat_code for more information.

Column Name: incident_to_svc_code
Column Type: varchar
Max Length: 50
'Is This An Incident-To Service?'

Column Name: incident_to_svc_value
Column Type: varchar
Max Length: 50
The description associated with incident_to_svc_code. See incident_to_svc_code for more information.

Column Name: inc_to_prac_cred_code
Column Type: varchar
Max Length: 15
'Incident-To Practitioner Credentials'

Column Name: inc_to_prac_cred_shval
Column Type: varchar
Max Length: 255

The description associated with inc_to_prac_cred_code up to 255 characters. See inc_to_prac_cred_code for more information.

Column Name: inc_to_prac_cred_value

Column Type: varchar

Max Length: 4096

The description associated with inc_to_prac_cred_code up to 4096 characters. See inc_to_prac_cred_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: max_amt_assoc_guar_value_long

Column Type: varchar

Max Length: 4096

The description associated with max_amt_associated_guarantors up to 4096 characters. See max_amt_associated_guarantors for more information.

Column Name: max_amt_assoc_guar_value_short

Column Type: varchar

Max Length: 255

The description associated with max_amt_associated_guarantors up to 255 characters. See max_amt_associated_guarantors for more information.

Column Name: max_amt_associated_guarantors

Column Type: varchar

Max Length: 1044

'Associated Guarantor(s) Whose Liability In Combination With This Guarantor Will Not Exceed Maximum Amount To Distribute Per Service'

Column Name: max_amt_to_dist_per_month

Column Type: numeric

'Maximum Amount To Distribute Per Month'

Column Name: max_amt_to_distribute_per_svc

Column Type: numeric

'Maximum Amount To Distribute Per Service'

Column Name: medicaid_rate_code_brif

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Brief'

Column Name: medicaid_rate_code_fam
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Family'

Column Name: medicaid_rate_code_grp
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Group'

Column Name: medicaid_rate_code_reg
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Regular'

Column Name: min_amt_to_dist_per_unit
Column Type: numeric
'Minimum Amount To Distribute Per Unit'

Column Name: min_amt_to_distr_per_svc
Column Type: numeric
'Minimum Amount To Distribute Per Service'

Column Name: modifier_x_ref
Column Type: varchar
Max Length: 50
'CPT-4 / HCPCS Modifier'

Column Name: mod_x_ref_frst_instance
Column Type: varchar
Max Length: 50
'CPT-4 / HCPCS Modifier If Not First Instance For Service Date'

Column Name: note_ref_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'

Column Name: note_ref_text
Column Type: varchar
Max Length: 50
'Note Reference Text (2400-NTE-02)'

Column Name: note_ref_value
Column Type: varchar
Max Length: 50
The description associated with note_ref_code. See note_ref_code for more information.

Column Name: option_desc
Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: practitioner_category_code

Column Type: varchar

Max Length: 50

'Practitioner Category'

Column Name: practitioner_category_value

Column Type: varchar

Max Length: 50

The description associated with practitioner_category_code. See practitioner_category_code for more information.

Column Name: practitioner_name

Column Type: varchar

Max Length: 40

Name associated with the staff ID.

Column Name: pricing_method_code

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_method_value

Column Type: varchar

Max Length: 50

The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_org_id

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: program_code

Column Type: varchar

Max Length: 15

The program code associated with the data.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: qual_ccbhc_service_code

Column Type: varchar
Max Length: 50
'Qualifies as a CCBHC Enumerated Service'

Column Name: qual_ccbhc_service_value
Column Type: varchar
Max Length: 40
The description associated with qual_ccbhc_service_code. See qual_ccbhc_service_code for more information.

Column Name: quantity
Column Type: varchar
Max Length: 50
'Quantity'

Column Name: service_value
Column Type: varchar
Max Length: 40
The description associated with SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: state_rp_code_4
Column Type: varchar
Max Length: 50
'State Reporting Code 4'

Column Name: svc_id
Column Type: varchar
Max Length: 50
'Service ID (837P-2400-SV1-01)'

Column Name: svc_id_qual_code
Column Type: varchar
Max Length: 50
'Product/Service ID Qualifier (2400-SV101-1)'

Column Name: svc_id_qual_value

Column Type: varchar

Max Length: 50

The description associated with svc_id_qual_code. See svc_id_qual_code for more information.

Column Name: svc_unit_meas_837i_code

Column Type: varchar

Max Length: 50

'Service Unit Of Measurement Code (837I)'

Column Name: svc_unit_meas_837i_value

Column Type: varchar

Max Length: 50

The description associated with svc_unit_meas_837i_code. See svc_unit_meas_837i_code for more information.

Column Name: svc_unit_meas_code

Column Type: varchar

Max Length: 50

'Service Unit Of Measurement Code (837P)'

Column Name: svc_unit_meas_value

Column Type: varchar

Max Length: 50

The description associated with svc_unit_meas_code. See svc_unit_meas_code for more information.

Column Name: ub_04_code

Column Type: varchar

Max Length: 50

UB-04 code associated with the guarantor distribution definition.

Column Name: ub_04_value

Column Type: varchar

Max Length: 120

The description associated with ub_04_code. See ub_04_code for more information.

Column Name: write_off_remaining

Column Type: varchar

Max Length: 2

'Write-off Remaining Balance (Contract Guarantors Only)'

Column Name: write_off_remaining_value

Column Type: varchar

Max Length: 40

The description associated with write_off_remaining. See write_off_remaining for more information.

Column Name: x_ref_name

Column Type: varchar

Max Length: 50

'Service Code Cross Reference Name'

Documentation for form: Service_Fee/Cross_Reference_Maintenance

Table Name: SYSTEM.billing_tx_xref_table

Table Description: This table will return service code cross references (CPT and Revenue Codes, Modifiers, etc.) defined in the Service Fee/Cross Reference Maintenance form.

Column Name: billing_tx_xref_table

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The facility ID in which the service code cross reference definition was created.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code, used in the field 'Service Code' of the Service Fee/Cross Reference Maintenance form when the cross reference definition was created.

Column Name: financial_class_code

Column Type: varchar

Max Length: 10

The code for the financial class assigned to the guarantor selected in the field 'Guarantor' of the Service Fee/Cross Reference Maintenance form when the cross reference definition was created . Will be the dictionary code for the financial class in Dictionary File: Payor, Data Element: 1000

Column Name: service_xref_index

Column Type: varchar

Max Length: 10

The ID assigned to the field within the Service Fee/Cross Reference Maintenance form. Will be the index for the value in the service_xref_value_or_code column.

Column Name: financial_class_value

Column Type: varchar

Max Length: 40

The description for the financial_class_code. See financial_class_code for more information.

Column Name: service_xref_name

Column Type: varchar

Max Length: 40

The description for the service_xref_index. Also the name of the field within the Service Fee/Cross Reference Maintenance form.

Column Name: service_xref_value_or_code

Column Type: varchar

Max Length: 40

The value entered in the associated field within the Service Fee/Cross Reference Maintenance form. The field can be identified by viewing the service_xref_name.

Column Name: service_xref_value_for_code

Column Type: varchar

Max Length: 40

The description for the service_xref_value_or_code. See service_xref_value_or_code for more information.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 10

The Guarantor ID with which the service code cross reference definition was created.

Column Name: fin_class_guar_index

Column Type: varchar

Max Length: 50

This field is used for the financial class guarantor index. Similar to the financial class code.

Column Name: guarantor_name

Column Type: varchar

Max Length: 50

The Guarantor name with which the service code cross reference definition was created.

Column Name: service_code_value

Column Type: varchar

Max Length: 40

The service code value.

Documentation for form: Delete_Service

Table Name: SYSTEM.audit_deleted_treatment

Table Description: This table represents audit trail data of client specific deleted services.

Column Name: deleted_treatment_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID of the service that was deleted.

Column Name: deleted_service_index
Column Type: varchar
Max Length: 10
This is an unique ID for the deleted service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 40
The practitioner ID who performed the service which was deleted.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the deleted service.

Column Name: date_of_service
Column Type: date
The date of service associated with the deleted service.

Column Name: date_service_deleted
Column Type: date
The date the service was deleted.

Column Name: time_service_deleted
Column Type: varchar
Max Length: 10
The time the service was deleted.

Column Name: user_who_deleted_service
Column Type: varchar
Max Length: 40
The user name who deleted the service.

Documentation for form: Delete_Service_(Open_Service_Only)

Table Name: SYSTEM.audit_deleted_treatment

Table Description: This table represents audit trail data of client specific deleted services.

Column Name: deleted_treatment_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service that was deleted.

Column Name: deleted_service_index
Column Type: varchar
Max Length: 10
This is an unique ID for the deleted service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 40
The practitioner ID who performed the service which was deleted.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the deleted service.

Column Name: date_of_service
Column Type: date
The date of service associated with the deleted service.

Column Name: date_service_deleted
Column Type: date
The date the service was deleted.

Column Name: time_service_deleted
Column Type: varchar
Max Length: 10
The time the service was deleted.

Column Name: user_who_deleted_service
Column Type: varchar
Max Length: 40
The user name who deleted the service.

Documentation for form: Change_MR#

Table Name: SYSTEM.RADplus_change_id_calls

Table Description: This table tracks the progress and calls being executed in the jobbed process of Change MR

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored

Column Name: job_id
Column Type: varchar
Max Length: 50
The ID of the job executing the change ID calls

Column Name: new_entity_id
Column Type: varchar
Max Length: 50
The new patient ID

Column Name: old_entity_id
Column Type: varchar
Max Length: 50
The old patient ID

Column Name: session_id
Column Type: varchar
Max Length: 50
The NX session ID where the change ID call was executed

Column Name: total_completion_status
Column Type: varchar
Max Length: 50
The number of calls remaining in the Change ID Job Process

Column Name: user_id
Column Type: varchar
Max Length: 50
The user ID that kicked off the change ID call

Documentation for form: Change_MR#

Table Name: SYSTEM.audit_deleted_treatment

Table Description: This table represents audit trail data of client specific deleted services.

Column Name: deleted_treatment_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service that was deleted.

Column Name: deleted_service_index
Column Type: varchar
Max Length: 10
This is an unique ID for the deleted service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 40
The practitioner ID who performed the service which was deleted.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the deleted service.

Column Name: date_of_service
Column Type: date
The date of service associated with the deleted service.

Column Name: date_service_deleted
Column Type: date
The date the service was deleted.

Column Name: time_service_deleted
Column Type: varchar
Max Length: 10
The time the service was deleted.

Column Name: user_who_deleted_service
Column Type: varchar
Max Length: 40
The user name who deleted the service.

Documentation for form: Appointment_Move/Delete

Table Name: SYSTEM.appt_move_delete

Table Description: Appointment Move/Delete Data

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: AMD_uniqueid
Column Type: varchar
Max Length: 20
The unique ID associated with the appointment move/delete action.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GROUP_ID
Column Type: varchar
Max Length: 20
Group Id associated with the appointment move/delete action.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
Service code.

Column Name: SITEID
Column Type: varchar
Max Length: 20
Site Id.

Column Name: STAFFID
Column Type: varchar
Max Length: 20
The original staff ID associated with the appointment.

Column Name: STAFFID_moved_to
Column Type: varchar
Max Length: 20
The new staff ID associated with the appointment.

Column Name: action_taken_code
Column Type: varchar
Max Length: 10
The appointment move/delete action code.

Column Name: action_taken_value
Column Type: varchar
Max Length: 40
The appointment move/delete action description.

Column Name: appointment_date
Column Type: date
Appointment date

Column Name: as_costaff_value
Column Type: varchar
Max Length: 15
Description indicating whether the appointment move/delete action was by co-practitioner.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: group_name
Column Type: varchar
Max Length: 40
The group name associated with the appointment move/delete action.

Column Name: service_description

Column Type: varchar
Max Length: 40
Service Description

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: staff_moved_to_name
Column Type: varchar
Max Length: 40
The new staff name associated with the appointment.

Column Name: staff_name
Column Type: varchar
Max Length: 40
The staff name associated with STAFFID.

Column Name: start_time
Column Type: varchar
Max Length: 20
Appointment start time

Documentation for form: Client_Purge

Table Name: [SYSTEM.client_purge_detail](#)

Table Description: This table returns client purge clients to be purged data.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_HEADER
Column Type: integer
Join to the SYSTEM.client_purge_hdr table

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient identification number. Each PATID represents a client who is eligible to be purged

Documentation for form: Client_Purge

Table Name: SYSTEM.client_purge_error

Table Description: This table returns errors produced by the client purge process.

Column Name: compile

Column Type: integer

The compile header id which produced this error.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: action

Column Type: varchar

Max Length: 400

The compile action that was executing when this error occurred.

Column Name: error

Column Type: varchar

Max Length: 400

The error message.

Column Name: rule_id

Column Type: varchar

Max Length: 50

The rule id (if applicable) that this error occurred for.

Column Name: childsub

Column Type: integer

Documentation for form: Client_Purge

Table Name: SYSTEM.client_purge_excluded

Table Description: This table returns client purge data.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient identification number.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: exclusion_reason_code
Column Type: varchar
Max Length: 50
The dictionary code for the 'Reason For Exclusion'.

Column Name: exclusion_reason_value
Column Type: varchar

Max Length: 50
The dictionary value for the exclusion_reason_code.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Documentation for form: Client_Purge

Table Name: SYSTEM.client_purge_hdr

Table Description: This table returns client purge data.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: compile_end_time
Column Type: varchar
Max Length: 50
The date/time when this compile record completed compiling.

Column Name: compile_start_time
Column Type: varchar
Max Length: 50
The date/time when this compile record started compiling.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: from_date
Column Type: date
'From Date'.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: purge_end_time
Column Type: varchar
Max Length: 50
The date/time when this compile record completed purging.

Column Name: purge_size
Column Type: varchar
Max Length: 50
The size in Megabytes of the data purged from the system.

Column Name: purge_start_time
Column Type: varchar
Max Length: 50
The date/time when this compile record started purging.

Column Name: status
Column Type: varchar

Max Length: 50

The current status of this compile record.

Documentation for form: Client_Purge

Table Name: SYSTEM.client_purge_history

Table Description: This table returns clients who have been purged using the 'Client Purge' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FAMID

Column Type: integer

'Most Recent Family ID'

Column Name: PATID

Column Type: varchar

Max Length: 20

The patient identification number. Each PATID represents a client who has been purged

Column Name: citizenship_code

Column Type: varchar

Max Length: 50

'Citizenship'

Column Name: citizenship_value

Column Type: varchar

Max Length: 50

The description associated with citizenship_code. See citizenship_code for more information.

Column Name: client_alias

Column Type: varchar

Max Length: 80

'Alias'

Column Name: client_alias_10

Column Type: varchar

Max Length: 80

'Alias 10'

Column Name: client_alias_2
Column Type: varchar
Max Length: 80
'Alias 2'

Column Name: client_alias_3
Column Type: varchar
Max Length: 80
'Alias 3'

Column Name: client_alias_4
Column Type: varchar
Max Length: 80
'Alias 4'

Column Name: client_alias_5
Column Type: varchar
Max Length: 80
'Alias 5'

Column Name: client_alias_6
Column Type: varchar
Max Length: 80
'Alias 6'

Column Name: client_alias_7
Column Type: varchar
Max Length: 80
'Alias 7'

Column Name: client_alias_8
Column Type: varchar
Max Length: 80
'Alias 8'

Column Name: client_alias_9
Column Type: varchar
Max Length: 80
'Alias 9'

Column Name: client_conf_city
Column Type: varchar
Max Length: 50
'Client's Confidential Address - City'

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
'Client's Confidential Address - Country'

Column Name: client_conf_cntry_value

Column Type: varchar

Max Length: 50

The description associated with client_conf_cntry_code. See client_conf_cntry_code for more information.

Column Name: client_conf_phone

Column Type: varchar

Max Length: 50

'Client Confidential Phone Number'

Column Name: client_conf_state_code

Column Type: varchar

Max Length: 50

'Client Confidential Address - State'

Column Name: client_conf_state_value

Column Type: varchar

Max Length: 50

The description associated with client_conf_state_code. See client_conf_state_code for more information.

Column Name: client_conf_street

Column Type: varchar

Max Length: 50

'Client Confidential Address - Street'

Column Name: client_conf_street2

Column Type: varchar

Max Length: 50

'Client Confidential Address - Street 2'

Column Name: client_conf_zipcode

Column Type: varchar

Max Length: 50

'Client Confidential Address - Zipcode'

Column Name: client_email_addr

Column Type: varchar

Max Length: 50

'Client's Email Address'

Column Name: client_mail_city

Column Type: varchar

Max Length: 50

'Client's Mailing Address - City'

Column Name: client_mail_cntry_code

Column Type: varchar

Max Length: 50

'Client's Mailing Address - Country'

Column Name: client_mail_cntry_value

Column Type: varchar

Max Length: 50

The description associated with client_mail_cntry_code. See client_mail_cntry_code for more information.

Column Name: client_mail_state_code

Column Type: varchar

Max Length: 50

'Client's Mailing Address - State'

Column Name: client_mail_state_value

Column Type: varchar

Max Length: 50

The description associated with client_mail_state_code. See client_mail_state_code for more information.

Column Name: client_mail_street

Column Type: varchar

Max Length: 50

'Client's Mailing Address - Street'

Column Name: client_mail_street2

Column Type: varchar

Max Length: 50

'Client's Mailing Address - Street 2'

Column Name: client_mail_zipcode

Column Type: varchar

Max Length: 50

'Client's Mailing Address - Zipcode'

Column Name: communication_pref_code

Column Type: varchar

Max Length: 50

'Communication Preference'

Column Name: communication_pref_value

Column Type: varchar

Max Length: 50

The description associated with communication_pref_code. See communication_pref_code for more information.

Column Name: country_of_origin_code

Column Type: varchar

Max Length: 50

'Country Of Origin'

Column Name: country_of_origin_value

Column Type: varchar

Max Length: 50

The description associated with country_of_origin_code. See country_of_origin_code for more information.

Column Name: date_of_birth
Column Type: date
'Date Of Birth'

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
'Client Declined To Provide Information On The Following'

Column Name: decline_prov_value_long
Column Type: varchar
Max Length: 4096
The description associated with decline_prov_code. See decline_prov_code for more information.

Column Name: decline_prov_value_short
Column Type: varchar
Max Length: 255
The description associated with decline_prov_code limited to 255 characters. See decline_prov_code for more information.

Column Name: education_code
Column Type: varchar
Max Length: 10
'Education'

Column Name: education_value
Column Type: varchar
Max Length: 255
The description associated with education_code. See education_code for more information.

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
'Employment Status'

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
The description associated with employment_status_code. See employment_status_code for more information.

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
'Ethnic Origin'

Column Name: ethnic_origin_value
Column Type: varchar
Max Length: 255

The description associated with ethnic_origin_code. See ethnic_origin_code for more information.

Column Name: ethnic_origin_X_NRI_code

Column Type: varchar

Max Length: 10

'NRI Ethnicity - 2013 and Before'

Column Name: ethnic_origin_X_NRI_value

Column Type: varchar

Max Length: 255

The description associated with ethnic_origin_X_NRI_code. See ethnic_origin_X_NRI_code for more information.

Column Name: eth_orig_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with eth_orig_X_NRI_2014_code. See eth_orig_X_NRI_2014_code for more information.

Column Name: eth_orig_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'NRI Ethnicity - 2014'

Column Name: expected_due_date

Column Type: date

'Expected Due Date'

Column Name: facility_chart_number

Column Type: varchar

Max Length: 40

'Facility Chart Number'

Column Name: family_name

Column Type: varchar

Max Length: 50

The name associated with FAMID. See FAMID for more information.

Column Name: gender_identity_code

Column Type: varchar

Max Length: 5

'Gender Identity'

Column Name: gender_identity_value

Column Type: varchar

Max Length: 40

The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: guarantor_1

Column Type: varchar

Max Length: 10
'Guarantor 1'

Column Name: guarantor_10
Column Type: varchar
Max Length: 10
'Guarantor 10'

Column Name: guarantor_2
Column Type: varchar
Max Length: 10
'Guarantor 2'

Column Name: guarantor_3
Column Type: varchar
Max Length: 10
'Guarantor 3'

Column Name: guarantor_4
Column Type: varchar
Max Length: 10
'Guarantor 4'

Column Name: guarantor_5
Column Type: varchar
Max Length: 10
'Guarantor 5'

Column Name: guarantor_6
Column Type: varchar
Max Length: 10
'Guarantor 6'

Column Name: guarantor_7
Column Type: varchar
Max Length: 10
'Guarantor 7'

Column Name: guarantor_8
Column Type: varchar
Max Length: 10
'Guarantor 8'

Column Name: guarantor_9
Column Type: varchar
Max Length: 10
'Guarantor 9'

Column Name: guarantor_name_1
Column Type: varchar

Max Length: 40

The name associated with guarantor_1. See guarantor_1 for more information.

Column Name: guarantor_name_10

Column Type: varchar

Max Length: 40

The name associated with guarantor_10. See guarantor_10 for more information.

Column Name: guarantor_name_2

Column Type: varchar

Max Length: 40

The name associated with guarantor_2. See guarantor_2 for more information.

Column Name: guarantor_name_3

Column Type: varchar

Max Length: 40

The name associated with guarantor_3. See guarantor_3 for more information.

Column Name: guarantor_name_4

Column Type: varchar

Max Length: 40

The name associated with guarantor_4. See guarantor_4 for more information.

Column Name: guarantor_name_5

Column Type: varchar

Max Length: 40

The name associated with guarantor_5. See guarantor_5 for more information.

Column Name: guarantor_name_6

Column Type: varchar

Max Length: 40

The name associated with guarantor_6. See guarantor_6 for more information.

Column Name: guarantor_name_7

Column Type: varchar

Max Length: 40

The name associated with guarantor_7. See guarantor_7 for more information.

Column Name: guarantor_name_8

Column Type: varchar

Max Length: 40

The name associated with guarantor_8. See guarantor_8 for more information.

Column Name: guarantor_name_9

Column Type: varchar

Max Length: 40

The name associated with guarantor_9. See guarantor_9 for more information.

Column Name: lactating_status_code

Column Type: varchar

Max Length: 50
'Lactating Status'

Column Name: lactating_status_value
Column Type: varchar
Max Length: 50
The description associated with lactating_status_code. See lactating_status_code for more information.

Column Name: marital_status_code
Column Type: varchar
Max Length: 15
'Marital Status'

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
The description associated with marital_status_code. See marital_status_code for more information.

Column Name: marital_status_X_NRI_code
Column Type: varchar
Max Length: 10
'NRI Marital Status'

Column Name: marital_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with marital_status_X_NRI_code. See marital_status_X_NRI_code for more information.

Column Name: medi_cal_policy_number
Column Type: varchar
Max Length: 20
'Medi-Cal Policy Number'

Column Name: mothers_maiden_name
Column Type: varchar
Max Length: 100
'Mother's Maiden Name'

Column Name: name_qualifier_code
Column Type: varchar
Max Length: 50
'Name Qualifier'

Column Name: name_qualifier_value
Column Type: varchar
Max Length: 50
The description associated with name_qualifier_code. See name_qualifier_code for more information.

Column Name: occupation_code

Column Type: varchar
Max Length: 10
'Occupation'

Column Name: occupation_value
Column Type: varchar
Max Length: 255
The description associated with occupation_code. See occupation_code for more information.

Column Name: other_eth_org_code
Column Type: varchar
Max Length: 50
'Other Ethnic Origin(s)'

Column Name: other_eth_org_value_long
Column Type: varchar
Max Length: 4096
The description associated with other_eth_org_code. See other_eth_org_code for more information.

Column Name: other_eth_org_value_short
Column Type: varchar
Max Length: 255
The description associated with other_eth_org_code limited to 255 characters. See other_eth_org_code for more information.

Column Name: other_lang_code
Column Type: varchar
Max Length: 50
'Other Language(s)'

Column Name: other_lang_shval
Column Type: varchar
Max Length: 255
The description associated with other_lang_code limited to 255 characters. See other_lang_code for more information.

Column Name: other_lang_val
Column Type: varchar
Max Length: 4096
The description associated with other_lang_code. See other_lang_code for more information.

Column Name: other_race_code
Column Type: varchar
Max Length: 50
'Other Race(s)'

Column Name: other_race_value_long
Column Type: varchar
Max Length: 4096
The description associated with other_race_code. See other_race_code for more information.

Column Name: other_race_value_short

Column Type: varchar

Max Length: 255

The description associated with other_race_code limited to 255 characters. See other_race_code for more information.

Column Name: patient_add_city

Column Type: varchar

Max Length: 20

'Client's Address - City'

Column Name: patient_add_country_code

Column Type: varchar

Max Length: 20

'Client's Address - Country'

Column Name: patient_add_country_value

Column Type: varchar

Max Length: 40

The description associated with patient_add_country_code. See patient_add_country_code for more information.

Column Name: patient_add_county_code

Column Type: varchar

Max Length: 5

'Client's Address - County'

Column Name: patient_add_county_value

Column Type: varchar

Max Length: 20

The description associated with patient_add_county_code. See patient_add_county_code for more information.

Column Name: patient_add_state_code

Column Type: varchar

Max Length: 10

'Client's Address - State'

Column Name: patient_add_state_value

Column Type: varchar

Max Length: 40

The description associated with patient_add_state_code. See patient_add_state_code for more information.

Column Name: patient_add_street_1

Column Type: varchar

Max Length: 40

'Client's Address - Street'

Column Name: patient_add_street_2
Column Type: varchar
Max Length: 40
'Client's Address - Street 2'

Column Name: patient_add_zipcode
Column Type: varchar
Max Length: 60
'Client's Address - Zipcode'

Column Name: patient_cell_phone
Column Type: varchar
Max Length: 60
'Client's Cell Phone'

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
'Client's Home Phone'

Column Name: patient_maiden_name
Column Type: varchar
Max Length: 40
'Maiden Name'

Column Name: patient_name
Column Type: varchar
Max Length: 40
'Client Name'

Column Name: patient_name_first
Column Type: varchar
Max Length: 40
'Client First Name'

Column Name: patient_name_last
Column Type: varchar
Max Length: 40
'Client Last Name'

Column Name: patient_name_middle
Column Type: varchar
Max Length: 40
'Client Middle Name'

Column Name: patient_name_prefix_code
Column Type: varchar
Max Length: 40
'Client Prefix'

Column Name: patient_name_prefix_value

Column Type: varchar

Max Length: 40

The description associated with patient_name_prefix_code. See patient_name_prefix_code for more information.

Column Name: patient_name_suffix_code

Column Type: varchar

Max Length: 40

'Client Suffix'

Column Name: patient_name_suffix_value

Column Type: varchar

Max Length: 40

The description associated with patient_name_suffix_code. See patient_name_suffix_code for more information.

Column Name: patient_place_of_birth

Column Type: varchar

Max Length: 40

'Place Of Birth'

Column Name: patient_sex_code

Column Type: varchar

Max Length: 5

'Sex'

Column Name: patient_sex_value

Column Type: varchar

Max Length: 40

The description associated with patient_sex_code. See patient_sex_code for more information.

Column Name: patient_sex_X_NRI_code

Column Type: varchar

Max Length: 10

'NRI Gender'

Column Name: patient_sex_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with patient_sex_X_NRI_code. See patient_sex_X_NRI_code for more information.

Column Name: patient_ssn

Column Type: varchar

Max Length: 15

'Social Security Number'

Column Name: patient_ssn_2

Column Type: varchar

Max Length: 15
'Social Security Number - 2'

Column Name: patient_ssn_3
Column Type: varchar
Max Length: 15
'Social Security Number - 3'

Column Name: patient_ssn_4
Column Type: varchar
Max Length: 15
'Social Security Number - 4'

Column Name: patient_work_phone
Column Type: varchar
Max Length: 60
'Client's Work Phone'

Column Name: personal_pronouns
Column Type: varchar
Max Length: 40
'Personal Pronouns'

Column Name: policy_number_1
Column Type: varchar
Max Length: 20
'Policy Number 1'

Column Name: policy_number_10
Column Type: varchar
Max Length: 20
'Policy Number 10'

Column Name: policy_number_2
Column Type: varchar
Max Length: 20
'Policy Number 2'

Column Name: policy_number_3
Column Type: varchar
Max Length: 20
'Policy Number 3'

Column Name: policy_number_4
Column Type: varchar
Max Length: 20
'Policy Number 4'

Column Name: policy_number_5
Column Type: varchar

Max Length: 20
'Policy Number 5'

Column Name: policy_number_6
Column Type: varchar
Max Length: 20
'Policy Number 6'

Column Name: policy_number_7
Column Type: varchar
Max Length: 20
'Policy Number 7'

Column Name: policy_number_8
Column Type: varchar
Max Length: 20
'Policy Number 8'

Column Name: policy_number_9
Column Type: varchar
Max Length: 20
'Policy Number 9'

Column Name: preferred_name
Column Type: varchar
Max Length: 40
'Preferred Name'

Column Name: pref_prov_eth_org_code
Column Type: varchar
Max Length: 5
'Preferred Provider's Ethnic Origin'

Column Name: pref_prov_eth_org_value
Column Type: varchar
Max Length: 255
The description associated with pref_prov_eth_org_code. See pref_prov_eth_org_code for more information.

Column Name: pref_prov_sex_code
Column Type: varchar
Max Length: 5
'Preferred Provider's Sex'

Column Name: pref_prov_sex_value
Column Type: varchar
Max Length: 15
The description associated with pref_prov_sex_code. See pref_prov_sex_code for more information.

Column Name: pregnancy_status_code

Column Type: varchar
Max Length: 50
'Pregnancy Status'

Column Name: pregnancy_status_value
Column Type: varchar
Max Length: 50
The description associated with pregnancy_status_code. See pregnancy_status_code for more information.

Column Name: primary_language_code
Column Type: varchar
Max Length: 50
'Primary Language'

Column Name: primary_language_value
Column Type: varchar
Max Length: 50
The description associated with primary_language_code. See primary_language_code for more information.

Column Name: protection_indicator_code
Column Type: varchar
Max Length: 50
'Protection Indicator'

Column Name: protection_indicator_date
Column Type: date
'Protection Indicator Effective Date'

Column Name: protection_indicator_val
Column Type: varchar
Max Length: 50
The description associated with protection_indicator_code. See protection_indicator_code for more information.

Column Name: purge_date
Column Type: date
The date the client was purged.

Column Name: race_code
Column Type: varchar
Max Length: 20
'Client Race'

Column Name: race_value
Column Type: varchar
Max Length: 255
The description associated with race_code. See race_code for more information.

Column Name: religion_code
Column Type: varchar

Max Length: 20

'Religion'

Column Name: religion_value

Column Type: varchar

Max Length: 255

The description associated with religion_code. See religion_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 5

'Sexual Orientation'

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: smoker_code

Column Type: varchar

Max Length: 50

'Smoker'

Column Name: smoker_value

Column Type: varchar

Max Length: 50

The description associated with smoker_code. See smoker_code for more information.

Column Name: smoking_stat_assess_date

Column Type: date

'Smoking Status Assessment Date'

Column Name: ss_demographics_date_1

Column Type: date

'SS Demographics Date 1'

Column Name: ss_demographics_date_2

Column Type: date

'SS Demographics Date 2'

Column Name: ss_demographics_date_3

Column Type: date

'SS Demographics Date 3'

Column Name: ss_demographics_date_4

Column Type: date

'SS Demographics Date 4'

Column Name: ss_demographics_date_5

Column Type: date

'SS Demographics Date 5'

Column Name: ss_demographics_dict_10_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 10'

Column Name: ss_demographics_dict_10_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_10_code. See ss_demographics_dict_10_code for more information.

Column Name: ss_demographics_dict_11_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 11'

Column Name: ss_demographics_dict_11_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_11_code. See ss_demographics_dict_11_code for more information.

Column Name: ss_demographics_dict_12_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 12'

Column Name: ss_demographics_dict_12_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_12_code. See ss_demographics_dict_12_code for more information.

Column Name: ss_demographics_dict_13_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 13'

Column Name: ss_demographics_dict_13_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_13_code. See ss_demographics_dict_13_code for more information.

Column Name: ss_demographics_dict_14_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 14'

Column Name: ss_demographics_dict_14_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_14_code. See ss_demographics_dict_14_code for more information.

Column Name: ss_demographics_dict_15_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 15'

Column Name: ss_demographics_dict_15_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_15_code. See ss_demographics_dict_15_code for more information.

Column Name: ss_demographics_dict_1_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 1'

Column Name: ss_demographics_dict_1_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_1_code. See ss_demographics_dict_1_code for more information.

Column Name: ss_demographics_dict_2_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 2'

Column Name: ss_demographics_dict_2_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_2_code. See ss_demographics_dict_2_code for more information.

Column Name: ss_demographics_dict_3_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 3'

Column Name: ss_demographics_dict_3_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_3_code. See ss_demographics_dict_3_code for more information.

Column Name: ss_demographics_dict_4_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 4'

Column Name: ss_demographics_dict_4_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_4_code. See ss_demographics_dict_4_code for more information.

Column Name: ss_demographics_dict_5_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 5'

Column Name: ss_demographics_dict_5_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_5_code. See ss_demographics_dict_5_code for more information.

Column Name: ss_demographics_dict_6_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 6'

Column Name: ss_demographics_dict_6_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_6_code. See ss_demographics_dict_6_code for more information.

Column Name: ss_demographics_dict_7_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 7'

Column Name: ss_demographics_dict_7_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_7_code. See ss_demographics_dict_7_code for more information.

Column Name: ss_demographics_dict_8_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 8'

Column Name: ss_demographics_dict_8_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_8_code. See ss_demographics_dict_8_code for more information.

Column Name: ss_demographics_dict_9_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 9'

Column Name: ss_demographics_dict_9_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_9_code. See ss_demographics_dict_9_code for more information.

Column Name: ss_demographics_free_txt_1

Column Type: varchar

Max Length: 32766

'SS Demographics Scrolling Free Text 1'

Column Name: ss_demographics_free_txt_2

Column Type: varchar

Max Length: 32766

'SS Demographics Scrolling Free Text 2'

Column Name: ss_demographics_freetxt_20_1

Column Type: varchar

Max Length: 20

'SS Demographics Free Text (20) 1'

Column Name: ss_demographics_freetxt_20_2

Column Type: varchar

Max Length: 20

'SS Demographics Free Text (20) 2'

Column Name: ss_demographics_freetxt_20_3

Column Type: varchar

Max Length: 20

'SS Demographics Free Text (20) 3'

Column Name: ss_demographics_freetxt_20_4

Column Type: varchar

Max Length: 20

'SS Demographics Free Text (20) 4'

Column Name: ss_demographics_freetxt_20_5

Column Type: varchar

Max Length: 20

'SS Demographics Free Text (20) 5'

Column Name: ss_demographics_free_txt_3

Column Type: varchar

Max Length: 32766

'SS Demographics Scrolling Free Text 3'

Column Name: ss_demographics_free_txt_4

Column Type: varchar

Max Length: 32766

'SS Demographics Scrolling Free Text 4'

Column Name: ss_demographics_freetxt_40_1

Column Type: varchar

Max Length: 40

'SS Demographics Free Text (40) 1'

Column Name: ss_demographics_freetxt_40_2

Column Type: varchar

Max Length: 40

'SS Demographics Free Text (40) 2'

Column Name: ss_demographics_freetxt_40_3

Column Type: varchar

Max Length: 40

'SS Demographics Free Text (40) 3'

Column Name: ss_demographics_freetxt_40_4

Column Type: varchar

Max Length: 40

'SS Demographics Free Text (40) 4'

Column Name: ss_demographics_freetxt_40_5

Column Type: varchar

Max Length: 40

'SS Demographics Free Text (40) 5'

Column Name: ss_demographics_free_txt_5

Column Type: varchar

Max Length: 32766

'SS Demographics Scrolling Free Text 5'

Column Name: ss_demographics_mult_10_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 10'

Column Name: ss_demographics_mult_10_shval

Column Type: varchar

Max Length: 255

The description associated with `ss_demographics_mult_10_code` limited to 255 characters. See `ss_demographics_mult_10_code` for more information.

Column Name: `ss_demographics_mult_10_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_10_code`. See `ss_demographics_mult_10_code` for more information.

Column Name: `ss_demographics_mult_1_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 1'

Column Name: `ss_demographics_mult_1_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_1_code` limited to 255 characters. See `ss_demographics_mult_1_code` for more information.

Column Name: `ss_demographics_mult_1_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_1_code`. See `ss_demographics_mult_1_code` for more information.

Column Name: `ss_demographics_mult_2_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 2'

Column Name: `ss_demographics_mult_2_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_2_code` limited to 255 characters. See `ss_demographics_mult_2_code` for more information.

Column Name: `ss_demographics_mult_2_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_2_code`. See `ss_demographics_mult_2_code` for more information.

Column Name: `ss_demographics_mult_3_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 3'

Column Name: `ss_demographics_mult_3_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_3_code` limited to 255 characters. See `ss_demographics_mult_3_code` for more information.

Column Name: `ss_demographics_mult_3_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_3_code`. See `ss_demographics_mult_3_code` for more information.

Column Name: `ss_demographics_mult_4_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 4'

Column Name: `ss_demographics_mult_4_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_4_code` limited to 255 characters. See `ss_demographics_mult_4_code` for more information.

Column Name: `ss_demographics_mult_4_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_4_code`. See `ss_demographics_mult_4_code` for more information.

Column Name: `ss_demographics_mult_5_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 5'

Column Name: `ss_demographics_mult_5_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_5_code` limited to 255 characters. See `ss_demographics_mult_5_code` for more information.

Column Name: `ss_demographics_mult_5_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_5_code`. See `ss_demographics_mult_5_code` for more information.

Column Name: `ss_demographics_mult_6_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 6'

Column Name: `ss_demographics_mult_6_shval`

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_6_code limited to 255 characters. See ss_demographics_mult_6_code for more information.

Column Name: ss_demographics_mult_6_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_6_code. See ss_demographics_mult_6_code for more information.

Column Name: ss_demographics_mult_7_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 7'

Column Name: ss_demographics_mult_7_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_7_code limited to 255 characters. See ss_demographics_mult_7_code for more information.

Column Name: ss_demographics_mult_7_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_7_code. See ss_demographics_mult_7_code for more information.

Column Name: ss_demographics_mult_8_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 8'

Column Name: ss_demographics_mult_8_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_8_code limited to 255 characters. See ss_demographics_mult_8_code for more information.

Column Name: ss_demographics_mult_8_value

Column Type: varchar

Max Length: 4096

ss_demographics_mult_8_code. See ss_demographics_mult_8_code for more information.

Column Name: ss_demographics_mult_9_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 9'

Column Name: ss_demographics_mult_9_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_9_code limited to 255 characters. See ss_demographics_mult_9_code for more information.

Column Name: ss_demographics_mult_9_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_9_code. See ss_demographics_mult_9_code for more information.

Column Name: ss_demographics_phone_1

Column Type: varchar

Max Length: 50

'SS Demographics Phone Number 1'

Column Name: ss_demographics_phone_2

Column Type: varchar

Max Length: 50

'SS Demographics Phone Number 2'

Column Name: ss_demographics_phone_3

Column Type: varchar

Max Length: 50

'SS Demographics Phone Number 3'

Column Name: ss_demographics_phone_4

Column Type: varchar

Max Length: 50

'SS Demographics Phone Number 4'

Column Name: ss_demographics_phone_5

Column Type: varchar

Max Length: 50

'SS Demographics Phone Number 5'

Column Name: ss_demographics_staff_1

Column Type: varchar

Max Length: 20

'SS Demographics Practitioner 1'

Column Name: ss_demographics_staff_2

Column Type: varchar

Max Length: 20

'SS Demographics Practitioner 2'

Column Name: ss_demographics_staff_3

Column Type: varchar

Max Length: 20

'SS Demographics Practitioner 3'

Column Name: ss_demographics_staff_4
Column Type: varchar
Max Length: 20
'SS Demographics Practitioner 4'

Column Name: ss_demographics_staff_5
Column Type: varchar
Max Length: 20
'SS Demographics Practitioner 5'

Column Name: ss_demographics_time_1
Column Type: varchar
Max Length: 10
'SS Demographics Time 1'

Column Name: ss_demographics_time_2
Column Type: varchar
Max Length: 10
'SS Demographics Time 2'

Column Name: ss_demographics_time_3
Column Type: varchar
Max Length: 10
'SS Demographics Time 3'

Column Name: ss_demographics_time_4
Column Type: varchar
Max Length: 10
'SS Demographics Time 4'

Column Name: ss_demographics_time_5
Column Type: varchar
Max Length: 10
'SS Demographics Time 5'

Documentation for form: File_Import

Table Name: CWSOrderEntry.file_import_order_code_setup

Table Description: This table returns information stored in the 'File Import' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY

Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
FILE ID

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
Add/Edit Order Code Code

Column Name: add_edit_value
Column Type: varchar
Max Length: 50
Add/Edit Order Code Value

Column Name: administration_route
Column Type: varchar
Max Length: 50
Route of Administration

Column Name: administration_route_val
Column Type: varchar
Max Length: 50
Route of Administration Value

Column Name: alert_client_above_age
Column Type: integer
Alert When Client Is Above Age

Column Name: alert_client_below_age
Column Type: integer
Alert When Client Is Below Age

Column Name: alert_cli_prob_code
Column Type: varchar
Max Length: 4096
Alert When Client Has Any Of These Active Problems Code

Column Name: alert_cli_prob_sh_value
Column Type: varchar
Max Length: 255
Alert When Client Has Any Of These Active Problems Short Value

Column Name: alert_cli_prob_value
Column Type: varchar
Max Length: 4096
Alert When Client Has Any Of These Active Problems Value

Column Name: allow_open_end_ord_code
Column Type: varchar
Max Length: 50
Allow Open-Ended Orders Code

Column Name: allow_open_end_ord_value
Column Type: varchar
Max Length: 50
Allow Open-Ended Orders Value

Column Name: allow_rnw_exp_ord_code
Column Type: varchar
Max Length: 50
Allow Expired Orders To Be Renewed Code

Column Name: allow_rnw_exp_ord_value
Column Type: varchar
Max Length: 50
Allow Expired Orders To Be Renewed Value

Column Name: arra_denom_exclude_code
Column Type: varchar
Max Length: 4096
Exclude Code in ARRA Measures Denominator Code

Column Name: arra_denom_exclude_shval
Column Type: varchar
Max Length: 255
Exclude Code in ARRA Measures Denominator Short Value

Column Name: arra_denom_exclude_value
Column Type: varchar
Max Length: 4096
Exclude Code in ARRA Measures Denominator Value

Column Name: arra_denom_include_code
Column Type: varchar
Max Length: 4096
Include Code in ARRA Measures Denominator Code

Column Name: arra_denom_include_shval
Column Type: varchar
Max Length: 255
Include Code in ARRA Measures Denominator Short Value

Column Name: arra_denom_include_value
Column Type: varchar
Max Length: 4096
Include Code in ARRA Measures Denominator Value

Column Name: arra_exclusionary_code
Column Type: varchar
Max Length: 4096
Include Code in Exclusionary Value for the following ARRA Measures Code

Column Name: arra_exclusionary_shval
Column Type: varchar
Max Length: 255
Include Code in Exclusionary Value for the following ARRA Measures Short Value

Column Name: arra_exclusionary_value
Column Type: varchar
Max Length: 4096
Include Code in Exclusionary Value for the following ARRA Measures Value

Column Name: arra_numer_exclude_code
Column Type: varchar
Max Length: 4096
Exclude Code in ARRA Measures Numerator Code

Column Name: arra_numer_exclude_shval
Column Type: varchar
Max Length: 255
Exclude Code in ARRA Measures Numerator Short Value

Column Name: arra_numer_exclude_value
Column Type: varchar
Max Length: 4096
Exclude Code in ARRA Measures Numerator Value

Column Name: arra_numer_include_code
Column Type: varchar
Max Length: 4096
Include Code in ARRA Measures Numerator Code

Column Name: arra_numer_include_shval
Column Type: varchar
Max Length: 255
Include Code in ARRA Measures Numerator Short Value

Column Name: arra_numer_include_value
Column Type: varchar
Max Length: 4096
Include Code in ARRA Measures Numerator Value

Column Name: associated_cpt_code
Column Type: varchar
Max Length: 50
Associated CPT Code

Column Name: associated_cpt_code_value
Column Type: varchar
Max Length: 50
Associated CPT Code Value

Column Name: associated_cvx_code
Column Type: varchar
Max Length: 50
Associated CVX Code

Column Name: associated_cvx_val
Column Type: varchar
Max Length: 50
Associated CVX Value

Column Name: associated_loinc_code
Column Type: varchar
Max Length: 50
Associated LOINC Code

Column Name: associated_loinc_val
Column Type: varchar
Max Length: 50
Associated LOINC Value

Column Name: auto_dc_order_type_codes
Column Type: varchar
Max Length: 50
Order Codes to Auto Discontinue when this Order Code is used;

Column Name: auto_dc_order_typ_val_lng
Column Type: varchar
Max Length: 4096
the auto_dc_order_type_codes long value

Column Name: auto_dc_ord_type_codes_val_sh
Column Type: varchar
Max Length: 255
the auto_dc_order_type_codes short value

Column Name: brand_or_generic_code
Column Type: varchar
Max Length: 50
Brand Or Generic Item Code

Column Name: brand_or_generic_value
Column Type: varchar
Max Length: 50
Brand Or Generic Item Value

Column Name: collection_volume
Column Type: varchar
Max Length: 50
Collection Volume

Column Name: collection_volume_unit
Column Type: varchar
Max Length: 50
Collection Volume Units of Measure

Column Name: compound_med_code
Column Type: varchar
Max Length: 50
Is A Compound Medication Orderable?

Column Name: compound_med_value
Column Type: varchar
Max Length: 50
Is A Compound Medication Orderable? Value

Column Name: consent_required_code
Column Type: varchar
Max Length: 50
'Require Consent'

Column Name: consent_required_value
Column Type: varchar
Max Length: 50
'Require Consent' Value

Column Name: consent_text
Column Type: varchar
Max Length: 32766
'Consent Text'

Column Name: consult_category_codes
Column Type: varchar
Max Length: 1000

Column Name: consult_category_val_long
Column Type: varchar
Max Length: 4096

Column Name: consult_category_val_sh
Column Type: varchar
Max Length: 4096

Column Name: consult_team_codes

Column Type: varchar

Max Length: 1000

The codes for consult teams that may take consults for this order code

Column Name: consult_teams_val_long

Column Type: varchar

Max Length: 4096

the consult_team_codes long value

Column Name: consult_teams_val_short

Column Type: varchar

Max Length: 255

the consult_team_codes short value

Column Name: contains_errors

Column Type: varchar

Max Length: 50

Contains Errors

Column Name: deactivate_code

Column Type: varchar

Max Length: 50

Deactivate Order Code

Column Name: deactivate_value

Column Type: varchar

Max Length: 50

Deactivate Order Value

Column Name: dea_schedule_code

Column Type: varchar

Max Length: 50

DEA Schedule Code

Column Name: dea_schedule_value

Column Type: varchar

Max Length: 50

DEA Schedule Value

Column Name: default_comments

Column Type: varchar

Max Length: 32766

Default Comments

Column Name: default_duration_days

Column Type: varchar

Max Length: 50

Default Duration (Days)

Column Name: default_duration_doses
Column Type: varchar
Max Length: 50
Default Duration (Doses)

Column Name: default_duration_hours
Column Type: varchar
Max Length: 50
Default Duration (Hours)

Column Name: default_duration_minutes
Column Type: varchar
Max Length: 50
Default Duration (Minutes)

Column Name: default_iv_rate
Column Type: varchar
Max Length: 50
Default IV Rate

Column Name: default_iv_rateunit_code
Column Type: varchar
Max Length: 50
Default IV Rate Unit Code

Column Name: default_iv_rateunit_value
Column Type: varchar
Max Length: 50
Default IV Rate Unit Value

Column Name: default_order_text
Column Type: varchar
Max Length: 32766
Default Order Text

Column Name: default_quantity
Column Type: varchar
Max Length: 50
Default Quantity

Column Name: default_reason_code
Column Type: varchar
Max Length: 50
Default Reason Code

Column Name: default_reason_text
Column Type: varchar
Max Length: 32766
Default Reason Text

Column Name: default_reason_value
Column Type: varchar
Max Length: 50
Default Reason Value

Column Name: default_spec_addl_instr
Column Type: varchar
Max Length: 32766
Default Special/Additional Instructions

Column Name: def_dispense_quan
Column Type: varchar
Max Length: 20
Default Dispense Quantity

Column Name: def_dispense_quan_unit
Column Type: varchar
Max Length: 50
Default Dispense Quantity Unit

Column Name: def_dispense_quan_unitval
Column Type: varchar
Max Length: 50
Default Dispense Quantity Unit Value

Column Name: def_dur_to_num_doses
Column Type: varchar
Max Length: 50
Default Duration to Number of Doses (code)

Column Name: def_dur_to_num_doses_val
Column Type: varchar
Max Length: 50
Default Duration to Number of Doses (code)

Column Name: description
Column Type: varchar
Max Length: 255
Description

Column Name: dflt_iv_adm_method_code
Column Type: varchar
Max Length: 50
Default IV Admin Method Code

Column Name: dflt_iv_adm_method_value
Column Type: varchar
Max Length: 50
Default IV Admin Method Value

Column Name: dflt_oto_ord_dur_code
Column Type: varchar
Max Length: 50
Default New One-Time-Only Orders To Duration Of 1 Day Code

Column Name: dflt_oto_ord_dur_value
Column Type: varchar
Max Length: 50
Default New One-Time-Only Orders To Duration Of 1 Day Value

Column Name: dflt_pca_unit_code
Column Type: varchar
Max Length: 50
Default PCA Dose Unit code

Column Name: dflt_pca_unit_val
Column Type: varchar
Max Length: 50
Default PCA Dose Unit value

Column Name: dflt_titr_rate_code
Column Type: varchar
Max Length: 50
Default Titration Rate code

Column Name: dflt_titr_rate_val
Column Type: varchar
Max Length: 50
Default Titration Rate value

Column Name: disc_reason_auto_disc_code
Column Type: varchar
Max Length: 50
The discontinue reason code to default in for auto_dc_order_type_values that are automatically discontinued

Column Name: disc_reason_auto_disc_val
Column Type: varchar
Max Length: 50
This discontinue reason value to default in for auto_dc_order_type_val

Column Name: dosage_form
Column Type: varchar
Max Length: 50
Dosage Form

Column Name: dosing_instructions
Column Type: varchar
Max Length: 32766
Dosing Instructions

Column Name: eMAR_admin_window
Column Type: integer
eMAR Administration Window (Minutes)

Column Name: eMAR_alerts_code
Column Type: varchar
Max Length: 50
eMAR Alerts Code

Column Name: eMAR_alerts_long_value
Column Type: varchar
Max Length: 4096
eMAR Alerts Value

Column Name: eMAR_alerts_short_value
Column Type: varchar
Max Length: 255
eMAR Alerts Value

Column Name: eMAR_fds_incl_adm_code
Column Type: varchar
Max Length: 50
Additional Data Elements To Include In Avatar eMAR (Administration) Code

Column Name: eMAR_fds_incl_adm_lval
Column Type: varchar
Max Length: 4096
Additional Data Elements To Include In Avatar eMAR (Administration) Long Value

Column Name: eMAR_fds_incl_adm_sval
Column Type: varchar
Max Length: 255
Additional Data Elements To Include In Avatar eMAR (Administration) Short Value

Column Name: eMAR_fds_incl_res_code
Column Type: varchar
Max Length: 50
Additional Data Elements To Include In Avatar eMAR (Results) Code

Column Name: eMAR_fds_incl_res_lval
Column Type: varchar
Max Length: 4096
Additional Data Elements To Include In Avatar eMAR (Results) Long Value

Column Name: eMAR_fds_incl_res_sval
Column Type: varchar
Max Length: 255
Additional Data Elements To Include In Avatar eMAR (Results) Short Value

Column Name: eMAR_flds_req_adm_code
Column Type: varchar
Max Length: 50
Additional Data Elements To Require In Avatar eMAR (Administration) Code

Column Name: eMAR_flds_req_adm_lval
Column Type: varchar
Max Length: 4096
Additional Data Elements To Require In Avatar eMAR (Administration) Long Value

Column Name: eMAR_flds_req_adm_sval
Column Type: varchar
Max Length: 255
Additional Data Elements To Require In Avatar eMAR (Administration) Short Value

Column Name: eMAR_flds_req_res_code
Column Type: varchar
Max Length: 50
Additional Data Elements To Require In Avatar eMAR (Results) Code

Column Name: eMAR_flds_req_res_lval
Column Type: varchar
Max Length: 4096
Additional Data Elements To Require In Avatar eMAR (Results) Long Value

Column Name: eMAR_flds_req_res_sval
Column Type: varchar
Max Length: 255
Additional Data Elements To Require In Avatar eMAR (Results) Short Value

Column Name: eMAR_followup_code
Column Type: varchar
Max Length: 50
eMAR Follow-Up Reminder Code

Column Name: eMAR_followup_head_code
Column Type: varchar
Max Length: 50
eMAR Follow-Up Reminder Heading Code

Column Name: eMAR_followup_head_val
Column Type: varchar
Max Length: 50
eMAR Follow-Up Reminder Heading Value

Column Name: eMAR_followup_interval
Column Type: varchar
Max Length: 50
Time Interval For Follow-Up Reminder (Minutes)

Column Name: eMAR_followup_supp_code
Column Type: varchar
Max Length: 50
Suppress Follow-Up Reminders for the Following Types of Orders Code

Column Name: eMAR_followup_supp_lval
Column Type: varchar
Max Length: 4096
Suppress Follow-Up Reminders for the Following Types of Orders Long Value

Column Name: eMAR_followup_supp_sval
Column Type: varchar
Max Length: 255
Suppress Follow-Up Reminders for the Following Types of Orders Short Value

Column Name: eMAR_followup_val
Column Type: varchar
Max Length: 50
eMAR Follow-Up Reminder Value

Column Name: eMAR_incl_pain_scale_code
Column Type: varchar
Max Length: 50
Include Pain Scale In Avatar eMAR Code

Column Name: eMAR_incl_pain_scale_val
Column Type: varchar
Max Length: 60
Include Pain Scale In Avatar eMAR Value

Column Name: eMAR_req_result_txt_code
Column Type: varchar
Max Length: 50
Require Result Text on Administration Event Result (code)

Column Name: eMAR_req_result_txt_val
Column Type: varchar
Max Length: 50
Require Result Text on Administration Event Result (value)

Column Name: eMAR_suppress_tasks_freq
Column Type: varchar
Max Length: 50
Suppress eMAR Tasks if More Frequent than Every N Minutes

Column Name: eMAR_witness_req_code
Column Type: varchar
Max Length: 50
Require a Witness in Avatar eMAR Code

Column Name: eMAR_witness_req_value
Column Type: varchar
Max Length: 50
Require a Witness in Avatar eMAR Value

Column Name: enable_ssi_instruction_code
Column Type: varchar
Max Length: 50
Enable Sliding Scale Insulin Instructions Code

Column Name: enable_ssi_instruction_value
Column Type: varchar
Max Length: 50
Enable Sliding Scale Insulin Instructions Value

Column Name: equivalent_dose_code
Column Type: varchar
Max Length: 50
Equivalent Dose for Product Substitution Code

Column Name: equivalent_dose_value
Column Type: varchar
Max Length: 50
Equivalent Dose for Product Substitution Value

Column Name: excl_clinical_scr_code
Column Type: varchar
Max Length: 50
Exclude this item from Clinical Screening processes Code

Column Name: excl_clinical_scr_value
Column Type: varchar
Max Length: 50
Exclude this item from Clinical Screening processes Value

Column Name: existing_order_code
Column Type: varchar
Max Length: 50
Existing Order Code

Column Name: ext_pharm_output_opt
Column Type: varchar
Max Length: 50
External Pharmacy Output Option

Column Name: file_date
Column Type: date
File Date

Column Name: file_name

Column Type: varchar
Max Length: 50
File Name

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: file_time
Column Type: time
File Time

Column Name: filetype
Column Type: varchar
Max Length: 50
File Type

Column Name: frequency_code
Column Type: varchar
Max Length: 50
Default Frequency Code

Column Name: frequency_description
Column Type: varchar
Max Length: 50
Frequency Description

Column Name: fulfill_form
Column Type: varchar
Max Length: 50
Fulfillment Form

Column Name: fulfill_form_id
Column Type: varchar
Max Length: 50
Fulfillment Form ID

Column Name: fulfill_required_code
Column Type: varchar
Max Length: 50
Fulfillment Required Code

Column Name: fulfill_required_value
Column Type: varchar
Max Length: 50
Fulfillment Required Value

Column Name: future_start_time
Column Type: varchar

Max Length: 50
Future Start Time will be used to default a start time in the future.

Column Name: individual_display_code
Column Type: varchar
Max Length: 50
Display Individually in Non-Product-Based Ordering code

Column Name: individual_display_val
Column Type: varchar
Max Length: 50
Display Individually in Non-Product-Based Ordering value

Column Name: inf_amount
Column Type: varchar
Max Length: 50
Infuse Amount (mL)

Column Name: inf_time
Column Type: varchar
Max Length: 50
Infuse Over Time

Column Name: inf_time_unit_code
Column Type: varchar
Max Length: 50
Infuse Over Time Unit code

Column Name: inf_time_unit_val
Column Type: varchar
Max Length: 50
Infuse Over Time Unit value

Column Name: interface_code
Column Type: varchar
Max Length: 50
Interface Code

Column Name: is_additive_code
Column Type: varchar
Max Length: 50
Is an IV Additive Component Code

Column Name: is_additive_value
Column Type: varchar
Max Length: 50
Is an IV Additive Component Value

Column Name: is_diluent_code
Column Type: varchar

Max Length: 50
Is an IV Diluent/Base Component Code

Column Name: is_diluent_value
Column Type: varchar
Max Length: 50
Is an IV Diluent/Base Component Value

Column Name: line
Column Type: integer
Line

Column Name: max_basal_rate
Column Type: varchar
Max Length: 50
Max Basal Rate

Column Name: max_break_dose
Column Type: varchar
Max Length: 50
Maximim Breakthrough Dose

Column Name: max_dose_4hr_limit
Column Type: varchar
Max Length: 50
Max Dose per 4 Hours Limit

Column Name: max_dose_limit
Column Type: varchar
Max Length: 50
Max Dose per Hour Limit

Column Name: max_duration_days
Column Type: varchar
Max Length: 50
Maximum Duration (Days)

Column Name: max_duration_doses
Column Type: varchar
Max Length: 50
Maximum Duration (Doses)

Column Name: max_duration_hours
Column Type: varchar
Max Length: 50
Maximum Duration (Hours)

Column Name: max_duration_minutes
Column Type: varchar
Max Length: 50

Maximum Duration (Minutes)

Column Name: max_loading_dose
Column Type: varchar
Max Length: 50
Max Loading Dose

Column Name: max_pca_dose
Column Type: varchar
Max Length: 50
Max PCA Dose

Column Name: med_category_code
Column Type: varchar
Max Length: 255
Medication Category Code

Column Name: med_category_value_long
Column Type: varchar
Max Length: 4096
Medication Category Long Value

Column Name: med_category_value_short
Column Type: varchar
Max Length: 255
Medication Category Short Value

Column Name: medication_formulary_code
Column Type: varchar
Max Length: 50
Is this Medication a Formulary Item Code

Column Name: medication_formulary_value
Column Type: varchar
Max Length: 50
Is this Medication a Formulary Item Value

Column Name: medication_treatment_code
Column Type: varchar
Max Length: 50
Is this Medication a "Treatment" Code

Column Name: medication_treatment_value
Column Type: varchar
Max Length: 50
Is this Medication a "Treatment" Value

Column Name: method_for_product_sub_code
Column Type: varchar
Max Length: 50

Method for Product Substitution Code

Column Name: method_for_product_sub_value

Column Type: varchar

Max Length: 50

Method for Product Substitution Value

Column Name: microbiology_code

Column Type: varchar

Max Length: 50

Microbiology Code (Y/N)

Column Name: microbiology_value

Column Type: varchar

Max Length: 50

Microbiology Value (Yes/No)

Column Name: min_lockout

Column Type: varchar

Max Length: 50

Minimum Lockout

Column Name: ndc

Column Type: varchar

Max Length: 50

NDC

Column Name: new_order_code

Column Type: varchar

Max Length: 50

New Order Code

Column Name: order_guidelines

Column Type: varchar

Max Length: 32766

Order Guidelines

Column Name: order_type_code

Column Type: varchar

Max Length: 50

Order Type Code

Column Name: order_type_value

Column Type: varchar

Max Length: 50

Order Type Value

Column Name: perf_basic_dup_chk_code

Column Type: varchar

Max Length: 50

Perform Basic Duplicate Order Code Checking Code

Column Name: perf_basic_dup_chk_value

Column Type: varchar

Max Length: 50

Perform Basic Duplicate Order Code Checking Value

Column Name: posted_value

Column Type: varchar

Max Length: 50

Posted Value

Column Name: preferred_dose

Column Type: varchar

Max Length: 32000

Preferred Dose

Column Name: product_substitution_code

Column Type: varchar

Max Length: 50

Product Substitution Code

Column Name: product_substitution_value

Column Type: varchar

Max Length: 50

Product Substitution Value

Column Name: prvnt_if_autodc_ordtyp_cd

Column Type: varchar

Max Length: 50

Prevent Entry of Auto-DC Order Types When Active Order Exists? code

Column Name: prvnt_if_autodc_ordtyp_vl

Column Type: varchar

Max Length: 50

Prevent Entry of Auto-DC Order Types When Active Order Exists? value

Column Name: quantity_unit

Column Type: varchar

Max Length: 50

Default Quantity Unit

Column Name: ra_code

Column Type: varchar

Max Length: 50

RA Code (MDS Medications List)

Column Name: report_to_codes

Column Type: varchar

Max Length: 50

Report To Codes

Column Name: report_to_value_long

Column Type: varchar

Max Length: 4096

Report To Long Value

Column Name: report_to_value_short

Column Type: varchar

Max Length: 255

Report To Short Value

Column Name: req_data_emar_admin_code

Column Type: varchar

Max Length: 50

Require Product Data During eMAR Administration Event Code

Column Name: req_data_emar_admin_value

Column Type: varchar

Max Length: 50

Require Product Data During eMAR Administration Event Value

Column Name: req_qty_and_qtyunit_code

Column Type: varchar

Max Length: 50

Require Quantity and Quantity Unit Code

Column Name: req_qty_and_qtyunit_value

Column Type: varchar

Max Length: 50

Require Quantity and Quantity Unit Value

Column Name: req_spec_addl_instr_code

Column Type: varchar

Max Length: 10

Require Special/Additional Instructions Code

Column Name: req_spec_addl_instr_value

Column Type: varchar

Max Length: 10

Require Special/Additional Instructions Value

Column Name: restrict_to_std_reas_code

Column Type: varchar

Max Length: 50

Restrict Users to Selecting Only Standard/Preferred Reason Codes Code

Column Name: restrict_to_std_reas_val

Column Type: varchar

Max Length: 50

Restrict Users to Selecting Only Standard/Preferred Reason Codes Value

Column Name: specimen_container_code
Column Type: varchar
Max Length: 50
Specimen Container Code

Column Name: specimen_container_value
Column Type: varchar
Max Length: 50
Specimen Container Value

Column Name: specimen_type_code
Column Type: varchar
Max Length: 50
Specimen Type Code

Column Name: specimen_type_value
Column Type: varchar
Max Length: 50
Specimen Type Value

Column Name: spec_types_allowed_code
Column Type: varchar
Max Length: 1000
Specimen Type Code

Column Name: spec_types_allowed_value
Column Type: varchar
Max Length: 4096
specimen type value

Column Name: std_pref_freq_codes
Column Type: varchar
Max Length: 1000
Standard/Preferred Frequency Codes

Column Name: std_pref_freq_value_long
Column Type: varchar
Max Length: 4096
Standard/Preferred Frequency Long Value

Column Name: std_pref_freq_value_short
Column Type: varchar
Max Length: 255
Standard/Preferred Frequency Short Value

Column Name: std_pref_reas_codes
Column Type: varchar
Max Length: 1000

Standard/Preferred Reason Codes

Column Name: std_pref_reas_value_long
Column Type: varchar
Max Length: 4096
Standard/Preferred Reason Long Value

Column Name: std_pref_reas_value_short
Column Type: varchar
Max Length: 255
Standard/Preferred Reason Short Value

Column Name: stop_end_of_day_code
Column Type: varchar
Max Length: 50
Stop Time to be set at end of Calendar Day? code.

Column Name: stop_end_of_day_val
Column Type: varchar
Max Length: 50
Stop Time to be set at end of Calendar Day? value.

Column Name: strength
Column Type: varchar
Max Length: 50
Strength

Column Name: strength_unit
Column Type: varchar
Max Length: 255
Strength Unit

Column Name: synonyms
Column Type: varchar
Max Length: 32000
Order Code Synonyms

Column Name: text_required_code
Column Type: varchar
Max Length: 50
Is Order Text Required With This Order Code Code

Column Name: text_required_value
Column Type: varchar
Max Length: 50
Is Order Text Required With This Order Code Value

Column Name: vent_modes_codes
Column Type: varchar
Max Length: 32766

Ventilator Modes Codes.

Column Name: vent_modes_value_long
Column Type: varchar
Max Length: 32766
Ventilator Modes Long Value

Column Name: vent_modes_value_short
Column Type: varchar
Max Length: 255
Ventilator Modes Short Value

Documentation for form: File_Import

Table Name: SYSTEM.File_Import_Hospital_Bed

Table Description: File import for bed

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID of the import.

Column Name: active_bed_code
Column Type: varchar
Max Length: 50
Code for 'Active bed' field.

Column Name: active_bed_value
Column Type: varchar
Max Length: 50
Description for 'Active bed' field

Column Name: active_room_code
Column Type: varchar
Max Length: 50
Code for 'Active Room' field.

Column Name: active_room_value

Column Type: varchar
Max Length: 50
Code for 'Active Room' field.

Column Name: add_edit_bed_code
Column Type: varchar
Max Length: 50
Code for 'Add Edit Bed Code' field

Column Name: add_edit_bed_value
Column Type: varchar
Max Length: 50
Description for 'Add Edit Bed Code' field

Column Name: bed
Column Type: varchar
Max Length: 50
Code for 'Bed' field.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
If the imported file contains errors.

Column Name: filetype
Column Type: integer
The type of file being imported.

Column Name: licen_unlicen_code
Column Type: varchar
Max Length: 50
Code for 'Licensed/Unlicensed' field

Column Name: licen_unlicen_value
Column Type: varchar
Max Length: 50
Description for 'Licensed/Unlicensed' field

Column Name: line
Column Type: integer
The line number associated with the import.

Column Name: medicaid_cert_code
Column Type: varchar
Max Length: 50
Code for 'Medicaid Certified' field

Column Name: medicaid_cert_value
Column Type: varchar
Max Length: 50

Description for 'Medicaid Certified' field

Column Name: medicare_cert_code

Column Type: varchar

Max Length: 50

Code for 'Medicare Certified' field

Column Name: medicare_cert_value

Column Type: varchar

Max Length: 50

Description for 'Medicare Certified' field

Column Name: new_bed

Column Type: varchar

Max Length: 50

Code for 'New Bed' field

Column Name: new_room

Column Type: varchar

Max Length: 50

Code for 'New Room' field

Column Name: posted_value

Column Type: varchar

Max Length: 50

If posted or not.

Column Name: room

Column Type: varchar

Max Length: 50

Code for 'Room' field.

Column Name: room_notes

Column Type: varchar

Max Length: 80

The notes for the room.

Column Name: unit_code

Column Type: varchar

Max Length: 50

Code for 'Unit code' field.

Column Name: unit_value

Column Type: varchar

Max Length: 50

The description associated with unit_code.

Documentation for form: File_Import

Table Name: SYSTEM.audit_outreach_client

Table Description: This table contains audit records for outreach targets.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
System code where the outreach client will be admitted to.

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: PATID
Column Type: varchar
Max Length: 20
Avatar patient identifier. Present if the person referenced by the external id has ever been admitted to a program.

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_city
Column Type: varchar
Max Length: 30
Target's address - city.

Column Name: address_county
Column Type: varchar
Max Length: 60
Target's address - county.

Column Name: address_state
Column Type: varchar
Max Length: 40
Target's address - state.

Column Name: address_street
Column Type: varchar
Max Length: 100
Target's address - street.

Column Name: address_street2
Column Type: varchar
Max Length: 60
Target's address - apartment/unit.

Column Name: address_zipcode
Column Type: varchar
Max Length: 10
Target's Zipcode.

Column Name: audit_action
Column Type: varchar
Max Length: 50
The type of action that caused the change to the SYSTEM.OutreachClient row.

Column Name: cell_phone
Column Type: varchar
Max Length: 60
Target's cell phone.

Column Name: communication_pref
Column Type: varchar
Max Length: 40
Target's communication preference

Column Name: communication_pref_val
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: contact_email
Column Type: varchar
Max Length: 60
Target's email address.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_birth
Column Type: date
Target's date of birth.

Column Name: eligibility_end_date_1
Column Type: date
Target's financial eligibility end date postition 1.

Column Name: eligibility_end_date_2

Column Type: date
Target's financial eligibility end date postition 2.

Column Name: eligibility_end_date_3
Column Type: date
Target's financial eligibility end date postition 3.

Column Name: eligibility_end_date_4
Column Type: date
Target's financial eligibility end date postition 4.

Column Name: eligibility_end_date_5
Column Type: date
Target's financial eligibility end date postition 5.

Column Name: eligibility_start_date_1
Column Type: date
Target's financial eligibility start date postition 1.

Column Name: eligibility_start_date_2
Column Type: date
Target's financial eligibility start date postition 2.

Column Name: eligibility_start_date_3
Column Type: date
Target's financial eligibility start date postition 3.

Column Name: eligibility_start_date_4
Column Type: date
Target's financial eligibility start date postition 4.

Column Name: eligibility_start_date_5
Column Type: date
Target's financial eligibility start date postition 5.

Column Name: external_id
Column Type: varchar
Max Length: 100
External organizational identifier for the person.

Column Name: first_name
Column Type: varchar
Max Length: 40
Target's first name.

Column Name: guarantor_id_1
Column Type: varchar
Max Length: 40
Target's primary guarantor (coded value).

Column Name: guarantor_id_2
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 2.

Column Name: guarantor_id_3
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 3.

Column Name: guarantor_id_4
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 4.

Column Name: guarantor_id_5
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 5.

Column Name: guarantor_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor.

Column Name: guarantor_val_2
Column Type: varchar
Max Length: 40
Target's guarantor position 2.

Column Name: guarantor_val_3
Column Type: varchar
Max Length: 40
Target's guarantor position 3.

Column Name: guarantor_val_4
Column Type: varchar
Max Length: 40
Target's guarantor position 4.

Column Name: guarantor_val_5
Column Type: varchar
Max Length: 40
Target's guarantor position 5.

Column Name: home_phone
Column Type: varchar
Max Length: 60
Target's home phone.

Column Name: join_to_outreach_id
Column Type: varchar
Max Length: 50
Links to ID in SYSTEM.OutreachClient.

Column Name: last_name
Column Type: varchar
Max Length: 40
Target's last name.

Column Name: medicaid_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicaid ID number.

Column Name: medicaid_id_2
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 2.

Column Name: medicaid_id_3
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 3.

Column Name: medicaid_id_4
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 4.

Column Name: medicaid_id_5
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 5.

Column Name: medicare_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicare ID number.

Column Name: medicare_id_2
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 2.

Column Name: medicare_id_3
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 3.

Column Name: medicare_id_4
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 4.

Column Name: medicare_id_5
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 5.

Column Name: middle_name
Column Type: varchar
Max Length: 40
Target's middle name.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: outside_facility_code
Column Type: varchar
Max Length: 50
Target's outside living facility (coded value). The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: outside_facility_value
Column Type: varchar
Max Length: 40
Target's outside living facility. The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: permission_to_text
Column Type: varchar
Max Length: 40
Target's permission to text.

Column Name: plan_id_1
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_2
Column Type: varchar
Max Length: 40

Target's primary guarantor plan (coded value).

Column Name: plan_id_3

Column Type: varchar

Max Length: 40

Target's primary guarantor plan (coded value).

Column Name: plan_id_4

Column Type: varchar

Max Length: 40

Target's primary guarantor plan (coded value).

Column Name: plan_id_5

Column Type: varchar

Max Length: 40

Target's primary guarantor plan (coded value).

Column Name: plan_val_1

Column Type: varchar

Max Length: 40

Target's primary guarantor plan.

Column Name: plan_val_2

Column Type: varchar

Max Length: 40

Target's primary guarantor plan.

Column Name: plan_val_3

Column Type: varchar

Max Length: 40

Target's primary guarantor plan.

Column Name: plan_val_4

Column Type: varchar

Max Length: 40

Target's primary guarantor plan.

Column Name: plan_val_5

Column Type: varchar

Max Length: 40

Target's primary guarantor plan.

Column Name: policy_number_1

Column Type: varchar

Max Length: 40

Target's primary insurance policy number.

Column Name: policy_number_2

Column Type: varchar

Max Length: 40

Target's insurance policy number position 2.

Column Name: policy_number_3

Column Type: varchar

Max Length: 40

Target's insurance policy number position 3.

Column Name: policy_number_4

Column Type: varchar

Max Length: 40

Target's insurance policy number position 4.

Column Name: policy_number_5

Column Type: varchar

Max Length: 40

Target's insurance policy number position 5.

Column Name: primary_care_physician_id

Column Type: varchar

Max Length: 40

Target's primary care physician id.

Column Name: protocol_code

Column Type: varchar

Max Length: 50

Target's protocol (coded value) to apply to the appointment created on successful outreach.

Column Name: protocol_shval

Column Type: varchar

Max Length: 40

Target's protocol to apply to the appointment created on successful outreach.

Column Name: protocol_value

Column Type: varchar

Max Length: 40

Target's protocol to apply to the appointment created on successful outreach.

Column Name: risk_level_code

Column Type: varchar

Max Length: 50

Target's risk level (coded value).

Column Name: risk_level_value

Column Type: varchar

Max Length: 40

Target's risk level.

Column Name: sex_code

Column Type: varchar

Max Length: 5

Target's sex (coded value).

Column Name: sex_value

Column Type: varchar

Max Length: 40

Target's sex.

Column Name: subscriber_city_1

Column Type: varchar

Max Length: 30

Subscriber's address - city position 1.

Column Name: subscriber_city_2

Column Type: varchar

Max Length: 30

Subscriber's address - city position 2.

Column Name: subscriber_city_3

Column Type: varchar

Max Length: 30

Subscriber's address - city position 3.

Column Name: subscriber_city_4

Column Type: varchar

Max Length: 30

Subscriber's address - city position 4.

Column Name: subscriber_city_5

Column Type: varchar

Max Length: 30

Subscriber's address - city position 5.

Column Name: subscriber_county_1

Column Type: varchar

Max Length: 60

Subscriber's address - county position 1.

Column Name: subscriber_county_2

Column Type: varchar

Max Length: 60

Subscriber's address - county position 2.

Column Name: subscriber_county_3

Column Type: varchar

Max Length: 60

Subscriber's address - county position 3.

Column Name: subscriber_county_4

Column Type: varchar

Max Length: 60

Subscriber's address - county position 4.

Column Name: subscriber_county_5

Column Type: varchar

Max Length: 60

Subscriber's address - county position 5.

Column Name: subscriber_dob_1

Column Type: date

Subscriber's date of birth position 1.

Column Name: subscriber_dob_2

Column Type: date

Subscriber's date of birth position 2.

Column Name: subscriber_dob_3

Column Type: date

Subscriber's date of birth position 3.

Column Name: subscriber_dob_4

Column Type: date

Subscriber's date of birth position 4.

Column Name: subscriber_dob_5

Column Type: date

Subscriber's date of birth position 5.

Column Name: subscriber_first_name_1

Column Type: varchar

Max Length: 40

Subscriber's first name position 1.

Column Name: subscriber_first_name_2

Column Type: varchar

Max Length: 40

Subscriber's first name position 2.

Column Name: subscriber_first_name_3

Column Type: varchar

Max Length: 40

Subscriber's first name position 3.

Column Name: subscriber_first_name_4

Column Type: varchar

Max Length: 40

Subscriber's first name position 4.

Column Name: subscriber_first_name_5

Column Type: varchar

Max Length: 40

Subscriber's first name position 5.

Column Name: subscriber_last_name_1
Column Type: varchar
Max Length: 40
Subscriber's last name position 1.

Column Name: subscriber_last_name_2
Column Type: varchar
Max Length: 40
Subscriber's last name position 2.

Column Name: subscriber_last_name_3
Column Type: varchar
Max Length: 40
Subscriber's last name position 3.

Column Name: subscriber_last_name_4
Column Type: varchar
Max Length: 40
Subscriber's last name position 4.

Column Name: subscriber_last_name_5
Column Type: varchar
Max Length: 40
Subscriber's last name position 5.

Column Name: subscriber_middle_name_1
Column Type: varchar
Max Length: 40
Subscriber's middle name position 1.

Column Name: subscriber_middle_name_2
Column Type: varchar
Max Length: 40
Subscriber's middle name position 2.

Column Name: subscriber_middle_name_3
Column Type: varchar
Max Length: 40
Subscriber's middle name position 3.

Column Name: subscriber_middle_name_4
Column Type: varchar
Max Length: 40
Subscriber's middle name position 4.

Column Name: subscriber_middle_name_5
Column Type: varchar
Max Length: 40

Subscriber's middle name position 5.

Column Name: subscriber_phone_1

Column Type: varchar

Max Length: 60

Subscriber's contact phone number position 1.

Column Name: subscriber_phone_2

Column Type: varchar

Max Length: 60

Subscriber's contact phone number position 2.

Column Name: subscriber_phone_3

Column Type: varchar

Max Length: 60

Subscriber's contact phone number position 3.

Column Name: subscriber_phone_4

Column Type: varchar

Max Length: 60

Subscriber's contact phone number position 4.

Column Name: subscriber_phone_5

Column Type: varchar

Max Length: 60

Subscriber's contact phone number position 5.

Column Name: subscriber_relationship_1

Column Type: varchar

Max Length: 20

Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relationship_2

Column Type: varchar

Max Length: 20

Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relationship_3

Column Type: varchar

Max Length: 20

Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relationship_4

Column Type: varchar

Max Length: 20

Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relationship_5

Column Type: varchar

Max Length: 20

Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_relation_val_1

Column Type: varchar

Max Length: 40

Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relation_val_2

Column Type: varchar

Max Length: 40

Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relation_val_3

Column Type: varchar

Max Length: 40

Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relation_val_4

Column Type: varchar

Max Length: 40

Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relation_val_5

Column Type: varchar

Max Length: 40

Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_sex_code_1

Column Type: varchar

Max Length: 5

Subscriber's sex (coded value), position 1.

Column Name: subscriber_sex_code_2

Column Type: varchar

Max Length: 5

Subscriber's sex (coded value), position 2.

Column Name: subscriber_sex_code_3

Column Type: varchar

Max Length: 5

Subscriber's sex (coded value), position 3.

Column Name: subscriber_sex_code_4

Column Type: varchar

Max Length: 5

Subscriber's sex (coded value), position 4.

Column Name: subscriber_sex_code_5

Column Type: varchar

Max Length: 5

Subscriber's sex (coded value), position 5.

Column Name: subscriber_sex_value_1
Column Type: varchar
Max Length: 40
Subscriber's sex, position 1.

Column Name: subscriber_sex_value_2
Column Type: varchar
Max Length: 40
Subscriber's sex, position 2.

Column Name: subscriber_sex_value_3
Column Type: varchar
Max Length: 40
Subscriber's sex, position 3.

Column Name: subscriber_sex_value_4
Column Type: varchar
Max Length: 40
Subscriber's sex, position 4.

Column Name: subscriber_sex_value_5
Column Type: varchar
Max Length: 40
Subscriber's sex, position 5.

Column Name: subscriber_state_1
Column Type: varchar
Max Length: 40
Subscriber's address - state position 1.

Column Name: subscriber_state_2
Column Type: varchar
Max Length: 40
Subscriber's address - state position 2.

Column Name: subscriber_state_3
Column Type: varchar
Max Length: 40
Subscriber's address - state position 3.

Column Name: subscriber_state_4
Column Type: varchar
Max Length: 40
Subscriber's address - state position 4.

Column Name: subscriber_state_5
Column Type: varchar
Max Length: 40

Subscriber's address - state position 5.

Column Name: subscriber_street_1

Column Type: varchar

Max Length: 100

Subscriber's address - street position 1.

Column Name: subscriber_street_2

Column Type: varchar

Max Length: 100

Subscriber's address - street position 2.

Column Name: subscriber_street2_1

Column Type: varchar

Max Length: 60

Subscriber's address - apartment/unit position 1.

Column Name: subscriber_street2_2

Column Type: varchar

Max Length: 60

Subscriber's address - apartment/unit position 2.

Column Name: subscriber_street2_3

Column Type: varchar

Max Length: 60

Subscriber's address - apartment/unit position 3.

Column Name: subscriber_street2_4

Column Type: varchar

Max Length: 60

Subscriber's address - apartment/unit position 4.

Column Name: subscriber_street2_5

Column Type: varchar

Max Length: 60

Subscriber's address - apartment/unit position 5.

Column Name: subscriber_street_3

Column Type: varchar

Max Length: 100

Subscriber's address - street position 3.

Column Name: subscriber_street_4

Column Type: varchar

Max Length: 100

Subscriber's address - street position 4.

Column Name: subscriber_street_5

Column Type: varchar

Max Length: 100

Subscriber's address - street position 5.

Column Name: subscriber_zipcode_1
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 1.

Column Name: subscriber_zipcode_2
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 2.

Column Name: subscriber_zipcode_3
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 3.

Column Name: subscriber_zipcode_4
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 4.

Column Name: subscriber_zipcode_5
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 5.

Column Name: target_adm_type_code
Column Type: varchar
Max Length: 50
Target's specified admission type (coded value) to be added to the admission record on appointment creation.

Column Name: target_adm_type_value
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: target_pre_program_code
Column Type: varchar
Max Length: 40
Target's specified pre-admit program (coded value) to be admitted to on appointment creation.

Column Name: target_pre_program_value
Column Type: varchar
Max Length: 40
Target's specified pre-admit program to be admitted to on appointment creation.

Column Name: target_program_code
Column Type: varchar

Max Length: 50

Target's specified admission program (coded value) to be admitted to on appointment creation.

Column Name: target_program_value

Column Type: varchar

Max Length: 40

Target's specified admission program to be admitted to on appointment creation.

Column Name: target_service_code

Column Type: varchar

Max Length: 50

Target's specified service (coded value) to be rendered at outreach appointment.

Column Name: target_service_value

Column Type: varchar

Max Length: 40

Target's specified service to be rendered at outreach appointment.

Column Name: target_status_code

Column Type: varchar

Max Length: 50

The current activity status of this target (coded value).

Column Name: target_status_value

Column Type: varchar

Max Length: 40

The current activity status of this target.

Column Name: work_phone

Column Type: varchar

Max Length: 60

Target's work phone.

Column Name: zone_code

Column Type: varchar

Max Length: 50

Target's assigned zone (coded value).

Column Name: zone_value

Column Type: varchar

Max Length: 40

Target's assigned zone.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_ccbhc_pop

Table Description: This table returns the information stored in the 'File Import' form for the 'CCBHC Population' selection.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID associated with the import.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
The errors that occurred for the import.

Column Name: date_of_birth
Column Type: date
Client's Date Of Birth

Column Name: effective_date
Column Type: date
'Effective Date'

Column Name: end_date
Column Type: date
'End Date'

Column Name: filetype
Column Type: integer
The file type associated with the import.

Column Name: first_name
Column Type: varchar
Max Length: 50
Client's First Name

Column Name: gender
Column Type: varchar
Max Length: 50
Client's Gender

Column Name: last_name
Column Type: varchar
Max Length: 50

Client's Last Name

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: medicaid_id

Column Type: varchar

Max Length: 50

Client's Medicaid ID

Column Name: middle_initial

Column Type: varchar

Max Length: 50

Client's Middle Initial

Column Name: population_code

Column Type: varchar

Max Length: 50

Population Assigned

Column Name: population_value

Column Type: varchar

Max Length: 50

The description associated with population_code. See population_code for more information.

Column Name: posted_value

Column Type: varchar

Max Length: 50

The posted value associated with the import.

Column Name: ssn

Column Type: varchar

Max Length: 50

Client's Social Security Number

Documentation for form: File_Import

Table Name: SYSTEM.file_import_clm_adj_grp

Table Description: This table returns the information stored in the 'File Import' form for the 'Claim Adjustment/Group Reason Code Definition' selection.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored

Column Name: FILE_ID
Column Type: integer
The ID of the file to be uploaded

Column Name: add_delete
Column Type: varchar
Max Length: 50
The action being preformed

Column Name: clm_adj_grp_code
Column Type: varchar
Max Length: 50
The claim adjustment group code of the definition being added or deleted

Column Name: clm_adj_rea_code
Column Type: varchar
Max Length: 50
The claim adjustment reason codes of the definition being added or deleted

Column Name: clm_filing_id_code
Column Type: varchar
Max Length: 50
The claim filing indicator code of the definition being added

Column Name: compiledonotpost
Column Type: varchar
Max Length: 50
The answer to the 'Compile but do not post adjustments (CAS) associated with the indicated Claim Adjustment Group/Reason codes when processing an 835' question of the definition being added

Column Name: contains_errors
Column Type: varchar
Max Length: 50
The error status of the file

Column Name: filetype
Column Type: integer
The type of file to be uploaded

Column Name: fin_class
Column Type: varchar
Max Length: 50
The financial class of the definition being added or deleted

Column Name: guarantor

Column Type: varchar
Max Length: 50
The guarantor of the definition being added or deleted

Column Name: line
Column Type: integer
The line number of the file to be uploaded

Column Name: posting_code
Column Type: varchar
Max Length: 50
The posting code of the definition being added

Column Name: posting_code_cr_code_ovrd
Column Type: varchar
Max Length: 50
The credit posting code override of the definition being added

Column Name: posting_code_credit
Column Type: varchar
Max Length: 50
The credit posting code of the definition being added or deleted

Column Name: posting_code_db_code_ovrd
Column Type: varchar
Max Length: 50
The debit posting code override of the definition being added

Column Name: posting_code_debit
Column Type: varchar
Max Length: 50
The debit posting code of the definition being added or deleted

Column Name: posting_code_override
Column Type: varchar
Max Length: 50
The posting code override of the definition being added

Column Name: remark_codes
Column Type: varchar
Max Length: 50
The remark codes of the definition being added or deleted

Column Name: transfer_csm_default
Column Type: varchar
Max Length: 50
The answer to the 'If no guarantor found to transfer the remaining balance, then do you want to transfer the remaining balance to CSM Default Payor (99999)?' of the definition being added

Column Name: transfer_fin_class_start

Column Type: varchar

Max Length: 50

The answer to the 'Start at the following financial class when determining the guarantor for remaining balance transfer' question of the definition being added

Column Name: transfer_fin_cls_exclude

Column Type: varchar

Max Length: 50

The answer to the 'Exclude the following financial class(es) when determining the guarantor for remaining balance transfer' question of the definition being added

Column Name: transfer_guar_exclude

Column Type: varchar

Max Length: 50

The answer to the 'Exclude the following guarantor(s) when determining the guarantor for remaining balance transfer' question of the definition being added

Column Name: transfer_liability_skip

Column Type: varchar

Max Length: 50

The answer to the 'Should a guarantor with liability distributed to them for the exact adjustment amount be skipped?' question of the definition being added

Column Name: transfer_method

Column Type: varchar

Max Length: 50

The answer to the 'In case of a remaining balance, select method to use for determining the order in which the guarantor(s) should be selected for the remaining balance transfer' question of the definition being added

Column Name: transfer_pay_post_skip

Column Type: varchar

Max Length: 50

The answer to the 'Should a guarantor with payment(s) posted against them for the service being adjudicated be skipped?' question of the definition being added

Documentation for form: File_Import

Table Name: SYSTEM.file_import_clm_follow_up

Table Description: This table returns the information stored in the 'File Import' form for the 'Claim Follow-Up Notes' selection.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number for the follow-up note.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FILE_ID

Column Type: integer

The file ID associated with the import.

Column Name: client_ID

Column Type: varchar

Max Length: 50

Client ID

Column Name: client_name

Column Type: varchar

Max Length: 50

Client's Name

Column Name: comments

Column Type: varchar

Max Length: 32766

Claim follow up comments

Column Name: completion_date

Column Type: date

Claim follow-up completion date

Column Name: contains_errors

Column Type: varchar

Max Length: 50

The errors that occurred for the import.

Column Name: current_crn

Column Type: varchar

Max Length: 50

Current claim reference number (CRN)

Column Name: denial_crn

Column Type: varchar

Max Length: 50

Denial claim reference number (CRN)

Column Name: denial_reason_code

Column Type: varchar

Max Length: 50

The insurance based denial reason code(s).

Column Name: denial_reason_value

Column Type: varchar

Max Length: 4096

The description associated with denial_reason_code. See denial_reason_code for more information.

Column Name: filetype

Column Type: integer

The file type associated with the import.

Column Name: followed_up

Column Type: varchar

Max Length: 50

Claim followed up

Column Name: follow_up_date

Column Type: date

Claim follow-up date

Column Name: follow_up_status

Column Type: varchar

Max Length: 50

The claim follow-up status code

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: next_follow_up_date

Column Type: date

Next claim follow-up date

Column Name: posted_value

Column Type: varchar

Max Length: 50

The posted value associated with the import.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_diag_mapping

Table Description: This table is used to upload files from the form 'File Upload' in Avatar

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored

Column Name: FILE_ID

Column Type: integer

The ID of the file to be uploaded

Column Name: client_mrn

Column Type: varchar

Max Length: 50

The Client's ID

Column Name: filetype

Column Type: varchar

Max Length: 50

The type of file to be uploaded

Column Name: line

Column Type: integer

The line number of the file to be uploaded

Column Name: new_code

Column Type: varchar

Max Length: 50

The new Diagnosis code relating to ICD-9, ICD-10, DSM-4

Column Name: new_code_set

Column Type: varchar

Max Length: 50

The new Diagnosis code set for searching on if one does not previously exist or to edit existing

Column Name: new_value

Column Type: varchar

Max Length: 4096

The description of new_code

Column Name: search_code

Column Type: varchar

Max Length: 50

The code correlated to the search of diagnosis code relating to ICD-9, ICD-10, DSM-4

Column Name: search_code_set

Column Type: varchar

Max Length: 50

the provided diagnosis code set for searching on

Documentation for form: File_Import

Table Name: SYSTEM.file_import_diagnosis_codes

Table Description: This table is used to upload files from the Avatar form 'File Import'

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered

Column Name: FILE_ID
Column Type: integer
The ID of the file to be uploaded

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
The diagnosis code to be added or edited

Column Name: add_edit_value
Column Type: varchar
Max Length: 250
The description for the add_edit_code

Column Name: code_set_code
Column Type: varchar
Max Length: 50
The diagnosis code set to be searched on

Column Name: diagnosis_code
Column Type: varchar
Max Length: 50
The code correlated to the patients diagnosis

Column Name: diagnosis_value
Column Type: varchar
Max Length: 50
The description of the diagnosis_code

Column Name: drg_code
Column Type: varchar
Max Length: 50

The code correlated to the patients diagnosis code related to DSM-4

Column Name: filetype

Column Type: varchar

Max Length: 50

The type of file to be uploaded

Column Name: line

Column Type: integer

The files import line number

Column Name: secondary_drg_code

Column Type: varchar

Max Length: 32000

The code correlated to the patients secondary DRG

Documentation for form: File_Import

Table Name: SYSTEM.file_import_drg_weights

Table Description: This table is used to upload drg weight definitions via the Avatar form 'File Upload'

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored

Column Name: FILE_ID

Column Type: integer

The Id of the file to be uploaded

Column Name: add_edit_code

Column Type: varchar

Max Length: 50

The diagnosis code to either be added or edited

Column Name: add_edit_value

Column Type: varchar

Max Length: 250

The description of the add_edit_code

Column Name: code_set_code

Column Type: varchar

Max Length: 50
type of ICD

Column Name: drg_code
Column Type: varchar
Max Length: 50
unique DRG ID

Column Name: end_date
Column Type: date
expiration date of wieght definition

Column Name: filetype
Column Type: varchar
Max Length: 50
The type of file to be uploaded

Column Name: line
Column Type: integer
The line number of the file to be uploaded

Column Name: start_date
Column Type: date
effective date of weight definition

Column Name: weight
Column Type: varchar
Max Length: 50
DRG weight value

Documentation for form: File_Import

Table Name: SYSTEM.file_import_error

Table Description: This table returns the File Import Errors

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The facility where the file was imported.

Column Name: FILEID
Column Type: integer

The file ID of the file that was imported.

Column Name: counter

Column Type: integer

Unique ID for each error for specific record.

Column Name: error_message

Column Type: varchar

Max Length: 200

The description of the error.

Column Name: field_location

Column Type: integer

.

Column Name: field_name

Column Type: varchar

Max Length: 100

The description of the field that encountered the error.

Column Name: field_number

Column Type: varchar

Max Length: 50

The field number of the field that encountered the error.

Column Name: field_value

Column Type: varchar

Max Length: 50

The value of the field that encountered the error.

Column Name: file_name

Column Type: varchar

Max Length: 50

The name of the file that was imported.

Column Name: file_status

Column Type: varchar

Max Length: 50

The status of the file that was imported.

Column Name: file_type_code

Column Type: varchar

Max Length: 50

The type of file that was imported.

Column Name: file_type_value

Column Type: varchar

Max Length: 50

The type of file that was imported.

Column Name: line
Column Type: integer
Unique ID for each record.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_flowsheet_map

Table Description: This table returns the information stored in the 'File Import' form for the 'Lab Results Flowsheet Mapping' selection.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
Unique Id for the file imported.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Flag for determining if the file has errors.

Column Name: flowsheet_id
Column Type: varchar
Max Length: 50
'Flowsheet Observation/Test ID'.

Column Name: flowsheet_id_value
Column Type: varchar
Max Length: 50
The description for the system_of_care_code. See system_of_care_code for more information.

Column Name: id_type_code
Column Type: varchar
Max Length: 50
'Observation/Test ID Type'.

Column Name: id_type_value
Column Type: varchar
Max Length: 50

The description for the id_type_code. See id_type_code for more information.

Column Name: line
Column Type: integer
Line (helper)

Column Name: mapping_type_code
Column Type: varchar
Max Length: 50
'Mapping Type'.

Column Name: mapping_type_value
Column Type: varchar
Max Length: 50
The description for the mapping_type_code. See mapping_type_code for more information.

Column Name: observation_test_id
Column Type: varchar
Max Length: 50
'Observation/Test ID'.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_gpbdt

Table Description: This table returns the information stored in the 'File Import' form for the 'Guarantor/Program Billing Defaults Template' selection.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID associated with the import.

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
'Add/Edit'

Column Name: add_edit_value
Column Type: varchar

Max Length: 250

The description associated with add_edit_code. See add_edit_code for more information.

Column Name: ccbhc_template

Column Type: varchar

Max Length: 50

'CCBHC Template'

Column Name: contains_errors

Column Type: varchar

Max Length: 50

The errors that occurred for the import.

Column Name: disp_codes_for_hipaa_code

Column Type: varchar

Max Length: 50

'Display Codes/Values For HIPAA'

Column Name: disp_codes_for_hipaa_value

Column Type: varchar

Max Length: 250

The description associated with disp_codes_for_hipaa_code. See disp_codes_for_hipaa_code for more information.

Column Name: filetype

Column Type: integer

The file type associated with the import.

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: posted_value

Column Type: varchar

Max Length: 50

The posted value associated with the import.

Column Name: tab_id_code

Column Type: integer

'Tab Id'

Column Name: tab_id_value

Column Type: varchar

Max Length: 50

The description associated with tab_id_code. See tab_id_code for more information.

Column Name: template_id

Column Type: varchar

Max Length: 50

'Template ID'

Column Name: template_name
Column Type: varchar
Max Length: 50
'Template Name'

Documentation for form: File_Import

Table Name: SYSTEM.file_import_gpbdt_i837

Table Description: This table returns the information stored in the 'File Import' form for the '837 Institutional' section of the 'Guarantor/Program Billing Defaults Template' selection.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID associated with the import.

Column Name: LX_sort_criteria_code
Column Type: varchar
Max Length: 50
'Additional Sort To LX Segment Based On Following Avatar PM Treatment String Value(s)'

Column Name: LX_sort_criteria_value
Column Type: varchar
Max Length: 250
The description associated with LX_sort_criteria_code. See LX_sort_criteria_code for more information.

Column Name: ack_requested_code
Column Type: varchar
Max Length: 50
'Acknowledgment Requested (ISA-14)'

Column Name: ack_requested_value
Column Type: varchar
Max Length: 250
The description associated with ack_requested_code. See ack_requested_code for more information.

Column Name: add_edit_code

Column Type: varchar
Max Length: 50
'Add/Edit'

Column Name: add_edit_value
Column Type: varchar
Max Length: 250
The description associated with add_edit_code. See add_edit_code for more information.

Column Name: add_leave_rev_sort_code
Column Type: varchar
Max Length: 50
'Add Leave Revenue To Sort'

Column Name: add_leave_rev_sort_value
Column Type: varchar
Max Length: 50
The description associated with add_leave_rev_sort_code. See add_leave_rev_sort_code for more information.

Column Name: admsrc_or_trfr_code
Column Type: varchar
Max Length: 50
'Admission Source (2300-CL1-02) Override For Transfer Program'

Column Name: admsrc_or_trfr_value
Column Type: varchar
Max Length: 250
The description associated with admsrc_or_trfr_code. See admsrc_or_trfr_code for more information.

Column Name: admtyp_or_trfr_code
Column Type: varchar
Max Length: 50
'Admission Type (2300-CL1-01) Override For Transfer Program'

Column Name: admtyp_or_trfr_value
Column Type: varchar
Max Length: 250
The description associated with admtyp_or_trfr_code. See admtyp_or_trfr_code for more information.

Column Name: allow_period_code
Column Type: varchar
Max Length: 50
'Allow Periods In Diagnosis Codes (837I)'

Column Name: allow_period_value
Column Type: varchar
Max Length: 250
The description associated with allow_period_code. See allow_period_code for more information.

Column Name: amt_due_disp_code
Column Type: varchar
Max Length: 50
'Patient Amount Due Information To Display In 2300-AMT'

Column Name: amt_due_disp_value
Column Type: varchar
Max Length: 250
The description associated with amt_due_disp_code. See amt_due_disp_code for more information.

Column Name: amt_paid_disp_code
Column Type: varchar
Max Length: 50
'Patient Paid Amount Information To Display In 2300-AMT'

Column Name: amt_paid_disp_value
Column Type: varchar
Max Length: 250
The description associated with amt_paid_disp_code See amt_paid_disp_code for more information.

Column Name: app_receiver_code
Column Type: varchar
Max Length: 50
'Application Receiver's Code (GS-03)'

Column Name: app_sender_code
Column Type: varchar
Max Length: 50
'Application Sender's Code (GS-02)'

Column Name: attending_entity_code
Column Type: varchar
Max Length: 50
'Attending Provider Entity Type Qualifier (2310A/2420A-NM1-02)'

Column Name: attending_entity_value
Column Type: varchar
Max Length: 250
The description associated with attending_entity_code. See attending_entity_code for more information.

Column Name: attending_first_name
Column Type: varchar
Max Length: 50
'Attending Provider First Name (2310A/2420A-NM1-04)'

Column Name: attending_id
Column Type: varchar
Max Length: 50
'Attending Provider Identification Code (2310A/2420A-NM1-09)'

Column Name: attending_id_qual_code
Column Type: varchar
Max Length: 50
'Attending Provider Identification Code Qualifier (2310A/2420A-NM1-08)'

Column Name: attending_id_qual_value
Column Type: varchar
Max Length: 250
The description associated with attending_id_qual_code. See attending_id_qual_code for more information.

Column Name: attending_last_org_name
Column Type: varchar
Max Length: 50
'Attending Provider Last Or Organization Name (2310A/2420A-NM1-02)'

Column Name: attending_middle_name
Column Type: varchar
Max Length: 50
'Attending Provider Middle Name (2310A/2420A-NM1-05)'

Column Name: attending_ref_id
Column Type: varchar
Max Length: 50
'Attending Provider Reference Identification (2310A/2420A-REF-02)'

Column Name: attending_ref_id2
Column Type: varchar
Max Length: 50
'Attending Provider Reference Identification-2 (2310A/2420A-REF-01)'

Column Name: attending_ref_qual2_code
Column Type: varchar
Max Length: 50
'Attending Provider Reference Identification Qualifier-2 (2310A/2420A-REF-01)'

Column Name: attending_ref_qual2_value
Column Type: varchar
Max Length: 250
The description associated with attending_ref_qual2_code. See attending_ref_qual2_code for more information.

Column Name: attending_ref_qual_code
Column Type: varchar
Max Length: 50
'Attending Provider Reference Identification Qualifier (2310A/2420A-REF-01)'

Column Name: attending_ref_qual_value
Column Type: varchar
Max Length: 250

The description associated with attending_ref_qual_code. See attending_ref_qual_code for more information.

Column Name: attending_suffix

Column Type: varchar

Max Length: 50

'Attending Provider Name Suffix (2310A/2420A-NM1-07)'

Column Name: attending_taxonomy

Column Type: varchar

Max Length: 50

'Attending Provider Taxonomy Code (2310A/2420A-PRV-03)'

Column Name: auth_code_ref_code

Column Type: varchar

Max Length: 50

'Service Authorization Exception Code Reference Identification (2300-REF-02)'

Column Name: auth_code_ref_value

Column Type: varchar

Max Length: 250

The description associated with auth_code_ref_code. See auth_code_ref_code for more information.

Column Name: auth_determ_code

Column Type: varchar

Max Length: 50

'Determine Managed Care Authorizations (2300-REF-02)'

Column Name: auth_determ_value

Column Type: varchar

Max Length: 250

The description associated with auth_determ_code. See auth_determ_code for more information.

Column Name: auth_info

Column Type: varchar

Max Length: 50

'Authorization Information (ISA-02)'

Column Name: auth_info_qua_code

Column Type: varchar

Max Length: 50

'Authorization Information Qualifier (ISA-01)'

Column Name: auth_info_qua_value

Column Type: varchar

Max Length: 250

The description associated with auth_info_qua_code. See auth_info_qua_code for more information.

Column Name: bill_clia_loop_code

Column Type: varchar

Max Length: 50
'Billing/Rendering CLIA Loop/Segment And Qualifier Location'

Column Name: bill_clia_loop_value
Column Type: varchar
Max Length: 250
The description associated with bill_clia_loop_code. See bill_clia_loop_code for more information.

Column Name: bill_clia_num_code
Column Type: varchar
Max Length: 50
'Billing/Rendering CLIA Number Code Qualifier (2300-NTE-01)'

Column Name: bill_clia_num_value
Column Type: varchar
Max Length: 250
The description associated with bill_clia_num_code. See bill_clia_num_code for more information.

Column Name: bill_comp_svcs_code
Column Type: varchar
Max Length: 50
'Bill Component Services When A Roll Up Service Is Found'

Column Name: bill_comp_svcs_value
Column Type: varchar
Max Length: 250
The description associated with bill_comp_svcs_code. See bill_comp_svcs_code for more information.

Column Name: bill_note_ref_code
Column Type: varchar
Max Length: 50
'Billing Note Reference Code (837I-2300-NTE-01)'

Column Name: bill_note_ref_value
Column Type: varchar
Max Length: 250
The description associated with bill_note_ref_code. See bill_note_ref_code for more information.

Column Name: bill_note_text
Column Type: varchar
Max Length: 50
'Billing Note Text (837I-2300-NTE-02)'

Column Name: bill_note_text_for_npy
Column Type: varchar
Max Length: 50
'Billing note text (2300-NTE-02) (No-Pay ##0 Claims)'

Column Name: bill_pro_sec_id_num
Column Type: varchar

Max Length: 50
'Billing Provider Secondary Identification Number (2010BB-REF-02)'

Column Name: bill_pro_sec_id_qua_code
Column Type: varchar
Max Length: 50
'Billing Provider Secondary Identification Code Qualifier (2010BB-REF-01)'

Column Name: bill_pro_sec_id_qua_value
Column Type: varchar
Max Length: 50
The description associated with bill_pro_sec_id_qua_code. See bill_pro_sec_id_qua_code for more information.

Column Name: bill_prov_tax_ident_num
Column Type: varchar
Max Length: 50
'Billing Provider Tax Identification Number (2010AA-REF-02)'

Column Name: ccbhc_claim_group_code
Column Type: varchar
Max Length: 50
Field 13216: CCBHC Claim Grouping

Column Name: ccbhc_claim_group_value
Column Type: varchar
Max Length: 50
Field 13216: CCBHC Claim Grouping

Column Name: claim_freq_2300clm
Column Type: varchar
Max Length: 50
'Claim Frequency Code (2300-CLM-05-3) Override'

Column Name: claim_freq_2300clm_value
Column Type: varchar
Max Length: 250
The description associated with claim_freq_2300clm. See claim_freq_2300clm for more information.

Column Name: claim_note_ref_code
Column Type: varchar
Max Length: 50
'Claim Note Reference Code (837I-2300-NTE-01)'

Column Name: claim_note_ref_value
Column Type: varchar
Max Length: 250
The description associated with claim_note_ref_code. See claim_note_ref_code for more information.

Column Name: claim_note_text

Column Type: varchar
Max Length: 50
'Claim Note Text (837I-2300-NTE-02)'

Column Name: claim_or_enc_indic_code
Column Type: varchar
Max Length: 50
'Claim or Encounter Indicator (BHT-06)'

Column Name: claim_or_enc_indic_value
Column Type: varchar
Max Length: 250
The description associated with claim_or_enc_indic_code. See claim_or_enc_indic_code for more information.

Column Name: clm_adj_grp_cas_code
Column Type: varchar
Max Length: 50
'Claim Adjustment Group Code (2320-CAS-01)'

Column Name: clm_adj_grp_cas_val
Column Type: varchar
Max Length: 30
The description associated with clm_adj_grp_cas_code. See clm_adj_grp_cas_code for more information.

Column Name: clm_adj_reas_cas_code
Column Type: varchar
Max Length: 50
'Claim Adjustment Reason Code (2320-CAS-02)'

Column Name: clm_adj_reas_cas_val
Column Type: varchar
Max Length: 250
The description associated with clm_adj_reas_cas_code. See clm_adj_reas_cas_code for more information.

Column Name: clm_hi_cond_for_npy_code
Column Type: varchar
Max Length: 50
'2300-HI:Condition Information-2 (No-Pay ##0 Claims)'

Column Name: clm_hi_cond_for_npy_value
Column Type: varchar
Max Length: 4096
The description associated with clm_hi_cond_for_npy_code. See clm_hi_cond_for_npy_code for more information.

Column Name: clm_id_ovrride_code
Column Type: varchar
Max Length: 50
'Claim Submitter Identifier / Patient Account Number Override (2300-CLM-01)'

Column Name: clm_id_override_value

Column Type: varchar

Max Length: 250

The description associated with clm_id_override_code. See clm_id_override_code for more information.

Column Name: clm_rd8_check_code

Column Type: varchar

Max Length: 50

'Express Claim Statement Dates In RD8 (CCYYMMDD-CCYYMMDD) Format'

Column Name: clm_rd8_check_value

Column Type: varchar

Max Length: 250

The description associated with clm_rd8_check_code. See clm_rd8_check_code for more information.

Column Name: clm_statement_date_code

Column Type: varchar

Max Length: 50

'Date To Use In Claim Statement To Date (2300-DTP)'

Column Name: clm_statement_date_value

Column Type: varchar

Max Length: 250

The description associated with clm_statement_date_code. See clm_statement_date_code for more information.

Column Name: cob_2320_allowd_amt_code

Column Type: varchar

Max Length: 50

'Amount To Display (2320-AMT:Total Allowed Amount-02)'

Column Name: cob_2320_allowd_amt_value

Column Type: varchar

Max Length: 250

The description associated with cob_2320_allowd_amt_code. See cob_2320_allowd_amt_code for more information.

Column Name: cob_fin_cls_code

Column Type: varchar

Max Length: 50

'Enable Coordination Of Benefits (COB) Allowed Amount (2320-AMT) For The Following Financial Class(es)'

Column Name: cob_fin_cls_value

Column Type: varchar

Max Length: 250

The description associated with cob_fin_cls_code. See cob_fin_cls_code for more information.

Column Name: compile_as_op_code

Column Type: varchar

Max Length: 50

'Compile As Outpatient Bill Type If There Are No Room And Board Charges Included'

Column Name: compile_as_op_value

Column Type: varchar

Max Length: 250

The description associated with compile_as_op_code. See compile_as_op_code for more information.

Column Name: contains_errors

Column Type: varchar

Max Length: 50

The errors that occurred for the import.

Column Name: contract_code

Column Type: varchar

Max Length: 50

'Contract Code (2400-CN1-04)'

Column Name: contract_type_code

Column Type: varchar

Max Length: 50

'Contract Type Code (2400-CN1-01)'

Column Name: contract_type_value

Column Type: varchar

Max Length: 250

The description associated with contract_type_code. See contract_type_code for more information.

Column Name: copract_note_ref_code

Column Type: varchar

Max Length: 50

'Use Co-Practitioner Note Reference Code and Text'

Column Name: copract_note_ref_value

Column Type: varchar

Max Length: 250

The description associated with copract_note_ref_code. See copract_note_ref_code for more information.

Column Name: cpt_by_rev_code

Column Type: varchar

Max Length: 50

'Only Include HCPCS For The Following Revenue Code(s): (HCPCS Will Be Required For Item(s) Selected)'

Column Name: cpt_by_rev_code_desc

Column Type: varchar

Max Length: 2000

The description associated with cpt_by_rev_code. See cpt_by_rev_code for more information.

Column Name: d8_date_format_code

Column Type: varchar

Max Length: 50

'If The Begin/From Date Is The Same As The End/To Date In A DTP Segment That Supports D8 (CCYYMMDD) And RD8(CCYYMMDD-CCYYMMDD) Formats, Do You Want To Express The Date Range In The D8 (CCYYMMDD) Format?'

Column Name: d8_date_format_value

Column Type: varchar

Max Length: 250

The description associated with d8_date_format_code. See d8_date_format_code for more information.

Column Name: def_cost_svc_units_code

Column Type: varchar

Max Length: 50

'Default Cost of Service/Units (2400-HCP-02/11/12)'

Column Name: def_cost_svc_units_value

Column Type: varchar

Max Length: 50

The description associated with def_cost_svc_units_code. See def_cost_svc_units_code for more information.

Column Name: def_tot_clm_chg_amt_code

Column Type: varchar

Max Length: 50

'Default Total Claim Charge Amount (2300-HCP-02)'

Column Name: def_tot_clm_chg_amt_value

Column Type: varchar

Max Length: 50

The description associated with def_tot_clm_chg_amt_code. See def_tot_clm_chg_amt_code for more information.

Column Name: demon_project_ident

Column Type: varchar

Max Length: 50

'Demonstration Project Identifier (2300-REF-02)'

Column Name: discharge_hour

Column Type: varchar

Max Length: 50

'Discharge Hour (2300-DTP)'

Column Name: dis_oth_subs_prim_id_code

Column Type: varchar

Max Length: 50

'Specify Information To Display In Other Subscriber Primary ID (2330A-NM1-09)'

Column Name: dis_oth_subs_prim_id_value

Column Type: varchar

Max Length: 250

The description associated with `dis_oth_subs_prim_id_code`. See `dis_oth_subs_prim_id_code` for more information.

Column Name: `disp_clia_num_code`

Column Type: `varchar`

Max Length: 50

'Display CLIA Number In NTE Segment At Claim Level'

Column Name: `disp_clia_num_value`

Column Type: `varchar`

Max Length: 250

The description associated with `disp_clia_num_code`. See `disp_clia_num_code` for more information.

Column Name: `disp_codes_for_hipaa_code`

Column Type: `varchar`

Max Length: 50

'Display Codes/Values For HIPAA'

Column Name: `disp_codes_for_hipaa_value`

Column Type: `varchar`

Max Length: 250

The description associated with `disp_codes_for_hipaa_code`. See `disp_codes_for_hipaa_code` for more information.

Column Name: `disp_nte_clm_code`

Column Type: `varchar`

Max Length: 50

'Display NTE Segment At Claim Level'

Column Name: `disp_nte_clm_value`

Column Type: `varchar`

Max Length: 250

The description associated with `disp_nte_clm_code`. See `disp_nte_clm_code` for more information.

Column Name: `disp_opayer_amt_code`

Column Type: `varchar`

Max Length: 50

'Amount To Display (2320-AMT:Other Payer Patient Paid Amount-02)'

Column Name: `disp_opayer_amt_value`

Column Type: `varchar`

Max Length: 250

The description associated with `disp_opayer_amt_code`. See `disp_opayer_amt_code` for more information.

Column Name: `disp_zero_amt_code`

Column Type: `varchar`

Max Length: 50

'Suppress AMT Segments When AMT-02 Is Zero'

Column Name: `disp_zero_amt_value`

Column Type: varchar

Max Length: 250

The description associated with disp_zero_amt_code. See disp_zero_amt_code for more information.

Column Name: enable_daily_clm_code

Column Type: varchar

Max Length: 50

'Enable Daily Claim Logic'

Column Name: enable_daily_clm_value

Column Type: varchar

Max Length: 50

The description associated with enable_daily_clm_code. See enable_daily_clm_code for more information.

Column Name: enb_dem_proj_ident_code

Column Type: varchar

Max Length: 50

'Enable Demonstration Project Identifier (2300-REF)'

Column Name: enb_dem_proj_ident_value

Column Type: varchar

Max Length: 50

The description associated with enb_dem_proj_ident_code. See enb_dem_proj_ident_code for more information.

Column Name: enb_drug_ident_code

Column Type: varchar

Max Length: 50

'Enable Drug Identification (2410)'

Column Name: enb_drug_ident_value

Column Type: varchar

Max Length: 250

The description associated with enb_drug_ident_code. See enb_drug_ident_code for more information.

Column Name: enb_using_drg_code

Column Type: varchar

Max Length: 50

'Enable Using DRG Code In 2300-HI-Diagnosis Related Group (DRG) Information'

Column Name: enb_using_drg_value

Column Type: varchar

Max Length: 50

The description associated with enb_using_drg_code. See enb_using_drg_code for more information.

Column Name: enfst_bill_dt_code

Column Type: varchar

Max Length: 50

'Enable First Billing Date Logic'

Column Name: en_fst_bill_dt_value

Column Type: varchar

Max Length: 250

The description associated with en_fst_bill_dt_code. See en_fst_bill_dt_code for more information.

Column Name: exclud_maint_for_npy_code

Column Type: varchar

Max Length: 50

'Exclude entries from the 'UB-92/UB-04/837I Billing Maintenance Screen' when generating No-Pay ##0 Claims'

Column Name: exclud_maint_for_npy_value

Column Type: varchar

Max Length: 50

The description associated with exclud_maint_for_npy_code. See exclud_maint_for_npy_code for more information.

Column Name: ext_char_set_code

Column Type: varchar

Max Length: 50

'Allow Extended Character Set In Data'

Column Name: ext_char_set_value

Column Type: varchar

Max Length: 250

The description associated with ext_char_set_code. See ext_char_set_code for more information.

Column Name: fac_id

Column Type: varchar

Max Length: 50

'Facility Identification Code (2310E-NM1-09)'

Column Name: fac_id_qua_code

Column Type: varchar

Max Length: 50

'Facility Identification Code Qualifier (2310E-NM1-08)'

Column Name: fac_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with fac_id_qua_code. See fac_id_qua_code for more information.

Column Name: fac_ind_2310E_disp_cd

Column Type: varchar

Max Length: 50

Field 12649: Facility Identification Code information to display in 2310E-NM1-09

Column Name: fac_ind_2310E_disp_val

Column Type: varchar

Max Length: 50

Field 12649: Facility Identification Code information to display in 2310E-NM1-09

Column Name: fac_ref_id
Column Type: varchar
Max Length: 50
'Facility Reference Identification (2310E-REF-02)'

Column Name: fac_ref_id_2
Column Type: varchar
Max Length: 50
'Facility Reference Identification - 2 (2310E-REF-02)'

Column Name: fac_ref_id_3
Column Type: varchar
Max Length: 50
'Facility Reference Identification - 3 (2310E-REF-02)'

Column Name: fac_ref_id_q_2_code
Column Type: varchar
Max Length: 50
'Facility Reference Identification Qualifier - 2 (2310E-REF-01)'

Column Name: fac_ref_id_q_2_value
Column Type: varchar
Max Length: 250
The description associated with fac_ref_id_q_2_code. See fac_ref_id_q_2_code for more information.

Column Name: fac_ref_id_q_3_code
Column Type: varchar
Max Length: 50
'Facility Reference Identification Qualifier - 3 (2310E-REF-01)'

Column Name: fac_ref_id_q_3_value
Column Type: varchar
Max Length: 250
The description associated with fac_ref_id_q_3_code. See fac_ref_id_q_3_code for more information.

Column Name: fac_ref_id_qua_code
Column Type: varchar
Max Length: 50
'Facility Reference Identification Qualifier (2310E-REF-01)'

Column Name: fac_ref_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with fac_ref_id_qua_code. See fac_ref_id_qua_code for more information.

Column Name: filetype
Column Type: integer
The file type associated with the import.

Column Name: fin_cls_override_code
Column Type: varchar
Max Length: 1
'Financial Classes To Override Other Payer Information (2330B)'

Column Name: fin_cls_override_value
Column Type: varchar
Max Length: 250
The description associated with fin_cls_override_code. See fin_cls_override_code for more information.

Column Name: gen_2310c_loop_code
Column Type: varchar
Max Length: 50
'Select Type Of Information To Include In Loop 2310C'

Column Name: gen_2310c_loop_value
Column Type: varchar
Max Length: 250
The description associated with gen_2310c_loop_code. See gen_2310c_loop_code for more information.

Column Name: gs_time_format_code
Column Type: varchar
Max Length: 50
'Time Format (GS-05)'

Column Name: gs_time_format_value
Column Type: varchar
Max Length: 250
The description associated with gs_time_format_code. See gs_time_format_code for more information.

Column Name: ident_qual_code
Column Type: varchar
Max Length: 50
'Pay-to Provider Identification Code Qualifier (2010AB-NM1-08)'

Column Name: ident_qual_value
Column Type: varchar
Max Length: 250
The description associated with ident_qual_code. See ident_qual_code for more information.

Column Name: inc_bill_guarin_other_subscriber
Column Type: varchar
Max Length: 50
'Include Billing Guarantor In Other Subscriber Information'

Column Name: inc_bill_guarin_other_subscriber_val
Column Type: varchar
Max Length: 250

The description associated with inc_bill_guarin_other_subscriber. See inc_bill_guarin_other_subscriber for more information.

Column Name: inc_dis_dt_2300_dtp_code

Column Type: varchar

Max Length: 50

'Include Discharge Date In Statement To Date (2300-DTP)'

Column Name: inc_dis_dt_2300_dtp_value

Column Type: varchar

Max Length: 50

The description associated with inc_dis_dt_2300_dtp_code. See inc_dis_dt_2300_dtp_code for more information.

Column Name: incld_pat_rem_liab_code

Column Type: varchar

Max Length: 50

'Select Type Of Information To Include In Patient Remaining Liability'

Column Name: incld_pat_rem_liab_value

Column Type: varchar

Max Length: 200

The description associated with incld_pat_rem_liab_code. See incld_pat_rem_liab_code for more information.

Column Name: include_clm_adj_code

Column Type: varchar

Max Length: 50

'Include Claim Level Adjustments (2320-CAS: Claim Level Adjustments)'

Column Name: include_clm_adj_value

Column Type: varchar

Max Length: 250

The description associated with include_clm_adj_code. See include_clm_adj_code for more information.

Column Name: include_dis_date_code

Column Type: varchar

Max Length: 50

'Include Discharge Date In Occurrence Information (2300-HI:Occurrence Information-01)'

Column Name: include_dis_date_value

Column Type: varchar

Max Length: 250

The description associated with include_dis_date_code. See include_dis_date_code for more information.

Column Name: include_poa_code

Column Type: varchar

Max Length: 50

'Include Present On Admission Indicator? (2300-K3-01)'

Column Name: include_poa_value

Column Type: varchar

Max Length: 250

The description associated with include_poa_code. See include_poa_code for more information.

Column Name: include_remit_date_code

Column Type: varchar

Max Length: 50

'Include Remittance Date (2330B-DTP-03/2430-DTP-03)'

Column Name: include_remit_date_value

Column Type: varchar

Max Length: 50

The description associated with include_remit_date_code. See include_remit_date_code for more information.

Column Name: include_svc_adj_code

Column Type: varchar

Max Length: 50

'Include Service Level Adjudication Information (2430)'

Column Name: include_svc_adj_value

Column Type: varchar

Max Length: 250

The description associated with include_svc_adj_code. See include_svc_adj_code for more information.

Column Name: include_unauth_code

Column Type: varchar

Max Length: 50

'Include Un-Authorized Services (2300-REF-02)'

Column Name: include_unauth_value

Column Type: varchar

Max Length: 250

The description associated with include_unauth_code. See include_unauth_code for more information.

Column Name: inc_ncvrldamt_insvc_code

Column Type: varchar

Max Length: 50

'Include Billable Leave Days Charge Amount(2400-SV2-07) in the Service Line Charge Amount(2400-SV2-03)
(Include Billable Leave Amt In Svc Amt)'

Column Name: inc_ncvrldamt_insvc_value

Column Type: varchar

Max Length: 50

The description associated with inc_ncvrldamt_insvc_code. See inc_ncvrldamt_insvc_code for more information.

Column Name: inc_pmts_cas_code

Column Type: varchar

Max Length: 1

'Include Prior Payer Paid Amount In Claim Level Adjustments/Service Level Adjustments (2320/2430-CAS)'

Column Name: inc_pmts_cas_value

Column Type: varchar

Max Length: 10

The description associated with inc_pmts_cas_code. See inc_pmts_cas_code for more information.

Column Name: inc_repic_rec_date_code

Column Type: varchar

Max Length: 50

'Include Repricer Received Date (2300-DTP)'

Column Name: inc_repic_rec_date_value

Column Type: varchar

Max Length: 50

The description associated with inc_repic_rec_date_code. See inc_repic_rec_date_code for more information.

Column Name: inc_subs_pol_num_ovrd

Column Type: varchar

Max Length: 50

'Include Subscriber Policy Number Override In:'

Column Name: inc_subs_pol_num_ovrd_value

Column Type: varchar

Max Length: 250

The description associated with inc_subs_pol_num_ovrd. See inc_subs_pol_num_ovrd for more information.

Column Name: inc_svc_line_date_code

Column Type: varchar

Max Length: 50

'Include Service Line Date (2400-DTP) for Inpatient Services'

Column Name: inc_svc_line_date_value

Column Type: varchar

Max Length: 50

The description associated with inc_svc_line_date_code. See inc_svc_line_date_code for more information.

Column Name: inc_trans_cas_code

Column Type: varchar

Max Length: 50

'Include Transfers In Claim Level Adjustments/Service Level Adjustments (2320/2430-CAS)'

Column Name: inc_trans_cas_value

Column Type: varchar

Max Length: 250

The description associated with inc_trans_cas_code. See inc_trans_cas_code for more information.

Column Name: info_in_2010ba_ref_code

Column Type: varchar

Max Length: 50

'Specify Information To Include in Subscriber Secondary ID Information (2010BA-REF) - Report Only'

Column Name: info_in_2010ba_ref_value

Column Type: varchar

Max Length: 50

The description associated with info_in_2010ba_ref_code. See info_in_2010ba_ref_code for more information.

Column Name: info_in_k3_code

Column Type: varchar

Max Length: 50

Column Name: info_in_k3_value

Column Type: varchar

Max Length: 250

The description associated with race_ethnicity_ssn.

Column Name: info_oth_pyr_sec_id_code

Column Type: varchar

Max Length: 50

Specify Information To Display In Other Payer Secondary Identification # (2330B-REF-02)

Column Name: info_oth_pyr_sec_id_value

Column Type: varchar

Max Length: 250

The description associated with info_oth_pyr_sec_id_code. See info_oth_pyr_sec_id_code for more information.

Column Name: int_rece_id

Column Type: varchar

Max Length: 50

'Interchange Receiver ID (ISA-08)'

Column Name: int_rece_id_qua_code

Column Type: varchar

Max Length: 50

'Interchange Receiver ID Qualifier (ISA-07)'

Column Name: int_rece_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with int_rece_id_qua_code. See int_rece_id_qua_code for more information.

Column Name: int_send_id

Column Type: varchar

Max Length: 50

'Interchange Sender ID (ISA-06)'

Column Name: int_send_id_qua_code

Column Type: varchar

Max Length: 50

'Interchange Sender ID Qualifier (ISA-05)'

Column Name: int_send_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with int_send_id_qua_code. See int_send_id_qua_code for more information.

Column Name: limit_claims_code

Column Type: varchar

Max Length: 50

'Generate One System Claim Number Per Guarantor, Program, Client, and Episode Combination'

Column Name: limit_claims_value

Column Type: varchar

Max Length: 250

The description associated with limit_claims_code. See limit_claims_code for more information.

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: max_clm_per_sub

Column Type: varchar

Max Length: 50

'Maximum Claim Information Per Subscriber Information (Maximum CLM Per Subscriber HL)'

Column Name: max_clm_per_sub_rb

Column Type: varchar

Max Length: 50

'Maximum Claim Information Per Subscriber Information For Re-Billing (Maximum CLM Per Subscriber HL)'

Column Name: max_sub_per_st

Column Type: varchar

Max Length: 50

'Maximum Subscriber Information Per Transaction (Maximum Subscriber SBR Per ST/SE)'

Column Name: max_sub_per_st_rb

Column Type: varchar

Max Length: 50

'Maximum Subscriber Information Per Transaction For Re-Billing (Maximum Subscriber SBR Per ST/SE)'

Column Name: max_svc_per_claim

Column Type: varchar

Max Length: 50

'Maximum Service Information Per Claim Information (Maximum LX Per CLM)'

Column Name: max_svc_per_clm_rb

Column Type: varchar

Max Length: 50

'Maximum Service Information Per Claim Information For Re-Billing (Maximum LX Per CLM)'

Column Name: mult_sv2_cvr_d_code

Column Type: varchar

Max Length: 50

'Create Multiple Institutional Service Line (2400-SV2) Segment (Covered and Non-Covered Charges)'

Column Name: mult_sv2_cvr_d_value

Column Type: varchar

Max Length: 50

The description associated with mult_sv2_cvr_d_code. See add_leave_rev_sort_code for more information.

Column Name: non_cov_chg_cas_code

Column Type: varchar

Max Length: 1

'Create CAS Segment For Prior Guarantor(s) For Non-Covered Charges'

Column Name: non_cov_chg_cas_value

Column Type: varchar

Max Length: 10

The description associated with non_cov_chg_cas_code. See non_cov_chg_cas_code for more information.

Column Name: non_cov_chg_int_stay_code

Column Type: varchar

Max Length: 50

'Include Non-covered Charge Amount on R&B and Ancillary Charges for Interrupted Stays'

Column Name: non_cov_chg_int_stay_val

Column Type: varchar

Max Length: 250

The description associated with non_cov_chg_int_stay_code. See non_cov_chg_int_stay_code for more information.

Column Name: noncov_chg_sv2_code

Column Type: varchar

Max Length: 50

'Include Non-Covered Charge Amount In The Service Line Non-Covered Charge Amount (2400-SV2-07) For Room & Board Services'

Column Name: noncov_chg_sv2_ip_code

Column Type: varchar

Max Length: 50

'Include Non-Covered Charge Amount In The Service Line Non-Covered Charge Amount (2400-SV2-07) For Inpatient Services'

Column Name: noncov_chg_sv2_ip_value

Column Type: varchar

Max Length: 50

The description associated with noncov_chg_sv2_ip_code. See noncov_chg_sv2_ip_code for more information.

Column Name: noncov_chg_sv2_op_code

Column Type: varchar

Max Length: 50

'Include Non-Covered Charge Amount In The Service Line Non-Covered Charge Amount (2400-SV2-07) For Outpatient Services'

Column Name: noncov_chg_sv2_op_value

Column Type: varchar

Max Length: 250

The description associated with noncov_chg_sv2_op_code. See noncov_chg_sv2_op_code for more information.

Column Name: noncov_chg_sv2_value

Column Type: varchar

Max Length: 250

'Include Non-Covered Charge Amount In The Service Line Non-Covered Charge Amount (2400-SV2-07) For Room & Board Services'

Column Name: num_days_hold_xover

Column Type: varchar

Max Length: 50

'Number of Days to Hold Billing of Crossover Claims'

Column Name: num_rev_code_digits_code

Column Type: varchar

Max Length: 50

'Specify Number Of Digits For Service Line Revenue Code (2400-SV2-01)'

Column Name: num_rev_code_digits_value

Column Type: varchar

Max Length: 250

The description associated with num_rev_code_digits_code. See num_rev_code_digits_code for more information.

Column Name: occ_span_ovr_code

Column Type: varchar

Max Length: 50

'Use Extended Dictionary Value Off Of 'Type Of Leave' To Populate Occurrence Span Code (2300-HI:Occurrence Span Information) For Leaves'

Column Name: occ_span_ovr_value

Column Type: varchar

Max Length: 250

The description associated with occ_span_ovr_code. See occ_span_ovr_code for more information.

Column Name: oth_payer_sec_id_num
Column Type: varchar
Max Length: 50
'Other Payer Secondary Identification # (2330B-REF-02)'

Column Name: oth_payr_last_or_org_name
Column Type: varchar
Max Length: 50
'Other Payer Last or Organization Name (2330B-NM1-03)'

Column Name: oth_payr_prim_ident_num
Column Type: varchar

Column Type: varchar
Max Length: 50
'Other Payer Secondary Identification Qualifier (2330B-REF-01)'

Column Name: oth_payr_sec_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with oth_payr_sec_id_qua_code. See oth_payr_sec_id_qua_code for more information.

Column Name: oth_pyr_prim_id_qua_code
Column Type: varchar
Max Length: 50
'Other Payer Primary Identification Code Qualifier (2330B-NM1-08)'

Column Name: oth_pyr_prim_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with oth_pyr_prim_id_qua_code. See oth_pyr_prim_id_qua_code for more information.

Column Name: out_clia_loop_code
Column Type: varchar
Max Length: 50
'Outsourced Lab CLIA Loop/Segment And Qualifier Location'

Column Name: out_clia_loop_value
Column Type: varchar
Max Length: 250
The description associated with out_clia_loop_code. See out_clia_loop_code for more information.

Column Name: out_clia_num_code
Column Type: varchar
Max Length: 50

'Outsourced LAB CLIA Number Code Qualifier (2300-NTE-01)'

Column Name: out_clia_num_value

Column Type: varchar

Max Length: 250

The description associated with out_clia_num_code. See out_clia_num_code for more information.

Column Name: ovd_pat_st_dis_leav_code

Column Type: varchar

Max Length: 50

'Override Patient Status Code (2300-CL1-03) For Client's Discharged On Leave'

Column Name: ovd_pat_st_dis_leav_value

Column Type: varchar

Max Length: 50

The description associated with ovd_pat_st_dis_leav_code. See ovd_pat_st_dis_leav_code for more information.

Column Name: ovd_pat_st_n_svc_rev_code

Column Type: varchar

Max Length: 50

'Override Patient Status Code (2300-CL1-03) And Service Line Revenue Code (2400-SV2-01)'

Column Name: ovd_pat_st_n_svc_rev_value

Column Type: varchar

Max Length: 250

The description associated with ovd_pat_st_n_svc_rev_code. See ovd_pat_st_n_svc_rev_code for more information.

Column Name: ovrd_fds_to_zero_code

Column Type: varchar

Max Length: 50

'Override Following Fields To Zero'

Column Name: ovrd_fds_to_zero_value

Column Type: varchar

Max Length: 90

The description associated with ovrd_fds_to_zero_code. See ovrd_fds_to_zero_code for more information.

Column Name: ovr_occ_date_code

Column Type: varchar

Max Length: 50

'Specify Occurrence Span Through Date (2300-HI:Occurrence Span Information) As Last Date On Leave'

Column Name: ovr_occ_date_value

Column Type: varchar

Max Length: 250

The description associated with ovr_occ_date_code. See ovr_occ_date_code for more information.

Column Name: pat_status_code

Column Type: varchar
Max Length: 50
'Patient Status Code (2300-CL1-03)'

Column Name: pat_status_value
Column Type: varchar
Max Length: 250
The description associated with pat_status_code. See pat_status_code for more information.

Column Name: payer_sec_id_num
Column Type: varchar
Max Length: 50
'Payer Secondary Identification # (2010BC/2330B-REF-02)'

Column Name: payer_sec_id_qua_code
Column Type: varchar
Max Length: 50
'Payer Secondary Identification Qualifier (2010BC/2330B-REF-01)'

Column Name: payer_sec_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with payer_sec_id_qua_code. See payer_sec_id_qua_code for more information.

Column Name: payor_id
Column Type: varchar
Max Length: 50
'Payer Identification # (2010BC/2330B-NM1-09)'

Column Name: payor_id_qua_code
Column Type: varchar
Max Length: 50
'Payer Identification Code Qualifier (2010BC/2330B-NM1-08)'

Column Name: payor_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with payor_id_qua_code. See payor_id_qua_code for more information.

'Select Subscriber Identification Number (2010BA-NM109)'

Column Name: sgmnts_to_include_code
Column Type: varchar
Max Length: 50
'Select Segments To Include (I)'

Column Name: sgmnts_to_include_value

Column Type: varchar

Max Length: 4096

The description associated with sgmnts_to_include_code. See sgmnts_to_include_code for more information.

Column Name: skip_loop_seg_code

Column Type: varchar

Max Length: 50

'If The Loop/Segment Information At The Service Level Is The Same As The Loop/Segment Information At The Claim Level (e.g. Service Facility Location Loop), Do You Want The Loop/Segment At The Service Level To Be Skipped?'

Column Name: skip_loop_seg_value

Column Type: varchar

Max Length: 250

The description associated with skip_loop_seg_code. See skip_loop_seg_code for more information.

Column Name: sort_claims_by_code

Column Type: varchar

Max Length: 50

'Sort Claims By'

Column Name: sort_claims_by_value_long

Column Type: varchar

Max Length: 4096

The long description associated with sort_claims_by_code. See sort_claims_by_code for more information.

Column Name: sort_claims_by_value_sh

Column Type: varchar

Max Length: 255

The short description associated with sort_claims_by_code. See sort_claims_by_code for more information.

Column Name: sort_clms_by_month_code

Column Type: varchar

Max Length: 50

'Sort Claims by Month'

Column Name: sort_clms_by_month_value

Column Type: varchar

Max Length: 50

The description associated with sort_clms_by_month_code. See sort_clms_by_month_code for more information.

Column Name: spec_prog_ind_code

Column Type: varchar

Max Length: 50

'Special Program Indicator Code (2300-CLM-12)'

Column Name: spec_prog_ind_value

Column Type: varchar

Max Length: 250

The description associated with spec_prog_ind_code. See spec_prog_ind_code for more information.

Column Name: srtclm_medrtcd_code

Column Type: varchar

Max Length: 50

'Sort Claim By Medicaid Rate Code'

Column Name: srtclm_medrtcd_value

Column Type: varchar

Max Length: 250

The description associated with srtclm_medrtcd_code. See srtclm_medrtcd_code for more information.

Column Name: submitter_contact_name

Column Type: varchar

Max Length: 50

'Submitter Contact Name (1000A-PER-02)'

Column Name: submitter_name

Column Type: varchar

Max Length: 50

'Submitter Name (1000A-NM1-03)'

Column Name: submitter_telephone

Column Type: varchar

Max Length: 50

'Submitter Telephone Number (1000A-PER-04)'

Column Name: sub_primary_id_num

Column Type: varchar

Max Length: 50

'Submitter Primary Identification # (1000A-NM1-09)'

Column Name: supp_adm_date_diag_code

Column Type: varchar

Max Length: 1

'Suppress Admission Date/Hour (2300-DTP) and Admitting Diagnosis (2300-HI) For The Following Claim Frequency Codes:'

Column Name: supp_adm_date_diag_value

Column Type: varchar

Max Length: 250

The description associated with supp_adm_date_diag_code. See supp_adm_date_diag_code for more information.

Column Name: sup_phys_mid_name_code

Column Type: varchar

Max Length: 50

'Suppress Attending Physician Middle Name (2310A/2420A-NM1-05)'

Column Name: sup_phys_mid_name_value

Column Type: varchar

Max Length: 250

The description associated with sup_phys_mid_name_code. See sup_phys_mid_name_code for more information.

Column Name: supp_lea_sv2_no_pay_code

Column Type: varchar

Max Length: 50

'Suppress Non-Billable Leave Days Charge Amount (2400-SV2-07) (No-Pay ##0 Claims)'

Column Name: supp_lea_sv2_no_pay_value

Column Type: varchar

Max Length: 50

The description associated with supp_lea_sv2_no_pay_code. See supp_lea_sv2_no_pay_code for more information.

Column Name: supp_non_bill_leave_code

Column Type: varchar

Max Length: 50

'Suppress Non-Billable Leaves'

Column Name: supp_non_bill_leave_value

Column Type: varchar

Max Length: 250

The description associated with supp_non_bill_leave_code. See supp_non_bill_leave_code for more information.

Column Name: supp_opayer_amt_code

Column Type: varchar

Max Length: 50

'Suppress Payer Paid Amount (2320-AMT)'

Column Name: supp_opayer_amt_value

Column Type: varchar

Max Length: 250

The description associated with supp_opayer_amt_code. See supp_opayer_amt_code for more information.

Column Name: suppress_leave_sv2_code

Column Type: varchar

Max Length: 50

'Suppress Non-Billable Leave Days Charge Amount (2400-SV2-07)'

Column Name: suppress_leave_sv2_value

Column Type: varchar

Max Length: 50

The description associated with suppress_leave_sv2_code. See suppress_leave_sv2_code for more information.

Column Name: suppress_zero_cas_code

Column Type: varchar
Max Length: 50
'Suppress Claim Level Adjustments/Service Level Adjustments When Total Is Zero'

Column Name: suppress_zero_cas_value
Column Type: varchar
Max Length: 50
The description associated with suppress_zero_cas_code. See suppress_zero_cas_code for more information.

Column Name: suppress_zero_day_code
Column Type: varchar
Max Length: 50
'Suppress Non-Covered Days (2300-HI) If Non-Covered Days Are Zero'

Column Name: suppress_zero_day_value
Column Type: varchar
Max Length: 50
The description associated with suppress_zero_day_code. See suppress_zero_day_code for more information.

Column Name: sup_ren_prov_enroll_code
Column Type: varchar
Max Length: 50
'Suppress Rendering Provider Name if Practitioner is Not Required to be Enrolled with Guarantor (2310D/2420C)'

Column Name: sup_ren_prov_enroll_value
Column Type: varchar
Max Length: 250
The description associated with sup_ren_prov_enroll_code. See sup_ren_prov_enroll_code for more information.

Column Name: sup_serv_fac_name_code
Column Type: varchar
Max Length: 50
'Suppress Service Facility Name (2310E)'

Column Name: sup_serv_fac_name_value
Column Type: varchar
Max Length: 250
The description associated with sup_serv_fac_name_code. See sup_serv_fac_name_code for more information.

Column Name: svc_clm_not_dis_code
Column Type: varchar
Max Length: 50
'If A Service Is Specified To Be Claimed But Not Displayed On The 837 File, Then Do You Want The Service To Be Claimed But Not Displayed On The 837 File?'

Column Name: svc_clm_not_dis_value

Column Type: varchar

Max Length: 250

The description associated with svc_clm_not_dis_code. See svc_clm_not_dis_code for more information.

Column Name: svc_prv_as_attend_code

Column Type: varchar

Max Length: 50

'Specify Rendering Practitioner As Attending Practitioner In Loop 2310A (Attending Physician Name)'

Column Name: svc_prv_as_attend_value

Column Type: varchar

Max Length: 250

The description associated with svc_prv_as_attend_code. See svc_prv_as_attend_code for more information.

Column Name: tab_id_code

Column Type: integer

'Tab Id'

Column Name: tab_id_value

Column Type: varchar

Max Length: 50

The description associated with tab_id_code. See tab_id_code for more information.

Column Name: template_id

Column Type: varchar

Max Length: 50

'Template ID'

Column Name: template_name

Column Type: varchar

Max Length: 50

'Template Name'

Column Name: type_of_bill_code

Column Type: varchar

Max Length: 50

'Type Of Bill (First Two Digits)'

Column Name: type_of_bill_value

Column Type: varchar

Max Length: 50

The description associated with type_of_bill_code. See type_of_bill_code for more information.

Column Name: usage_ind_code

Column Type: varchar

Max Length: 50

'Usage Indicator (ISA-15)'

Column Name: usage_ind_value

Column Type: varchar

Max Length: 250

The description associated with usage_ind_code. See usage_ind_code for more information.

Column Name: use_adm_pgm_code

Column Type: varchar

Max Length: 50

'If The Service Program Is Different From The Admission Program, Do You Want To Sort The Bill By Admission Program?'

Column Name: use_adm_pgm_value

Column Type: varchar

Max Length: 250

The description associated with use_adm_pgm_code. See use_adm_pgm_code for more information.

Column Name: use_att_if_notfound_code

Column Type: varchar

Max Length: 50

'Specify How Attending Provider Information Should Be Populated'

Column Name: use_att_if_notfound_value

Column Type: varchar

Max Length: 250

The description associated with use_att_if_notfound_code. See use_att_if_notfound_code for more information.

Column Name: xover_guar_code

Column Type: varchar

Max Length: 50

'Select Guarantor(s) Responsible For Crossover Claim Submission'

Column Name: xover_guar_value

Column Type: varchar

Max Length: 2000

The description associated with xover_guar_code. See xover_guar_code for more information.

Column Name: zero_dol_svc_code

Column Type: varchar

Max Length: 50

'Include Zero Dollar Services'

Column Name: zero_dol_svc_nopay_code

Column Type: varchar

Max Length: 50

'Include Zero Dollar Services In No-Pay ##0 Claims'

Column Name: zero_dol_svc_nopay_value

Column Type: varchar

Max Length: 50

The description associated with zero_dol_svc_code. See zero_dol_svc_code for more information.

Column Name: zero_dol_svc_value

Column Type: varchar

Max Length: 250

The description associated with zero_dol_svc_code. See zero_dol_svc_code for more information.

Column Name: zerofill_logic_code

Column Type: varchar

Max Length: 50

'Enable 'Cost Avoidance Override/Zero Fill' Logic (2000B-SBR-04)'

Column Name: zerofill_logic_value

Column Type: varchar

Max Length: 250

The description associated with zerofill_logic_code. See zerofill_logic_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_gpbd_t_p837

Table Description: This table returns the information stored in the 'File Import' form for the '837 Professional' section of the 'Guarantor/Program Billing Defaults Template' selection.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: EPSDT_referral_code

Column Type: varchar

Max Length: 50

'EPSDT Referral (2300-CRC)'

Column Name: EPSDT_referral_value

Column Type: varchar

Max Length: 250

The description associated with EPSDT_referral_code. See EPSDT_referral_code for more information.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FILE_ID

Column Type: integer

The file ID associated with the import.

Column Name: ack_requested_code
Column Type: varchar
Max Length: 50
'Acknowledgment Requested (ISA-14)'

Column Name: ack_requested_value
Column Type: varchar
Max Length: 250
The description associated with ack_requested_code. See ack_requested_code for more information.

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
'Add/Edit'

Column Name: add_edit_value
Column Type: varchar
Max Length: 250
The description associated with add_edit_code. See add_edit_code for more information.

Column Name: allow_period_code
Column Type: varchar
Max Length: 50
'Allow Periods In Diagnosis Codes (837P)'

Column Name: allow_period_value
Column Type: varchar
Max Length: 250
The description associated with allow_period_code. See allow_period_code for more information.

Column Name: amount_to_display
Column Type: varchar
Max Length: 50
'Amount To Display (2320-AMT:Patient Responsibility Amount-02)'

Column Name: app_receiver_code
Column Type: varchar
Max Length: 50
'Application Receiver's Code (GS-03)'

Column Name: approved_amt_code
Column Type: varchar
Max Length: 50
'Approved Amount (2400-AMT-02)'

Column Name: approved_amt_value
Column Type: varchar
Max Length: 250
The description associated with approved_amt_code. See approved_amt_code for more information.

Column Name: app_sender_code
Column Type: varchar
Max Length: 50
'Application Sender's Code (GS-02)'

Column Name: auth_info
Column Type: varchar
Max Length: 50
'Authorization Information (ISA-02)'

Column Name: auth_info_qua_code
Column Type: varchar
Max Length: 50
'Authorization Information Qualifier (ISA-01)'

Column Name: auth_info_qua_value
Column Type: varchar
Max Length: 250
The description associated with auth_info_qua_code. See auth_info_qua_code for more information.

Column Name: bill_comp_svcs_code
Column Type: varchar
Max Length: 50
'Bill Component Services When A Roll Up Service Is Found'

Column Name: bill_comp_svcs_value
Column Type: varchar
Max Length: 250
The description associated with bill_comp_svcs_code. See bill_comp_svcs_code for more information.

Column Name: bill_pr_first_name
Column Type: varchar
Max Length: 50
'Billing Provider First Name (2010AA-NM1-04)'

Column Name: bill_pr_mid_name
Column Type: varchar
Max Length: 50
'Billing Provider Middle Name (2010AA-NM1-05)'

Column Name: bill_prov_sec_id
Column Type: varchar
Max Length: 50
Billing Provider Secondary Identification Number

Column Name: bill_prov_sec_id_qua_code
Column Type: varchar
Max Length: 50
Billing Provider Secondary Identification Code Qualifier

Column Name: bill_prov_sec_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with bill_prov_sec_id_qua_code. See bill_prov_sec_id_qua_code for more information.

Column Name: bill_pr_suffix

Column Type: varchar

Max Length: 50

'Billing Provider Name Suffix (2010AA-NM1-07)'

Column Name: calc_hi_per_svc_clm_code

Column Type: varchar

Max Length: 50

'When Generating A Medical Diagnosis Bill, If 'Maximum Service Information Per Claim Information (Maximum LX Per CLM)' Is Set To "1" And No Diagnosis Information Is Specified In The 'Medical Diagnosis' Option, Then Should The Health Care Diagnosis Code (2300-HI) Segment Be Populated With Only The Medical Diagnosis Associated With The Particular Service And CLM?'

Column Name: calc_hi_per_svc_clm_value

Column Type: varchar

Max Length: 250

The description associated with calc_hi_per_svc_clm_code. See bill_prov_sec_id_qua_code for more information.

Column Name: ccbhc_claim_group_code

Column Type: varchar

Max Length: 50

Field 12049: CCBHC Claim Grouping

Column Name: ccbhc_claim_group_value

Column Type: varchar

Max Length: 50

Field 12049: CCBHC Claim Grouping

Column Name: claim_note_alt_code

Column Type: varchar

Max Length: 50

Claim Note Text (837P-2300-NTE-02) Alternate Value

Column Name: claim_note_alt_value

Column Type: varchar

Max Length: 50

The description associated with claim_note_alt_code. See claim_note_alt_code for more information.

Column Name: claim_note_ref_code

Column Type: varchar

Max Length: 50

'Claim Note Reference Code (837P-2300-NTE-01)'

Column Name: claim_note_ref_value

Column Type: varchar

Max Length: 250

The description associated with claim_note_ref_code. See claim_note_ref_code for more information.

Column Name: claim_note_text

Column Type: varchar

Max Length: 50

'Claim Note Text (837P-2300-NTE-02)'

Column Name: claim_or_enc_indic_code

Column Type: varchar

Max Length: 50

'Claim or Encounter Indicator (BHT-06)'

Column Name: claim_or_enc_indic_value

Column Type: varchar

Max Length: 250

The description associated with claim_or_enc_indic_code. See claim_or_enc_indic_code for more information.

Column Name: clm_adj_grp_cas_code

Column Type: varchar

Max Length: 50

'Claim Adjustment Group Code (2320-CAS-01)'

Column Name: clm_adj_grp_cas_val

Column Type: varchar

Max Length: 30

The description associated with clm_adj_grp_cas_code. See clm_adj_grp_cas_code for more information.

Column Name: clm_adj_reas_cas_code

Column Type: varchar

Max Length: 50

'Claim Adjustment Reason Code (2320-CAS-02)'

Column Name: clm_adj_reas_cas_val

Column Type: varchar

Max Length: 250

The description associated with clm_adj_reas_cas_code. See clm_adj_reas_cas_code for more information.

Column Name: clm_id_override_code

Column Type: varchar

Max Length: 50

'Claim Submitter Identifier / Patient Account Number Override (2300-CLM-01)'

Column Name: clm_id_override_value

Column Type: varchar

Max Length: 250

The description associated with clm_id_override_code. See clm_id_override_code for more information.

Column Name: clm_id_suffix_code
Column Type: varchar
Max Length: 50
'Claim Submitter Identifier / Patient Account Number Suffix (2300-CLM-01)'

Column Name: clm_id_suffix_value
Column Type: varchar
Max Length: 250
The description associated with clm_id_suffix_code. See clm_id_suffix_code for more information.

Column Name: clm_sort_code
Column Type: varchar
Max Length: 50
'Sort Claim Information By Treatment String Values'

Column Name: clm_sort_value
Column Type: varchar
Max Length: 250
The description associated with clm_sort_code. See clm_sort_code for more information.

Column Name: cob_2320_apprvd_amt_code
Column Type: varchar
Max Length: 50
'Amount To Display (2320-AMT:Approved Amount-02)'

Column Name: cob_2320_apprvd_amt_value
Column Type: varchar
Max Length: 250
The description associated with cob_2320_apprvd_amt_code. See cob_2320_apprvd_amt_code for more information.

Column Name: cob_fin_cls_code
Column Type: varchar
Max Length: 50
'Enable Coordination Of Benefits (COB) Allowed Amount (2320-AMT) For The Following Financial Class(es)'

Column Name: cob_fin_cls_value
Column Type: varchar
Max Length: 250
The description associated with cob_fin_cls_code. See cob_fin_cls_code for more information.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
The errors that occurred for the import.

Column Name: contract_2300_rep_code
Column Type: varchar
Max Length: 50

'Contract Code (2300-CN1-04) - Report Only'

Column Name: contract_2400_code

Column Type: varchar

Max Length: 50

'Contract Code (2400-CN1-04)'

Column Name: contract_2400_rep_code

Column Type: varchar

Max Length: 50

'Contract Code (2400-CN1-04) - Report Only'

Column Name: contract_code

Column Type: varchar

Max Length: 50

'Contract Code (2300-CN1-04)'

Column Name: contract_type_2400_code

Column Type: varchar

Max Length: 50

'Contract Type Code (2400-CN1-01)'

Column Name: contract_type_2400_value

Column Type: varchar

Max Length: 250

The description associated with contract_type_2400_code. See contract_type_2400_code for more information.

Column Name: contract_type_code

Column Type: varchar

Max Length: 50

'Contract Type Code (2300-CN1-01)'

Column Name: contract_type_value

Column Type: varchar

Max Length: 250

The description associated with contract_type_code. See contract_type_code for more information.

Column Name: cont_type_2300_rep_code

Column Type: varchar

Max Length: 50

'Contract Type Code (2300-CN1-01) - Report Only'

Column Name: cont_type_2300_rep_value

Column Type: varchar

Max Length: 50

The description associated with cont_type_2300_rep_code. See cont_type_2300_rep_code for more information.

Column Name: cont_type_2400_rep_code

Column Type: varchar
Max Length: 50
'Contract Type Code (2400-CN1-01) - Report Only'

Column Name: cont_type_2400_rep_value
Column Type: varchar
Max Length: 50
The description associated with cont_type_2400_rep_code. See cont_type_2400_rep_code for more information.

Column Name: copract_note_ref_code
Column Type: varchar
Max Length: 50
'Use Co-Practitioner Note Reference Code and Text'

Column Name: copract_note_ref_value
Column Type: varchar
Max Length: 250
The description associated with copract_note_ref_code. See copract_note_ref_code for more information.

Column Name: d8_date_format_code
Column Type: varchar
Max Length: 50
'If The Begin/From Date Is The Same As The End/To Date In A DTP Segment That Supports D8 (CCYYMMDD) And RD8(CCYYMMDD-CCYYMMDD) Formats, Do You Want To Express The Date Range In The D8 (CCYYMMDD) Format?'

Column Name: d8_date_format_value
Column Type: varchar
Max Length: 250
The description associated with d8_date_format_code. See d8_date_format_code for more information.

Column Name: def_cost_svc_units_code
Column Type: varchar
Max Length: 50
'Default Cost of Service/Units (2400-HCP-02/11/12)'

Column Name: def_cost_svc_units_value
Column Type: varchar
Max Length: 50
The description associated with def_cost_svc_units_code. See def_cost_svc_units_code for more information.

Column Name: def_tot_clm_chg_amt_code
Column Type: varchar
Max Length: 50
'Default Total Claim Charge Amount (2300-HCP-02)'

Column Name: def_tot_clm_chg_amt_value
Column Type: varchar

Max Length: 50

The description associated with def_tot_clm_chg_amt_code. See def_tot_clm_chg_amt_code for more information.

Column Name: demon_project_ident

Column Type: varchar

Max Length: 50

'Demonstration Project Identifier (2300-REF-02)'

Column Name: dis_oth_subs_prim_id_code

Column Type: varchar

Max Length: 50

'Specify Information To Display In Other Subscriber Primary ID (2330A-NM1-09)'

Column Name: dis_oth_subs_prim_id_value

Column Type: varchar

Max Length: 250

The description associated with dis_oth_subs_prim_id_code. See dis_oth_subs_prim_id_code for more information.

Column Name: disp_clia_num_code

Column Type: varchar

Max Length: 50

'Include Clinical Laboratory Improvement Amendment Number'

Column Name: disp_clia_num_value

Column Type: varchar

Max Length: 250

The description associated with disp_clia_num_code. See disp_clia_num_code for more information.

Column Name: disp_clia_svc_code

Column Type: varchar

Max Length: 50

'Display Rendering/Billing CLIA Number At Service Level If No Outsourced Laboratory Is Identified'

Column Name: disp_clia_svc_value

Column Type: varchar

Max Length: 250

The description associated with disp_clia_svc_code. See disp_clia_svc_code for more information.

Column Name: disp_codes_for_hipaa_code

Column Type: varchar

Max Length: 50

'Display Codes/Values For HIPAA'

Column Name: disp_codes_for_hipaa_value

Column Type: varchar

Max Length: 250

The description associated with disp_codes_for_hipaa_code. See disp_codes_for_hipaa_code for more information.

Column Name: disp_nte_clm_code
Column Type: varchar
Max Length: 50
'Display NTE Segment At Claim Level'

Column Name: disp_nte_clm_value
Column Type: varchar
Max Length: 250
The description associated with disp_nte_clm_code. See disp_nte_clm_code for more information.

Column Name: disp_nte_svc_code
Column Type: varchar
Max Length: 50
'Display NTE Segment At Service Level'

Column Name: disp_nte_svc_value
Column Type: varchar
Max Length: 250
The description associated with disp_nte_svc_code. See disp_nte_svc_code for more information.

Column Name: disp_opayer_amt_code
Column Type: varchar
Max Length: 50
'Amount To Display (2320-AMT:Payer Patient Paid Amount-02)'

Column Name: disp_opayer_amt_value
Column Type: varchar
Max Length: 250
The description associated with disp_opayer_amt_code. See disp_opayer_amt_code for more information.

Column Name: enb_dem_proj_ident_code
Column Type: varchar
Max Length: 50
'Enable Demonstration Project Identifier (2300-REF)'

Column Name: enb_dem_proj_ident_value
Column Type: varchar
Max Length: 50
The description associated with enb_dem_proj_ident_code. See enb_dem_proj_ident_code for more information.

Column Name: enb_drug_ident_code
Column Type: varchar
Max Length: 50
'Enable Drug Identification (2410)'

Column Name: enb_drug_ident_value
Column Type: varchar
Max Length: 250

The description associated with enb_drug_ident_code. See enb_drug_ident_code for more information.

Column Name: enb_ohio_mrdd_code

Column Type: varchar

Max Length: 50

'Enable Service Level Adjudication (Loop 2430) Logic (Ohio MRDD)'

Column Name: enb_ohio_mrdd_value

Column Type: varchar

Max Length: 250

The description associated with enb_ohio_mrdd_code. See enb_ohio_mrdd_code for more information.

Column Name: en_fst_bill_dt_code

Column Type: varchar

Max Length: 50

'Enable First Billing Date Logic'

Column Name: en_fst_bill_dt_value

Column Type: varchar

Max Length: 250

The description associated with en_fst_bill_dt_code. See en_fst_bill_dt_code for more information.

Column Name: entity_bill_p_code

Column Type: varchar

Max Length: 50

'Billing Provider Entity Type Qualifier (2010AA-NM1-02)'

Column Name: entity_bill_p_value

Column Type: varchar

Max Length: 250

The description associated with entity_bill_p_code. See entity_bill_p_code for more information.

Column Name: entity_type_code

Column Type: varchar

Max Length: 50

'Pay-to Address Entity Type Qualifier'

Column Name: entity_type_value

Column Type: varchar

Max Length: 250

The description associated with entity_type_code. See entity_type_code for more information.

Column Name: ext_char_set_code

Column Type: varchar

Max Length: 50

'Allow Extended Character Set In Submission File'

Column Name: ext_char_set_value

Column Type: varchar

Max Length: 250

The description associated with ext_char_set_code. See ext_char_set_code for more information.

Column Name: fac_entity_id_code
Column Type: varchar
Max Length: 50
'Facility Entity Identifier Code'

Column Name: fac_entity_id_value
Column Type: varchar
Max Length: 250
The description associated with fac_entity_id_code. See fac_entity_id_code for more information.

Column Name: fac_id
Column Type: varchar
Max Length: 50
'Facility Identification Code'

Column Name: fac_id_qua_code
Column Type: varchar
Max Length: 50
'Facility Identification Code Qualifier'

Column Name: fac_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with fac_id_qua_code. See fac_id_qua_code for more information.

Column Name: fac_ind_2310C_2420C_disp_cd
Column Type: varchar
Max Length: 50
Field 12648: Facility Identification Code information to display in 2310C-NM1-09 and 2420-NM1-09

Column Name: fac_ind_2310C_2420C_disp_val
Column Type: varchar
Max Length: 50
Field 12648: Facility Identification Code information to display in 2310C-NM1-09 and 2420-NM1-09

Column Name: fac_ref_id
Column Type: varchar
Max Length: 50
'Facility Reference Identification'

Column Name: fac_ref_id2
Column Type: varchar
Max Length: 50
'Facility Reference Identification - 2'

Column Name: fac_ref_id3
Column Type: varchar
Max Length: 50

'Facility Reference Identification - 3 (2310E-REF-02)'

Column Name: fac_ref_id_qua_code

Column Type: varchar

Max Length: 50

'Facility Reference Identification Qualifier'

Column Name: fac_ref_id_qua_code2

Column Type: varchar

Max Length: 50

'FacilityReference Identification Qualifier - 2'

Column Name: fac_ref_id_qua_code3

Column Type: varchar

Max Length: 50

'FacilityReference Identification Qualifier - 3'

Column Name: fac_ref_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with fac_ref_id_qua_code. See fac_ref_id_qua_code for more information.

Column Name: fac_ref_id_qua_value2

Column Type: varchar

Max Length: 250

The description associated with fac_ref_id_qua_code2. See fac_ref_id_qua_code2 for more information.

Column Name: fac_ref_id_qua_value3

Column Type: varchar

Max Length: 250

The description associated with fac_ref_id_qua_code3. See fac_ref_id_qua_code3 for more information.

Column Name: file_information

Column Type: varchar

Max Length: 50

'File Information (2400-K3-01)'

Column Name: filetype

Column Type: integer

The file type associated with the import.

Column Name: fin_cls_override_code

Column Type: varchar

Max Length: 1

'Financial Classes To Override Other Payer Information (2330B)'

Column Name: fin_cls_override_value

Column Type: varchar

Max Length: 250

The description associated with fin_cls_override_code. See fin_cls_override_code for more information.

Column Name: gs_time_format_code

Column Type: varchar

Max Length: 50

'Time Format (GS-05)'

Column Name: gs_time_format_value

Column Type: varchar

Max Length: 250

The description associated with gs_time_format_code. See gs_time_format_code for more information.

Column Name: guar_appear_2010bb

Column Type: varchar

Max Length: 50

'Guarantor To Appear In Payer Name (2010BB)'

Column Name: ident_qual_code

Column Type: varchar

Max Length: 50

'Pay-to Address Identification Code Qualifier'

Column Name: ident_qual_value

Column Type: varchar

Max Length: 250

The description associated with ident_qual_code. See ident_qual_code for more information.

Column Name: inc_bill_gua_oth_sub_code

Column Type: varchar

Max Length: 50

'Include Billing Guarantor In Other Subscriber Information'

Column Name: inc_bill_gua_oth_sub_value

Column Type: varchar

Max Length: 250

The description associated with inc_bill_gua_oth_sub_code. See inc_bill_gua_oth_sub_code for more information.

Column Name: inc_guar_prog_comb_code

Column Type: varchar

Max Length: 50

'Include This Guarantor and Program Combination For Report Only Guarantors'

Column Name: inc_guar_prog_comb_value

Column Type: varchar

Max Length: 250

The description associated with inc_guar_prog_comb_code. See inc_guar_prog_comb_code for more information.

Column Name: incld_pat_rem_liab_code

Column Type: varchar

Max Length: 50

'Select Type Of Information To Include In Patient Remaining Liability'

Column Name: incld_pat_rem_liab_value

Column Type: varchar

Max Length: 200

The description associated with incld_pat_rem_liab_code. See incld_pat_rem_liab_code for more information.

Column Name: include_clm_adj_code

Column Type: varchar

Max Length: 50

'Include Claim Level Adjustments (2320-CAS: Claim Level Adjustments)'

Column Name: include_clm_adj_value

Column Type: varchar

Max Length: 250

The description associated with include_clm_adj_code. See include_clm_adj_code for more information.

Column Name: include_ref_prov_code

Column Type: varchar

Max Length: 50

'Select Type Of Information To Include In Referring Provider Name (2310A/2420F)'

Column Name: include_ref_prov_value

Column Type: varchar

Max Length: 250

The description associated with include_ref_prov_code. See include_ref_prov_code for more information.

Column Name: include_remit_date_code

Column Type: varchar

Max Length: 50

'Include Remittance Date (2330B-DTP-03/2430-DTP-03)'

Column Name: include_remit_date_value

Column Type: varchar

Max Length: 50

The description associated with include_remit_date_code. See include_remit_date_code for more information.

Column Name: include_svc_adj_code

Column Type: varchar

Max Length: 50

'Include Service Level Adjudication Information (2430)'

Column Name: include_svc_adj_value

Column Type: varchar

Max Length: 250

The description associated with include_svc_adj_code. See include_svc_adj_code for more information.

Column Name: inc_pmts_cas_code

Column Type: varchar

Max Length: 1

'Include Prior Payer Paid Amount In Claim Level Adjustments/Service Level Adjustments (2320/2430-CAS)'

Column Name: inc_pmts_cas_value

Column Type: varchar

Max Length: 10

The description associated with inc_pmts_cas_code. See inc_pmts_cas_code for more information.

Column Name: inc_repic_rec_date_code

Column Type: varchar

Max Length: 50

'Include Repricer Received Date (2300-DTP)'

Column Name: inc_repic_rec_date_value

Column Type: varchar

Max Length: 50

The description associated with inc_repic_rec_date_code. See inc_repic_rec_date_code for more information.

Column Name: inc_subs_pol_num_ovrd

Column Type: varchar

Max Length: 50

'Include Subscriber Policy Number Override In:'

Column Name: inc_subs_pol_num_ovrd_value

Column Type: varchar

Max Length: 250

The description associated with inc_subs_pol_num_ovrd. See inc_subs_pol_num_ovrd for more information.

Column Name: inc_svc_start_time_code

Column Type: varchar

Max Length: 50

'Include Service Start Time In Reference Identification (2400-REF-02)'

Column Name: inc_svc_start_time_value

Column Type: varchar

Max Length: 50

The description associated with inc_svc_start_time_code. See inc_svc_start_time_code for more information.

Column Name: inc_trans_cas_code

Column Type: varchar

Max Length: 50

'Include Transfers In Claim Level Adjustments/Service Level Adjustments (2320/2430-CAS)'

Column Name: inc_trans_cas_value

Column Type: varchar

Max Length: 250

The description associated with inc_trans_cas_code. See inc_trans_cas_code for more information.

Column Name: info_in_2010ba_ref_code

Column Type: varchar

Max Length: 50

'Specify Information To Include in Subscriber Secondary ID Information (2010BA-REF) - Report Only'

Column Name: info_in_2010ba_ref_value

Column Type: varchar

Max Length: 50

The description associated with info_in_2010ba_ref_code. See info_in_2010ba_ref_code for more information.

Column Name: info_in_2310b_code

Column Type: varchar

Max Length: 50

'Select Type Of Information To Include In Rendering Provider Name (2310B)'

Column Name: info_in_2310b_value

Column Type: varchar

Max Length: 250

The description associated with info_in_2310b_code. See info_in_2310b_code for more information.

Column Name: info_in_2420a_code

Column Type: varchar

Max Length: 50

'Select Type Of Information To Include In Rendering Provider Name (2420A)'

Column Name: info_in_2420a_value

Column Type: varchar

Max Length: 250

The description associated with info_in_2420_code. See info_in_2420_code for more information.

Column Name: info_in_k3_code

Column Type: varchar

Max Length: 50

Column Name: info_in_k3_value

Column Type: varchar

Max Length: 250

The description associated with race_ethnicity_ssn.

Column Name: info_oth_pyr_sec_id_code

Column Type: varchar

Max Length: 50

Specify Information To Display In Other Payer Secondary Identification # (2330B-REF-02)

Column Name: info_oth_pyr_sec_id_value

Column Type: varchar

Max Length: 250

The description associated with info_oth_pyr_sec_id_code. See info_oth_pyr_sec_id_code for more information.

Column Name: int_rece_id

Column Type: varchar

Max Length: 50

'Interchange Receiver ID (ISA-08)'

Column Name: int_rece_id_qua_code

Column Type: varchar

Max Length: 50

'Interchange Receiver ID Qualifier (ISA-07)'

Column Name: int_rece_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with int_rece_id_qua_code. See int_rece_id_qua_code for more information.

Column Name: int_send_id

Column Type: varchar

Max Length: 50

'Interchange Sender ID (ISA-06)'

Column Name: int_send_id_qua_code

Column Type: varchar

Max Length: 50

'Interchange Sender ID Qualifier (ISA-05)'

Column Name: int_send_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with int_send_id_qua_code. See int_send_id_qua_code for more information.

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: max_clm_per_sub

Column Type: varchar

Max Length: 50

'Maximum Claim Information Per Subscriber Information (Maximum CLM Per Subscriber HL)'

Column Name: max_clm_per_sub_rb

Column Type: varchar

Max Length: 50

'Maximum Claim Information Per Subscriber Information For Re-Billing (Maximum CLM Per Subscriber HL)'

Column Name: max_diag_per_hi
Column Type: integer
'Number Of Diagnosis Codes To Include In The Health Care Diagnosis Code Segment (2300-HI)'

Column Name: max_len_sub_prim_id
Column Type: varchar
Max Length: 50
'Maximum Length for Subscriber Primary Identifier (2010BA-NM1-09)'

Column Name: max_sub_per_st
Column Type: varchar
Max Length: 50
'Maximum Subscriber Information Per Transaction (Maximum Subscriber SBR Per ST/SE)'

Column Name: max_sub_per_st_rb
Column Type: varchar
Max Length: 50
'Maximum Subscriber Information Per Transaction For Re-Billing (Maximum Subscriber SBR Per ST/SE)'

Column Name: max_svc_per_claim
Column Type: varchar
Max Length: 50
'Maximum Service Information Per Claim Information (Maximum LX Per CLM)'

Column Name: max_svc_per_clm_rb
Column Type: varchar
Max Length: 50
'Maximum Service Information Per Claim Information For Re-Billing (Maximum LX Per CLM)'

Column Name: no_guar_prog_rend_prov_code
Column Type: varchar
Max Length: 50
'Do Not Use Rendering Provider Information Defined At The Guarantor/Program Level'

Column Name: no_guar_prog_rend_prov_value
Column Type: varchar
Max Length: 250
The description associated with no_guar_prov_rend_prov_code. See no_guar_prov_rend_prov_code for more information.

Column Name: non_cov_chg_cas_code
Column Type: varchar
Max Length: 1
'Create CAS Segment For Prior Guarantor(s) For Non-Covered Charges'

Column Name: non_cov_chg_cas_value
Column Type: varchar
Max Length: 10
The description associated with non_cov_chg_cas_code. See non_cov_chg_cas_code for more information.

Column Name: num_days_hold_xover
Column Type: varchar
Max Length: 50
'Number of Days to Hold Billing of Crossover Claims'

Column Name: oh_mrdd_adj_amt
Column Type: varchar
Max Length: 50
'Adjustment Amount (2430-CAS-03) for Service Level Adjudication (Loop 2430) Logic (Ohio MRDD)'

Column Name: oh_mrdd_adj_grp_code
Column Type: varchar
Max Length: 50
'Adjustment Group Code (2430-CAS-01) for Service Level Adjudication (Loop 2430) Logic (Ohio MRDD)'

Column Name: oh_mrdd_adj_grp_value
Column Type: varchar
Max Length: 250
The description associated with oh_mrdd_adj_grp_code. See oh_mrdd_adj_grp_code for more information.

Column Name: oh_mrdd_adj_rsn_code
Column Type: varchar
Max Length: 50
'Adjustment Reason Code (2430-CAS-02) for Service Level Adjudication (Loop 2430) Logic (Ohio MRDD)'

Column Name: oh_mrdd_adj_rsn_value
Column Type: varchar
Max Length: 250
The description associated with oh_mrdd_adj_rsn_code. See oh_mrdd_adj_rsn_code for more information.

Column Name: oh_mrdd_fin_cls_code
Column Type: varchar
Max Length: 50
'Specify Financial Class(es) for Service Level Adjudication (Loop 2430) Logic (Ohio MRDD)'

Column Name: oh_mrdd_fin_cls_value
Column Type: varchar
Max Length: 250
The description associated with oh_mrdd_fin_cls_code. See oh_mrdd_fin_cls_code for more information.

'Other Payer Primary Identification # (2330B-NM1-09)'

Column Name: oth_payr_sec_id_qua_code
Column Type: varchar
Max Length: 50
'Other Payer Secondary Identification Qualifier (2330B-REF-01)'

Column Name: oth_payr_sec_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with oth_payr_sec_id_qua_code. See oth_payr_sec_id_qua_code for more information.

Column Name: oth_pyr_prim_id_qua_code
Column Type: varchar
Max Length: 50
'Other Payer Primary Identification Code Qualifier (2330B-NM1-08)'

Column Name: oth_pyr_prim_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with oth_pyr_prim_id_qua_code. See oth_pyr_prim_id_qua_code for more information.

Column Name: oth_ref_logic_code
Column Type: varchar
Max Length: 50
'Enable Other Subscriber Secondary Reference Identification (2330A-REF-02) Logic'

Column Name: oth_ref_logic_value
Column Type: varchar
Max Length: 250
The description associated with oth_ref_logic_code. See oth_ref_logic_code for more information.

Column Name: othsubsec_id
Column Type: varchar
Max Length: 50
'Other Subscriber Secondary Identification (2330A-REF-02)'

Column Name: othsubsec_idq_code
Column Type: varchar
Max Length: 50
Other Subscriber Secondary Identification Qualifier (2330A-REF-01)

Column Name: othsubsec_idq_value
Column Type: varchar
Max Length: 250

The description associated with othsubsec_idq_code. See othsubsec_idq_code for more information.

Column Name: ovrd_flds_to_zero_code

Column Type: varchar

Max Length: 50

'Override Following Fields To Zero'

Column Name: ovrd_flds_to_zero_value

Column Type: varchar

Max Length: 90

The description associated with ovrd_flds_to_zero_code. See ovrd_flds_to_zero_code for more information.

Column Name: p837_2320_allwd_amt_code

Column Type: varchar

Max Length: 50

'Amount To Display (2320-AMT:Allowed Amount-02)'

Column Name: p837_2320_allwd_amt_value

Column Type: varchar

Max Length: 250

The description associated with p837_2320_allwd_amt_code. See p837_2320_allwd_amt_code for more information.

Column Name: patient_paid_amt_code

Column Type: varchar

Max Length: 50

'Amount To Display (2300-AMT:Patient Amount Paid)'

Column Name: patient_paid_amt_value

Column Type: varchar

Max Length: 250

The description associated with patient_paid_amt_code. See patient_paid_amt_code for more information.

Column Name: pat_sig_source_code

Column Type: varchar

Max Length: 50

'Patient Signature Source Code (2300-CLM-10 and 2320-OI-04)'

Column Name: pat_sig_source_value

Column Type: varchar

Max Length: 250

The description associated with pat_sig_source_code. See pat_sig_source_code for more information.

Column Name: payer_sec_id_num

Column Type: varchar

Max Length: 50

'Payer Secondary Identification # (2010BB/2330B-REF-02)'

Column Name: payer_sec_id_qua_code

Column Type: varchar

Max Length: 50
Payer Secondary Identification Qualifier (2010BB/2330B-REF-01)

Column Name: payer_sec_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with payer_sec_id_qua_code. See payer_sec_id_qua_code for more information.

Column Name: payor_id
Column Type: varchar
Max Length: 50
'Payer Identification # (2010BB/2330B-NM1-09)'

Column Name: payor_id_qua_code
Column Type: varchar
Max Length: 50
'Payer Identification Code Qualifier (2010BB/2330B-NM1-08)'

Column Name: payor_id_qua_value
Column Type: varchar
Max Length: 250
The description associated with payor_id_qua_code. See payor_id_qua_code for more information.

Column Name: payto_address_1
Column Type: varchar
Max Length: 50
'Pay-to Address Line 1'

Column Name: payto_address_2
Column Type: varchar
Max Length: 50
'Pay-to Address Line 2'

Column Name: payto_adtl_ident
Column Type: varchar
Max Length: 50
'Pay-to Address Additional Identifier'

Column Name: payto_city
Column Type: varchar
Max Length: 50
'Pay-to Address City'

Column Name: payto_first_name
Column Type: varchar
Max Length: 50
'Pay-to Address First Name'

Column Name: payto_identifier
Column Type: varchar

Max Length: 50
'Pay-to Address Identifier'

Column Name: payto_last_org_name
Column Type: varchar
Max Length: 50
'Pay-to Address Last Or Organization Name'

Column Name: payto_middle_name
Column Type: varchar
Max Length: 50
'Pay-to Address Middle Name'

Column Name: payto_name_suffix
Column Type: varchar
Max Length: 50
'Pay-to Address Suffix'

Column Name: payto_state
Column Type: varchar
Max Length: 50
'Pay-to Address State'

Column Name: payto_state_value
Column Type: varchar
Max Length: 50
The description associated with payto_state. See payto_state for more information.

Column Name: payto_zip_code
Column Type: varchar
Max Length: 50
'Pay-to Address Zip Code'

Column Name: pop_nte_ebp_value
Column Type: varchar
Max Length: 50
'Populate 2400-NTE-02 With EBP Information' value

Column Name: pop_nte_ebp_code
Column Type: varchar
Max Length: 50
'Populate 2400-NTE-02 With EBP Information' code

Column Name: posted_value
Column Type: varchar
Max Length: 50
The posted value associated with the import.

Column Name: prefix_clm_sub_id
Column Type: varchar

Max Length: 50

'Specify A Prefix Value For Claim Submitter ID / Patient Account Number (2300-CLM-01)'

Column Name: pricing_hcp_loops_code

Column Type: varchar

Max Length: 50

'Select Loops To Include Pricing/Re-Pricing Information (HCP)'

Column Name: pricing_hcp_loops_value

Column Type: varchar

Max Length: 250

The description associated with pricing_hcp_loops_code. See pricing_hcp_loops_code for more information.

Column Name: pricing_method_value

Column Type: varchar

Max Length: 50

The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_method_code

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_org_id

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Specify Principle Diagnosis (2300-HI-01)'

Column Name: prov_address_1

Column Type: varchar

Max Length: 50

'Billing Provider Address 1 (2010AA-N3-01)'

Column Name: prov_address_2

Column Type: varchar

Max Length: 50

'Billing Provider Address 2 (2010AA-N3-02)'

Column Name: prov_city

Column Type: varchar

Max Length: 50

'Billing Provider City (2010AA-N4-01)'

Column Name: prov_contact_name

Column Type: varchar

Max Length: 50
'Billing Provider Contact Name (2010AA-PER-02)'

Column Name: provider_code_code
Column Type: varchar
Max Length: 50
'Provider Code (2000A-PRV-01)'

Column Name: provider_code_value
Column Type: varchar
Max Length: 250
The description associated with provider_code_code. See provider_code_code for more information.

Column Name: prov_name
Column Type: varchar
Max Length: 50
'Billing Provider Last Or Organization Name (2010AA-NM1-03)'

Column Name: prov_nm_addr_info_disp_cd
Column Type: varchar
Max Length: 50
Field 1308: Billing Provider Name and Address information to display in 2010AA-NM1, N3, N4

Column Name: prov_nm_addr_info_disp_val
Column Type: varchar
Max Length: 50
Field 1308: Billing Provider Name and Address information to display in 2010AA-NM1, N3, N4

Column Name: prov_nm_prim_id_disp_cd
Column Type: varchar
Max Length: 50
Field 1309: Billing Provider Primary Identification # to display in 2010AA-NM1-09

Column Name: prov_nm_prim_id_disp_val
Column Type: varchar
Max Length: 50
Field 1309: Billing Provider Primary Identification # to display in 2010AA-NM1-09

Column Name: prov_phone
Column Type: varchar
Max Length: 50
'Billing Provider Phone # (2010AA-PER-04)'

Column Name: prov_prim_id
Column Type: varchar
Max Length: 50
'Billing Provider Primary Identification # (2010AA-NM1-09)'

Column Name: prov_prim_id_qua_code
Column Type: varchar

Max Length: 50

'Billing Provider Primary Identification Code Qualifier (2010AA-NM1-08)'

Column Name: prov_prim_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with prov_prim_id_qua_code. See prov_prim_id_qua_code for more information.

Column Name: prov_sec_id

Column Type: varchar

Max Length: 50

'Billing Provider Tax Identification Number'

Column Name: prov_sec_id_2

Column Type: varchar

Max Length: 50

'Billing Provider UPIN/License Information'

Column Name: prov_sec_id_3

Column Type: varchar

Max Length: 50

'Billing Provider UPIN/License Information - 2'

Column Name: prov_secid_qua2_code

Column Type: varchar

Max Length: 50

Billing Provider UPIN/License Information Code Qualifier

Column Name: prov_secid_qua2_value

Column Type: varchar

Max Length: 250

The description associated with prov_secid_qua2_code. See prov_secid_qua2_code for more information.

Column Name: prov_secid_qua3_code

Column Type: varchar

Max Length: 50

'Billing Provider UPIN/License Information Code Qualifier - 2'

Column Name: prov_secid_qua3_value

Column Type: varchar

Max Length: 250

The description associated with prov_secid_qua3_code. See prov_secid_qua3_code for more information.

Column Name: prov_sec_id_qua_code

Column Type: varchar

Max Length: 50

'Billing Provider Tax Identification Code Qualifier'

Column Name: prov_sec_id_qua_value

Column Type: varchar

Max Length: 250

The description associated with prov_sec_id_qua_code. See prov_sec_id_qua_code for more information.

Column Name: prov_state

Column Type: varchar

Max Length: 50

'Billing Provider State (2010AA-N4-02)'

Column Name: prov_state_value

Column Type: varchar

Max Length: 50

The description associated with prov_state. See prov_state for more information.

Column Name: prov_taxid_to_disp_code

Column Type: varchar

Max Length: 50

'Billing Provider Tax Qualifier/ID to Display (2010AA-REF-01/02)'

Column Name: prov_taxid_to_disp_value

Column Type: varchar

Max Length: 50

The description associated with prov_taxid_to_disp_code. See prov_taxid_to_disp_code for more information.

Column Name: prov_taxon_to_disp_code

Column Type: varchar

Max Length: 50

'Provider Taxonomy Code to Display (2000A-PRV-03)'

Column Name: prov_taxon_to_disp_value

Column Type: varchar

Max Length: 50

The description associated with prov_taxon_to_disp_code. See prov_taxon_to_disp_code for more information.

Column Name: prov_zip_code

Column Type: varchar

Max Length: 50

'Billing Provider Zip Code (2010AA-N4-03)'

Column Name: receiver_name

Column Type: varchar

Max Length: 50

'Receiver Name (1000B-NM1-03)'

Column Name: rec_primary_id_num

Column Type: varchar

Max Length: 50

'Receiver Primary Identification # (1000B-NM1-09)'

Column Name: reference_ident
Column Type: varchar
Max Length: 50
'Reference Identification (2000A-PRV-03)'

Column Name: ref_id_q_code
Column Type: varchar
Max Length: 50
'Pay-to Address Reference Identification Qualifier'

Column Name: ref_id_q_value
Column Type: varchar
Max Length: 250
The description associated with ref_id_q_code. See ref_id_q_code for more information.

Column Name: rendering_entity_code
Column Type: varchar
Max Length: 50
'Rendering Provider Entity Type Qualifier (2310B/2420A-NM1-02)'

Column Name: rendering_entity_value
Column Type: varchar
Max Length: 250
The description associated with rendering_entity_code. See rendering_entity_code for more information.

Column Name: rendering_first_name
Column Type: varchar
Max Length: 50
'Rendering Provider First Name (2310B/2420A-NM1-04)'

Column Name: rendering_id
Column Type: varchar
Max Length: 50
'Rendering Provider Identification Code (2310B/2420A-NM1-09)'

Column Name: rendering_id_qual_code
Column Type: varchar
Max Length: 50
'Rendering Provider Identification Code Qualifier (2310B/2420A-NM1-08)'

Column Name: rendering_id_qual_value
Column Type: varchar
Max Length: 250
The description associated with rendering_id_qual_code. See rendering_id_qual_code for more information.

Column Name: rendering_last_org_name
Column Type: varchar
Max Length: 50

'Rendering Provider Last Or Organization Name (2310B/2420A-NM1-03)'

Column Name: rendering_middle_name

Column Type: varchar

Max Length: 50

'Rendering Provider Middle Name (2310B/2420A-NM1-05)'

Column Name: rendering_ref_id

Column Type: varchar

Max Length: 50

'Rendering Provider Reference Identification (2310B/2420A-REF-01)'

Column Name: rendering_ref_id2

Column Type: varchar

Max Length: 50

'Rendering Provider Identification Code-2 (2310B/2420A-REF-02)'

Column Name: rendering_ref_qual2_code

Column Type: varchar

Max Length: 50

'Rendering Provider Reference Identification Qualifier-2 (2310B/2420A-REF-01)'

Column Name: rendering_ref_qual2_value

Column Type: varchar

Max Length: 250

The description associated with rendering_ref_qual2_code. See rendering_ref_qual2_code for more information.

Column Name: rendering_ref_qual_code

Column Type: varchar

Max Length: 50

'Rendering Provider Reference Identification Qualifier (2310B/2420A-REF-01)'

Column Name: rendering_ref_qual_value

Column Type: varchar

Max Length: 250

The description associated with rendering_ref_qual_code. See rendering_ref_qual_code for more information.

Column Name: rendering_suffix

Column Type: varchar

Max Length: 50

'Rendering Provider Name Suffix (2310B/2420A-NM1-07)'

Column Name: rendering_taxonomy

Column Type: varchar

Max Length: 50

'Rendering Provider Taxonomy Code (2310B/2420A-PRV-03)'

Column Name: repetition_separator

Column Type: varchar
Max Length: 50
'Repetition Separator (ISA-11)'

Column Name: rept_sep_ovrd_code
Column Type: varchar
Max Length: 50
'Repetition Separator Override'

Column Name: rept_sep_ovrd_value
Column Type: varchar
Max Length: 50
The description associated with rept_sep_ovrd_code. See rept_sep_ovrd_code for more information.

Column Name: secu_info
Column Type: varchar
Max Length: 50
'Security Information (ISA-04)'

Column Name: secu_info_qua_code
Column Type: varchar
Max Length: 50
'Security Information Qualifier (ISA-03)'

Column Name: secu_info_qua_value
Column Type: varchar
Max Length: 250
The description associated with secu_info_qua_code. See secu_info_qua_code for more information.

Column Name: sel_sub_ident_num_code
Column Type: varchar
Max Length: 50
'Select Subscriber Identification Number (2010BA-NM109)'

Column Name: sel_sub_ident_num_value
Column Type: varchar
Max Length: 50
'Select Subscriber Identification Number (2010BA-NM109)'

Column Name: sgmnts_to_include_code
Column Type: varchar
Max Length: 50
'Select Segments To Include'

Column Name: sgmnts_to_include_value
Column Type: varchar
Max Length: 4096
The description associated with sgmnts_to_include_code. See sgmnts_to_include_code for more information.

Column Name: skip_loop_seg_code

Column Type: varchar

Max Length: 50

'If The Loop/Segment Information At The Service Level Is The Same As The Loop/Segment Information At The Claim Level (e.g. Service Facility Location Loop), Do You Want The Loop/Segment At The Service Level To Be Skipped?'

Column Name: skip_loop_seg_value

Column Type: varchar

Max Length: 250

The description associated with skip_loop_seg_code. See skip_loop_seg_code for more information.

Column Name: sort_by_prac_code

Column Type: varchar

Max Length: 50

'Sort Billing Pay To Provider Group By Rendering Practitioner'

Column Name: sort_by_prac_value

Column Type: varchar

Max Length: 250

The description associated with sort_by_prac_code. See sort_by_prac_code for more information.

Column Name: sort_clms_by_month_code

Column Type: varchar

Max Length: 50

'Sort Claims by Month'

Column Name: sort_clms_by_month_value

Column Type: varchar

Max Length: 50

The description associated with sort_clms_by_month_code. See sort_clms_by_month_code for more information.

Column Name: spec_prog_ind_code

Column Type: varchar

Max Length: 50

'Special Program Indicator Code (2300-CLM-12)'

Column Name: spec_prog_ind_value

Column Type: varchar

Max Length: 250

The description associated with spec_prog_ind_code. See spec_prog_ind_code for more information.

Column Name: submitter_contact_name

Column Type: varchar

Max Length: 50

'Submitter Contact Name (1000A-PER-02)'

Column Name: submitter_name

Column Type: varchar

Max Length: 50
'Submitter Name (1000A-NM1-03)'

Column Name: submitter_telephone
Column Type: varchar
Max Length: 50
'Submitter Telephone Number (1000A-PER-04)'

Column Name: sub_primary_id_num
Column Type: varchar
Max Length: 50
'Submitter Primary Identification # (1000A-NM1-09)'

Column Name: subscriber_group_number
Column Type: varchar
Max Length: 50
'Subscriber Group Number (2000B-SBR-03)'

Column Name: suffix_clm_sub_id
Column Type: varchar
Max Length: 50
'Specify A Suffix Value For Claim Submitter ID / Patient Account Number (2300-CLM-01)'

Column Name: supp_disc_date_seg_fornon_mode
Column Type: varchar
Max Length: 50
'Suppress Discharge Date Segment (2300-DTP) For Non-Mode 05 Services'

Column Name: supp_disc_date_seg_fornon_mode_value
Column Type: varchar
Max Length: 250
The description associated with supp_disc_date_seg_fornon_mode. See supp_disc_date_seg_fornon_mode for more information.

Column Name: supp_opayer_amt_code
Column Type: varchar
Max Length: 50
'Suppress Payer Paid Amount (2320-AMT)'

Column Name: supp_opayer_amt_value
Column Type: varchar
Max Length: 250
The description associated with supp_opayer_amt_code. See supp_opayer_amt_code for more information.

Column Name: suppress_zero_cas_code
Column Type: varchar
Max Length: 50
'Suppress Claim Level Adjustments/Service Level Adjustments When Total Is Zero'

Column Name: suppress_zero_cas_value

Column Type: varchar

Max Length: 50

The description associated with suppress_zero_cas_code. See suppress_zero_cas_code for more information.

Column Name: supr_adm_dis_code

Column Type: varchar

Max Length: 50

'Suppress Admission And Discharge Date Segment (2300-DTP)'

Column Name: supr_adm_dis_value

Column Type: varchar

Max Length: 250

The description associated with supr_adm_dis_code. See supr_adm_dis_code for more information.

Column Name: sup_ren_prov_enroll_code

Column Type: varchar

Max Length: 50

'Suppress Rendering Provider Name if Practitioner is Not Required to be Enrolled with Guarantor (2310B/2420A)'

Column Name: sup_ren_prov_enroll_value

Column Type: varchar

Max Length: 250

The description associated with sup_ren_prov_enroll_code. See sup_ren_prov_enroll_code for more information.

Column Name: supr_rend_prov_code

Column Type: varchar

Max Length: 50

'Suppress Rendering Provider Name (2310B/2420A)'

Column Name: supr_rend_prov_value

Column Type: varchar

Max Length: 250

The description associated with supr_rend_prov_code. See supr_rend_prov_code fore more information.

Column Name: supr_svc_fac_code

Column Type: varchar

Max Length: 50

Suppress Service Facility Location

Column Name: supr_svc_fac_value

Column Type: varchar

Max Length: 250

The description associated with supr_svc_fac_code. See supr_svc_fac_code for more information.

Column Name: svc_note_ref_code

Column Type: varchar

Max Length: 50

'Service Note Reference Code (837P-2400-NTE-01)'

Column Name: svc_note_ref_value

Column Type: varchar

Max Length: 250

The description associated with svc_note_ref_code. See svc_note_ref_code for more information.

Column Name: svc_note_text

Column Type: varchar

Max Length: 50

'Service Note Text (837P-2400-NTE-02)'

Column Name: tab_id_code

Column Type: integer

'Tab Id'

Column Name: tab_id_value

Column Type: varchar

Max Length: 50

The description associated with tab_id_code. See tab_id_code for more information.

Column Name: template_id

Column Type: varchar

Max Length: 50

'Template ID'

Column Name: template_name

Column Type: varchar

Max Length: 50

'Template Name'

Column Name: usage_ind_code

Column Type: varchar

Max Length: 50

'Usage Indicator (ISA-15)'

Column Name: usage_ind_value

Column Type: varchar

Max Length: 250

The description associated with usage_ind_code. See usage_ind_code for more information.

Column Name: use_rnd_if_notfound_code

Column Type: varchar

Max Length: 50

'Specify How Rendering Provider Information Should Be Populated'

Column Name: use_rnd_if_notfound_value

Column Type: varchar

Max Length: 250

The description associated with use_rnd_if_notfound_code. See use_rnd_if_notfound_code for more information.

Column Name: use_rollup_dts_code

Column Type: varchar

Max Length: 50

'Use Roll-Up Component First And Last Dates Of Service (2400-DTP)'

Column Name: use_rollup_dts_value

Column Type: varchar

Max Length: 250

The description associated with use_rollup_dts_code. See use_rollup_dts_code for more information.

Column Name: xover_guar_code

Column Type: varchar

Max Length: 50

'Select Guarantor(s) Responsible For Crossover Claim Submission'

Column Name: xover_guar_value

Column Type: varchar

Max Length: 2000

The description associated with xover_guar_code. See xover_guar_code for more information.

Column Name: zero_dol_svc_code

Column Type: varchar

Max Length: 50

'Include Zero Dollar Services'

Column Name: zero_dol_svc_value

Column Type: varchar

Max Length: 250

The description associated with zero_dol_svc_code. See zero_dol_svc_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_gpbd_t_paperhcfa

Table Description: This table returns the information stored in the 'File Import' form for the 'Paper CMS 1500' section of the 'Guarantor/Program Billing Defaults Template' selection.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

Column Name: FILE_ID
Column Type: integer

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
5000 - Add/Edit

Column Name: add_edit_value
Column Type: varchar
Max Length: 250

Column Name: contains_errors
Column Type: varchar
Max Length: 50

Column Name: disp_codes_for_hipaa_code
Column Type: varchar
Max Length: 50
14268 - Display Codes/Values For HIPAA

Column Name: disp_codes_for_hipaa_value
Column Type: varchar
Max Length: 250

Column Name: enable_drug_ident_code
Column Type: varchar
Max Length: 50
14610 - Enable Drug Identification (Form Locator 24)

Column Name: enable_drug_ident_value
Column Type: varchar
Max Length: 250

Column Name: enable_form_loc_17_code
Column Type: varchar
Max Length: 50

Column Name: enable_form_loc_17_value
Column Type: varchar
Max Length: 50

Column Name: enable_ndi_format_code
Column Type: varchar
Max Length: 50
14611 - Drug Identification Quantity Format (Form Locator 24)

Column Name: enable_ndi_format_value
Column Type: varchar
Max Length: 250

Column Name: filetype
Column Type: integer

Column Name: form_loc_19_alt_code
Column Type: varchar
Max Length: 50
Form Locator 19 Alternate Value

Column Name: form_loc_19_alt_value
Column Type: varchar
Max Length: 50
The description associated with form_loc_19_alt_code. See form_loc_19_alt_code for more information.

Column Name: hcfa_box9_fin_cls_code
Column Type: varchar
Max Length: 1
12161 Financial Classes To Override Other Payer Information (2330B)

Column Name: hcfa_box9_fin_cls_value
Column Type: varchar
Max Length: 250

Column Name: hcfa_first_bill_dt_code
Column Type: varchar
Max Length: 50
1430 - Enable First Billing Date Logic

Column Name: hcfa_first_bill_dt_value
Column Type: varchar
Max Length: 250

Column Name: hcfa_npi_loc_24i_code
Column Type: varchar
Max Length: 50
13430 - Rendering Provider ID Qualifier (Form Locator 24-I HCFA-1500-NPI Version Only)

Column Name: hcfa_npi_loc_24i_value
Column Type: varchar
Max Length: 250

Column Name: hcfa_npi_loc_24j_npi
Column Type: varchar
Max Length: 50
13432 - Rendering Provider NPI Number (Form Locator 24-J HCFA-1500-NPI Version Only)

Column Name: hcfa_npi_loc_24j_other
Column Type: varchar
Max Length: 50
13431 - Rendering Provider ID (Form Locator 24-J HCFA-1500-NPI Version Only)

Column Type: varchar

Max Length: 50

1105 - Form Locator 11-C

Column Name: paper_hcfa_form_loc_19

Column Type: varchar

Max Length: 50

1106 - Form Locator 19

Column Name: paper_hcfa_form_loc_24_b

Column Type: varchar

Max Length: 50

1136 - Form Locator 24-B

Column Name: paper_hcfa_form_loc_24_c

Column Type: varchar

Max Length: 50

1137 - Form Locator 24-C

Column Name: paper_hcfa_form_loc_24_h

Column Type: varchar

Max Length: 50

1138 - Form Locator 24-H

Column Name: paper_hcfa_form_loc_24_i

Column Type: varchar

Max Length: 50

1139 - Form Locator 24-I

Column Name: paper_hcfa_form_loc_24_j

Column Type: varchar

Max Length: 50

1140 - Form Locator 24-J

Column Name: paper_hcfa_form_loc_25

Column Type: varchar

Max Length: 50

14601 - Federal Tax ID Number (Form Locator 25)

Column Name: paper_hcfa_form_loc_26

Column Type: varchar

Max Length: 50

1178 - Form Locator 26 (Patient Account No.)

Column Name: paper_hcfa_form_loc_27_code

Column Type: varchar

Max Length: 50

1171 - Form Locator 27 (Accept Assignment)

Column Name: paper_hcfa_form_loc_27_value

Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_form_loc_31
Column Type: varchar
Max Length: 50
1107 - Form Locator 31 For Non Sorted HCFA-1500

Column Name: paper_hcfa_form_loc_32_code
Column Type: varchar
Max Length: 50
1116 - Facility Name To Print In Form Locator 32

Column Name: paper_hcfa_form_loc_32_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_form_loc_33_grp
Column Type: varchar
Max Length: 50
138 - Form Locator 33 (GRP#)

Column Name: paper_hcfa_form_loc_33_pin
Column Type: varchar
Max Length: 50
1108 - Form Locator 33 (PIN#)

Column Name: paper_hcfa_horiz_offset
Column Type: varchar
Max Length: 50
1112 - Horizontal Offset (HCFA-1500)

Column Name: paper_hcfa_loc33_addr_code
Column Type: varchar
Max Length: 50
1158 - Address Information To Print In Form Locator 33

Column Name: paper_hcfa_loc33_addr_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_npi_loc_24c
Column Type: varchar
Max Length: 50
1320 - Form Locator 24-C (EMG) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_32a

Column Type: varchar
Max Length: 50
1321 - Form Locator 32-A (NPI #) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_32b
Column Type: varchar
Max Length: 50
1323 - Form Locator 32-B (Other ID #) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_32b_code
Column Type: varchar
Max Length: 50
1329 - Form Locator 32-B (Other ID Qualifier) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_32b_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_npi_loc_33a
Column Type: varchar
Max Length: 50
1325 - Form Locator 33-A (NPI #) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_33a_override
Column Type: varchar
Max Length: 50
1326 - Override Form Locator 33-A (NPI #) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_33a_override_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_npi_loc_33b
Column Type: varchar
Max Length: 50
1327 - Form Locator 33-B (Other ID #) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_33b_code
Column Type: varchar
Max Length: 50
1330 - Form Locator 33-B (Other ID Qualifier) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_33b_override
Column Type: varchar
Max Length: 50
1328 - Override Form Locator 33-B (Other ID Qualifier And #) (HCFA-1500-NPI Version Only)

Column Name: paper_hcfa_npi_loc_33b_override_value

Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_npi_loc_33b_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_npi_rnd_pr_ovr_code
Column Type: varchar
Max Length: 50
1431 - Select Rendering Provider Override

Column Name: paper_hcfa_npi_rnd_pr_ovr_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_oth_add_info_1
Column Type: varchar
Max Length: 50
Other Address Information To Print In Form Locator 33-1

Column Name: paper_hcfa_oth_add_info_2
Column Type: varchar
Max Length: 50
Other Address Information To Print In Form Locator 33-2

Column Name: paper_hcfa_oth_add_info_3
Column Type: varchar
Max Length: 50
Other Address Information To Print In Form Locator 33-3

Column Name: paper_hcfa_oth_fac_name_1
Column Type: varchar
Max Length: 50
Other Facility Name To Print In Form Locator 32-1

Column Name: paper_hcfa_oth_fac_name_2
Column Type: varchar
Max Length: 50
Other Facility Name To Print In Form Locator 32-2

Column Name: paper_hcfa_oth_fac_name_3
Column Type: varchar
Max Length: 50
Other Facility Name To Print In Form Locator 32-3

Column Name: paper_hcfa_override_grp_code

Column Type: varchar
Max Length: 50
1175 - Over-Ride Form Locator 33 (GRP#) With Practitioner Number

Column Name: paper_hcfa_override_grp_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_override_pin_code
Column Type: varchar
Max Length: 50
1174 - Over-Ride Form Locator 33 (PIN#) With Practitioner Number

Column Name: paper_hcfa_override_pin_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_paid_chg_code
Column Type: varchar
Max Length: 50
1290 - Display Fully Paid Charges

Column Name: paper_hcfa_paid_chg_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_prefix_loc_26
Column Type: varchar
Max Length: 50
13107 - Specify A Prefix Value For Form Locator 26 (Patient Account No.)

Column Name: paper_hcfa_print_discip_code
Column Type: varchar
Max Length: 50
1160 - Print Practitioner Category In Form Locator 31 For Sorted HCFA-1500

Column Name: paper_hcfa_print_discip_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_prt_address_on_top
Column Type: varchar
Max Length: 50
1102 - Print Address On Top Of Form

Column Name: paper_hcfa_prt_address_on_top_value

Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_prt_form_loc_21_1
Column Type: varchar
Max Length: 50
1115 - Print Diagnosis On 21-1 Only

Column Name: paper_hcfa_prt_form_loc_21_1_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_prt_loc_14_code
Column Type: varchar
Max Length: 50
1103 - Print Form Locator 14

Column Name: paper_hcfa_prt_loc_14_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_spv_lc31_code
Column Type: varchar
Max Length: 50

Column Name: paper_hcfa_spv_lc31_value
Column Type: varchar
Max Length: 50

Column Name: paper_hcfa_srt_clms_code
Column Type: varchar
Max Length: 50
1428 - Sort Paper HCFA-1500 Claims By

Column Name: paper_hcfa_srt_clms_value
Column Type: varchar
Max Length: 250

Column Name: paper_hcfa_zero_svc_code
Column Type: varchar
Max Length: 50
1427 - Include Zero Dollar Services

Column Name: paper_hcfa_zero_svc_value

Column Type: varchar
Max Length: 250

Column Name: posted_value
Column Type: varchar
Max Length: 50

Column Name: tab_id_code
Column Type: integer
14274 - Tab Id

Column Name: tab_id_value

Column Name: template_id
Column Type: varchar
Max Length: 50
14252 - Template ID

Column Name: template_name
Column Type: varchar
Max Length: 50
14251 - Template Name

Documentation for form: File_Import

Table Name: SYSTEM.file_import_gpbdt_paperub04

Table Description: This table returns the information stored in the 'File Import' form for the 'Paper UB-04' section of the 'Guarantor/Program Billing Defaults Template' selection.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
FACILITY

Column Name: FILE_ID
Column Type: integer
FILE_ID

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
Add/Edit (code)

Column Name: add_edit_value
Column Type: varchar
Max Length: 250
Add/Edit (value)

Column Name: att_prov_first_name
Column Type: varchar
Max Length: 50
'Attending Provider First Name (Form Locator 76)'

Column Name: att_prov_last_name
Column Type: varchar
Max Length: 50
'Attending Provider Last Name (Form Locator 76)'

Column Name: att_prov_npi
Column Type: varchar
Max Length: 50
'Attending Provider NPI (Form Locator 76)'

Column Name: att_prov_sec_id
Column Type: varchar
Max Length: 50
'Attending Provider Secondary Identifier (Form Locator 76)'

Column Name: att_prov_sec_id_code
Column Type: varchar
Max Length: 50
'Attending Provider Secondary Identifier Code (Form Locator 76)'

Column Name: att_prov_sec_id_value
Column Type: varchar
Max Length: 250
The description associated with att_prov_sec_id_code. See att_prov_sec_id_code for more information.

Column Name: billing_prov_name_fl1
Column Type: varchar
Max Length: 50
'Form Locator 1 Billing Provider Name'

Column Name: bill_zero_chg_svcs_code
Column Type: varchar
Max Length: 50
'Include Zero Charge Services'

Column Name: bill_zero_chg_svcs_value

Column Type: varchar

Max Length: 50

The description associated with bill_zero_chg_svcs_code. See bill_zero_chg_svcs_code for more information.

Column Name: contains_errors

Column Type: varchar

Max Length: 50

Import file contains errors

Column Name: covered_days_code

Column Type: varchar

Max Length: 50

'Value To Display For Value Code 80 (Covered Days Form Locator 39-41)'

Column Name: covered_days_value

Column Type: varchar

Max Length: 250

The description associated with covered_days_code. See covered_days_code for more information.

Column Name: demo_data_display_code

Column Type: varchar

Max Length: 50

'Information To Display For Form Locators 8b, 9, 10, And 11'

Column Name: demo_data_display_value

Column Type: varchar

Max Length: 250

The description associated with demo_data_display_code. See demo_data_display_code for more information.

Column Name: det_non_cov_chg_fee_code

Column Type: varchar

Max Length: 50

'Determine Non-Covered Charge Amount (Form Locator 48) From Fee Table'

Column Name: det_non_cov_chg_fee_value

Column Type: varchar

Max Length: 250

The description associated with det_non_cov_chg_fee_code. See det_non_cov_chg_fee_code for more information.

Column Name: disp_codes_for_hipaa_code

Column Type: varchar

Max Length: 50

'Display Codes/Values For HIPAA' (Code)

Column Name: disp_codes_for_hipaa_value

Column Type: varchar
Max Length: 250
'Display Codes/Values For HIPAA' (Value)

Column Name: display_poa_code
Column Type: varchar
Max Length: 50
'Display Present On Admission Indicator Code For Form Locators 67 And 72'

Column Name: display_poa_value
Column Type: varchar
Max Length: 250
The description associated with display_poa_code. See display_poa_code for more information.

Column Name: enable_first_bill_code
Column Type: varchar
Max Length: 50
'Enable First Billing Date Logic'

Column Name: enable_first_bill_value
Column Type: varchar
Max Length: 250

Column Name: enb_using_drg_code
Column Type: varchar
Max Length: 50
'Enable Using DRG Code In Form Locator 71' (Code)

Column Name: enb_using_drg_value
Column Type: varchar
Max Length: 50
'Enable Using DRG Code In Form Locator 71' (Value)

Column Name: estimated_amt_due_code
Column Type: varchar
Max Length: 50
'Value To Display For Estimated Amount Due - Payer (Form Locator 55)'

Column Name: estimated_amt_due_value
Column Type: varchar
Max Length: 250
The description associated with estimated_amt_due_code. See estimated_amount_due_code for more information.

Column Name: exclude_punc_code
Column Type: varchar
Max Length: 50
'Exclude Punctuation From Claim - Form Locators 67-70, 72 And 74'

Column Name: exclude_punc_value

Column Type: varchar

Max Length: 250

The description associated with exclude_punc_code. See exclude_punc_code for more information.

Column Name: filetype

Column Type: integer

File type

Column Name: form_loc_13_adm_hr_code

Column Type: varchar

Max Length: 50

'Form Locator 13 - Admission Hour'

Column Name: form_loc_13_adm_hr_value

Column Type: varchar

Max Length: 50

The description associated with form_loc_13_adm_hr_code. See form_loc_13_adm_hr_code for more information.

Column Name: form_loc_16_discharge_hr

Column Type: varchar

Max Length: 50

'Form Locator 16 - Discharge Hour'

Column Name: form_loc_17_pt_stat_code

Column Type: varchar

Max Length: 50

'Form Locator 17 - Patient Status'

Column Name: form_loc_17_pt_stat_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_17_pt_stat_code. See form_loc_17_pt_stat_code for more information.

Column Name: form_loc_1_code

Column Type: varchar

Max Length: 50

'Address Information To Print In Form Locator 1'

Column Name: form_loc_1_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_1_code. See form_loc_1_code for more information.

Column Name: form_loc_2_city

Column Type: varchar

Max Length: 50

'Form Locator 2 Pay-To City'

Column Name: form_loc_2_name
Column Type: varchar
Max Length: 50
'Form Locator 2 Pay-To Provider Name'

Column Name: form_loc_2_state
Column Type: varchar
Max Length: 50
'Form Locator 2 Pay-To State'

Column Name: form_loc_2_state_value
Column Type: varchar
Max Length: 50
The description associated with form_loc_2_state. See form_loc_2_state for more information.

Column Name: form_loc_2_str_address
Column Type: varchar
Max Length: 50
'Form Locator 2 Pay-To Street Address'

Column Name: form_loc_2_zip
Column Type: varchar
Max Length: 50
'Form Locator 2 Pay-To Zip Code'

Column Name: form_loc_38_code
Column Type: varchar
Max Length: 50
'Display For Form Locator 38'

Column Name: form_loc_38_value
Column Type: varchar
Max Length: 250
The description associated with form_loc_38_code. See form_loc_38_code for more information.

Column Name: form_loc_3_code
Column Type: varchar
Max Length: 50
'Display For Form Locator 3 (Patient Account No.)'

Column Name: form_loc_3_value
Column Type: varchar
Max Length: 250
The description associated with form_loc_3_code. See form_loc_3_code for more information.

Column Name: form_loc_42_code
Column Type: varchar
Max Length: 50
'Form Locator 42 - Number Of Digits For Revenue Code'

Column Name: form_loc_42_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_42_code. See form_loc_42_code for more information.

Column Name: form_loc_43_code

Column Type: varchar

Max Length: 50

'Form Locator 43 - Revenue Code Description'

Column Name: form_loc_43_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_43_code. See form_loc_43_code for more information.

Column Name: form_loc_44_code

Column Type: varchar

Max Length: 50

'Form Locator 44 - Display HCPCS For The Following Revenue Code(s)'

Column Name: form_loc_44_code_desc

Column Type: varchar

Max Length: 2000

The description associated with form_loc_44_code. See form_loc_44_code for more information.

Column Name: form_loc_45_code

Column Type: varchar

Max Length: 50

'Form Locator 45 - Display Dates Of Service For The Following Revenue Code(s)'

Column Name: form_loc_45_code_desc

Column Type: varchar

Max Length: 2000

The description associated with form_loc_45_code. See form_loc_45_code for more information.

Column Name: form_loc_47_code

Column Type: varchar

Max Length: 50

'Form Locator 47 - Charge Calculation'

Column Name: form_loc_47_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_47_code. See form_loc_47_code for more information.

Column Name: form_loc_4_code

Column Type: varchar

Max Length: 50

'Form Locator 4 (First Three Digits)'

Column Name: form_loc_4_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_4_code. See form_loc_4_code for more information.

Column Name: form_loc_50_code

Column Type: varchar

Max Length: 50

'Payer Name Location (Form Locator 50)'

Column Name: form_loc_50_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_50_code. See form_loc_50_code for more information.

Column Name: form_loc_51_hlth_plan_no

Column Type: varchar

Max Length: 50

'Form Locator 51 (Health Plan ID)'

Column Name: form_loc_56_NPI

Column Type: varchar

Max Length: 50

'Form Locator 56 (National Provider Identifier)'

Column Name: form_loc_57_oth_id

Column Type: varchar

Max Length: 50

'Form Locator 57 (Other Billing Provider ID)'

Column Name: form_loc_5_tax_num

Column Type: varchar

Max Length: 50

'Federal Tax Number (Form Locator 5)'

Column Name: form_loc_62_clm_date_code

Column Type: varchar

Max Length: 50

'Date To Use In Statement Covers Period - Through (Form Locator 6-2)'

Column Name: form_loc_62_clm_date_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_62_clm_date_code. See form_loc_62_clm_date_code for more information.

Column Name: form_loc_66_dx_code

Column Type: varchar

Max Length: 50

'Form Locator 66 (ICD Version Indicator)'

Column Name: form_loc_66_dx_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_66_dx_code. See form_loc_dx_66_code for more information.

Column Name: form_loc_80_code

Column Type: varchar

Max Length: 50

'Display For Form Locator 80'

Column Name: form_loc_80_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_80_code. See form_loc_80_code for more information.

Column Name: form_loc_81_A_1_code

Column Type: varchar

Max Length: 50

'Form Locator 81-A-1'

Column Name: form_loc_81_A_1_value

Column Type: varchar

Max Length: 250

The description associated with form_loc_81_A_1_code. See form_loc_81_A_1_code for more information.

Column Name: form_loc_81_A_2

Column Type: varchar

Column Type: varchar
Max Length: 50
'Override To Type Of Bill For Medicare Certified Bed Stay (Form Locator 4)'

Column Name: medicare_cert_ovr_value
Column Type: varchar
Max Length: 250
The description associated with medicare_cert_ovr_code. See medicare_cert_ovr_code for more information.

Column Name: non_covered_days_code
Column Type: varchar
Max Length: 50
'Value To Display For Value Code 81 (Non-Covered Days Form Locator 39-41)'

Column Name: non_covered_days_value
Column Type: varchar
Max Length: 250
The description associated with non_covered_days_code. See non_covered_days_code for more information.

Column Name: onlyuse_attprvinf_wnn_nf
Column Type: varchar
Max Length: 50
'Only Use Attending Provider Information When An Attending Provider Is Not Found'

Column Name: onlyuse_attprvinf_wnn_nf_value
Column Type: varchar
Max Length: 250
The description associated with onlyuse_attprvinf_wnn_nf. See onlyuse_attprvinf_wnn_nf for more information.

Column Name: posted_value
Column Type: varchar
Max Length: 50
Import File Posted

Column Name: prefix_form_loc_3
Column Type: varchar
Max Length: 50
'Specify A Prefix Value For Form Locator 3 (Patient Account No.)'

Column Name: print_op_bill_code
Column Type: varchar
Max Length: 50
'Print As An Outpatient Bill If There Are No Room And Board Charges'

Column Name: print_op_bill_value
Column Type: varchar
Max Length: 250

The description associated with print_op_bill_code. See print_op_bill_code for more information.

Column Name: sort_claims_by_code

Column Type: varchar

Max Length: 50

'Sort Paper UB-04 Claims By'

Column Name: sort_claims_by_value

Column Type: varchar

Max Length: 250

The description associated with sort_claims_by_code. See sort_claims_by_code for more information.

Column Name: state_from_date_code

Column Type: varchar

Max Length: 50

'Statement From Date For First Bill For Guarantor'

Column Name: state_from_date_value

Column Type: varchar

Max Length: 250

The description associated with state_from_date_code. See state_from_date_code for more information.

Column Name: supp_non_bill_leave_code

Column Type: varchar

Max Length: 50

'Suppress Non-Billable Leaves'

Column Name: supp_non_bill_leave_value

Column Type: varchar

Max Length: 250

The description associated with supp_non_bill_leave_code. See supp_non_bill_leave_code for more information.

Column Name: suppress_fl54_code

Column Type: varchar

Max Length: 50

'If Prior Payments (Form Locator 54) Equals Zero Suppress Prior Payments'

Column Name: suppress_fl54_value

Column Type: varchar

Max Length: 250

The description associated with suppress_fl54_code. See suppress_fl54_code for more information.

Column Name: suppress_fl8a_code

Column Type: varchar

Max Length: 50

'If Patient Identifier (Form Locator 8a) Matches Insured's Unique ID (Form Locator 60) Suppress Patient Identifier'

Column Name: suppress_fl8a_value

Column Type: varchar

Max Length: 250

The description associated with suppress_fl8_code. See suppress_fl8_code for more information.

Column Name: tab_id_code

Column Type: integer

Tab Id

Column Name: tab_id_value

Column Type: varchar

Max Length: 50

The description associated with tab_id_code. See tab_id_code for more information.

Column Name: template_id

Column Type: varchar

Max Length: 50

Template ID

Column Name: template_name

Column Type: varchar

Max Length: 50

Template Name

Column Name: ub04_revenue_code

Column Type: varchar

Max Length: 50

'UB-04 Revenue Code For No-Pay ##0 Claims'

Documentation for form: File_Import

Table Name: SYSTEM.file_import_grp_home_dly

Table Description: This table returns information from the 'Group Home Daily Charge Rates' file import.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FILE_ID

Column Type: integer

The file ID associated with the import.

Column Name: add_edit_delete_code
Column Type: varchar
Max Length: 50
'Add Edit or Delete'.

Column Name: add_edit_delete_value
Column Type: varchar
Max Length: 50
The description for the add_edit_delete_code. See add_edit_delete_code for more information.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Does the line contain errors.

Column Name: effective_date
Column Type: date
Effective date of rate.

Column Name: expiration_date
Column Type: date
Expiration date of rate.

Column Name: line
Column Type: integer
The line associated with the import.

Column Name: master_override_code
Column Type: varchar
Max Length: 50
Is rate master or override.

Column Name: master_override_value
Column Type: varchar
Max Length: 40
The description for the master_override_code. See master_override_code for more information.

Column Name: number_residents
Column Type: integer
Number of residents the rate is for.

Column Name: posted_value
Column Type: varchar
Max Length: 50
Compiled or Posted.

Column Name: program_code
Column Type: varchar
Max Length: 50
The program the rate is for.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: range_staff_hours

Column Type: varchar

Max Length: 50

Range of staff hours the rate is for.

Column Name: rate

Column Type: numeric

The daily charge rate.

Column Name: service_code_code

Column Type: varchar

Max Length: 50

'Service Code'.

Column Name: service_code_value

Column Type: varchar

Max Length: 255

The description associated with service_code_code. See service_code_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_grp_home_log

Table Description: This table returns information from the 'Group Home Log' file import.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FILE_ID

Column Type: integer

The file ID associated with the import.

Column Name: actual_hours

Column Type: numeric

Actual hours for the Program.

Column Name: add_edit_delete_code
Column Type: varchar
Max Length: 50
'Add Edit or Delete'.

Column Name: add_edit_delete_value
Column Type: varchar
Max Length: 50
The description for the add_edit_delete_code. See add_edit_delete_code for more information.

Column Name: authorized_hours
Column Type: numeric
Authorized hours for the Program.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Does the line contain errors.

Column Name: effective_date
Column Type: date
Effective date of rate.

Column Name: expiration_date
Column Type: date
Expiration date of rate.

Column Name: line
Column Type: integer
The line associated with the import.

Column Name: posted_value
Column Type: varchar
Max Length: 50
Compiled or Posted.

Column Name: program_code
Column Type: varchar
Max Length: 50
The program the rate is for.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_grp_home_r_b

Table Description: This table returns information from the 'Group Home Room and Board Rates' file import.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID associated with the import.

Column Name: add_edit_delete_code
Column Type: varchar
Max Length: 50
'Add Edit or Delete'.

Column Name: add_edit_delete_value
Column Type: varchar
Max Length: 50
The description for the add_edit_delete_code. See add_edit_delete_code for more information.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Does the line contain errors.

Column Name: effective_date
Column Type: date
Effective date of rate.

Column Name: expiration_date
Column Type: date
Expiration date of rate.

Column Name: line
Column Type: integer
The line associated with the import.

Column Name: master_override_code
Column Type: varchar
Max Length: 50

Is rate master or override.

Column Name: master_override_value

Column Type: varchar

Max Length: 40

The description for the master_override_code. See master_override_code for more information.

Column Name: occupied_beds

Column Type: integer

Number of occupied beds the rate is for.

Column Name: posted_value

Column Type: varchar

Max Length: 50

Compiled or Posted.

Column Name: program_code

Column Type: varchar

Max Length: 50

The program the rate is for.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: rate

Column Type: numeric

The daily charge rate.

Column Name: service_code_code

Column Type: varchar

Max Length: 50

'Service Code'.

Column Name: service_code_value

Column Type: varchar

Max Length: 255

The description associated with service_code_code. See service_code_code for more information.

Column Name: total_bedrooms

Column Type: integer

Number of bedrooms the rate is for.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_pay_adj

Table Description: File Import Payment/Adjustment Posting

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the posting was entered.

Column Name: FILE_ID
Column Type: integer
The File Import File ID.

Column Name: GUAR_ID
Column Type: varchar
Max Length: 20
The ID of the guarantor for which the posting was entered.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 50
The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID for which the posting was entered.

Column Name: actual_amount_posted
Column Type: numeric
The amount posted.

Column Name: check_number
Column Type: varchar
Max Length: 50
The check number.

Column Name: claim_number
Column Type: integer
The claim number assigned to a Client's service for which the posting was entered.

Column Name: client_name
Column Type: varchar
Max Length: 100
The Client's name.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Does the import contain errors.

Column Name: date_of_service
Column Type: date
'Date of Service'.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the Client ID for which the posting was entered.

Column Name: filetype
Column Type: integer
The File Import File Type.

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
The Guarantor name.

Column Name: line
Column Type: integer
The File Import row of data.

Column Name: pay_ack_transaction_num
Column Type: integer
The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: percent_allocation
Column Type: varchar
Max Length: 50
'Percent Allocation'.

Column Name: posted_value
Column Type: varchar
Max Length: 50
Is the File Import data posted.

Column Name: posting_code
Column Type: varchar
Max Length: 50
Posting Code.

Column Name: posting_code_desc
Column Type: varchar
Max Length: 50
Posting Code description.

Column Name: posting_comments
Column Type: varchar
Max Length: 50
'Posting Comments'

Column Name: posting_date
Column Type: date
Posting Date.

Column Name: posting_dollar_amount
Column Type: numeric
The posting dollar amount.

Column Name: reason_for_not_posting
Column Type: varchar
Max Length: 50
The reason if not posted.

Column Name: receipt_date
Column Type: date
'Date Of Receipt'.

Column Name: receipt_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: rem_balance_action_code
Column Type: varchar
Max Length: 50
'Action For Remaining Balance'.

Column Name: rem_balance_action_value
Column Type: varchar
Max Length: 50
'Action For Remaining Balance'.

Column Name: rem_bal_transfer_code
Column Type: varchar
Max Length: 50
Remaining Balance transfer posting code.

Column Name: rem_bal_transfer_code_desc
Column Type: varchar
Max Length: 50
Remaining Balance transfer posting code.

Column Name: REM_BAL_TRAN_TO_GUAR_ID
Column Type: varchar
Max Length: 50

Remaining Balance transfer to Guarantor.

Column Name: rem_bal_write_off_code

Column Type: varchar

Max Length: 50

Remaining Balance write off posting code.

Column Name: rem_bal_write_off_code_desc

Column Type: varchar

Max Length: 50

Remaining Balance write off posting code.

Column Name: rem_tran_to_guarantor_name

Column Type: varchar

Max Length: 50

Remaining Balance transfer to Guarantor.

Column Name: service_code

Column Type: varchar

Max Length: 50

Service Code.

Column Name: service_description

Column Type: varchar

Max Length: 50

Service Code description.

Column Name: tran_to_guarantor_name

Column Type: varchar

Max Length: 50

Transfer to Guarantor.

Column Name: TRAN_TO_GUAR_ID

Column Type: varchar

Max Length: 20

Transfer to Guarantor.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_pay_auths

Table Description: File Import for Payor Based Authorizations.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
FILEID

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The id of the guarantor (payor) for this authorization.

Column Name: authorization_group_id
Column Type: varchar
Max Length: 10
Authorization group id.

Column Name: authorization_group_name
Column Type: varchar
Max Length: 50
Authorization group name.

Column Name: authorization_number
Column Type: varchar
Max Length: 50
Authorization number.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Contains Errors.

Column Name: effective_date
Column Type: date
The effective or start date for this authorization.

Column Name: expiration_date
Column Type: date
The expiration date for this authorization.

Column Name: filetype
Column Type: integer
The filetype

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name of the guarantor (payor) for this authorization.

Column Name: line
Column Type: integer
line

Column Name: location_code
Column Type: varchar
Max Length: 4096
Location Code

Column Name: location_value
Column Type: varchar
Max Length: 32000
Location Value

Column Name: practitioner_category_code
Column Type: varchar
Max Length: 4096
The practitioner category code that this authorization can be applied to.

Column Name: practitioner_category_value
Column Type: varchar
Max Length: 32000
The practitioner category value that this authorization can be applied to.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code that this authorization can be applied to.

Column Name: program_value
Column Type: varchar
Max Length: 50
The program that this authorization can be applied to.

Column Name: v_service_code
Column Type: varchar
Max Length: 4096
The authorization's Service code.

Column Name: v_service_value
Column Type: varchar
Max Length: 32000
The name of this authorization's Service code.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_pcp_def

Table Description: This table returns the information stored in the 'File Import' form for the 'PCP Definition' selection.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
Unique Id for the file imported.

Column Name: active_code
Column Type: varchar
Max Length: 50
'Active'.

Column Name: active_value
Column Type: varchar
Max Length: 50
The description for the active_code. See active_code for more information.

Column Name: add_edit_code
Column Type: varchar
Max Length: 50
'Add or Edit'.

Column Name: add_edit_value
Column Type: varchar
Max Length: 50
The description for the add_edit_code. See add_edit_code for more information.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Flag for determining if the file has errors.

Column Name: line
Column Type: integer
Line (helper)

Column Name: np_i_number
Column Type: varchar
Max Length: 50
'PCP NPI Number'.

Column Name: pcp_first_name
Column Type: varchar
Max Length: 50
'PCP First Name'.

Column Name: pcp_last_name
Column Type: varchar
Max Length: 50
'PCP Last Name'.

Column Name: pcp_middle_name
Column Type: varchar
Max Length: 50
'PCP Middle Name'.

Column Name: posted_value
Column Type: varchar
Max Length: 50
Posted appointment value

Column Name: program_code
Column Type: varchar
Max Length: 4096
'Programs'.

Column Name: program_value_long
Column Type: varchar
Max Length: 4096
The description for the program_code. See program_code for more information.

Column Name: program_value_short
Column Type: varchar
Max Length: 255
The description for the program_code limited to 255 characters. See program_code for more information.

Column Name: system_of_care_code
Column Type: varchar
Max Length: 50
'System Of Care'.

Column Name: system_of_care_value
Column Type: varchar
Max Length: 50
The description for the system_of_care_code. See system_of_care_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_pcp_def_site

Table Description: This table returns the information stored in the 'File Import' form for the 'PCP Definition Site' selection.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: office_add_state_code
Column Type: varchar
Max Length: 10
'Office Address - State'.

Column Name: office_add_state_value
Column Type: varchar
Max Length: 40
The description for the office_add_state_code. See office_add_state_code for more information.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
Unique Id for the file imported.

Column Name: active_code
Column Type: varchar
Max Length: 50
'Active'.

Column Name: active_value
Column Type: varchar
Max Length: 50
The description for the active_code. See active_code for more information.

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Flag for determining if the file has errors.

Column Name: end_time
Column Type: varchar

Max Length: 50
'Valid Time Frame - End Time'.

Column Name: fax_number
Column Type: varchar
Max Length: 50
'Fax Number'.

Column Name: fax_verified_code
Column Type: varchar
Max Length: 50
'Fax Verified'.

Column Name: fax_verified_value
Column Type: varchar
Max Length: 50
The description for the fax_verified_code. See fax_verified_code for more information.

Column Name: line
Column Type: integer
Line (helper)

Column Name: method_code
Column Type: varchar
Max Length: 50
'Document Receiving Method Preference'.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: npi_number
Column Type: varchar
Max Length: 50
PCP NPI Number.

Column Name: office_add_city
Column Type: varchar
Max Length: 50
'Office Address - City'.

Column Name: office_add_county_code
Column Type: varchar
Max Length: 50
'Office Address - County'.

Column Name: office_add_county_value
Column Type: varchar
Max Length: 50

The description for the office_add_county_code. See office_add_county_code for more information.

Column Name: office_add_street
Column Type: varchar
Max Length: 50
'Office Address - Street'.

Column Name: office_add_street_2
Column Type: varchar
Max Length: 50
'Office Address - Street 2'.

Column Name: office_add_zip
Column Type: varchar
Max Length: 50
'Office Address - Zip Code'.

Column Name: office_number
Column Type: varchar
Max Length: 50
'Office Number'.

Column Name: posted_value
Column Type: varchar
Max Length: 50
Posted appointment value

Column Name: receive_docs_code
Column Type: varchar
Max Length: 50
'Receive Documents'.

Column Name: receive_docs_value
Column Type: varchar
Max Length: 50
The description for the receive_docs_code. See receive_docs_code for more information.

Column Name: site_id
Column Type: integer
Communication Site ID.

Column Name: site_name
Column Type: varchar
Max Length: 50
'Communication Site Name'.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time'.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
'Time Zone'.

Column Name: time_zone_value
Column Type: varchar
Max Length: 50
The description for the time_zone_code. See time_zone_code for more information.

Column Name: valid_days_code
Column Type: varchar
Max Length: 50
'Valid Days Of The Week To Send'.

Column Name: valid_days_value_long
Column Type: varchar
Max Length: 4096
The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short
Column Type: varchar
Max Length: 255
The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code
Column Type: varchar
Max Length: 50
'Document Communication View Type'.

Column Name: view_type_value
Column Type: varchar
Max Length: 50
The description for the view_type_code. See view_type_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_prog_maint

Table Description: Keeps the data imported via 'File Import' when the 'Program Maintenance' is selected.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
Unique Id for the file imported.

Column Name: active_code
Column Type: varchar
Max Length: 50
Code for active

Column Name: active_value
Column Type: varchar
Max Length: 50
Value for active

Column Name: add_or_edit_code
Column Type: varchar
Max Length: 50
Code for determining if this is adding or editing of a row.

Column Name: add_or_edit_value
Column Type: varchar
Max Length: 50
Value for determining if this is adding or editing of a row.

Column Name: address_city
Column Type: varchar
Max Length: 50
City

Column Name: address_state_code
Column Type: varchar
Max Length: 50
State

Column Name: address_state_value
Column Type: varchar
Max Length: 50
State name

Column Name: address_street
Column Type: varchar
Max Length: 50
Street

Column Name: address_zip_code

Column Type: varchar
Max Length: 10
ZIP

Column Name: admission_charge_code
Column Type: varchar
Max Length: 50
Default service code for admission

Column Name: admission_charge_desc
Column Type: varchar
Max Length: 50
Default service code description for admission

Column Name: allow_charge_entry_code
Column Type: varchar
Max Length: 50
Flag for allowing service entry

Column Name: allow_charge_entry_value
Column Type: varchar
Max Length: 50
Flag value for allowing service entry

Column Name: allow_deviate_loc_code
Column Type: varchar
Max Length: 50
Allow Deviation from Restricted LOC Codes in Recovery Plan code

Column Name: allow_deviate_loc_value
Column Type: varchar
Max Length: 50
Allow Deviation from Restricted LOC Codes in Recovery Plan

Column Name: allow_xfr_to_code
Column Type: varchar
Max Length: 255
Flag for determining 'Allow Transfer Only To The Following Programs'

Column Name: allow_xfr_to_value
Column Type: varchar
Max Length: 4096
Flag value for determining 'Allow Transfer Only To The Following Programs'

Column Name: associated_loc_codes
Column Type: varchar
Max Length: 32766
Associated Location codes

Column Name: associated_loc_values

Column Type: varchar
Max Length: 32766
Associated Location values

Column Name: assoc_svc_pgms_code
Column Type: varchar
Max Length: 10000
Associated Service Programs

Column Name: assoc_svc_pgms_val
Column Type: varchar
Max Length: 32766
Associated Service Programs

Column Name: billing_provider_npi
Column Type: varchar
Max Length: 50
Billing Provider NPI

Column Name: bill_prov_tax_ident_num
Column Type: varchar
Max Length: 50
'Billing Provider Tax Identification Number'

Column Name: bill_prov_tax_id_qua_code
Column Type: varchar
Max Length: 50
'Billing Provider Tax Identification Code Qualifier'

Column Name: bill_prov_tax_id_qua_val
Column Type: varchar
Max Length: 250
The description associated with bill_prov_tax_id_qua_code. See bill_prov_tax_id_qua_code for more information.

Column Name: cfr_code
Column Type: varchar
Max Length: 50
'Does this program meet 42 CFR Part 2 Regulations?' code

Column Name: cfr_value
Column Type: varchar
Max Length: 80
Dictionary value for the column 'cfr_code' 1548 - 'Does this program meet 42 CFR Part 2 Regulations?' value

Column Name: contains_errors
Column Type: varchar
Max Length: 50
Flag for determining if the file has errors.

Column Name: daily_charge_code
Column Type: varchar
Max Length: 50
Default daily service code

Column Name: daily_charge_code_2
Column Type: varchar
Max Length: 50
Default daily service code 2

Column Name: daily_charge_code_3
Column Type: varchar
Max Length: 50
Default daily service code 3

Column Name: daily_charge_code_4
Column Type: varchar
Max Length: 50
Default daily service code 4

Column Name: daily_charge_code_5
Column Type: varchar
Max Length: 50
Default daily service code 5

Column Name: daily_charge_desc
Column Type: varchar
Max Length: 50
Default daily service code description

Column Name: daily_charge_desc_2
Column Type: varchar
Max Length: 50
Default daily service code 2 description

Column Name: daily_charge_desc_3
Column Type: varchar
Max Length: 50
Default daily service code 3 description

Column Name: daily_charge_desc_4
Column Type: varchar
Max Length: 50
Default daily service code 4 description

Column Name: daily_charge_desc_5
Column Type: varchar
Max Length: 50
Default daily service code 5 description

Column Name: default_allow_serv_code
Column Type: varchar
Max Length: 40
Default Allowable Services in the Client Treatment Plan - Code

Column Name: default_allow_serv_shval
Column Type: varchar
Max Length: 255
Default Allowable Services in the Client Treatment Plan - Short Value

Column Name: default_allow_serv_value

Max Length: 4096
Default Allowable Services in the Client Treatment Plan - Long Value

Column Name: def_num_days_expect_dis
Column Type: integer
Default Number Of Days For Expected Discharge

Column Name: description
Column Type: varchar
Max Length: 50
Description

Column Name: disp_only_active_ep_code
Column Type: varchar
Max Length: 50
Flag for determining 'Display Only Active Episodes In Episode Lookup'

Column Name: disp_only_active_ep_value
Column Type: varchar
Max Length: 50
Flag value for determining 'Display Only Active Episodes In Episode Lookup'

Column Name: emergency_room_code
Column Type: varchar
Max Length: 50
Emergency Room Program (Used for ARRA CQM Reports)

Column Name: emergency_room_value
Column Type: varchar
Max Length: 50
Emergency Room Program Name (Used for ARRA CQM Reports)

Column Name: enable_loc_tx_plan_code
Column Type: varchar
Max Length: 50
Enable Treatment Plans for the Level of Care Services code

Column Name: enable_loc_tx_plan_value

Column Type: varchar
Max Length: 50
Enable Treatment Plans for the Level of Care Services description

Column Name: encounter_cpt_code
Column Type: varchar
Max Length: 50
Encounter CPT Code

Column Name: encounter_cpt_value
Column Type: varchar
Max Length: 50
Encounter CPT Code description

Column Name: encounter_prob_code
Column Type: varchar
Max Length: 50
Encounter SNOMED Code (MU Hospital)

Column Name: encounter_prob_value
Column Type: varchar
Max Length: 256
Encounter SNOMED Code description (MU Hospital)

Column Name: enrollment_program_code
Column Type: varchar
Max Length: 50
1640 - Enrollment Program

Column Name: enrollment_program_value
Column Type: varchar
Max Length: 50
1640 - Enrollment Program

Column Name: evv_provider_org_id
Column Type: varchar
Max Length: 50
EVV Provider Organization ID

Column Name: exc_prog_from_report_code
Column Type: varchar
Max Length: 50
Flag for determining 'Exclude Program From Measures Reporting'

Column Name: exc_prog_from_report_val
Column Type: varchar
Max Length: 10
Flag value for determining 'Exclude Program From Measures Reporting'

Column Name: ext_amb_prov_code

Column Type: varchar
Max Length: 50
Flag for determining 'Is This Program Associated With An External Ambulatory Provider?'

Column Name: ext_amb_prov_value
Column Type: varchar
Max Length: 256
Flag value for determining 'Is This Program Associated With An External Ambulatory Provider?'

Column Name: fac_id_code
Column Type: varchar
Max Length: 50
Facility Identification Code Qualifier

Column Name: fac_id_code_qual_code
Column Type: varchar
Max Length: 50
Facility Identification Code Qualifier

Column Name: fac_id_code_qual_value
Column Type: varchar

Flag for determining 'Should A User Receive A Warning Or An Error If A Client Has A Service Occuring After Discharge Date?'

Column Name: wrn_err_svc_aft_dis_value
Column Type: varchar

Max Length: 50

Flag value for determining 'Should A User Receive A Warning Or An Error If A Client Has A Service Occuring After Discharge Date?'

Documentation for form: File_Import

Table Name: SYSTEM.file_import_staff_prov_num_dates

Table Description: This table returns the information stored in the 'File Import' form for the '837 Institutional' section of the 'Guarantor/Program Billing Defaults Template' selection.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: staff_name

Column Type: varchar

Max Length: 40

The description associated with STAFF_ID. See STAFF_ID for more information.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FILE_ID

Column Type: integer

The file ID associated with the import.

Column Name: STAFF_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: add_prov_id_dental_fl58

Column Type: varchar

Max Length: 50

'Additional Provider ID (ADA Form Locator 58)'

Column Name: bill_note_ref_837i_code

Column Type: varchar

Max Length: 50

'Billing Note Reference Code (837I-2300-NTE-01)'

Column Name: bill_note_ref_837i_value

Column Type: varchar

Max Length: 50

The description associated with bill_note_ref_837i_code. See bill_note_ref_837i_code for more information.

Column Name: bill_note_text_837i
Column Type: varchar
Max Length: 50
'Billing Note Text (837I-2300-NTE-02)'

Column Name: claim_note_ref_837d_code
Column Type: varchar
Max Length: 50
'Claim Note Reference Code (837D-2300-NTE-01)'

Column Name: claim_note_ref_837d_value
Column Type: varchar
Max Length: 50
The description associated with claim_note_ref_837d_code. See claim_note_ref_837d_code for more information.

Column Name: claim_note_ref_837i_code
Column Type: varchar
Max Length: 50
'Claim Note Reference Code (837I-2300-NTE-01)'

Column Name: claim_note_ref_837i_value
Column Type: varchar
Max Length: 50
The description associated with claim_note_ref_837i_code. See claim_note_ref_837i_code for more information.

Column Name: claim_note_ref_837p_code
Column Type: varchar
Max Length: 50
'Claim Note Reference Code (837P-2300-NTE-01)'

Column Name: claim_note_ref_837p_value
Column Type: varchar
Max Length: 50
The description associated with claim_note_ref_837p_code. See claim_note_ref_837p_code for more information.

Column Name: claim_note_text_837d
Column Type: varchar
Max Length: 50
'Claim Note Text (837D-2300-NTE-02)'

Column Name: claim_note_text_837i
Column Type: varchar
Max Length: 50
'Claim Note Text (837I-2300-NTE-02)'

Column Name: claim_note_text_837p
Column Type: varchar
Max Length: 80
'Claim Note Text (837P-2300-NTE-02)'

Column Name: comments
Column Type: varchar
Max Length: 32000
'Comments'

Column Name: contains_errors
Column Type: varchar
Max Length: 50
The errors that occurred for the import.

Column Name: effective_date
Column Type: date
'Effective Date'

Column Name: expiration_date
Column Type: date
'Expiration Date'

Column Name: filetype
Column Type: integer
The file type associated with the import.

Column Name: guarantor_code
Column Type: varchar
Max Length: 50
The guarantor ID associated with the file import.

Column Name: guarantor_shval
Column Type: varchar
Max Length: 256
The short description associated with guarantor_code. See guarantor_code for more information.

Column Name: guarantor_value
Column Type: varchar
Max Length: 4096
The description associated with guarantor_code. See guarantor_code for more information.

'Practitioner Billing # Qualifier - Other (Form Locator 33-B) (HCFA-1500-NPI Version Only)'

Column Name: hcfa_npi_loc_33b_value

Column Type: varchar

Max Length: 50

The description associated with hcfa_npi_loc_33b_code. See hcfa_npi_loc_33b_code for more information.

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: npi_number

Column Type: varchar

Max Length: 50
'NPI Number'

Column Name: posted_value
Column Type: varchar
Max Length: 50
The posted value associated with the import.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program'

Column Name: program_shval
Column Type: varchar
Max Length: 256
The short description associated with program_code. See program_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 4096
The long description associated with program_code. See program_code for more information.

Column Name: reference_id_2
Column Type: varchar
Max Length: 50
'Practitioner Secondary Identifier - 2 (837 Electronic Billing)'

Column Name: reference_id_qua_code_2
Column Type: varchar
Max Length: 50
'Practitioner Secondary Identification Qualifier - 2 (837 Electronic Billing)'

Column Name: reference_id_qua_value_2
Column Type: varchar
Max Length: 50
The description associated with reference_id_qua_code_2. See reference_id_qua_code_2 for more information.

Column Name: svc_fac_ref_id_code_837p

Column Type: varchar

Max Length: 40

'Service Facility Reference Identification Qualifier (837P-2310D/2420C-REF-01)'

Column Name: svc_fac_ref_id_value_837p

Column Type: varchar

Max Length: 50

The description associated with svc_fac_ref_id_code_837p. See svc_fac_ref_id_code_837p for more information.

Column Name: svc_fac_state_837p_code

Column Type: varchar

Max Length: 50

'Service Facility State (837P-2310D/2420C-N4-02)'

Column Name: svc_fac_state_837p_value

Column Type: varchar

Max Length: 50

The description associated with svc_fac_state_837p_code. See svc_fac_state_837p_code for more information.

Column Name: svc_fac_zip_837p

Column Type: varchar

Max Length: 50

'Service Facility Zip Code (837P-2310D/2420C-N4-03)'

Column Name: svc_note_ref_837d_code
Column Type: varchar
Max Length: 50
'Service Note Reference Code (837D-2400-NTE-01)'

Column Name: svc_note_ref_837d_value
Column Type: varchar
Max Length: 50
The description associated with svc_note_ref_837d_code. See svc_note_ref_837d_code for more information.

Column Name: svc_note_ref_837p_code
Column Type: varchar
Max Length: 50
'Service Note Reference Code (837P-2400-NTE-01)'

Column Name: svc_note_ref_837p_value
Column Type: varchar
Max Length: 50
The description associated with svc_note_ref_837p_code. See svc_note_ref_837p_code for more information.

Column Name: svc_note_text_837d
Column Type: varchar
Max Length: 50
'Service Note Text (837D-2400-NTE-02)'

Column Name: svc_note_text_837p
Column Type: varchar
Max Length: 80
'Service Note Text (837P-2400-NTE-02)'

Column Name: taxonomy_code
Column Type: varchar
Max Length: 50
'Taxonomy Code'

Column Name: taxonomy_value
Column Type: varchar
Max Length: 500
The description associated with taxonomy_code. See taxonomy_code for more information.

Documentation for form: File_Import

Table Name: SYSTEM.file_import_svc_fee

Table Description: This table returns the information stored in the 'File Import' form for the 'Service Fee/Cross Reference' file type.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID associated with the import.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID Number.

Column Name: age_range
Column Type: varchar
Max Length: 10
Age range associated with the guarantor distribution definition.

Column Name: alt_rev_code_desc
Column Type: varchar
Max Length: 50
'Alternate Revenue Code Description'

Column Name: contains_errors
Column Type: varchar
Max Length: 50
If the imported file contains errors.

Column Name: cpt_code
Column Type: varchar
Max Length: 50
CPT code associated with the guarantor distribution definition.

Column Name: cpt_value
Column Type: varchar
Max Length: 120
The description associated with cpt_code. See cpt_code for more information.

Column Name: duration_range
Column Type: varchar
Max Length: 10
Duration range associated with the guarantor distribution definition.

Column Name: end_date
Column Type: date
End date of the guarantor distribution definition.

Column Name: fee
Column Type: numeric
'Fee'

Column Name: fee_type_code
Column Type: varchar
Max Length: 15
'Fee Type'

Column Name: fee_type_value
Column Type: varchar
Max Length: 40
Value associated with 'Fee Type' in fee_type_code.

Column Name: file_information
Column Type: varchar
Max Length: 50
'File Information (2400-K3-01)'

Column Name: filetype
Column Type: integer
The type of file being imported.

Column Name: from_date
Column Type: date
Effective date of the guarantor distribution definition.

Column Name: inc_cov_cat_code
Column Type: varchar
Max Length: 32000
'Incident-To Category For Coverage'

Column Name: inc_cov_cat_value_long
Column Type: varchar
Max Length: 4096
The description associated with inc_cov_cat_code up to 4096 characters. See inc_cov_cat_code for more information.

Column Name: inc_cov_cat_value_short
Column Type: varchar
Max Length: 255
The description associated with inc_cov_cat_code up to 255 characters. See inc_cov_cat_code for more information.

Column Name: incident_to_svc_code
Column Type: varchar

Max Length: 50

'Is This An Incident-To Service?'

Column Name: incident_to_svc_value

Column Type: varchar

Max Length: 50

The description associated with incident_to_svc_code. See incident_to_svc_code for more information.

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: location_code

Column Type: varchar

Max Length: 1024

'Location'

Column Name: location_value

Column Type: varchar

Max Length: 8192

The description associated with location_code. See location_code for more information.

Column Name: medicaid_rate_code_brf

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Brief'

Column Name: medicaid_rate_code_fam

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Family'

Column Name: medicaid_rate_code_grp

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Group'

Column Name: medicaid_rate_code_reg

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Regular'

Column Name: modifier

Column Type: varchar

Max Length: 10

'Modifier'

Column Name: modifier_x_ref

Column Type: varchar

Max Length: 50

'CPT-4 / HCPCS Modifier'

Column Name: mod_x_ref_frst_instance

Column Type: varchar

Max Length: 50

'CPT-4 / HCPCS Modifier If Not First Instance For Service Date'

Column Name: note_ref_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'

Column Name: note_ref_text

Column Type: varchar

Max Length: 50

'Note Reference Text (2400-NTE-02)'

Column Name: note_ref_value

Column Type: varchar

Max Length: 50

The description associated with note_ref_code. See note_ref_code for more information.

Column Name: posted_value

Column Type: varchar

Max Length: 50

Indicating if a line has been posted or not.

Column Name: pract_cat_code

Column Type: varchar

Max Length: 1024

Practitioner Category Codes

Column Name: pract_cat_value

Column Type: varchar

Max Length: 8192

The description associated with pract_cat_code. See pract_cat_code for more information.

Column Name: practitioner_code

Column Type: varchar

Max Length: 1024

Practitioner IDs.

Column Name: practitioner_value

Column Type: varchar

Max Length: 8192

The description associated with practitioner_code. See practitioner_code for more information.

Column Name: pricing_method_code

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_method_value

Column Type: varchar

Max Length: 50

The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_org_id

Column Type: varchar

Max Length: 50

'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: program_code

Column Type: varchar

Max Length: 10

The program code(s) associated with the guarantor distribution definition.

Column Name: program_value

Column Type: varchar

Max Length: 8192

The description associated with program_code. See program_code for more information.

Column Name: prorate_calc_code

Column Type: varchar

Max Length: 50

'Pro-Rated Fee Calculation'

Column Name: prorate_calc_value

Column Type: varchar

Max Length: 50

The description associated with prorate_calc_code. See prorate_calc_code for more information.

Column Name: prorate_code

Column Type: varchar

Max Length: 50

'Pro-Rate Fee For'

Column Name: prorate_value

Column Type: varchar

Max Length: 50

The description associated with prorate_code. See prorate_code for more information.

Column Name: prorate_year_code

Column Type: varchar

Max Length: 50

'Yearly Days Calculation'

Column Name: prorate_year_value

Column Type: varchar

Max Length: 50

The description associated with `prorate_year_code`. See `prorate_year_code` for more information.

Column Name: `qual_ccbhc_service_code`

Column Type: `varchar`

Max Length: 50

'Qualifies as a CCBHC Enumerated Service'

Column Name: `qual_ccbhc_service_value`

Column Type: `varchar`

Max Length: 40

The description associated with `qual_ccbhc_service_code`. See `qual_ccbhc_service_code` for more information.

Column Name: `quantity`

Column Type: `varchar`

Max Length: 50

'Quantity'

Column Name: `service_code`

Column Type: `varchar`

Max Length: 50

The service code associated with the guarantor distribution definition.

Column Name: `service_description`

Column Type: `varchar`

Max Length: 50

The description associated with `service_code`. See `service_code` for more information.

Column Name: `state_rp_code_1`

Column Type: `varchar`

Max Length: 50

'State Reporting Code 1'

Column Name: `state_rp_code_2`

Column Type: `varchar`

Max Length: 50

'State Reporting Code 2'

Column Name: `state_rp_code_3`

Column Type: `varchar`

Max Length: 50

'State Reporting Code 3'

Column Name: `state_rp_code_4`

Column Type: `varchar`

Max Length: 50

'State Reporting Code 4'

Column Name: `svc_id`

Column Type: `varchar`

Max Length: 50
'Service ID (837P-2400-SV1-01)'

Column Name: svc_id_qual_code
Column Type: varchar
Max Length: 50
'Product/Service ID Qualifier (2400-SV101-1)'

Column Name: svc_id_qual_value
Column Type: varchar
Max Length: 50
The description associated with svc_id_qual_code. See svc_id_qual_code for more information.

Column Name: svc_unit_meas_837i_code
Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837I)'

Column Name: svc_unit_meas_837i_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_837i_code. See svc_unit_meas_837i_code for more information.

Column Name: svc_unit_meas_code
Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837P)'

Column Name: svc_unit_meas_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_code. See svc_unit_meas_code for more information.

Column Name: ub_04_code
Column Type: varchar
Max Length: 50
UB-04 code.

Column Name: ub_04_value
Column Type: varchar
Max Length: 120
The description associated with ub_04_code. See ub_04_code for more information.

Column Name: unit
Column Type: numeric
'Unit'

Column Name: update_liab_code
Column Type: varchar

Max Length: 50
'Update Liabilities'

Column Name: update_liab_value
Column Type: varchar
Max Length: 50
The description associated with update_liab_code. See update_liab_code for more information.

Column Name: x_ref_name
Column Type: varchar
Max Length: 50
'Service Code Cross Reference Name'

Documentation for form: File_Import

Table Name: SYSTEM.file_import_svc_max_liab

Table Description: This table returns the information stored in the 'File Import' form for the 'Service Guarantor Definitions' file type.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_ID
Column Type: integer
The file ID associated with the import.

Column Name: age_range
Column Type: varchar
Max Length: 10
Age range associated with the guarantor distribution definition.

Column Name: alt_rev_code_desc
Column Type: varchar
Max Length: 50
'Alternate Revenue Code Description'

Column Name: amt_per_unit
Column Type: numeric
'Maximum Amount To Distribute Per Unit'

Column Name: contains_errors
Column Type: varchar
Max Length: 50
If the imported file contains errors.

Column Name: contract_rate
Column Type: numeric
'Contract Rate'

Column Name: cpt_code
Column Type: varchar
Max Length: 50
CPT code associated with the guarantor distribution definition.

Column Name: cpt_value
Column Type: varchar
Max Length: 50
The description associated with cpt_code. See cpt_code for more information.

Column Name: duration_range
Column Type: varchar
Max Length: 10
Duration range associated with the guarantor distribution definition.

Column Name: end_date
Column Type: date
End date of the guarantor distribution definition.

Column Name: file_information
Column Type: varchar
Max Length: 50
'File Information (2400-K3-01)'

Column Name: filetype
Column Type: integer
The type of file being imported.

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
'Financial Class'

Column Name: financial_class_value
Column Type: varchar
Max Length: 40
The description associated with financial_class_code. See financial_class_code for more information.

Column Name: fixed_fee_units
Column Type: varchar
Max Length: 50

'Unit'

Column Name: from_date

Column Type: date

Effective date of the guarantor distribution definition.

Column Name: guarantor_code

Column Type: varchar

Max Length: 1024

The guarantor IDs associated with the guarantor distribution definition.

Column Name: guarantor_value

Column Type: varchar

Max Length: 8192

Description associated with the guarantor_code. See guarantor_code for more information.

Column Name: ignore_for_liab_dis_code

Column Type: varchar

Max Length: 50

'Ignore Specified Amounts When Distributing Liability'

Column Name: ignore_for_liab_dis_value

Column Type: varchar

Max Length: 40

The description associated with ignore_for_liab_dis_code. See ignore_for_liab_dis_code for more information.

Column Name: inc_cov_cat_code

Column Type: varchar

Max Length: 32000

'Incident-To Category For Coverage'

Column Name: inc_cov_cat_value_long

Column Type: varchar

Max Length: 4096

The description associated with inc_cov_cat_code up to 4096 characters. See inc_cov_cat_code for more information.

Column Name: inc_cov_cat_value_short

Column Type: varchar

Max Length: 255

The description associated with inc_cov_cat_code up to 255 characters. See inc_cov_cat_code for more information.

Column Name: incident_to_svc_code

Column Type: varchar

Max Length: 50

'Is This An Incident-To Service?'

Column Name: incident_to_svc_value

Column Type: varchar

Max Length: 50

The description associated with incident_to_svc_code. See incident_to_svc_code for more information.

Column Name: line

Column Type: integer

The line associated with the import.

Column Name: location_code

Column Type: varchar

Max Length: 1024

'Location'

Column Name: location_value

Column Type: varchar

Max Length: 8192

The description associated with location_code. See location_code for more information.

Column Name: max_amt_assoc_guar_value_long

Column Type: varchar

Max Length: 4096

The description associated with max_amt_associated_guarantors up to 4096 characters. See max_amt_associated_guarantors for more information.

Column Name: max_amt_assoc_guar_value_short

Column Type: varchar

Max Length: 255

The description associated with max_amt_associated_guarantors up to 255 characters. See max_amt_associated_guarantors for more information.

Column Name: max_amt_associated_guarantors

Column Type: varchar

Max Length: 1044

'Associated Guarantor(s) Whose Liability In Combination With This Guarantor Will Not Exceed Maximum Amount To Distribute Per Service'

Column Name: max_amt_per_svc

Column Type: numeric

'Maximum Amount To Distribute Per Service'

Column Name: max_amt_to_dist_per_month

Column Type: numeric

'Maximum Amount To Distribute Per Month'

Column Name: medicaid_rate_code_brf

Column Type: varchar

Max Length: 50

'Medicaid Rate Code - Brief'

Column Name: medicaid_rate_code_fam

Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Family'

Column Name: medicaid_rate_code_grp
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Group'

Column Name: medicaid_rate_code_reg
Column Type: varchar
Max Length: 50
'Medicaid Rate Code - Regular'

Column Name: min_amt_per_svc
Column Type: numeric
'Minimum Amount To Distribute Per Service'

Column Name: min_amt_per_unit
Column Type: numeric
'Minimum Amount To Distribute Per Unit'

Column Name: modifier_x_ref
Column Type: varchar
Max Length: 50
'CPT-4 / HCPCS Modifier'

Column Name: mod_x_ref_frst_instance
Column Type: varchar
Max Length: 50
'CPT-4 / HCPCS Modifier If Not First Instance For Service Date'

Column Name: note_ref_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'

Column Name: note_ref_text
Column Type: varchar
Max Length: 50
'Note Reference Text (2400-NTE-02)'

Column Name: note_ref_value
Column Type: varchar
Max Length: 50
The description associated with note_ref_code. See note_ref_code for more information.

Column Name: posted_value
Column Type: varchar
Max Length: 50

Indicating if a line has been posted or not.

Column Name: pract_cat_code
Column Type: varchar
Max Length: 1024
Practitioner Category Codes

Column Name: pract_cat_value
Column Type: varchar
Max Length: 8192
The description associated with pract_cat_code. See pract_cat_code for more information.

Column Name: practitioner_code
Column Type: varchar
Max Length: 1024
Practitioner IDs.

Column Name: practitioner_value
Column Type: varchar
Max Length: 8192
The description associated with practitioner_code. See practitioner_code for more information.

Column Name: pricing_method_code
Column Type: varchar
Max Length: 50
'Pricing/Re-Pricing Methodology (2300/2400-HCP-01)'

Column Name: pricing_method_value
Column Type: varchar
Max Length: 50
The description associated with pricing_method_code. See pricing_method_code for more information.

Column Name: pricing_org_id
Column Type: varchar
Max Length: 50
'Pricing/Re-Pricing Organization Identifier (2300/2400-HCP-04)'

Column Name: program_code
Column Type: varchar
Max Length: 1024
The program code(s) associated with the guarantor distribution definition.

Column Name: program_value
Column Type: varchar
Max Length: 8192
The description associated with program_code. See program_code for more information.

Column Name: qual_ccbhc_service_code
Column Type: varchar
Max Length: 50

'Qualifies as a CCBHC Enumerated Service'

Column Name: qual_ccbhc_service_value

Column Type: varchar

Max Length: 40

The description associated with qual_ccbhc_service_code. See qual_ccbhc_service_code for more information.

Column Name: quantity

Column Type: varchar

Max Length: 50

'Quantity'

Column Name: service_code

Column Type: varchar

Max Length: 50

The service code associated with the guarantor distribution definition.

Column Name: service_description

Column Type: varchar

Max Length: 50

The description associated with service_code. See service_code for more information.

Column Name: state_rp_code_1

Column Type: varchar

Max Length: 50

'State Reporting Code 1'

Column Name: state_rp_code_2

Column Type: varchar

Max Length: 50

'State Reporting Code 2'

Column Name: state_rp_code_3

Column Type: varchar

Max Length: 50

'State Reporting Code 3'

Column Name: state_rp_code_4

Column Type: varchar

Max Length: 50

'State Reporting Code 4'

Column Name: svc_id

Column Type: varchar

Max Length: 50

'Service ID (837P-2400-SV1-01)'

Column Name: svc_id_qual_code

Column Type: varchar

Max Length: 50
'Product/Service ID Qualifier (2400-SV101-1)'

Column Name: svc_id_qual_value
Column Type: varchar
Max Length: 50
The description associated with svc_id_qual_code. See svc_id_qual_code for more information.

Column Name: svc_unit_meas_837i_code
Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837I)'

Column Name: svc_unit_meas_837i_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_837i_code. See svc_unit_meas_837i_code for more information.

Column Name: svc_unit_meas_code
Column Type: varchar
Max Length: 50
'Service Unit Of Measurement Code (837P)'

Column Name: svc_unit_meas_value
Column Type: varchar
Max Length: 50
The description associated with svc_unit_meas_code. See svc_unit_meas_code for more information.

Column Name: ub_04_code
Column Type: varchar
Max Length: 50
UB-04 code associated with the guarantor distribution definition.

Column Name: ub_04_value
Column Type: varchar
Max Length: 50
The description associated with ub_04_code. See ub_04_code for more information.

Column Name: update_liab_code
Column Type: varchar
Max Length: 50
'Update Liabilities'

Column Name: update_liab_value
Column Type: varchar
Max Length: 50
The description associated with update_liab_code. See update_liab_code for more information.

Column Name: write_off_remaining

Column Type: varchar
Max Length: 2
'Write-off Remaining Balance (Contract Guarantors Only)'

Column Name: write_off_remaining_value
Column Type: varchar
Max Length: 40
The description associated with write_off_remaining. See write_off_remaining for more information.

Column Name: x_ref_name
Column Type: varchar
Max Length: 50
'Service Code Cross Reference Name'

Documentation for form: File_Import

Table Name: SYSTEM.outreach_client

Table Description: This table contains outreach targets.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
System code where the outreach client will be admitted to.

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: PATID
Column Type: varchar
Max Length: 20
Avatar patient identifier. Present if the person referenced by the external id has ever been admitted to a program.

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_city
Column Type: varchar
Max Length: 30
Target's address - city.

Column Name: address_county
Column Type: varchar
Max Length: 60
Target's address - county.

Column Name: address_state
Column Type: varchar
Max Length: 40
Target's address - state.

Column Name: address_street
Column Type: varchar
Max Length: 100
Target's address - street.

Column Name: address_street2
Column Type: varchar
Max Length: 60
Target's address - apartment/unit.

Column Name: address_zipcode
Column Type: varchar
Max Length: 10
Target's Zipcode.

Column Name: cell_phone
Column Type: varchar
Max Length: 60
Target's cell phone.

Column Name: communication_pref
Column Type: varchar
Max Length: 40
Target's communication preference

Column Name: communication_pref_val
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: contact_email
Column Type: varchar
Max Length: 60
Target's email address.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_birth

Column Type: date

Target's date of birth.

Column Name: eligibility_end_date_1

Column Type: date

Target's financial eligibility end date postition 1.

Column Name: eligibility_end_date_2

Column Type: date

Target's financial eligibility end date postition 2.

Column Name: eligibility_end_date_3

Column Type: date

Target's financial eligibility end date postition 3.

Column Name: eligibility_end_date_4

Column Type: date

Target's financial eligibility end date postition 4.

Column Name: eligibility_end_date_5

Column Type: date

Target's financial eligibility end date postition 5.

Column Name: eligibility_start_date_1

Column Type: date

Target's financial eligibility start date postition 1.

Column Name: eligibility_start_date_2

Column Type: date

Target's financial eligibility start date postition 2.

Column Name: eligibility_start_date_3

Column Type: date

Target's financial eligibility start date postition 3.

Column Name: eligibility_start_date_4

Column Type: date

Target's financial eligibility start date postition 4.

Column Name: eligibility_start_date_5

Column Type: date

Target's financial eligibility start date postition 5.

Column Name: external_id

Column Type: varchar

Max Length: 100

External organizational identifier for the person.

Column Name: first_name
Column Type: varchar
Max Length: 40
Target's first name.

Column Name: guarantor_id_1
Column Type: varchar
Max Length: 40
Target's primary guarantor (coded value).

Column Name: guarantor_id_2
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 2.

Column Name: guarantor_id_3
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 3.

Column Name: guarantor_id_4
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 4.

Column Name: guarantor_id_5
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 5.

Column Name: guarantor_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor.

Column Name: guarantor_val_2
Column Type: varchar
Max Length: 40
Target's guarantor position 2.

Column Name: guarantor_val_3
Column Type: varchar
Max Length: 40
Target's guarantor position 3.

Column Name: guarantor_val_4
Column Type: varchar
Max Length: 40
Target's guarantor position 4.

Column Name: guarantor_val_5
Column Type: varchar
Max Length: 40
Target's guarantor position 5.

Column Name: home_phone
Column Type: varchar
Max Length: 60
Target's home phone.

Column Name: last_name
Column Type: varchar
Max Length: 40
Target's last name.

Column Name: medicaid_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicaid ID number.

Column Name: medicaid_id_2
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 2.

Column Name: medicaid_id_3
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 3.

Column Name: medicaid_id_4
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 4.

Column Name: medicaid_id_5
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 5.

Column Name: medicare_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicare ID number.

Column Name: medicare_id_2
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 2.

Column Name: medicare_id_3
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 3.

Column Name: medicare_id_4
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 4.

Column Name: medicare_id_5
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 5.

Column Name: middle_name
Column Type: varchar
Max Length: 40
Target's middle name.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: outside_facility_code
Column Type: varchar
Max Length: 50
Target's outside living facility (coded value). The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: outside_facility_value
Column Type: varchar
Max Length: 40
Target's outside living facility. The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: permission_to_text
Column Type: varchar
Max Length: 40
Target's permission to text.

Column Name: plan_id_1
Column Type: varchar

Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_2
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_3
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_4
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_5
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_2
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_3
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_4
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_5
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: policy_number_1
Column Type: varchar

Max Length: 40
Target's primary insurance policy number.

Column Name: policy_number_2
Column Type: varchar
Max Length: 40
Target's insurance policy number position 2.

Column Name: policy_number_3
Column Type: varchar
Max Length: 40
Target's insurance policy number position 3.

Column Name: policy_number_4
Column Type: varchar
Max Length: 40
Target's insurance policy number position 4.

Column Name: policy_number_5
Column Type: varchar
Max Length: 40
Target's insurance policy number position 5.

Column Name: primary_care_physician_id
Column Type: varchar
Max Length: 40
Target's primary care physician id.

Column Name: protocol_code
Column Type: varchar
Max Length: 50
Target's protocol (coded value) to apply to the appointment created on successful outreach.

Column Name: protocol_shval
Column Type: varchar
Max Length: 40
Target's protocol to apply to the appointment created on successful outreach.

Column Name: protocol_value
Column Type: varchar
Max Length: 40
Target's protocol to apply to the appointment created on successful outreach.

Column Name: risk_level_code
Column Type: varchar
Max Length: 50
Target's risk level (coded value).

Column Name: risk_level_value
Column Type: varchar

Max Length: 40
Target's risk level.

Column Name: sex_code
Column Type: varchar
Max Length: 5
Target's sex (coded value).

Column Name: sex_value
Column Type: varchar
Max Length: 40
Target's sex.

Column Name: subscriber_city_1
Column Type: varchar
Max Length: 30
Subscriber's address - city position 1.

Column Name: subscriber_city_2
Column Type: varchar
Max Length: 30
Subscriber's address - city position 2.

Column Name: subscriber_city_3
Column Type: varchar
Max Length: 30
Subscriber's address - city position 3.

Column Name: subscriber_city_4
Column Type: varchar
Max Length: 30
Subscriber's address - city position 4.

Column Name: subscriber_city_5
Column Type: varchar
Max Length: 30
Subscriber's address - city position 5.

Column Name: subscriber_county_1
Column Type: varchar
Max Length: 60
Subscriber's address - county position 1.

Column Name: subscriber_county_2
Column Type: varchar
Max Length: 60
Subscriber's address - county position 2.

Column Name: subscriber_county_3
Column Type: varchar

Max Length: 60
Subscriber's address - county position 3.

Column Name: subscriber_county_4
Column Type: varchar
Max Length: 60
Subscriber's address - county position 4.

Column Name: subscriber_county_5
Column Type: varchar
Max Length: 60
Subscriber's address - county position 5.

Column Name: subscriber_dob_1
Column Type: date
Subscriber's date of birth position 1.

Column Name: subscriber_dob_2
Column Type: date
Subscriber's date of birth position 2.

Column Name: subscriber_dob_3
Column Type: date
Subscriber's date of birth position 3.

Column Name: subscriber_dob_4
Column Type: date
Subscriber's date of birth position 4.

Column Name: subscriber_dob_5
Column Type: date
Subscriber's date of birth position 5.

Column Name: subscriber_first_name_1
Column Type: varchar
Max Length: 40
Subscriber's first name position 1.

Column Name: subscriber_first_name_2
Column Type: varchar
Max Length: 40
Subscriber's first name position 2.

Column Name: subscriber_first_name_3
Column Type: varchar
Max Length: 40
Subscriber's first name position 3.

Column Name: subscriber_first_name_4
Column Type: varchar

Max Length: 40
Subscriber's first name position 4.

Column Name: subscriber_first_name_5
Column Type: varchar
Max Length: 40
Subscriber's first name position 5.

Column Name: subscriber_last_name_1
Column Type: varchar
Max Length: 40
Subscriber's last name position 1.

Column Name: subscriber_last_name_2
Column Type: varchar
Max Length: 40
Subscriber's last name position 2.

Column Name: subscriber_last_name_3
Column Type: varchar
Max Length: 40
Subscriber's last name position 3.

Column Name: subscriber_last_name_4
Column Type: varchar
Max Length: 40
Subscriber's last name position 4.

Column Name: subscriber_last_name_5
Column Type: varchar
Max Length: 40
Subscriber's last name position 5.

Column Name: subscriber_middle_name_1
Column Type: varchar
Max Length: 40
Subscriber's middle name position 1.

Column Name: subscriber_middle_name_2
Column Type: varchar
Max Length: 40
Subscriber's middle name position 2.

Column Name: subscriber_middle_name_3
Column Type: varchar
Max Length: 40
Subscriber's middle name position 3.

Column Name: subscriber_middle_name_4
Column Type: varchar

Max Length: 40
Subscriber's middle name position 4.

Column Name: subscriber_middle_name_5
Column Type: varchar
Max Length: 40
Subscriber's middle name position 5.

Column Name: subscriber_phone_1
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 1.

Column Name: subscriber_phone_2
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 2.

Column Name: subscriber_phone_3
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 3.

Column Name: subscriber_phone_4
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 4.

Column Name: subscriber_phone_5
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 5.

Column Name: subscriber_relationship_1
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relationship_2
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relationship_3
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relationship_4
Column Type: varchar

Max Length: 20
Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relationship_5
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_relation_val_1
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relation_val_2
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relation_val_3
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relation_val_4
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relation_val_5
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_sex_code_1
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 1.

Column Name: subscriber_sex_code_2
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 2.

Column Name: subscriber_sex_code_3
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 3.

Column Name: subscriber_sex_code_4
Column Type: varchar

Max Length: 5
Subscriber's sex (coded value), position 4.

Column Name: subscriber_sex_code_5
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 5.

Column Name: subscriber_sex_value_1
Column Type: varchar
Max Length: 40
Subscriber's sex, position 1.

Column Name: subscriber_sex_value_2
Column Type: varchar
Max Length: 40
Subscriber's sex, position 2.

Column Name: subscriber_sex_value_3
Column Type: varchar
Max Length: 40
Subscriber's sex, position 3.

Column Name: subscriber_sex_value_4
Column Type: varchar
Max Length: 40
Subscriber's sex, position 4.

Column Name: subscriber_sex_value_5
Column Type: varchar
Max Length: 40
Subscriber's sex, position 5.

Column Name: subscriber_state_1
Column Type: varchar
Max Length: 40
Subscriber's address - state position 1.

Column Name: subscriber_state_2
Column Type: varchar
Max Length: 40
Subscriber's address - state position 2.

Column Name: subscriber_state_3
Column Type: varchar
Max Length: 40
Subscriber's address - state position 3.

Column Name: subscriber_state_4
Column Type: varchar

Max Length: 40
Subscriber's address - state position 4.

Column Name: subscriber_state_5
Column Type: varchar
Max Length: 40
Subscriber's address - state position 5.

Column Name: subscriber_street_1
Column Type: varchar
Max Length: 100
Subscriber's address - street position 1.

Column Name: subscriber_street_2
Column Type: varchar
Max Length: 100
Subscriber's address - street position 2.

Column Name: subscriber_street2_1
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 1.

Column Name: subscriber_street2_2
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 2.

Column Name: subscriber_street2_3
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 3.

Column Name: subscriber_street2_4
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 4.

Column Name: subscriber_street2_5
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 5.

Column Name: subscriber_street_3
Column Type: varchar
Max Length: 100
Subscriber's address - street position 3.

Column Name: subscriber_street_4
Column Type: varchar

Max Length: 100
Subscriber's address - street position 4.

Column Name: subscriber_street_5
Column Type: varchar
Max Length: 100
Subscriber's address - street position 5.

Column Name: subscriber_zipcode_1
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 1.

Column Name: subscriber_zipcode_2
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 2.

Column Name: subscriber_zipcode_3
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 3.

Column Name: subscriber_zipcode_4
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 4.

Column Name: subscriber_zipcode_5
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 5.

Column Name: target_adm_type_code
Column Type: varchar
Max Length: 50
Target's specified admission type (coded value) to be added to the admission record on appointment creation.

Column Name: target_adm_type_value
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: target_pre_program_code
Column Type: varchar
Max Length: 40
Target's specified pre-admit program (coded value) to be admitted to on appointment creation.

Column Name: target_pre_program_value

Column Type: varchar
Max Length: 40
Target's specified pre-admit program to be admitted to on appointment creation.

Column Name: target_program_code
Column Type: varchar
Max Length: 50
Target's specified admission program (coded value) to be admitted to on appointment creation.

Column Name: target_program_value
Column Type: varchar
Max Length: 40
Target's specified admission program to be admitted to on appointment creation.

Column Name: target_service_code
Column Type: varchar
Max Length: 50
Target's specified service (coded value) to be rendered at outreach appointment.

Column Name: target_service_value
Column Type: varchar
Max Length: 40
Target's specified service to be rendered at outreach appointment.

Column Name: target_status_code
Column Type: varchar
Max Length: 50
The current activity status of this target (coded value).

Column Name: target_status_value
Column Type: varchar
Max Length: 40
The current activity status of this target.

Column Name: work_phone
Column Type: varchar
Max Length: 60
Target's work phone.

Column Name: zone_code
Column Type: varchar
Max Length: 50
Target's assigned zone (coded value).

Column Name: zone_value
Column Type: varchar
Max Length: 40
Target's assigned zone.

Documentation for form: File_Import

Table Name: SYSTEM.table_cda_loinc

Table Description: This table returns the data filed from the 'Logical Observation Identifiers (LOINC)' form.

Column Name: ID
Column Type: varchar
Max Length: 15

Column Name: acssym
Column Type: varchar
Max Length: 255
'Acssym'

Column Name: audit_facility
Column Type: integer
System Code where the LOINC code was last updated.

Column Name: base_name
Column Type: varchar
Max Length: 50
'Base Name'

Column Name: cdisc_common_test
Column Type: varchar
Max Length: 255
'CDISC Code'

Column Name: change_reason_public
Column Type: varchar
Max Length: 255
'Change Reason Public'

Column Name: chnge_type
Column Type: varchar
Max Length: 255
'Change Type'

Column Type: varchar
Max Length: 255
'Comments'

Column Name: common_order_rank
Column Type: varchar
Max Length: 255
'Common Order Rank'

Column Name: common_si_test_rank
Column Type: varchar
Max Length: 255
'Common SI Test Rank'

Column Name: common_test_rank
Column Type: varchar
Max Length: 255
'Common Test Rank'

Column Name: component
Column Type: varchar
Max Length: 255
'Component'

Column Name: consumer_name
Column Type: varchar
Max Length: 255
'Consumer Name'

Column Name: curated_range_and_units
Column Type: varchar
Max Length: 255
'Curated Range and Units'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: varchar
Max Length: 50
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: date_last_changed
Column Type: varchar
Max Length: 40
'Date Last Changed'

Column Name: document_section
Column Type: varchar
Max Length: 255
'Document Section'

Column Name: entry_person
Column Type: varchar
Max Length: 50
The user name that last updated this data row.

Documentation for form: File_Import

Table Name: SYSTEM.table_drg_weights

Table Description: this table contains DRG weight definitions

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer

Column Name: code_set_code
Column Type: varchar

Max Length: 50
type of ICD

Column Name: drg_code
Column Type: varchar
Max Length: 50
unique DRG ID

Column Name: drg_value
Column Type: varchar
Max Length: 50
DRG description

Column Name: end_date
Column Type: date
expiration date of wieght definition

Column Name: start_date
Column Type: date
effective date of weight definition

Column Name: weight
Column Type: varchar
Max Length: 50
DRG weight value

Documentation for form: Process_Internal_Referrals

Table Name: SYSTEM.internal_referral_proc

Table Description: This table stores all processed internal referrals.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The facility of the referral

Column Name: HST_uniqueid
Column Type: varchar
Max Length: 40
The record unique identifier.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID of the referral.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 20
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: referral_comments
Column Type: varchar
Max Length: 32000
The comments associated with the referral.

Column Name: referral_form_code
Column Type: varchar
Max Length: 40
The form code of the referral assessment.

Column Name: referral_form_value
Column Type: varchar
Max Length: 40
The form value of the referral assessment.

Column Name: referral_status_code
Column Type: varchar
Max Length: 40
The status code of the referral.

Column Name: referral_status_value
Column Type: varchar
Max Length: 40
The status value of the referral.

Documentation for form: Internal_Referral_Waitlist

Table Name: SYSTEM.internal_referral_waitlst

Table Description: This table stores internal referral waitlist information.

Column Name: ID

Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: FACILITY
Column Type: integer
The facility of the referral

Column Name: HST_uniqueid
Column Type: varchar
Max Length: 40
The record unique identifier.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the referral.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 20
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: priority_code
Column Type: varchar
Max Length: 40
Priority.

Column Name: priority_value
Column Type: varchar
Max Length: 40
Priority.

Column Name: reason_closure_code
Column Type: varchar
Max Length: 40
Reason for closure.

Column Name: reason_closure_value
Column Type: varchar

Max Length: 40
Reason for closure.

Column Name: reason_removal_code
Column Type: varchar
Max Length: 40
Reason for removal.

Column Name: reason_removal_value
Column Type: varchar
Max Length: 40
Reason for removal.

Column Name: referral_form_code
Column Type: varchar
Max Length: 40
The form code of the referral assessment.

Column Name: referral_form_value
Column Type: varchar
Max Length: 40
The form value of the referral assessment.

Column Name: waitlist_comments
Column Type: varchar
Max Length: 32000
The comments associated with the waitlist referral.

Column Name: waitlist_status_code
Column Type: varchar
Max Length: 40
The status code of the waitlist referral.

Column Name: waitlist_status_value
Column Type: varchar
Max Length: 40
The status of the waitlist referral.

Column Name: waitlist_type_code
Column Type: varchar
Max Length: 40
Waitlist type.

Column Name: waitlist_type_value
Column Type: varchar
Max Length: 40
Waitlist type.

Documentation for form: Internal_Client_Referrals

Table Name: SYSTEM.internal_client_referrals

Table Description: This table stores all internal referrals.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: FACILITY
Column Type: integer
The facility of the referral

Column Name: HST_uniqueid
Column Type: varchar
Max Length: 40
The record unique identifier.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the referral.

Column Name: client_name
Column Type: varchar
Max Length: 100
The client name.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 20
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: direct_to_wait_lst_code
Column Type: varchar
Max Length: 40
Direct to wait list.

Column Name: direct_to_wait_lst_value
Column Type: varchar
Max Length: 40
Direct to wait list.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: referral_form_code
Column Type: varchar
Max Length: 40
The form code of the referral assessment.

Column Name: referral_form_value
Column Type: varchar
Max Length: 40
The form value of the referral assessment.

Column Name: referral_name
Column Type: varchar
Max Length: 40
The referral name.

Column Name: referral_num
Column Type: varchar
Max Length: 10
The referral number.

Column Name: referral_wait_lst_code
Column Type: varchar
Max Length: 40
Wait list selected.

Column Name: referral_wait_lst_value
Column Type: varchar
Max Length: 40
Wait list selected.

Column Name: status
Column Type: varchar
Max Length: 40
The status of the referral.

Column Name: users_selected_code
Column Type: varchar
Max Length: 32000
Users selected.

Column Name: users_selected_shval
Column Type: varchar
Max Length: 255
Users selected.

Column Name: users_selected_value
Column Type: varchar
Max Length: 4096
Users selected.

Column Name: waitlist_date
Column Type: date
Wait list date.

Documentation for form: Client_Merge

Table Name: SYSTEM.audit_deleted_treatment

Table Description: This table represents audit trail data of client specific deleted services.

Column Name: deleted_treatment_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service that was deleted.

Column Name: deleted_service_index
Column Type: varchar
Max Length: 10
This is an unique ID for the deleted service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 40
The practitioner ID who performed the service which was deleted.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code associated with the deleted service.

Column Name: date_of_service
Column Type: date

The date of service associated with the deleted service.

Column Name: date_service_deleted

Column Type: date

The date the service was deleted.

Column Name: time_service_deleted

Column Type: varchar

Max Length: 10

The time the service was deleted.

Column Name: user_who_deleted_service

Column Type: varchar

Max Length: 40

The user name who deleted the service.

Documentation for form: Client_Merge

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PROGRAM

Column Type: varchar

Max Length: 10

The program code in which the patient is active in.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODENUMBER

Column Type: integer

'Episode Number'

Documentation for form: Compile/Edit/Post/Unpost_Roll-Up_Services_Worklist

Table Name: SYSTEM.rollup_compile_errors

Table Description: This table returns error information about services that could not be rolled up via the 'Compile/Edit/Post/Unpost Roll-Up Services Worklist' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique ID of service for the client and episode.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for the service.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name of the client.

Column Name: compile_date
Column Type: date
The date the roll-up compile was run.

Column Name: compile_date_index
Column Type: varchar
Max Length: 50
The unique identifier of the roll-up compile date.

Column Name: cost_of_service
Column Type: numeric
The cost of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: error_message

Column Type: varchar

Max Length: 256

The error message that explains why the service could not be rolled up.

Column Name: practitioner_id

Column Type: varchar

Max Length: 50

The ID of the rendering practitioner of the service.

Column Name: rollup_definition_id

Column Type: integer

The unique identifier of the roll-up definition associated with the service.

Column Name: service_code

Column Type: varchar

Max Length: 50

The service code for the service.

Column Name: service_description

Column Type: varchar

Max Length: 50

The description associated with service

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Compile/Edit/Post/Unpost_Roll-Up_Services_Worklist

Table Name: SYSTEM.rollup_services_adj

Table Description: This table returns the unique IDs for postings created by the roll-up posting process.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID associated with the posting.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: JOIN_TO_ROLLUP_SERVICE

Column Type: varchar

Max Length: 40

The unique ID assigned to the Client's service created by the roll-up process. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

The unique ID assigned to the Client's service included in the roll-up. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with the data.

Column Name: POSTING_INDEX

Column Type: varchar

Max Length: 50

The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Compile/Edit/Post/Unpost_Roll-Up_Services_Worklist

Table Name: SYSTEM.rollup_services_unpost

Table Description: This table returns information about roll-up services that were unposted via the 'Unpost Selected Roll-Up Services' section of the 'Compile/Edit/Post/Unpost Roll-Up Services Worklist' form.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the roll-up service.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor to which the roll-up service liability is assigned.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique identifier for the client service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name of the client identified by PATID. See PATID for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40

Column Name: data_entry_date
Column Type: date

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_rollup_service
Column Type: date

The date of the roll-up service.

Column Name: duration

Column Type: varchar

Max Length: 20

The duration associated with the roll-up service code.

Column Name: guarantor_name

Column Type: varchar

Max Length: 50

The name associated with the GUARANTOR_ID for the roll-up service code.

Column Name: location_code

Column Type: varchar

Max Length: 50

The location of the roll-up service.

Column Name: location_value

Column Type: varchar

Max Length: 50

The description associated with location_code. See location_code for more information.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: practitioner_id

Column Type: varchar

Max Length: 50

The ID of the rendering practitioner of the roll-up service.

Column Name: practitioner_name

Column Type: varchar

Max Length: 40

The name associated with the practitioner_id.

Column Name: program_code

Column Type: varchar

Max Length: 50

The program of the roll-up service.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: service_code

Column Type: varchar

Max Length: 20

The service code for the roll-up service.

Column Name: service_description

Column Type: varchar

Max Length: 50

The description associated with the roll-up service.

Column Name: service_units

Column Type: varchar

Max Length: 50

The units of service associated with the roll-up service.

Column Name: unpost_date

Column Type: date

The date the roll-up service was unposted.

Column Name: unpost_index

Column Type: varchar

Max Length: 40

The unpost index under which the table entry was filed.

Documentation for form: Compile/Edit/Post/Unpost_Roll-Up_Services_Worklist

Table Name: SYSTEM.rollup_services_worklist

Table Description: This table returns the information stored in 'Compile/Edit/Post/Unpost Roll-Up Services Worklist' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

The unique identifier for the client service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name of the client identified by PATID. See PATID for more information.

Column Name: compile_date
Column Type: date
The date the roll-up services worklist was compiled.

Column Name: compile_date_index
Column Type: varchar
Max Length: 50
The compile date index for the roll-up.

Column Name: cost_of_rollup_service
Column Type: numeric
The cost of the roll-up service.

Column Name: cost_of_service
Column Type: numeric
The cost of the roll-up component service.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: date_of_rollup_service

Column Type: date

The date of the roll-up service.

Column Name: date_of_service

Column Type: date

The date of the roll-up component service.

Column Name: duration

Column Type: numeric

The duration of the roll-up component service.

Column Name: exclude_from_totals

Column Type: varchar

Max Length: 50

A flag to indicate whether the component service should be excluded from the roll-up totals

Column Name: in_other_rollups_code

Column Type: varchar

Max Length: 5

Indicator of whether the roll-up component service is included in another roll-up service.

Column Name: in_other_rollups_value

Column Type: varchar

Max Length: 5

The description associated with in_other_rollups_code. See in_other_rollups_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

The location of the roll-up service component.

Column Name: location_value

Column Type: varchar

Max Length: 50

The description associated with location_code. See location_code for more information.

Column Name: ncpdp_days

Column Type: numeric
The number of days for the NCPDP component.

Column Name: ncpdp_quantity
Column Type: numeric
The quantity for the NCPDP component service.

Column Name: ncpdp_rollup_days
Column Type: numeric
The number of days for the NCPDP roll-up service.

Column Name: ncpdp_rollup_fillnum
Column Type: varchar
Max Length: 50
The fill number for the NCPDP roll-up service.

Column Name: ncpdp_rollup_ndc
Column Type: varchar
Max Length: 50
The NDC for the NCPDP roll-up service.

Column Name: ncpdp_rollup_order_data
Column Type: varchar
Max Length: 512
The order data associated with the NCPDP roll-up service.

Column Name: ncpdp_rollup_overlap_yn
Column Type: varchar
Max Length: 50
The overlap indicator for the NCPDP roll-up service.

Column Name: ncpdp_rollup_quantity
Column Type: numeric
The quantity for the NCPDP roll-up service.

Column Name: ncpdp_rollup_rxnum
Column Type: varchar
Max Length: 50
The prescription number for the NCPDP roll-up service.

Column Name: ncpdp_rule_yn
Column Type: varchar
Max Length: 50
The indicator that identifies the roll-up rule as an NCPDP rule.

Column Name: number_of_people
Column Type: varchar
Max Length: 50
The number of people associated with the group ratio roll-up services worklist.

Column Name: practitioner_id
Column Type: varchar
Max Length: 50
The practitioner ID of the roll-up component service.

Column Name: program_code
Column Type: varchar
Max Length: 50
The program of the roll-up component service.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description associated with program_code. See program_code for more information.

Column Name: roll_date_index
Column Type: varchar
Max Length: 50
The roll-up date index for the roll-up services worklist.

Column Name: rollup_modifiers
Column Type: varchar
Max Length: 50
The modifiers associated with the roll-up services worklist.

Column Name: roll_practitioner_index
Column Type: varchar
Max Length: 50
The practitioner index associated with the service.

Column Name: rollup_bill_date
Column Type: date
The date the roll-up service is billed.

Column Name: rollup_definition_id
Column Type: integer
The ID of the roll-up services rule associated with the service.

Column Name: rollup_description
Column Type: varchar
Max Length: 50
The description associated with rollup_definition_id. See rollup_definition_id for more information.

Column Name: rollup_duration
Column Type: numeric
The duration of the roll-up service.

Column Name: rollup_location_code
Column Type: varchar
Max Length: 50

The location of the roll-up service.

Column Name: rollup_location_value

Column Type: varchar

Max Length: 50

The description associated with rollup_location_code. See rollup_location_code for more information.

Column Name: rollup_practitioner_id

Column Type: varchar

Max Length: 50

The practitioner ID of the roll-up service.

Column Name: rollup_program_code

Column Type: varchar

Max Length: 50

The program of the roll-up service.

Column Name: rollup_program_value

Column Type: varchar

Max Length: 50

The description associated with rollup_program_code. See rollup_program_code for more information.

Column Name: rollup_service_code

Column Type: varchar

Max Length: 50

The service code for the roll-up service.

Column Name: rollup_service_fee

Column Type: numeric

The cost of the roll-up service.

Column Name: rollup_service_value

Column Type: varchar

Max Length: 50

The description associated with rollup_service_code. See rollup_service_code for more information.

Column Name: rollup_units

Column Type: numeric

The number of units for the roll-up service.

Column Name: service_code

Column Type: varchar

Max Length: 20

The service code for the roll-up component service.

Column Name: service_value

Column Type: varchar

Max Length: 50

The description associated with service_code. See service_code for more information.

Column Name: supervising_practitioner

Column Type: varchar

Max Length: 50

The supervising practitioner ID associated with the practitioner ID of the roll-up service component.

Column Name: surcharge_amount

Column Type: double

The surcharge amount of the service.

Column Name: total_component_charges

Column Type: numeric

The total charges of all roll-up component services for the roll-up service.

Column Name: transferred_service

Column Type: varchar

Max Length: 50

Indicator of whether or not the roll-up component service is a transfer.

Column Name: units

Column Type: numeric

The number of units for the roll-up component service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: worklist_data_str

Column Type: varchar

Max Length: 255

A delimited string of data containing all the information associated with the service.

Column Name: worklist_status

Column Type: varchar

Max Length: 50

The status of the roll-up services worklist.

Column Name: worklist_status_str

Column Type: varchar

Max Length: 255

A delimited string of data containing information about the status of the roll-up services worklist.

Documentation for form: Compile/Edit/Post/Unpost_Roll-Up_Services_Worklist

Table Name: SYSTEM.rollup_unpost_errors

Table Description: This table returns error information about roll-up services that could not be unposted up via the 'Unpost Selected Roll-Up Services' section of the 'Compile/Edit/Post/Unpost Roll-Up Services Worklist' form.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique ID of service for the client and episode.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for the roll-up service.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name of the client.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40

Column Name: data_entry_date
Column Type: date

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_service
Column Type: date
The date of the roll-up service.

Column Name: error_message
Column Type: varchar

Max Length: 256

The error message that explains why the roll-up service could not be unposted.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: practitioner_id

Column Type: varchar

Max Length: 50

The ID of the rendering practitioner of the roll-up service.

Column Name: practitioner_name

Column Type: varchar

Max Length: 40

The name associated with the practitioner_id.

Column Name: service_code

Column Type: varchar

Max Length: 50

The service code for the roll-up service.

Column Name: service_description

Column Type: varchar

Max Length: 50

The description associated with the roll-up service.

Column Name: unpost_index

Column Type: varchar

Max Length: 40

The unpost index under which the table entry was filed.

Documentation for form: Compile/Edit/Post/Unpost_Roll-Up_Services_Worklist

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the service.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: accounting_period

Column Type: date

'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

'Referring Practitioner Name'

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Group_Ratio_Roll-Up_Daily_Reconciliation_Report

Table Name: SYSTEM.rollup_group_ratio_report

Table Description: This table returns the information temporarily stored by running 'Group Ratio Roll-Up Daily Reconciliation Report' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique identifier for the client service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: client_name
Column Type: varchar
Max Length: 40
The name of the client identified by PATID. See PATID for more information.

Column Name: compile_date
Column Type: date
The date the roll-up services worklist was compiled.

Column Name: compile_date_index
Column Type: varchar
Max Length: 50
The compile date index for the roll-up.

Column Name: cost_of_rollup_service
Column Type: numeric
The cost of the roll-up service.

Column Name: cost_of_service
Column Type: numeric
The cost of the roll-up component service.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: date_of_rollup_service

Column Type: date

The date of the roll-up service.

Column Name: date_of_service

Column Type: date

The date of the roll-up component service.

Column Name: duration

Column Type: numeric

The duration of the roll-up component service.

Column Name: in_other_rollups_code

Column Type: varchar

Max Length: 5

Indicator of whether the roll-up component service is included in another roll-up service.

Column Name: in_other_rollups_value

Column Type: varchar

Max Length: 5

The description associated with in_other_rollups_code. See in_other_rollups_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

The location of the roll-up service component.

Column Name: location_value

Column Type: varchar

Max Length: 50

The description associated with location_code. See location_code for more information.

Column Name: ncpdp_days

Column Type: numeric

The number of days for the NCPDP component.

Column Name: ncpdp_quantity

Column Type: numeric

The quantity for the NCPDP component service.

Column Name: ncpdp_rollup_days

Column Type: numeric

The number of days for the NCPDP roll-up service.

Column Name: ncpdp_rollup_fillnum

Column Type: varchar

Max Length: 50

The fill number for the NCPDP roll-up service.

Column Name: ncpdp_rollup_ndc

Column Type: varchar

Max Length: 50

The NDC for the NCPDP roll-up service.

Column Name: ncpdp_rollup_order_data

Column Type: varchar

Max Length: 512

The order data associated with the NCPDP roll-up service.

Column Name: ncpdp_rollup_overlap_yn

Column Type: varchar

Max Length: 50

The overlap indicator for the NCPDP roll-up service.

Column Name: ncpdp_rollup_quantity

Column Type: numeric

The quantity for the NCPDP roll-up service.

Column Name: ncpdp_rollup_rxnum

Column Type: varchar

Max Length: 50

The prescription number for the NCPDP roll-up service.

Column Name: ncpdp_rule_yn

Column Type: varchar

Max Length: 50

The indicator that identifies the roll-up rule as an NCPDP rule.

Column Name: number_of_people

Column Type: varchar

Max Length: 50

The number of people associated with the group ratio roll-up services worklist.

Column Name: practitioner_id

Column Type: varchar

Max Length: 50

The practitioner ID of the roll-up component service.

Column Name: program_code
Column Type: varchar
Max Length: 50
The program of the roll-up component service.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description associated with program_code. See program_code for more information.

Column Name: roll_date_index
Column Type: varchar
Max Length: 50
The roll-up date index for the roll-up services worklist.

Column Name: roll_practitioner_index
Column Type: varchar
Max Length: 50
The practitioner index associated with the service.

Column Name: rollup_bill_date
Column Type: date
The date the roll-up service is billed.

Column Name: rollup_definition_id
Column Type: integer
The ID of the roll-up services rule associated with the service.

Column Name: rollup_description
Column Type: varchar
Max Length: 50
The description associated with rollup_definition_id. See rollup_definition_id for more information.

Column Name: rollup_duration
Column Type: numeric
The duration of the roll-up service.

Column Name: rollup_location_code
Column Type: varchar
Max Length: 50
The location of the roll-up service.

Column Name: rollup_location_value
Column Type: varchar
Max Length: 50
The description associated with rollup_location_code. See rollup_location_code for more information.

Column Name: rollup_modifiers
Column Type: varchar
Max Length: 50

The modifiers associated with the roll-up services worklist.

Column Name: rollup_practitioner_id

Column Type: varchar

Max Length: 50

The practitioner ID of the roll-up service.

Column Name: rollup_program_code

Column Type: varchar

Max Length: 50

The program of the roll-up service.

Column Name: rollup_program_value

Column Type: varchar

Max Length: 50

The description associated with rollup_program_code. See rollup_program_code for more information.

Column Name: rollup_service_code

Column Type: varchar

Max Length: 50

The service code for the roll-up service.

Column Name: rollup_service_fee

Column Type: numeric

The cost of the roll-up service.

Column Name: rollup_service_value

Column Type: varchar

Max Length: 50

The description associated with rollup_service_code. See rollup_service_code for more information.

Column Name: rollup_units

Column Type: numeric

The number of units for the roll-up service.

Column Name: service_code

Column Type: varchar

Max Length: 20

The service code for the roll-up component service.

Column Name: service_value

Column Type: varchar

Max Length: 50

The description associated with service_code. See service_code for more information.

Column Name: supervising_practitioner

Column Type: varchar

Max Length: 50

The supervising practitioner ID associated with the practitioner ID of the roll-up service component.

Column Name: surcharge_amount
Column Type: double
The surcharge amount of the service.

Column Name: total_component_charges
Column Type: numeric
The total charges of all roll-up component services for the roll-up service.

Column Name: transferred_service
Column Type: varchar
Max Length: 50
Indicator of whether or not the roll-up component service is a transfer.

Column Name: units
Column Type: numeric
The number of units for the roll-up component service.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: worklist_data_str
Column Type: varchar
Max Length: 255
A delimited string of data containing all the information associated with the service.

Column Name: worklist_status
Column Type: varchar
Max Length: 50
The status of the roll-up services worklist.

Column Name: worklist_status_str
Column Type: varchar
Max Length: 255
A delimited string of data containing information about the status of the roll-up services worklist.

Documentation for form: Spreadsheet_Charge_Input

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode number.

Column Name: total_closed_charges

Column Type: numeric

Total dollar amount for all closed services in the episode.

Column Name: total_open_charges

Column Type: numeric

Total dollar amount for all open services in the episode.

Column Name: total_payments

Column Type: numeric

Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance

Column Type: numeric

Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date

Column Type: date

The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Charge_Input

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40
'Program'

Column Name: v_PROVIDER_ID
Column Type: varchar
Max Length: 10
'Practitioner'

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 100
The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value
Column Type: varchar
Max Length: 40
The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service'

Column Name: v_accounting_period
Column Type: date
The accounting period for the service.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date
Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc
Column Type: varchar
Max Length: 50
This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number
Column Type: varchar
Max Length: 50
'Authorization Number'

Column Name: billing_units
Column Type: numeric
'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Spreadsheet_Charge_Input

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID

Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Charge_Input

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code

Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code
Column Type: varchar
Max Length: 40
'Location' for the program_code of the service.

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 15
'RRG' for the program_code of the service.

Column Name: program_X_address_street
Column Type: varchar
Max Length: 40
'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 40
'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 15
'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code
Column Type: varchar
Max Length: 15
'Program Type' for the program_code of the service.

Column Name: program_X_location_value
Column Type: varchar
Max Length: 40
The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 40
The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value
Column Type: varchar
Max Length: 40
The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name
Column Type: varchar
Max Length: 40
The name of the PATID of the service.

Column Name: age_on_date_of_service_
Column Type: numeric
The client's age at the time of service.

Column Name: appt_site_name
Column Type: varchar
Max Length: 40
The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC
Column Type: varchar
Max Length: 40
The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV
Column Type: varchar
Max Length: 100
The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP
Column Type: varchar
Max Length: 100
The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id
Column Type: varchar
Max Length: 50
The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC
Column Type: varchar
Max Length: 50
Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE
Column Type: varchar
Max Length: 40
Join to Group Note.

Column Name: JOIN_TO_PARENT_TX
Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar

Max Length: 32768

'Add-On Notes'.

Column Name: add_svc_info_code

Column Type: varchar

Max Length: 50

'Additional Service Information'.

Column Name: add_svc_info_shval

Column Type: varchar

Max Length: 255

The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value

Column Type: varchar

Max Length: 4096

The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program

Column Type: varchar

Max Length: 10

The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time

Column Type: varchar

Max Length: 50

The 'Appointment End Time' related to this service.

Column Name: appt_group_id

Column Type: varchar

Max Length: 50

The 'Group #' related to this service.

Column Name: apt_group_name

Column Type: varchar

Max Length: 40

The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id

Column Type: varchar

Max Length: 50

The 'Appointment Site' related to this service.

Column Name: appt_start_time

Column Type: varchar

Max Length: 50

The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code

Column Type: varchar

Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value

Column Type: varchar

Max Length: 50

The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc

Column Type: varchar

Max Length: 50

The client's age in days, months and years at the time of service.

Column Name: discipline_code

Column Type: varchar

Max Length: 255

'Discipline'.

Column Name: discipline_value

Column Type: varchar

Max Length: 255

The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code

Column Type: varchar

Max Length: 255

'Evidence Based Practices'

Column Name: ebps_sh_val

Column Type: varchar

Max Length: 255

'The description associated with ebps_code. See ebps_code for more information.'

Column Name: ebps_value

Column Type: varchar

Max Length: 4096

'The description associated with ebps_code. See ebps_code for more information.'

Column Name: emergency_ind_code

Column Type: varchar

Max Length: 50

'Emergency Indicator'.

Column Name: emergency_ind_value

Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code

Column Type: varchar

Max Length: 5

Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value

Column Type: varchar

Max Length: 10

The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi

Column Type: bit

Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code

Column Type: varchar

Max Length: 5

Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value
Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration

Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the `tooth_surface_code`. See `tooth_surface_code` for more information.

Column Name: `total_duration_crisis_svc`

Column Type: `varchar`

Max Length: 40

Total duration if 'Service Code Type' of `SERVICE_CODE` is "Crisis".

Column Name: `total_duration_other_svc`

Column Type: `varchar`

Max Length: 40

Total duration if 'Service Code Type' of `SERVICE_CODE` is "Other".

Column Name: `transferred_service`

Column Type: `varchar`

Max Length: 10

Is this a transfer service.

Column Name: `treatment_service_code`

Column Type: `varchar`

Max Length: 50

'Treatment Service' for the `program_code` of the service.

Column Name: `treatment_service_value`

Column Type: `varchar`

Max Length: 50

The description for the `treatment_service_code`. See `treatment_service_code` for more information.

Column Name: `units_of_service`

Column Type: `numeric`

The units of the service.

Column Name: `user_row_access_code`

Column Type: `integer`

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: `v_deleted_service_value`

Column Type: `varchar`

Max Length: 40

The description for the `deleted_service_code`. See `deleted_service_code` for more information.

Documentation for form: [Spreadsheet_Edit_Service_Information](#)

Table Name: `SYSTEM.billing_episode_totals`

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar
Max Length: 40
The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The client's name.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Edit_Service_Information

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability
Column Type: numeric
The guarantor's liability.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number assigned to a client's service.

Column Name: guarantor_total_payments
Column Type: numeric
The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE
Column Type: varchar
Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date
Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc
Column Type: varchar
Max Length: 50
This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number
Column Type: varchar
Max Length: 50
'Authorization Number'

Column Name: billing_units
Column Type: numeric
'Billing Units'

Column Name: claimed_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number
Column Type: varchar
Max Length: 50
'Claimed Authorization Number'

Column Name: date_of_svc_close
Column Type: date
'Date of Service Closed'

Column Name: re_bill_claim_number
Column Type: varchar
Max Length: 50
This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance
Column Type: double
Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level
Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar
Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration

Column Type: varchar

Max Length: 20

'Duration'

Column Name: v_location_code

Column Type: varchar

Max Length: 20

'Location'

Column Name: v_modifiers

Column Type: varchar

Max Length: 20

'Modifiers'

Documentation for form: Spreadsheet_Edit_Service_Information

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Edit_Service_Information

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2
Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar
Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_accident

Column Type: date

'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service

Column Type: date

Date To Bill Roll-Up Service.

Column Name: delay_reason_code

Column Type: varchar

Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar

Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value

Column Type: varchar

Max Length: 10

The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code

Column Type: varchar

Max Length: 5

Was this service created as a roll-up service.

Column Name: is_roll_up_service_value

Column Type: varchar

Max Length: 10

The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 40

The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code

Column Type: varchar

Max Length: 50

'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value

Column Type: varchar

Max Length: 50

The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_date

Column Type: date

The date the service was first entered into the system.

Column Name: orig_entry_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 50

The time the service was first entered into the system.

Column Name: orig_entry_user

Column Type: varchar

Max Length: 50

The username that first entered the service into the system.

Column Name: orig_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that first entered the service into the system.

Column Name: original_tx_code

Column Type: varchar

Max Length: 10

'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Spreadsheet_Edit_Service_Information

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2

Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: CareConnect_HIE_Configuration

Table Name: SYSTEM.care_quality_config

Table Description: CareQuality Network Config Data

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: all_services

Column Type: varchar

Max Length: 50

Set to "Y" if Pre-Fetch Process is enabled for all service codes.

Column Name: care_quality_net_enabled

Column Type: varchar

Max Length: 50

CareQuality Network is enabled or not

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: enable_service

Column Type: varchar
Max Length: 50
'Enable Pre-Fetch Process' is enabled or not.

Column Name: enforce_consent
Column Type: varchar
Max Length: 50
Enforce Consent is enabled or not.

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 20
Option Id

Column Name: pn_form_code
Column Type: varchar
Max Length: 32000
'Progress Notes Available in Carequality'

Column Name: pn_form_sh_val
Column Type: varchar
Max Length: 255
'The description associated with pn_form_code. See pn_form_code for more information.

Column Name: pn_form_value
Column Type: varchar
Max Length: 4096
'The description associated with pn_form_code. See pn_form_code for more information.

Column Name: service_code
Column Type: varchar
Max Length: 32000
'Service Codes for Pre-Fetch'

Column Name: service_sh_val
Column Type: varchar
Max Length: 255
'The description associated with service_code. See service_code for more information.

Column Name: service_value
Column Type: varchar
Max Length: 4096
'The description associated with service_code. See service_code for more information.

Documentation for form: CareConnect_HIE_Configuration

Table Name: SYSTEM.care_quality_config_orgs

Table Description: CareQuality Network Config Organizations Data

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: organization_id
Column Type: varchar
Max Length: 50
CareQuality Organization Id

Column Name: status_code
Column Type: varchar
Max Length: 50
Status code of the organization.

Column Name: status_value
Column Type: varchar
Max Length: 50
Status description

Documentation for form: CareConnect_HIE_Configuration

Table Name: SYSTEM.ccd_upload_audit

Table Description: This table returns an audit log of information via the CareConnect CCD interface.

Column Name: ID
Column Type: integer

Column Name: ccd_file
Column Type: longvarchar
Max Length: 2147483647
Name of the CCD file.

Column Name: ccd_save_enabled
Column Type: bit

'Save CCD File To Audit Log'

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: send_date

Column Type: date

'Send Date'

Column Name: send_time

Column Type: time

'Send Time'

Column Name: status

Column Type: varchar

Max Length: 50

Status

Column Name: status_message

Column Type: varchar

Max Length: 5000

Sending status

Documentation for form: CareConnect_HIE_Configuration

Table Name: SYSTEM.ccd_upload_config

Table Description: CCD Upload Configuration Table

Column Name: ID

Column Type: integer

Column Name: ccd_upload_enabled

Column Type: varchar

Max Length: 50

CCD Upload Enabled

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored. Facility number.

Column Name: save_ccd_to_audit
Column Type: varchar
Max Length: 50
Save CCD to audit file after uploading

Column Name: ccd_interval
Column Type: integer
Interval To Upload CCD File

Column Name: consent_req_for
Column Type: varchar
Max Length: 50
Consent Required Model

Column Name: content_code
Column Type: varchar
Max Length: 10000
'Content' to be included in the CCD

Column Name: content_code_version
Column Type: integer
'Content' code dictionary version

Column Name: content_value
Column Type: varchar
Max Length: 30000
Content dictionary value

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: hie_identifier

Column Type: varchar

Max Length: 50

HIE identifier

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: provider_id
Column Type: varchar
Max Length: 50
Provider identifier

Column Name: support_42CFR_Part2
Column Type: varchar
Max Length: 50
42 CFR Part 2 supported

Documentation for form: CareConnect_HIE_Configuration

Table Name: SYSTEM.ccd_upload_queue

Table Description: This table tracks the clients that are added to transfer queue for uploading CCDs.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: last_send_date
Column Type: date
'Last Send Date'

Column Name: last_send_time
Column Type: time
'Last Send Time'

Column Name: queued
Column Type: varchar
Max Length: 50
Set to "Y" if this client is subject to be uploading CCD now.

Column Name: user_id
Column Type: varchar
Max Length: 50
User Id associated with CCD upload.

Column Name: comments
Column Type: varchar
Max Length: 32000
Comments associated with CCD upload.

Documentation for form: Payment_Acknowledgement

Table Name: SYSTEM.audit_payment_acknowledge

Table Description: This table returns the audit data filed in the 'Payment Acknowledgement' form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code where data was filed.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the acknowledgement was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID.

Column Name: amount_type_code
Column Type: varchar
Max Length: 50
1 if payment_amount is "Less than zero", 2 if payment_amount is "Greater than zero", 3 if payment_amount is "Zero".

Column Name: amount_type_value
Column Type: varchar
Max Length: 50
The description for the amount_type_code. See amount_type_code for more information.

Column Name: bank_ref_number
Column Type: varchar
Max Length: 50
The 'Bank Ref #'.

Column Name: batch_number
Column Type: varchar

Max Length: 50
The 'Batch Number'.

Column Name: category_code
Column Type: varchar
Max Length: 50
The 'Category'.

Column Name: category_value
Column Type: varchar
Max Length: 100
The description for the category_code. See category_code for more information.

Column Name: check_eft_date
Column Type: date
'Check/EFT Date'.

Column Name: check_eft_number
Column Type: varchar
Max Length: 50
The check/EFT number.

Column Name: comments
Column Type: varchar
Max Length: 32000
comments property for reporting

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 20
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Receipt Date'.

Column Name: deposit_date
Column Type: date
'Deposit Date'.

Column Name: name_source
Column Type: varchar
Max Length: 50
The 'Name/Source'.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: payment_amount
Column Type: numeric
The Payment Acknowledgement dollar amount.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value
Column Type: varchar
Max Length: 40
The description associated with payment_type_code. See payment_type_code for more information.

Column Name: transaction_number
Column Type: integer
The 'Transaction Number'.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'.

Column Name: treatment_service_value
Column Type: varchar
Max Length: 50
The description for the treatment_service_code. See treatment_service_code for more information.

Documentation for form: Payment_Acknowledgement

Table Name: SYSTEM.pay_ack_post_pay_acc_ent

Table Description: This table returns the data filed in the 'Payment Acknowledgement' (Post Payment Accounting Entry) form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code where data was filed.

Column Name: account_code
Column Type: varchar
Max Length: 50

The 'Account'.

Column Name: account_value

Column Type: varchar

Max Length: 100

The description for the account_code. See account_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 20

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: payment_amount
Column Type: numeric
The Payment Acknowledgement dollar amount.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value
Column Type: varchar
Max Length: 40
The description associated with payment_type_code. See payment_type_code for more information.

Column Name: posting_date
Column Type: date
'Posting Date'.

Column Name: program_code
Column Type: varchar
Max Length: 50
The 'Program'.

Column Name: program_value
Column Type: varchar
Max Length: 100
The description for the program_code. See program_code for more information.

Column Name: reversal_reason
Column Type: varchar
Max Length: 4096
'Reversal Reason' property for reporting

Column Name: transaction_number
Column Type: integer
The 'Transaction Number'.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'.

Column Name: treatment_service_value
Column Type: varchar
Max Length: 50
The description for the treatment_service_code. See treatment_service_code for more information.

Documentation for form: Payment_Acknowledgement

Table Name: SYSTEM.payment_acknowledgement

Table Description: This table returns the data filed in the 'Payment Acknowledgement' form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code where data was filed.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the acknowledgement was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID.

Column Name: amount_type_code
Column Type: varchar
Max Length: 50
1 if payment_amount is "Less than zero", 2 if payment_amount is "Greater than zero", 3 if payment_amount is "Zero".

Column Name: amount_type_value
Column Type: varchar

Max Length: 50

The description for the amount_type_code. See amount_type_code for more information.

Column Name: bank_ref_number

Column Type: varchar

Max Length: 50

The 'Bank Ref #'.

Column Name: batch_number

Column Type: varchar

Max Length: 50

The 'Batch Number'.

Column Name: category_code

Column Type: varchar

Max Length: 50

The 'Category'.

Column Name: category_value

Column Type: varchar

Max Length: 100

The description for the category_code. See category_code for more information.

Column Name: check_eft_date

Column Type: date

'Check/EFT Date'.

Column Name: check_eft_number

Column Type: varchar

Max Length: 50

The check/EFT number.

Column Name: comments

Column Type: varchar

Max Length: 32000

comments property for reporting

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 20

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Receipt Date'.

Column Name: deposit_date
Column Type: date
'Deposit Date'.

Column Name: name_source
Column Type: varchar
Max Length: 50
The 'Name/Source'.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: payment_amount
Column Type: numeric
The Payment Acknowledgement dollar amount.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value
Column Type: varchar
Max Length: 40
The description associated with payment_type_code. See payment_type_code for more information.

Column Name: transaction_number
Column Type: integer
The 'Transaction Number'.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'.

Column Name: treatment_service_value
Column Type: varchar
Max Length: 50
The description for the treatment_service_code. See treatment_service_code for more information.

Documentation for form: CCBHC_Population_Maintenance

Table Name: SYSTEM.audit_ccbhc_population

Table Description: This table returns the audit information stored in the 'CCBHC Population Maintenance' form.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOINTOAuditCCBHCPopulation

Column Type: integer

The table row id of the record.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: audit_data_entry_by

Column Type: varchar

Max Length: 50

The user who last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_data_entry_user_name

Column Type: varchar

Max Length: 50

The user name who last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_date

Column Type: date

The date the row was last updated on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_option_desc

Column Type: varchar

Max Length: 255

The name of the form that last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row on the original SYSTEM.ccbhc_population_history table.

Column Name: audit_time

Column Type: time

The time the row was last updated on the original SYSTEM.ccbhc_population_history table.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: date_of_birth

Column Type: date

Client's Date Of Birth

Column Name: effective_date

Column Type: date

'Effective Date'

Column Name: end_date
Column Type: date
'End Date'

Column Name: first_name
Column Type: varchar
Max Length: 50
Client's First Name

Column Name: gender
Column Type: varchar
Max Length: 50
Client's Gender

Column Name: last_name
Column Type: varchar
Max Length: 50
Client's Last Name

Column Name: medicaid_id
Column Type: varchar
Max Length: 50
Client's Medicaid ID

Column Name: middle_initial
Column Type: varchar
Max Length: 50
Client's Middle Initial

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: population_code
Column Type: varchar
Max Length: 50
Population Assigned

Column Name: population_id
Column Type: varchar
Max Length: 50
Link to the original SYSTEM.ccbhc_population_history table row id.

Column Name: population_value

Column Type: varchar

Max Length: 50

The description associated with population_code. See population_code for more information.

Column Name: ssn

Column Type: varchar

Max Length: 50

Client's Social Security Number

Column Name: status

Column Type: varchar

Max Length: 50

'Status'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: CCBHC_Population_Maintenance

Table Name: SYSTEM.ccbhc_population_history

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: PCP_Communication_Configuration

Table Name: SYSTEM.audit_pcp_communications

Table Description: This table returns audit pcp communication information.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_COMM

Column Type: integer

Join to the SYSTEM.pcp_communication table.

Column Name: JOIN_TO_PCP

Column Type: varchar

Max Length: 50

Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID

Column Type: varchar

Max Length: 20

Client ID associated to this communication.

Column Name: application

Column Type: varchar

Max Length: 50

Application the form_id is located in.

Column Name: communication_user

Column Type: varchar

Max Length: 50

user who created this communication.

Column Name: doc_date

Column Type: date

The date this document was created.

Column Name: doc_form

Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50
Fax identifier.

Column Name: fax_number
Column Type: varchar
Max Length: 50
Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value
Column Type: varchar

Max Length: 50

The description for the method_code. See method_code for more information.

Column Name: printed_date

Column Type: date

The date this document was printed for mailing.

Column Name: printed_time

Column Type: varchar

Max Length: 50

The time this document was printed for mailing.

Column Name: printed_user

Column Type: varchar

Max Length: 50

The user that set this document as printed for mailing.

Column Name: program_code

Column Type: varchar

Max Length: 50

'Program(s)'.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: routing_doc_image_id

Column Type: integer

Document image ID associated to the routed document.

Column Name: site_name

Column Type: varchar

Max Length: 50

site for this communication.

Column Name: start_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - Start Time' for this communication.

Column Name: status

Column Type: varchar

Max Length: 50

The status of this communication.

Column Name: time_zone_code

Column Type: varchar

Max Length: 50

Time zone for this communication.

Column Name: time_zone_value

Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic

Column Type: varchar

Max Length: 50

Historic associated to the assessment that created this communication.

Column Name: updated_date

Column Type: date

The date this communication was last updated.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

Valid days of the week to fax this communication.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: PCP_Communication_Configuration

Table Name: SYSTEM.pcp_comm_config

Table Description: This table returns 'PCP Communication Configuration' information.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: application
Column Type: varchar
Max Length: 50
Application the form is located in.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: doc_form_id
Column Type: varchar
Max Length: 50
'Document Management Form'.

Column Name: form_desc
Column Type: varchar

Max Length: 80

The option name associated to form_id.

Column Name: form_id

Column Type: varchar

Max Length: 50

'Avatar Form/Assessment'.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The option name that last updated this data row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The option identifier that last updated this data_row.

Column Name: report

Column Type: varchar

Max Length: 50

'Report'.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

'Document Communication View Type'.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: PCP_Communication_Configuration

Table Name: SYSTEM.pcp_communications

Table Description: This table returns all pcp communication that have been submitted or errored.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_PCP
Column Type: varchar
Max Length: 50
Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID associated to this communication.

Column Name: application
Column Type: varchar
Max Length: 50
Application the form_id is located in.

Column Name: communication_user
Column Type: varchar
Max Length: 50
user who created this communication.

Column Name: doc_date
Column Type: date
The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar

Max Length: 50

Fax identifier.

Column Name: fax_number

Column Type: varchar

Max Length: 50

Fax number for this communication.

Column Name: form_desc

Column Type: varchar

Max Length: 80

The option name associated to form_id.

Column Name: form_id

Column Type: varchar

Max Length: 50

The form that created this communication.

Column Name: method_code

Column Type: varchar

Max Length: 50

Communication method.

Column Name: method_value

Column Type: varchar

Max Length: 50

The description for the method_code. See method_code for more information.

Column Name: printed_date

Column Type: date

The date this document was printed for mailing.

Column Name: printed_time

Column Type: varchar

Max Length: 50

The time this document was printed for mailing.

Column Name: printed_user

Column Type: varchar

Max Length: 50

The user that set this document as printed for mailing.

Column Name: program_code

Column Type: varchar

Max Length: 50

'Program(s)'.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: removal_reason

Column Type: varchar

Max Length: 200

'Removal Reason' for this communication.

Column Name: routing_doc_image_id

Column Type: integer

Document image ID associated to the routed document.

Column Name: site_name

Column Type: varchar

Max Length: 50

site for this communication.

Column Name: start_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - Start Time' for this communication.

Column Name: status

Column Type: varchar

Max Length: 50

The status of this communication.

Column Name: time_zone_code

Column Type: varchar

Max Length: 50

Time zone for this communication.

Column Name: time_zone_value

Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic

Column Type: varchar

Max Length: 50

Historic associated to the assessment that created this communication.

Column Name: updated_date

Column Type: date

The date this communication was last updated.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

Valid days of the week to fax this communication.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: Program_PCP_Communication_Preferences

Table Name: SYSTEM.audit_pcp_communications

Table Description: This table returns audit pcp communication information.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_COMM

Column Type: integer

Join to the SYSTEM.pcp_communication table.

Column Name: JOIN_TO_PCP

Column Type: varchar

Max Length: 50

Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID

Column Type: varchar

Max Length: 20

Client ID associated to this communication.

Column Name: application

Column Type: varchar

Max Length: 50

Application the form_id is located in.

Column Name: communication_user

Column Type: varchar

Max Length: 50

user who created this communication.

Column Name: doc_date

Column Type: date

The date this document was created.

Column Name: doc_form

Column Type: varchar

Max Length: 50

Document Mangement Form ID.

Column Name: doc_image_id

Column Type: integer

Document image ID associated to this communication.

Column Name: end_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - End Time' for this communication.

Column Name: episode

Column Type: varchar

Max Length: 50

Episode for this communication.

Column Name: error

Column Type: varchar

Max Length: 100

Error message for this communication.

Column Name: fax_id

Column Type: varchar

Max Length: 50

Fax identifier.

Column Name: fax_number

Column Type: varchar

Max Length: 50

Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: printed_date
Column Type: date
The date this document was printed for mailing.

Column Name: printed_time
Column Type: varchar
Max Length: 50
The time this document was printed for mailing.

Column Name: printed_user
Column Type: varchar
Max Length: 50
The user that set this document as printed for mailing.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: routing_doc_image_id
Column Type: integer
Document image ID associated to the routed document.

Column Name: site_name
Column Type: varchar

Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
Time zone for this communication.

Column Name: time_zone_value
Column Type: varchar
Max Length: 50
The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic
Column Type: varchar
Max Length: 50
Historic associated to the assessment that created this communication.

Column Name: updated_date
Column Type: date
The date this communication was last updated.

Column Name: valid_days_code
Column Type: varchar
Max Length: 50
Valid days of the week to fax this communication.

Column Name: valid_days_value_long
Column Type: varchar
Max Length: 4096
The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short
Column Type: varchar
Max Length: 255
The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code
Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: Program_PCP_Communication_Preferences

Table Name: SYSTEM.audit_pcp_program_pref

Table Description: This table returns audit information for the 'Program PCP Communication Preferences' form.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: active_code

Column Type: varchar

Max Length: 50

'Active'.

Column Name: active_value

Column Type: varchar

Max Length: 50

The description for the active_code. See active_code for more information.

Column Name: comm_meth_req_code

Column Type: varchar

Max Length: 50

'Communication Method Requirement'.

Column Name: comm_meth_req_value

Column Type: varchar

Max Length: 50

The description for the comm_meth_req_code. See comm_meth_req_code for more information.

Column Name: comm_pref_name

Column Type: varchar

Max Length: 50

'Communication Preference Name'.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: pcpr_required_code
Column Type: varchar
Max Length: 50
'PCP Required'.

Column Name: pcpr_required_value
Column Type: varchar
Max Length: 50
The description for the pcpr_required_code. See pcpr_required_code for more information.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: view_type_code
Column Type: varchar
Max Length: 50
'Document Communication View Type'.

Column Name: view_type_value
Column Type: varchar
Max Length: 50
The description for the view_type_code. See view_type_code for more information.

Documentation for form: Program_PCP_Communication_Preferences

Table Name: SYSTEM.pcp_communications

Table Description: This table returns all pcp communication that have been submitted or errored.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_PCP
Column Type: varchar
Max Length: 50
Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID associated to this communication.

Column Name: application
Column Type: varchar
Max Length: 50

Application the form_id is located in.

Column Name: communication_user
Column Type: varchar
Max Length: 50
user who created this communication.

Column Name: doc_date
Column Type: date
The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50
Fax identifier.

Column Name: fax_number
Column Type: varchar
Max Length: 50
Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: printed_date
Column Type: date
The date this document was printed for mailing.

Column Name: printed_time
Column Type: varchar
Max Length: 50
The time this document was printed for mailing.

Column Name: printed_user
Column Type: varchar
Max Length: 50
The user that set this document as printed for mailing.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: removal_reason
Column Type: varchar
Max Length: 200
'Removal Reason' for this communication.

Column Name: routing_doc_image_id
Column Type: integer
Document image ID associated to the routed document.

Column Name: site_name
Column Type: varchar

Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
Time zone for this communication.

Column Name: time_zone_value
Column Type: varchar
Max Length: 50
The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic
Column Type: varchar
Max Length: 50
Historic associated to the assessment that created this communication.

Column Name: updated_date
Column Type: date
The date this communication was last updated.

Column Name: valid_days_code
Column Type: varchar
Max Length: 50
Valid days of the week to fax this communication.

Column Name: valid_days_value_long
Column Type: varchar
Max Length: 4096
The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short
Column Type: varchar
Max Length: 255
The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code
Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: Program_PCP_Communication_Preferences

Table Name: SYSTEM.pcp_program_pref

Table Description: This table returns 'Program PCP Communication Preferences' information.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: active_code

Column Type: varchar

Max Length: 50

'Active'.

Column Name: active_value

Column Type: varchar

Max Length: 50

The description for the active_code. See active_code for more information.

Column Name: comm_meth_req_code

Column Type: varchar

Max Length: 50

'Communication Method Requirement'.

Column Name: comm_meth_req_value

Column Type: varchar

Max Length: 50

The description for the comm_meth_req_code. See comm_meth_req_code for more information.

Column Name: comm_pref_name

Column Type: varchar

Max Length: 50

'Communication Preference Name'.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: pcp_required_code
Column Type: varchar
Max Length: 50
'PCP Required'.

Column Name: pcp_required_value
Column Type: varchar
Max Length: 50
The description for the pcp_required_code. See pcp_required_code for more information.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: view_type_code
Column Type: varchar
Max Length: 50
'Document Communication View Type'.

Column Name: view_type_value
Column Type: varchar
Max Length: 50
The description for the view_type_code. See view_type_code for more information.

Documentation for form:

PCP_Definition_And_Communication_Preferences

Table Name: SYSTEM.audit_pcp_communications

Table Description: This table returns audit pcp communication information.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_COMM
Column Type: integer
Join to the SYSTEM.pcp_communication table.

Column Name: JOIN_TO_PCP
Column Type: varchar
Max Length: 50
Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID
Column Type: varchar

Max Length: 20
Client ID associated to this communication.

Column Name: application
Column Type: varchar
Max Length: 50
Application the form_id is located in.

Column Name: communication_user
Column Type: varchar
Max Length: 50
user who created this communication.

Column Name: doc_date
Column Type: date
The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50
Fax identifier.

Column Name: fax_number
Column Type: varchar
Max Length: 50
Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: printed_date
Column Type: date
The date this document was printed for mailing.

Column Name: printed_time
Column Type: varchar
Max Length: 50
The time this document was printed for mailing.

Column Name: printed_user
Column Type: varchar
Max Length: 50
The user that set this document as printed for mailing.

Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: routing_doc_image_id
Column Type: integer
Document image ID associated to the routed document.

Column Name: site_name

Column Type: varchar
Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
Time zone for this communication.

Column Name: time_zone_value
Column Type: varchar
Max Length: 50
The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic
Column Type: varchar
Max Length: 50
Historic associated to the assessment that created this communication.

Column Name: updated_date
Column Type: date
The date this communication was last updated.

Column Name: valid_days_code
Column Type: varchar
Max Length: 50
Valid days of the week to fax this communication.

Column Name: valid_days_value_long
Column Type: varchar
Max Length: 4096
The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short
Column Type: varchar
Max Length: 255
The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar
Max Length: 50
View type associated to this communication.

Column Name: view_type_value
Column Type: varchar
Max Length: 50
The description for the view_type_code. See view_type_code for more information.

Documentation for form: PCP_Definition_And_Communication_Preferences

Table Name: SYSTEM.audit_pcp_def_sites

Table Description: This table returns audit PCP site definition information.

Column Name: ID
Column Type: integer

Column Name: office_add_state_code
Column Type: varchar
Max Length: 10
'Office Address - State'.

Column Name: office_add_state_value
Column Type: varchar
Max Length: 40
The description for the office_add_state_code. See office_add_state_code for more information.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_PCP
Column Type: varchar
Max Length: 50
Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: active_code
Column Type: varchar
Max Length: 50
'Active'.

Column Name: active_value
Column Type: varchar

Max Length: 50

The description for the active_code. See active_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time when this data row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: end_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - End Time'.

Column Name: fax_number

Column Type: varchar

Max Length: 50

'Fax Number'.

Column Name: fax_verified_code

Column Type: varchar

Max Length: 50

'Fax Verified'.

Column Name: fax_verified_value

Column Type: varchar

Max Length: 50

The description for the fax_verified_code. See fax_verified_code for more information.

Column Name: method_code

Column Type: varchar

Max Length: 50

'Document Receiving Method Preference'.

Column Name: method_value

Column Type: varchar

Max Length: 50

The description for the method_code. See method_code for more information.

Column Name: office_add_city

Column Type: varchar

Max Length: 50

'Office Address - City'.

Column Name: office_add_county_code

Column Type: varchar

Max Length: 50

'Office Address - County'.

Column Name: office_add_county_value

Column Type: varchar

Max Length: 50

The description for the office_add_county_code. See office_add_county_code for more information.

Column Name: office_add_street

Column Type: varchar

Max Length: 50

'Office Address - Street'.

Column Name: office_add_street_2

Column Type: varchar

Max Length: 50

'Office Address - Street 2'.

Column Name: office_add_zip

Column Type: varchar

Max Length: 50

'Office Address - Zip Code'.

Column Name: office_number

Column Type: varchar

Max Length: 50

'Office Number'.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The option name that last updated this data row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The option identifier that last updated this data_row.

Column Name: receive_docs_code

Column Type: varchar

Max Length: 50

'Receive Documents'.

Column Name: receive_docs_value

Column Type: varchar

Max Length: 50

The description for the receive_docs_code. See receive_docs_code for more information.

Column Name: site_name

Column Type: varchar

Max Length: 50

'Communication Site Name'.

Column Name: start_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - Start Time'.

Column Name: time_zone_code

Column Type: varchar

Max Length: 50

'Time Zone'.

Column Name: time_zone_value

Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

'Valid Days Of The Week To Send'.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

'Document Communication View Type'.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form:

PCP_Definition_And_Communication_Preferences

Table Name: SYSTEM.audit_pcp_definition

Table Description: This table returns audit PCP definition information.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: active_code

Column Type: varchar

Max Length: 50

'Active'.

Column Name: active_value

Column Type: varchar

Max Length: 50

The description for the active_code. See active_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: np_i_number

Column Type: varchar

Max Length: 50

'PCP NPI Number'.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The option name that last updated this data row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The option identifier that last updated this data_row.

Column Name: pcp_first_name

Column Type: varchar

Max Length: 50

'PCP First Name'.

Column Name: pcp_last_name

Column Type: varchar

Max Length: 50

'PCP Last Name'.

Column Name: pcp_middle_name

Column Type: varchar

Max Length: 50

'PCP Middle Name'.

Column Name: program_code

Column Type: varchar

Max Length: 4096

'Programs'.

Column Name: program_value_long

Column Type: varchar

Max Length: 4096

The description for the program_code. See program_code for more information.

Column Name: program_value_short

Column Type: varchar

Max Length: 255

The description for the program_code limited to 255 characters. See program_code for more information.

Column Name: system_of_care_code

Column Type: varchar

Max Length: 50

'System Of Care'.

Column Name: system_of_care_value

Column Type: varchar

Max Length: 50

The description for the system_of_care_code. See system_of_care_code for more information.

Documentation for form: PCP_Definition_And_Communication_Preferences

Table Name: SYSTEM.pcp_communications

Table Description: This table returns all pcp communication that have been submitted or errored.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_PCP
Column Type: varchar
Max Length: 50
Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID associated to this communication.

Column Name: application
Column Type: varchar
Max Length: 50
Application the form_id is located in.

Column Name: communication_user
Column Type: varchar
Max Length: 50
user who created this communication.

Column Name: doc_date
Column Type: date
The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50
Fax identifier.

Column Name: fax_number
Column Type: varchar
Max Length: 50
Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: printed_date
Column Type: date
The date this document was printed for mailing.

Column Name: printed_time

Column Type: varchar
Max Length: 50
The time this document was printed for mailing.

Column Name: printed_user
Column Type: varchar
Max Length: 50
The user that set this document as printed for mailing.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: removal_reason
Column Type: varchar
Max Length: 200
'Removal Reason' for this communication.

Column Name: routing_doc_image_id
Column Type: integer
Document image ID associated to the routed document.

Column Name: site_name
Column Type: varchar
Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
Time zone for this communication.

Column Name: time_zone_value
Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic

Column Type: varchar

Max Length: 50

Historic associated to the assessment that created this communication.

Column Name: updated_date

Column Type: date

The date this communication was last updated.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

Valid days of the week to fax this communication.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form:

PCP_Definition_And_Communication_Preferences

Table Name: SYSTEM.pcp_definition

Table Description: This table returns PCP definition information.

Column Name: ID

Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: active_code
Column Type: varchar
Max Length: 50
'Active'.

Column Name: active_value
Column Type: varchar
Max Length: 50
The description for the active_code. See active_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: npi_number
Column Type: varchar
Max Length: 50
'PCP NPI Number'.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: pcp_first_name
Column Type: varchar
Max Length: 50
'PCP First Name'.

Column Name: pcp_last_name
Column Type: varchar
Max Length: 50
'PCP Last Name'.

Column Name: pcp_middle_name
Column Type: varchar
Max Length: 50
'PCP Middle Name'.

Column Name: program_code

Column Type: varchar
Max Length: 4096
'Programs'.

Column Name: program_value_long
Column Type: varchar
Max Length: 4096
The description for the program_code. See program_code for more information.

Column Name: program_value_short
Column Type: varchar
Max Length: 255
The description for the program_code limited to 255 characters. See program_code for more information.

Column Name: system_of_care_code
Column Type: varchar
Max Length: 50
'System Of Care'.

Column Name: system_of_care_value
Column Type: varchar
Max Length: 50
The description for the system_of_care_code. See system_of_care_code for more information.

Documentation for form:

PCP_Definition_And_Communication_Preferences

Table Name: SYSTEM.pcp_definition_sites

Table Description: This table returns PCP site definition information.

Column Name: ID
Column Type: integer

Column Name: office_add_state_code

'Active'.

Column Name: active_value
Column Type: varchar
Max Length: 50
The description for the active_code. See active_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: end_time
Column Type: varchar
Max Length: 50

'Valid Time Frame - End Time'.

Column Name: fax_number
Column Type: varchar
Max Length: 50
'Fax Number'.

Column Name: fax_verified_code
Column Type: varchar
Max Length: 50
'Fax Verified'.

Column Name: fax_verified_value
Column Type: varchar
Max Length: 50
The description for the fax_verified_code. See fax_verified_code for more information.

Column Name: method_code
Column Type: varchar
Max Length: 50
'Document Receiving Method Preference'.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: office_add_city
Column Type: varchar
Max Length: 50
'Office Address - City'.

Column Name: office_add_county_code
Column Type: varchar
Max Length: 50
'Office Address - County'.

Column Name: office_add_county_value
Column Type: varchar
Max Length: 50
The description for the office_add_county_code. See office_add_county_code for more information.

Column Name: office_add_street
Column Type: varchar
Max Length: 50
'Office Address - Street'.

Column Name: office_add_street_2
Column Type: varchar
Max Length: 50

'Office Address - Street 2'.

Column Name: office_add_zip

Column Type: varchar

Max Length: 50

'Office Address - Zip Code'.

Column Name: office_number

Column Type: varchar

Max Length: 50

'Office Number'.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The option name that last updated this data row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The option identifier that last updated this data_row.

Column Name: receive_docs_code

Column Type: varchar

Max Length: 50

'Receive Documents'.

Column Name: receive_docs_value

Column Type: varchar

Max Length: 50

The description for the receive_docs_code. See receive_docs_code for more information.

Column Name: site_name

Column Type: varchar

Max Length: 50

'Communication Site Name'.

Column Name: start_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - Start Time'.

Column Name: time_zone_code

Column Type: varchar

Max Length: 50

'Time Zone'.

Column Name: time_zone_value

Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

'Valid Days Of The Week To Send'.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

'Document Communication View Type'.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: PCP_Communication_-_Manual_Mail_Queue

Table Name: SYSTEM.audit_pcp_communications

Table Description: This table returns audit pcp communication information.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_COMM

Column Type: integer

Join to the SYSTEM.pcp_communication table.

Column Name: JOIN_TO_PCP

Column Type: varchar
Max Length: 50
Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID
Column Type: varchar
Max Length: 20
Client ID associated to this communication.

Column Name: application
Column Type: varchar
Max Length: 50
Application the form_id is located in.

Column Name: communication_user
Column Type: varchar
Max Length: 50
user who created this communication.

Column Name: doc_date
Column Type: date
The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50

Fax identifier.

Column Name: fax_number

Column Type: varchar

Max Length: 50

Fax number for this communication.

Column Name: form_desc

Column Type: varchar

Max Length: 80

The option name associated to form_id.

Column Name: form_id

Column Type: varchar

Max Length: 50

The form that created this communication.

Column Name: method_code

Column Type: varchar

Max Length: 50

Communication method.

Column Name: method_value

Column Type: varchar

Max Length: 50

The description for the method_code. See method_code for more information.

Column Name: printed_date

Column Type: date

The date this document was printed for mailing.

Column Name: printed_time

Column Type: varchar

Max Length: 50

The time this document was printed for mailing.

Column Name: printed_user

Column Type: varchar

Max Length: 50

The user that set this document as printed for mailing.

Column Name: program_code

Column Type: varchar

Max Length: 50

'Program(s)'.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: routing_doc_image_id
Column Type: integer
Document image ID associated to the routed document.

Column Name: site_name
Column Type: varchar
Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
Time zone for this communication.

Column Name: time_zone_value
Column Type: varchar
Max Length: 50
The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic
Column Type: varchar
Max Length: 50
Historic associated to the assessment that created this communication.

Column Name: updated_date
Column Type: date
The date this communication was last updated.

Column Name: valid_days_code
Column Type: varchar
Max Length: 50
Valid days of the week to fax this communication.

Column Name: valid_days_value_long
Column Type: varchar
Max Length: 4096
The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Document image ID associated to the routed document.

Column Name: site_name
Column Type: varchar
Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar

Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50
Time zone for this communication.

Column Name: time_zone_value
Column Type: varchar
Max Length: 50
The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic
Column Type: varchar
Max Length: 50
Historic associated to the assessment that created this communication.

Column Name: updated_date
Column Type: date
The date this communication was last updated.

Column Name: valid_days_code
Column Type: varchar
Max Length: 50
Valid days of the week to fax this communication.

Column Name: valid_days_value_long
Column Type: varchar
Max Length: 4096
The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short
Column Type: varchar
Max Length: 255
The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code
Column Type: varchar
Max Length: 50
View type associated to this communication.

Column Name: view_type_value
Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: PCP_Communication_-_Error_Processing_Queue

Table Name: SYSTEM.audit_pcp_communications

Table Description: This table returns audit pcp communication information.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_COMM

Column Type: integer

Join to the SYSTEM.pcp_communication table.

Column Name: JOIN_TO_PCP

Column Type: varchar

Max Length: 50

Join to the SYSTEM.pcp_definition table on NPI Number.

Column Name: PATID

Column Type: varchar

Max Length: 20

Client ID associated to this communication.

Column Name: application

Column Type: varchar

Max Length: 50

Application the form_id is located in.

Column Name: communication_user

Column Type: varchar

Max Length: 50

user who created this communication.

Column Name: doc_date

Column Type: date

The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode
Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50
Fax identifier.

Column Name: fax_number
Column Type: varchar
Max Length: 50
Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value

Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: printed_date
Column Type: date
The date this document was printed for mailing.

Column Name: printed_time
Column Type: varchar
Max Length: 50
The time this document was printed for mailing.

Column Name: printed_user
Column Type: varchar
Max Length: 50
The user that set this document as printed for mailing.

Column Name: program_code
Column Type: varchar
Max Length: 50
'Program(s)'.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: routing_doc_image_id
Column Type: integer
Document image ID associated to the routed document.

Column Name: site_name
Column Type: varchar
Max Length: 50
site for this communication.

Column Name: start_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - Start Time' for this communication.

Column Name: status
Column Type: varchar
Max Length: 50
The status of this communication.

Column Name: time_zone_code
Column Type: varchar
Max Length: 50

Time zone for this communication.

Column Name: time_zone_value

Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic

Column Type: varchar

Max Length: 50

Historic associated to the assessment that created this communication.

Column Name: updated_date

Column Type: date

The date this communication was last updated.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

Valid days of the week to fax this communication.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: PCP_Communication_-_Error_Processing_Queue

Table Name: SYSTEM.pcp_communications

Table Description: This table returns all pcp communication that have been submitted or errored.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_PCP
Column Type: varchar

Client ID associated to this communication.

Column Name: application
Column Type: varchar
Max Length: 50
Application the form_id is located in.

Column Name: communication_user
Column Type: varchar
Max Length: 50
user who created this communication.

Column Name: doc_date
Column Type: date
The date this document was created.

Column Name: doc_form
Column Type: varchar
Max Length: 50
Document Mangement Form ID.

Column Name: doc_image_id
Column Type: integer
Document image ID associated to this communication.

Column Name: end_time
Column Type: varchar
Max Length: 50
'Valid Time Frame - End Time' for this communication.

Column Name: episode

Column Type: varchar
Max Length: 50
Episode for this communication.

Column Name: error
Column Type: varchar
Max Length: 100
Error message for this communication.

Column Name: fax_id
Column Type: varchar
Max Length: 50
Fax identifier.

Column Name: fax_number
Column Type: varchar
Max Length: 50
Fax number for this communication.

Column Name: form_desc
Column Type: varchar
Max Length: 80
The option name associated to form_id.

Column Name: form_id
Column Type: varchar
Max Length: 50
The form that created this communication.

Column Name: method_code
Column Type: varchar
Max Length: 50
Communication method.

Column Name: method_value
Column Type: varchar
Max Length: 50
The description for the method_code. See method_code for more information.

Column Name: printed_date
Column Type: date
The date this document was printed for mailing.

Column Name: printed_time
Column Type: varchar
Max Length: 50
The time this document was printed for mailing.

Column Name: printed_user
Column Type: varchar

Max Length: 50

The user that set this document as printed for mailing.

Column Name: program_code

Column Type: varchar

Max Length: 50

'Program(s)'.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: removal_reason

Column Type: varchar

Max Length: 200

'Removal Reason' for this communication.

Column Name: routing_doc_image_id

Column Type: integer

Document image ID associated to the routed document.

Column Name: site_name

Column Type: varchar

Max Length: 50

site for this communication.

Column Name: start_time

Column Type: varchar

Max Length: 50

'Valid Time Frame - Start Time' for this communication.

Column Name: status

Column Type: varchar

Max Length: 50

The status of this communication.

Column Name: time_zone_code

Column Type: varchar

Max Length: 50

Time zone for this communication.

Column Name: time_zone_value

Column Type: varchar

Max Length: 50

The description for the time_zone_code. See time_zone_code for more information.

Column Name: unique_historic

Column Type: varchar

Max Length: 50

Historic associated to the assessment that created this communication.

Column Name: updated_date

Column Type: date

The date this communication was last updated.

Column Name: valid_days_code

Column Type: varchar

Max Length: 50

Valid days of the week to fax this communication.

Column Name: valid_days_value_long

Column Type: varchar

Max Length: 4096

The description for the valid_days_code. See valid_days_code for more information.

Column Name: valid_days_value_short

Column Type: varchar

Max Length: 255

The description for the valid_days_code limited to 255 characters. See valid_days_code for more information.

Column Name: view_type_code

Column Type: varchar

Max Length: 50

View type associated to this communication.

Column Name: view_type_value

Column Type: varchar

Max Length: 50

The description for the view_type_code. See view_type_code for more information.

Documentation for form: Patient_Health_Profile

Table Name: SYSTEM.php_data

Table Description: PHP Data

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_of_onset
Column Type: varchar
Max Length: 20

Date of onset.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: other

Column Type: varchar

Max Length: 32000

Other field.

Column Name: problem_code

Column Type: varchar

Max Length: 20

Problem code.

Column Name: problem_description

Column Type: varchar

Max Length: 256

Problem description.

Column Name: status_code

Column Type: varchar

Max Length: 20

Status Code.

Column Name: status_value

Column Type: varchar

Max Length: 80

The dictionary value of statuscode.

Column Name: verification_code

Column Type: varchar

Max Length: 20

Verification status code.

Column Name: verification_value

Column Type: varchar

Max Length: 80

The dictionary value of verificationcode.

Column Name: childsub

Column Type: integer

Documentation for form: Patient_Health_Profile

Table Name: SYSTEM.php_probs_submitted_audit

Table Description: PHP Problem Data Submitted Audit

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored. FACILITY

Column Name: JOIN_TO_CURRENT

Column Type: varchar

Max Length: 40

A pointer to the Current value

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: php_problem_data_id

Column Type: varchar

Max Length: 20

The PHP Problem Data ID associated with the data.

Column Name: data_entry_action

Column Type: varchar

Max Length: 40

The action that was performed.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

The time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

The short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: date_of_onset

Column Type: varchar

Max Length: 20

Date of onset.

Column Name: option_desc

Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: other
Column Type: varchar
Max Length: 32000
Other field.

Column Name: problem_code
Column Type: varchar
Max Length: 20
Problem code.

Column Name: problem_description
Column Type: varchar
Max Length: 256
Problem description.

Column Name: status_code
Column Type: varchar
Max Length: 20
Status Code.

Column Name: status_value
Column Type: varchar
Max Length: 80
The dictionary value of statuscode.

Column Name: verification_code
Column Type: varchar
Max Length: 20
Verification status code.

Column Name: verification_value
Column Type: varchar
Max Length: 80
The dictionary value of verificationcode.

Documentation for form: Allergies_and_Hypersensitivities

Table Name: SYSTEM.cw_client_allergies_review

Table Description: This table returns data for the field 'Allergies/Hypersensitivities Reviewed' in the form 'Allergies and Hypersensitivities'.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code that generated the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client's ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40.
The 'User Description'.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: reviewed_code
Column Type: varchar
Max Length: 50
The value for the field 'Allergies/Hypersensitivities Reviewed'.

Column Name: reviewed_value
Column Type: varchar
Max Length: 50
The description of the associated reviewed_code. See reviewed_code for more information.

Documentation for form: Allergies_and_Hypersensitivities

Table Name: SYSTEM.cw_client_clinical_info

Table Description: This table returns information regarding a Client's current clinical information.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code that generated the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: client_name
Column Type: varchar
Max Length: 50
'Client Name'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the data entry source that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: known_allergies_code
Column Type: varchar
Max Length: 50
This is only set by the CARECONSV.CWS.Allergies.AllergiesServiceV2

Column Name: known_allergies_value
Column Type: varchar
Max Length: 50
The description associated with known_allergies_code See known_allergies_code for more information.

Column Name: known_food_allergies_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known food allergies status

Column Name: known_food_allergies_value
Column Type: varchar
Max Length: 50
Known Food Allergies value

Column Name: known_med_allergies_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known medication allergies status

Column Name: known_med_allergies_value
Column Type: varchar
Max Length: 50
The description associated with known_med_allergies_code. See known_med_allergies_code for more information.

Column Name: known_medications_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known medication status

Column Name: known_medications_value
Column Type: varchar
Max Length: 50
The description associated with known_medications_code. See known_medications_code for more information.

Column Name: known_problems_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known problem status

Column Name: known_problems_value
Column Type: varchar
Max Length: 50
The description associated with known_problems_code. See known_problems_code for more information.

Column Name: last_reconciliation_id
Column Type: varchar
Max Length: 50
The Clinical Reconciliation Unique ID saved when the row is updated via 'Clinical Reconciliation'.

Column Name: no_known_allergies_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known allergy status

Column Name: no_known_allergies_value
Column Type: varchar
Max Length: 50
The description associated with no_known_allergies_code. See no_known_allergies_code for more information.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Documentation for form: Allergies_and_Hypersensitivities

Table Name: SYSTEM.cw_client_clinical_info_audit

Table Description: This table returns information regarding a Client's historical clinical information.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code that generated the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: client_name
Column Type: varchar
Max Length: 50
'Client Name'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20
The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: known_med_allergies_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known medication allergies status

Column Name: known_med_allergies_value
Column Type: varchar
Max Length: 50
The description associated with known_med_allergies_code. See known_med_allergies_code for more information.

Column Name: known_medications_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known medication status

Column Name: known_medications_value
Column Type: varchar
Max Length: 50
The description associated with known_medications_code. See known_medications_code for more information.

Column Name: known_problems_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known problem status

Column Name: known_problems_value
Column Type: varchar
Max Length: 50
The description associated with known_problems_code. See known_problems_code for more information.

Column Name: last_reconciliation_id
Column Type: varchar
Max Length: 50
The Clinical Reconciliation Unique ID saved when the row is updated via 'Clinical Reconciliation'.

Column Name: no_known_allergies_code
Column Type: varchar
Max Length: 50
Flag to keep the Client's known allergy status

Column Name: no_known_allergies_value
Column Type: varchar
Max Length: 50

The description associated with no_known_allergies_code. See no_known_allergies_code for more information.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Documentation for form: Allergies_and_Hypersensitivities

Table Name: SYSTEM.cw_hist_client_allergies

Table Description: This table contains information on the confirmed allergies filed for a client and corresponds to the vertical historic ^CWSH(%CC,patid)

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: ALGuniqueid

Column Type: varchar

Max Length: 50

The unique id of the allergy specific to the client (ALG.###)

Column Name: FACILITY

Column Type: integer

The system code that generated the data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: active_allergy_code

Column Type: varchar

Max Length: 10

The code of 'Active Allergy' [Y or N].

Column Name: active_allergy_value

Column Type: varchar

Max Length: 10

The value of 'Active Allergy'.

Column Name: age_at_onset

Column Type: integer

The age of the client at the onset of the allergy.

Column Name: allergen_reactant_code
Column Type: varchar
Max Length: 50
The code of the allergen reactant.

Column Name: allergen_reactant_value
Column Type: varchar
Max Length: 50
The value of the allergen reactant.

Column Name: allergy_type_code
Column Type: varchar
Max Length: 50
The code of the type of allergy.

Column Name: allergy_type_value
Column Type: varchar
Max Length: 50
The value of the type of allergy.

Column Name: comments
Column Type: varchar
Max Length: 32766
Comments at full length.

Column Name: comments_255
Column Type: varchar
Max Length: 255
Comments limited to 255 characters.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 50
The number of the allergy with respect to the current total number of allergies recorded.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 40
The name of the data entry source that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_recognized
Column Type: date
The date the allergen was first recognized.

Column Name: date_recorded
Column Type: date
The date the allergy was recorded.

Column Name: incl_in_screening_code
Column Type: varchar
Max Length: 2
The code of 'Include in Screening Code' [Y or N].

Column Name: incl_in_screening_value
Column Type: varchar
Max Length: 10
The value of 'Include in Screening Code'.

Column Name: last_reconciliation_id
Column Type: varchar
Max Length: 50
The id of the last reconciliation.

Column Name: no_known_allergies_code
Column Type: varchar
Max Length: 50
The code of the No Known Allergies.

Column Name: no_known_allergies_value
Column Type: varchar
Max Length: 50
The value of the No Known Allergies.

Column Name: onset_code
Column Type: varchar
Max Length: 50
The code for the onset of the allergy (when the allergy first began).

Column Name: onset_value
Column Type: varchar
Max Length: 50
The value for the onset of the allergy (when the allergy first began).

Column Name: reactions_code
Column Type: varchar
Max Length: 250
The code of any recorded reactions (limited to 250 characters).

Column Name: reactions_code_long
Column Type: varchar
Max Length: 750
The code of any recorded reactions (limited to 750 characters).

Column Name: reaction_severity_code
Column Type: varchar
Max Length: 50
The code of the severity of any recorded reactions.

Column Name: reaction_severity_value
Column Type: varchar
Max Length: 50
The value of the severity of any recorded reactions.

Column Name: reactions_value_long
Column Type: varchar
Max Length: 4096
The value of any recorded reactions (limited to 4096 characters).

Column Name: reactions_value_short
Column Type: varchar
Max Length: 255
The value of any recorded reactions (limited to 255 characters).

Column Name: staff_entered_id
Column Type: varchar
Max Length: 50
The staff id of the user that entered the data.

Column Name: staff_entered_name
Column Type: varchar
Max Length: 50
The name of the user that entered the data.

Column Name: status_code
Column Type: varchar
Max Length: 50
The code of the status of the allergy.

Column Name: status_date
Column Type: date
The date the status was recorded.

Column Name: status_value
Column Type: varchar
Max Length: 50
The value of the status of the allergy.

Column Name: treatment
Column Type: varchar
Max Length: 32766
The treatment for an allergy.

Column Name: treatment_255
Column Type: varchar
Max Length: 255
The treatment for an allergy (limited to 255 characters).

Column Name: v_client_name

Column Type: varchar
Max Length: 50
The name of the client.

Documentation for form: Family_Health_History

Table Name: SYSTEM.family_health_history

Table Description: This table stores data associated with a 'Family Health History'.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the program and agency are associated.

Column Name: JOIN_TO_FAMILY_HEALTH
Column Type: varchar
Max Length: 50
Family Health History Unique ID (row identifier)

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: additional_info_code
Column Type: varchar
Max Length: 50
'Additional Information'

Column Name: additional_info_value
Column Type: varchar
Max Length: 50
The description associated with additional_info_code. See additional_info_code for more information.

Column Name: age_at_death
Column Type: integer
'Age at Death'

Column Name: birth_date
Column Type: date
Stores the client's birthday in MM/DD/YYYY format.

Column Name: cause_of_death_code

Column Type: varchar
Max Length: 50
'Cause of Death'

Column Name: cause_of_death_value
Column Type: varchar
Max Length: 50
The description associated with cause_of_death_code. See cause_of_death_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The username that last updated the row.

Column Name: ethnicity_code
Column Type: varchar
Max Length: 50
'Ethnicity'

Column Name: ethnicity_value
Column Type: varchar

Max Length: 50

The description associated with ethnicity_code. See ethnicity_code for more information.

Column Name: first_name

Column Type: varchar

Max Length: 50

Stores the client's first name.

Column Name: fmh_age_at_death

Column Type: varchar

Max Length: 15

'Primary Care Age of Death'

Column Name: fmh_cause_of_death

Column Type: varchar

Max Length: 120

'Primary Care Cause of Death'

Column Name: fmh_living_status_code

Column Type: varchar

Max Length: 50

'Primary Care Living Status'

Column Name: fmh_living_status_value

Column Type: varchar

Max Length: 50

The description associated with fmh_living_status_code. See fmh_living_status_code for more information.

Column Name: fmh_notes

Column Type: longvarchar

Max Length: 2147483647

'Primary Care Notes'

Column Name: fmh_other_relationship

Column Type: varchar

Max Length: 120

'Primary Care Other Relationship'

Column Name: fmh_relationship_code

Column Type: varchar

Max Length: 50

'Primary Care Relationship'

Column Name: fmh_relationship_value

Column Type: varchar

Max Length: 50

The description associated with fmh_relationship_code. See fmh_relationship_code for more information.

Column Name: last_name

Column Type: varchar

Max Length: 50
Stores the client's last name.

Column Name: living_in_household_code
Column Type: varchar
Max Length: 50
'Living In The Household'

Column Name: living_in_household_value
Column Type: varchar
Max Length: 50
The description associated with living_in_household_code. See living_in_household_code for more information.

Column Name: notes
Column Type: longvarchar
Max Length: 2147483647
Notes related to Family Health History

Column Name: option_desc
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 50
The unique ID of the assessment form.

Column Name: orig_data_entry_by
Column Type: varchar
Max Length: 40
The user who was first entered into the system.

Column Name: orig_data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that was first entered into the system.

Column Name: orig_data_entry_date
Column Type: date
The date the row was first entered into the system.

Column Name: orig_data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that was first entered into the system.

Column Name: orig_data_entry_time
Column Type: varchar

Max Length: 50

The time the row was first entered into the system.

Column Name: orig_data_entry_user_id

Column Type: varchar

Max Length: 50

The 'User ID' that was first entered into the system.

Column Name: orig_data_entry_user_name

Column Type: varchar

Max Length: 50

The username that was first entered into the system.

Column Name: orig_option_desc

Column Type: varchar

Max Length: 50

The name of the form that was first entered into the system.

Column Name: orig_option_id

Column Type: varchar

Max Length: 50

The unique ID of the assessment form that was first entered into the system.

Column Name: other_cause_of_death

Column Type: varchar

Max Length: 120

'Other Cause of Death'

Column Name: other_relationship

Column Type: varchar

Max Length: 50

'Other Relationship'

Column Name: race_code

Column Type: varchar

Max Length: 50

'Client Race'.

Column Name: race_value

Column Type: varchar

Max Length: 50

The description associated with race_code. See race_code for more information.

Column Name: relationship_code

Column Type: varchar

Max Length: 50

'Relationship'

Column Name: relationship_value

Column Type: varchar

Max Length: 50

The description associated with relationship_code. See relationship_code for more information.

Column Name: sex_code

Column Type: varchar

Max Length: 50

'Sex'.

Column Name: sex_value

Column Type: varchar

Max Length: 50

The description associated with sex_code. See sex_code for more information.

Column Name: unique_cause_death_code

Column Type: varchar

Max Length: 50

'Unique Cause of Death'

Column Name: unique_cause_death_value

Column Type: varchar

Max Length: 50

The description associated with unique_cause_death_code. See unique_cause_death_code for more information.

Documentation for form: Family_Health_History

Table Name: SYSTEM.family_health_problems

Table Description: This table stores problem data associated with a 'Family Health History'.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: JOIN_TO_FAMILY_HEALTH

Column Type: varchar

Max Length: 50

Family Health History Unique ID (row identifier)

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data

Column Name: actual_age_at_onset
Column Type: varchar
Max Length: 50
'Actual Age At Onset'

Column Name: age_at_onset_code
Column Type: varchar
Max Length: 50
'Age At Onset Code'.

Column Name: age_at_onset_value
Column Type: varchar
Max Length: 50
The description of Age At Onset Code.

Column Name: cured_date
Column Type: date
'Cured Date'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
source or form that filed the data.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: notes
Column Type: longvarchar
Max Length: 2147483647
Notes related to Problem

Column Name: option_desc
Column Type: varchar
Max Length: 50
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 50
The option identifier that last updated this data_row.

Column Name: orig_data_entry_by
Column Type: varchar
Max Length: 40
The user who was first entered into the system.

Column Name: orig_data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that was first entered into the system.

Column Name: orig_data_entry_date
Column Type: date
The date the row was first entered into the system.

Column Name: orig_data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that was first entered into the system.

Column Name: orig_data_entry_time
Column Type: varchar
Max Length: 50
The time the row was first entered into the system.

Column Name: orig_data_entry_user_id
Column Type: varchar
Max Length: 50
The 'User ID' that was first entered into the system.

Column Name: orig_data_entry_user_name
Column Type: varchar

Max Length: 50

The username that was first entered into the system.

Column Name: orig_option_desc

Column Type: varchar

Max Length: 50

The name of the form that was first entered into the system.

Column Name: orig_option_id

Column Type: varchar

Max Length: 50

The unique ID of the assessment form that was first entered into the system.

Column Name: other_problem

Column Type: varchar

Max Length: 120

'Other Problem'.

Column Name: pcare_cond_code

Column Type: varchar

Max Length: 50

'Primary Care Condition Code'.

Column Name: pcare_cond_other

Column Type: varchar

Max Length: 120

'Primary Care Other Condition Code'.

Column Name: pcare_cond_value

Column Type: varchar

Max Length: 50

The description of the Primary Care Condition Code.

Column Name: pcare_cured_date

Column Type: date

'Primary Care Cured Date'.

Column Name: pcare_notes

Column Type: longvarchar

Max Length: 2147483647

Notes related to Primary Care

Column Name: pcare_status_code

Column Type: varchar

Max Length: 50

'Primary Care Status Code'.

Column Name: pcare_status_value

Column Type: varchar

Max Length: 50

The description of the Primary Care Status Code.

Column Name: pcare_treatment
Column Type: varchar
Max Length: 120
'Primary Care Treatment'.

Column Name: pcare_treatment_res_code
Column Type: varchar
Max Length: 50
'Primary Care Treatment Result'.

Column Name: pcare_treatment_res_value
Column Type: varchar
Max Length: 50
The description of the Primary Care Treatment Result.

Column Name: problem_code
Column Type: varchar
Max Length: 50
The problem code associated with SNOMED.

Column Name: problem_id
Column Type: varchar
Max Length: 50
The problem ID associated with problem.

Column Name: problem_value
Column Type: varchar
Max Length: 100
The problem description associated with SNOMED.

Column Name: status_code
Column Type: varchar
Max Length: 50
'Status'

Column Name: status_value
Column Type: varchar
Max Length: 50
Stores the provider's status value.

Column Name: treatment
Column Type: longvarchar
Max Length: 2147483647
'Treatment'

Column Name: treatment_result_code
Column Type: varchar
Max Length: 50

'Treatment Result Code'

Column Name: treatment_result_value

Column Type: varchar

Max Length: 50

The description of the Treatment Result Code.

Column Name: unique_problem_code

Column Type: varchar

Max Length: 50

'Unique Problem Search Code'.

Column Name: unique_problem_value

Column Type: varchar

Max Length: 50

The problem description associated with IMO.

Documentation for form: Vitals_Entry

Table Name: OrderEntry.history_client_height_weight

Table Description: Order Entry Client Height and Weight history

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: HAWuniqueid

Column Type: varchar

Max Length: 50

Height and weight row ID.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

Data entry by User.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
Data entry option ID.

Column Name: data_entry_date
Column Type: date
Data entry date.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
Data entry source.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
Data entry time.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
Data entry by user ID.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
Data entry user name.

Column Name: date_height_recorded
Column Type: date
Date height was recorded.

Column Name: date_weight_recorded
Column Type: date
Date weight was recorded.

Column Name: h_data_entry_by
Column Type: varchar
Max Length: 40
Height data entry by.

Column Name: h_data_entry_by_option
Column Type: varchar
Max Length: 50
Height data entry option ID.

Column Name: h_data_entry_date
Column Type: date
Height date entry date.

Column Name: h_data_entry_source
Column Type: varchar
Max Length: 255
Height data entry source.

Column Name: h_data_entry_time
Column Type: varchar
Max Length: 50
Height data entry time.

Column Name: h_data_entry_user_id
Column Type: varchar
Max Length: 50
Height data entry by user ID.

Column Name: h_data_entry_user_name
Column Type: varchar
Max Length: 50
Height data entry user name.

Column Name: height
Column Type: varchar
Max Length: 50
Height of patient.

Column Name: height_in_centimeters
Column Type: varchar
Max Length: 50
Height in centimeters.

Column Name: height_in_feet_inches
Column Type: varchar
Max Length: 50
Height in feet and inches.

Column Name: height_in_inches
Column Type: varchar
Max Length: 50
Height in inches.

Column Name: height_unit_code
Column Type: varchar
Max Length: 50
Unit code for height.

Column Name: height_unit_value
Column Type: varchar
Max Length: 50
Height unit value.

Column Name: w_data_entry_by
Column Type: varchar
Max Length: 40
Weight data entry by.

Column Name: w_data_entry_by_option
Column Type: varchar
Max Length: 50
Weight data entry option ID.

Column Name: w_data_entry_date
Column Type: date
Weight data entry date.

Column Name: w_data_entry_source
Column Type: varchar
Max Length: 50
Weight data entry source.

Column Name: w_data_entry_time
Column Type: varchar
Max Length: 50
Weight data entry time.

Column Name: w_data_entry_user_id
Column Type: varchar
Max Length: 50
Weight data entry user ID.

Column Name: w_data_entry_user_name
Column Type: varchar
Max Length: 50
Weight data entry username.

Column Name: weight
Column Type: varchar
Max Length: 50
Patient weight.

Column Name: weight_in_kilograms
Column Type: varchar
Max Length: 50
Weight in kilograms.

Column Name: weight_in_pounds
Column Type: varchar
Max Length: 50
Weight in pounds.

Column Name: weight_unit_code
Column Type: varchar
Max Length: 50
Weight unit code.

Column Name: weight_unit_value
Column Type: varchar
Max Length: 50
Weight unit value.

Documentation for form: Vitals_Entry

Table Name: SYSTEM.cw_vital_signs

Table Description: This table returns the information entered via the 'Vitals Entry' or 'CWS Vital Signs' forms.

Column Name: ID
Column Type: integer

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: FACILITY
Column Type: integer
The system code in which the vitals were entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the vitals were entered.

Column Name: Unique_Row_Id
Column Type: varchar
Max Length: 50

The unique ID for the vital record entry. Will be the 'Date' in format (YYYYMMDD), the time in format (HHMMSS), 1, followed by the data entry date and time in UTC (Coordinated Universal Time).

Column Name: admin_date_actual
Column Type: date
'Date'

Column Name: admin_time_actual_h
Column Type: time
'Time'

Column Name: admin_unique_id
Column Type: varchar
Max Length: 50
The eMAR administration unique ID.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user which last updated the row.

Column Name: data_entry_user_name

Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: emar_attached_result
Column Type: bit
Flag to indicate whether or not the user attached to an already existing result/vital when filing an eMAR administration.

Column Name: edit_comments
Column Type: varchar
Max Length: 50
edit comments

Column Name: edit_increment_ID
Column Type: integer
ID that groups vital signs edited together

Column Name: emar_event_code
Column Type: varchar
Max Length: 50
"R" for "Results" or "A" for "Administration".

Column Name: emar_event_value
Column Type: varchar
Max Length: 50
The description associated with emar_event_code. See emar_event_code for more information.

Column Name: JOIN_RESULT_DETAIL_ID
Column Type: varchar
Max Length: 80
The link the the SYSTEM.results_detail row ID.

Column Name: measured_unit
Column Type: varchar
Max Length: 50
The unit of measurement for the vital sign reading.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The description of the option that last filed the form.

Column Name: option_id
Column Type: varchar
Max Length: 20

The option ID that last filed the form.

Column Name: order_number

Column Type: varchar

Max Length: 50

eMAR Order Number.

Column Name: order_unique_id

Column Type: varchar

Max Length: 50

The eMAR unique ID for the order number.

Column Name: reading

Column Type: varchar

Max Length: 50

The code for the vital sign associated with the reading value.

Column Name: reading_entry

Column Type: varchar

Max Length: 80

The value associated with the vital sign (reading).

Column Name: reading_value

Column Type: varchar

Max Length: 80

The value and measurement for the associated row.

Column Name: vital_sign

Column Type: varchar

Max Length: 50

The description associated with the reading property. See the reading property for more information.

Column Name: voided_code

Column Type: varchar

Max Length: 40

Voided

Column Name: voided_value

Column Type: varchar

Max Length: 255

The description associated with voided_code.

Column Name: void_reason_code

Column Type: varchar

Max Length: 40

Void Reason

Column Name: void_reason_value

Column Type: varchar

Max Length: 255

The description associated with void_reason_code. See void_reason_code for more information.

Documentation for form: Vitals_Entry

Table Name: SYSTEM.cw_vitals_single_row_view

Table Description: This table returns the information entered via the 'Vitals Entry' or 'CWS Vital Signs' forms.

Documentation for form: Hospitalizations_and_Surgeries

Table Name: SYSTEM.hospital_surgery

Table Description: This table returns the information stored in the 'Hospitalizations and Surgeries' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: HSHuniqueid
Column Type: varchar
Max Length: 50
The unique ID associated with the hospitalization/surgery.

Column Name: PATID
Column Type: varchar
Max Length: 20
The unique ID of the client.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: filter_by_classification_code

Column Type: varchar

Max Length: 50
'Filter by Classification'

Column Name: filter_by_classification_value
Column Type: varchar
Max Length: 50
The description associated with filter_by_classification_code. See filter_by_classification_code for more information.

Column Name: notes
Column Type: varchar
Max Length: 32000
'Notes'

Column Name: option_desc
Column Type: varchar
Max Length: 50
The description of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that last updated the row.

Column Name: reason
Column Type: varchar
Max Length: 50
The description associated with reason_code. See reason_code for more information.

Column Name: reason_code
Column Type: varchar
Max Length: 50
Reason Code

Column Name: when
Column Type: varchar
Max Length: 50
'When'

Column Name: when_field
Column Type: varchar
Max Length: 50
'When_Field' same as When, to prevent SQL reserved word error.

Column Name: where
Column Type: varchar
Max Length: 50
'Where'

Column Name: where_field

Column Type: varchar
Max Length: 50
'Where_field' same as When, to prevent SQL reserved word error.

Documentation for form: Problem_List

Table Name: SYSTEM.cw_problem_list

Table Description: This table returns the information stored in the 'Problem List' form and the 'Problem List' grid of the 'Treatment Plan' forms.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: PLuniqueid
Column Type: varchar
Max Length: 50
The problem list historic (row identifier)

Column Name: action_code
Column Type: varchar
Max Length: 50
'Action'

Column Name: action_value
Column Type: varchar
Max Length: 50
The description associated with action_code. See action_code for more information.

Column Name: active_status_code
Column Type: varchar
Max Length: 50
'Active Status Code'

Column Name: active_status_value
Column Type: varchar

Max Length: 50

The description associated with active_status_code. See active_status_code for more information.

Column Name: chronicity_code

Column Type: varchar

Max Length: 50

'Chronicity'

Column Name: chronicity_value

Column Type: varchar

Max Length: 50

The description associated with chronicity_code. See chronicity_code for more information.

Column Name: classification_code

Column Type: varchar

Max Length: 50

'Problem Classification'

Column Name: classification_system_codes

Column Type: varchar

Max Length: 50

The applicable system codes associated with classification_code.

Column Name: classification_value

Column Type: varchar

Max Length: 50

The description associated with classification_code.

Column Name: comment

Column Type: varchar

Max Length: 32766

Any user comments entered for the problem

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_identified
Column Type: date
'Date Identified'

Column Name: date_of_onset_date
Column Type: date
'Date of Onset'

Column Name: date_of_onset_string
Column Type: varchar
Max Length: 50

'Date of Onset'

Column Name: date_resolved_date

Column Type: date

'Date Resolved'

Column Name: date_resolved_string

Column Type: varchar

Max Length: 50

'Date Resolved'

Column Name: diagnosis_code

Column Type: varchar

Max Length: 50

'Diagnosis Code'

Column Name: displayable

Column Type: varchar

Max Length: 50

Set to 1 if the row is displayable by the reports and widgets.

Column Name: gain_icp_results_id

Column Type: bit

'GAIN ICP Results ID'

Column Name: last_reconciliation_id

Column Type: varchar

Max Length: 50

'Last Reconciliation ID'

Column Name: option_desc

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row.

Column Name: other

Column Type: varchar

Max Length: 32766

The user entered problem description required when problem_code is "Specify Other"

Column Name: pc_pmh_age_at_onset

Column Type: varchar

Max Length: 50

'Primary Care - PMH Age On Onset'

Column Name: pc_pmh_condition_code
Column Type: varchar
Max Length: 50
'Primary Care - PMH Condition Code'

Column Name: pc_pmh_condition_other
Column Type: varchar
Max Length: 120
'Primary Care - PMH Condition Other'

Column Name: pc_pmh_condition_value
Column Type: varchar
Max Length: 50
The description associated with pc_pmh_condition_code. See pc_pmh_condition_code for more information.

Column Name: pc_pmh_cured_date
Column Type: date
'Primary Care - PMH Cured Date'

Column Name: pc_pmh_notes
Column Type: varchar
Max Length: 32766
'Primary Care - PMH Notes'

Column Name: pc_pmh_status_code
Column Type: varchar
Max Length: 50
'Primary Care - PMH Status'

Column Name: pc_pmh_status_value
Column Type: varchar
Max Length: 50
The description associated with pc_pmh_status_code. See pc_pmh_status_code for more information.

Column Name: pc_pmh_treatment
Column Type: varchar
Max Length: 32766
'Primary Care - PMH Treatment'

Column Name: pc_pmh_treat_result_code
Column Type: varchar
Max Length: 50
'Primary Care - PMH Treatment Result'

Column Name: pc_pmh_treat_result_value
Column Type: varchar
Max Length: 50
The description associated with pc_pmh_treat_result_code. See pc_pmh_treat_result_code for more information.

Column Name: problem_code
Column Type: varchar
Max Length: 50
'Problem'

Column Name: problem_description
Column Type: varchar
Max Length: 200
The description for the 'Problem' code

Column Name: problems_to_record_code
Column Type: varchar
Max Length: 50
'Problems To Record'

Column Name: problems_to_record_value
Column Type: varchar
Max Length: 50
The description associated with problems_to_record_code. See problems_to_record_code for more information.

Column Name: severity_code
Column Type: varchar
Max Length: 50
'Severity'

Column Name: severity_value
Column Type: varchar
Max Length: 50
The description associated with severity_code. See severity_code for more information.

Column Name: staff_entered_id
Column Type: varchar
Max Length: 50
The staff member id associated with the user id (data_entry_user_id) who entered this row

Column Name: staff_entered_name
Column Type: varchar
Max Length: 50
The staff member name associated to the staff_entered_id

Column Name: status_code
Column Type: varchar
Max Length: 50
'Status'

Column Name: status_value
Column Type: varchar
Max Length: 50

The description associated with status_code. See status_code for more information.

Column Name: time_of_onset
Column Type: varchar
Max Length: 50
'Time Of Onset'

Column Name: type_code
Column Type: varchar
Max Length: 50
'Type'

Column Name: type_value
Column Type: varchar
Max Length: 50
The description associated with type_code. See type_code for more information.

Column Name: unique_problem_code
Column Type: varchar
Max Length: 50
'Unique Problem Search Code'

Column Name: unique_problem_description
Column Type: varchar
Max Length: 200
The description for the 'Unique Problem Search Code' code

Documentation for form: Problem_List

Table Name: SYSTEM.cw_problem_list_history

Table Description: This table returns the problem list action history data.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code that generated the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: PLuniqueid
Column Type: varchar

Max Length: 50
The problem list historic (row identifier)

Column Name: action_code
Column Type: varchar
Max Length: 50
The action code.

Column Name: action_value
Column Type: varchar
Max Length: 50
The description associated with action_code. See action_code for more information.

Column Name: status_code
Column Type: varchar
Max Length: 50
'Status'

Column Name: status_value
Column Type: varchar
Max Length: 50
The description associated with status_code. See status_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form or feature that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The description of the last option that saved the vital sign.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: staff_name
Column Type: varchar
Max Length: 1024
The practitioner name with credentials at the date of entry.

Documentation for form: Treatment/Discharge_Summary

Table Name: SYSTEM.tx_disch_summary

Table Description: This table returns the information stored in the 'Treatment/Discharge Summary' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: Data_Entry_By_Login
Column Type: varchar
Max Length: 40
The login of the user who entered the data.

Column Name: Data_Entry_By_Option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: Data_Entry_Date
Column Type: date
The date the row was last updated.

Column Name: Data_Entry_Source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: Data_Entry_Time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: Data_Entry_User_Id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: Data_Entry_User_Name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: Option_Desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: TDSuniqueid
Column Type: varchar
Max Length: 50
The unique ID associated to a row of data.

Column Name: aftercare_comments
Column Type: varchar
Max Length: 32766
'Aftercare Comments'

Column Name: aftercare_comments_255
Column Type: varchar
Max Length: 255
'Aftercare Comments'

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_appointment
Column Type: date
'Date Of Appointment'

Column Name: followup_appt_sched_code
Column Type: varchar
Max Length: 40
'Follow Up Appointment Scheduled'

Column Name: followup_appt_sched_value
Column Type: varchar
Max Length: 40
The description associated with followup_appt_sched_code. See followup_appt_sched_code for more information.

Column Name: followup_comments
Column Type: varchar
Max Length: 32766
'Follow Up Comments'

Column Name: followup_comments_255
Column Type: varchar
Max Length: 255
'Follow Up Comments'

Column Name: note_type_code
Column Type: varchar
Max Length: 40
'Note Type'

Column Name: note_type_value
Column Type: varchar
Max Length: 40
The description associated with note_type_code. See note_type_code for more information.

Column Name: notification_comments
Column Type: varchar
Max Length: 32766
'Notification Comments'

Column Name: notification_comments_255
Column Type: varchar
Max Length: 255
'Notification Comments'

Column Name: notified_fam_disch_code
Column Type: varchar
Max Length: 40

'Notified Family/Sponsor Of Discharge'

Column Name: notified_fam_disch_value

Column Type: varchar

Max Length: 40

The description associated with notified_fam_disch_code. See notified_fam_disch_code for more information.

Column Name: other_reason_discharge

Column Type: varchar

Max Length: 40

'Other Reason For Discharge'

Column Name: plan_for_care

Column Type: varchar

Max Length: 32766

'Review/Discharge Plan For Care'

Column Name: plan_for_care_255

Column Type: varchar

Max Length: 255

'Review/Discharge Plan For Care'

Column Name: reason_discharge_code

Column Type: varchar

Max Length: 40

'Reason For Discharge'

Column Name: reason_discharge_value

Column Type: varchar

Max Length: 40

The description associated with reason_discharge_code. See reason_discharge_code for more information.

Column Name: resources_comments

Column Type: varchar

Max Length: 32766

'Community Resources Comments'

Column Name: resources_comments_255

Column Type: varchar

Max Length: 255

'Community Resources Comments'

Column Name: review_after_ins_code

Column Type: varchar

Max Length: 40

'Reviewed Aftercare Resources And Insurance Coverage'

Column Name: review_after_instr_code

Column Type: varchar

Max Length: 40
'Reviewed Aftercare Instructions And Orders'

Column Name: review_after_instr_value
Column Type: varchar
Max Length: 40
The description associated with review_after_instr_code. See review_after_instr_code for more information.

Column Name: review_after_ins_value
Column Type: varchar
Max Length: 40
The description associated with review_after_ins_code. See review_after_ins_code for more information.

Column Name: review_discharge_note
Column Type: varchar
Max Length: 32766
'Review/Discharge Note'

Column Name: review_discharge_note_255
Column Type: varchar
Max Length: 255
'Review/Discharge Note'

Column Name: review_treatment
Column Type: varchar
Max Length: 32766
'Review Of Client's Treatment'

Column Name: review_treatment_255
Column Type: varchar
Max Length: 255
'Review Of Client's Treatment'

Column Name: review_type_code
Column Type: varchar
Max Length: 40
'Review Type'

Column Name: review_type_value
Column Type: varchar
Max Length: 40
The description associated with review_type_code. See review_type_code for more information.

Column Name: state_at_review
Column Type: varchar
Max Length: 32766
'Mental/Physical State At Review'

Column Name: state_at_review_255

Column Type: varchar
Max Length: 255
'Mental/Physical State At Review'

Column Name: summary_date
Column Type: date
'Summary Date'

Column Name: summary_status_code
Column Type: varchar
Max Length: 40
'Summary Status'

Column Name: summary_status_value
Column Type: varchar
Max Length: 40
The description associated with summary_status_code. See summary_status_code for more information.

Column Name: summary_time
Column Type: varchar
Max Length: 10
'Summary Time'

Column Name: summary_type_code
Column Type: varchar
Max Length: 40
'Summary Type'

Column Name: summary_type_value
Column Type: varchar
Max Length: 40
The description associated with summary_type_code. See summary_type_code for more information.

Column Name: transport_comments
Column Type: varchar
Max Length: 32766
'Transportation Comments'

Column Name: transport_comments_255
Column Type: varchar
Max Length: 255
'Transportation Comments'

Column Name: transport_verified_code
Column Type: varchar
Max Length: 40
'Transportation And Equipment Verified'

Column Name: transport_verified_value
Column Type: varchar

Max Length: 40

The description associated with transport_verified_code. See transport_verified_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Significant_Findings

Table Name: SYSTEM.significant_finding

Table Description: This table returns the finding information entered via the 'Significant Findings' form.

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the finding was entered.

Column Name: FIN_uniqueid

Column Type: varchar

Max Length: 50

A unique identifier of the SYSTEM.significant_finding table.

Column Name: JOIN_ALERT

Column Type: varchar

Max Length: 50

A unique identifier of the client alert associated to this record.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the finding was entered.

Column Name: critical_finding_code

Column Type: varchar

Max Length: 50

'Critical Finding'

Column Name: critical_finding_value

Column Type: varchar

Max Length: 255

The description associated with finding_type_code. See finding_type_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

The time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

The short abbreviation for the timezone.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: description_other

Column Type: varchar

Max Length: 50

'Finding Description (Other)'

Column Name: finding_code

Column Type: varchar

Max Length: 50

A unique id for vitals/results/conditions depending on finding_type_code.

Column Name: finding_date

Column Type: date

'Significant Finding Date'

Column Name: finding_time

Column Type: varchar

Max Length: 50

'Significant Finding Time'

Column Name: finding_type_code

Column Type: varchar

Max Length: 50

'Significant Finding Type'

Column Name: finding_type_value

Column Type: varchar

Max Length: 255

The description associated with finding_type_code. See finding_type_code for more information.

Column Name: finding_value

Column Type: varchar

Max Length: 50

The description associated with finding_code. See finding_code for more information.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: orig_data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who first created the row.

Column Name: orig_data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who first created the row.

Column Name: voided_code
Column Type: varchar
Max Length: 50
'Void Finding'

Column Name: voided_value
Column Type: varchar
Max Length: 255
The description associated with voided_code. See voided_code for more information.

Column Name: void_reason_code
Column Type: varchar
Max Length: 50
'Void Reason'

Column Name: void_reason_other
Column Type: varchar
Max Length: 50
'Void Reason (Other)'

Column Name: void_reason_value
Column Type: varchar
Max Length: 255
The description associated with void_reason_code. See void_reason_code for more information.

Documentation for form: Significant_Findings

Table Name: SYSTEM.significant_finding_comm

Table Description: This table returns the communication information entered via the 'Significant Findings' form.

Column Name: ID
Column Type: integer

Column Name: COM_uniqueid
Column Type: varchar
Max Length: 50
A unique identifier of the SYSTEM.significant_finding_comm table.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the finding was entered.

Column Name: JOIN_FINDING
Column Type: varchar
Max Length: 50
A unique identifier of the SYSTEM.significant_finding table.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the finding was entered.

Column Name: comm_type_code
Column Type: varchar
Max Length: 50
'Communication Type'

Column Name: comm_type_value
Column Type: varchar
Max Length: 255
The description associated with comm_type_code. See comm_type_code for more information.

Column Name: communication_date
Column Type: date
'Communication Date'

Column Name: communication_time
Column Type: varchar
Max Length: 50
'Communication Time'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp

The UTC date and time the data was saved.

Column Name: family_communicated
Column Type: varchar
Max Length: 50
'Family/Caregiver Communicated'

Column Name: notes
Column Type: varchar
Max Length: 32767
'Communication Notes'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: orders_received
Column Type: varchar
Max Length: 50
'Order(s) Received'

Column Name: physician_communicated
Column Type: varchar
Max Length: 50
'Physician Communicated'

Column Name: read_back_code
Column Type: varchar
Max Length: 50
'Physician Read Back'

Column Name: read_back_value
Column Type: varchar
Max Length: 255
The description associated with read_back_code. See read_back_code for more information.

Column Name: voided_code
Column Type: varchar
Max Length: 50
'Void Finding'

Column Name: voided_value
Column Type: varchar
Max Length: 255

The description associated with voided_code. See voided_code for more information.

Column Name: void_reason_code
Column Type: varchar
Max Length: 50
'Void Reason'

Column Name: void_reason_other
Column Type: varchar
Max Length: 50
'Void Reason (Other)'

Column Name: void_reason_value
Column Type: varchar
Max Length: 255
The description associated with void_reason_code. See void_reason_code for more information.

Documentation for form: Significant_Findings

Table Name: SYSTEM.significant_finding_note

Table Description: This table returns the 'Finding Notes/Observations' information entered via the 'Significant Findings' form.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the finding was entered.

Column Name: JOIN_FINDING
Column Type: varchar
Max Length: 50
A unique identifier of the SYSTEM.significant_finding table.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the finding was entered.

Column Name: data_entry_by

Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: note
Column Type: varchar
Max Length: 32767
'Finding Notes/Observations'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option name that last updated this data row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The option identifier that last updated this data_row.

Column Name: voided
Column Type: bit
Is this note voided?

Column Name: void_reason_code
Column Type: varchar
Max Length: 50
'Void Reason'

Column Name: void_reason_other
Column Type: varchar
Max Length: 50
'Void Reason (Other)'

Column Name: void_reason_value
Column Type: varchar
Max Length: 255
The description associated with void_reason_code. See void_reason_code for more information.

Documentation for form: Treatment_Plan_Deletion

Table Name: SYSTEM.cw_tp_delete

Table Description: This table returns data about deleted treatment plans from 'Treatment Plan Deletion'.

Column Name: ID
Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number the treatment plan is associated with.

Column Name: FACILITY

Column Type: integer

The system code the client is defined in.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID.

Column Name: TPROWID

Column Type: varchar

Max Length: 50

The unique ID of the client treatment plan information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that deleted the treatment plan.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that deleted the treatment plan.

Column Name: data_entry_date

Column Type: date

The date the treatment plan was deleted.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that deleted the treatment plan.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the treatment plan was deleted.

Column Name: data_entry_time_j

Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: reason_for_del_code
Column Type: varchar
Max Length: 50
The code for 'Reason For Deletion'.

Column Name: reason_for_del_value
Column Type: varchar
Max Length: 50
The description associated with reason_for_del_code. See reason_for_del_code for more information.

Column Name: tp_delete_comment
Column Type: varchar
Max Length: 32766
'Comments'

Column Name: tpdelindex
Column Type: varchar
Max Length: 50
The index number of this deletion for this treatment plan.

Column Name: tp_orig_data_entr_by_option
Column Type: varchar
Max Length: 40
The user name that deleted the treatment plan.

Column Name: tp_orig_data_entry_by
Column Type: varchar
Max Length: 40
The user name that deleted the treatment plan.

Column Name: tp_orig_data_entry_date
Column Type: date
The date the treatment plan was deleted.

Column Name: tp_orig_date_entry_time
Column Type: varchar
Max Length: 50
The time the treatment plan was deleted.

Column Name: type_of_plan_code
Column Type: varchar
Max Length: 50
The code for 'Type Of Treatment Plan To Delete'.

Column Name: type_of_plan_value
Column Type: varchar
Max Length: 50
The description associated with type_of_plan_code. See type_of_plan_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Review/Co-Sign_Notes

Table Name: SYSTEM.cw_cosign_notes_voided

Table Description: This table returns data from the Review/Co-sign notes

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: CSNuniqueid
Column Type: varchar
Max Length: 50
Co-Sign Note unique ID.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number.

Column Name: FACILITY
Column Type: integer
The system code that generated the data.

Column Name: FILING_COUNTER
Column Type: integer

'Counter'

Column Name: NOT_filing_counter

Column Type: integer

The particular note being filed.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID.

Column Name: cosigners_comments

Column Type: varchar

Max Length: 32766

'Cosigner's Comments'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: list_of_notes_code
Column Type: varchar
Max Length: 50
'List of Notes code'

Column Name: list_of_notes_value
Column Type: varchar
Max Length: 50
The description associated with list_of_notes_code. See list_of_notes_code for more information.

Column Name: notes_entry_index_nu
Column Type: varchar
Max Length: 50
'Notes Entry Index Number for Internal Use'

Column Name: note_type_code
Column Type: varchar
Max Length: 50
'Note Type code'

Column Name: note_type_value
Column Type: varchar
Max Length: 50
The description associated with note_type_code. See note_type_code for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 80

'Option Description'

Column Name: option_id

Column Type: varchar

Max Length: 20

'Option Id'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: void_data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row for a voided note.

Column Name: void_data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row for a voided note.

Column Name: void_data_entry_date

Column Type: date

The date the row was last updated for a voided note.

Column Name: void_data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated for a voided note.

Column Name: void_data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' that last updated the row for a voided note.

Column Name: void_data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the 'User ID' who voided the note.

Column Name: void_option_desc

Column Type: varchar

Max Length: 80

The description of the form that voided the note.

Column Name: void_option_id

Column Type: varchar

Max Length: 40

The form that voided the note.

Documentation for form: Client_Observation

Table Name: SYSTEM.cw_observation_details

Table Description: this table returns the information stored from filing the 'Client Observation' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: COB_uniqueid
Column Type: varchar
Max Length: 15

Column Name: EPISODE_NUMBER
Column Type: integer

Column Type: varchar
Max Length: 40

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40

Column Name: data_entry_date
Column Type: date

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 20

Column Name: data_entry_time
Column Type: varchar
Max Length: 15

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Documentation for form: Enter_Group_Default_Note

Table Name: SYSTEM.cw_scratch_notes

Table Description: This table returns the information stored in the 'Enter Default Group Note' and 'Progress Notes (Group and Individual)' forms.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID that joins the note to the service.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number.

Column Name: FACILITY
Column Type: integer
The system code in which the data is stored.

Column Name: Option_Desc
Column Type: varchar
Max Length: 80
The description of the form that filed the note.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The unique identifier of the form that filed the note.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client id.

Column Name: SNOTuniqueid
Column Type: varchar
Max Length: 50
The unique ID that identifies the scratch note.

Column Name: TODO_ID
Column Type: varchar
Max Length: 20
The unique ID associated with the To-Do.

Column Name: clinical_quality_code
Column Type: varchar
Max Length: 255
'Clinical Quality Indicators'

Column Name: clinical_quality_sh_val
Column Type: varchar
Max Length: 255
'The description associated with clinical_quality_code. See clinical_quality_code for more information.'

Column Name: clinical_quality_value
Column Type: varchar
Max Length: 4096
'The description associated with clinical_quality_code. See clinical_quality_code for more information.'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: ebps_code

Column Type: varchar

Max Length: 255

'Evidence Based Practices'

Column Name: ebps_sh_val

Column Type: varchar

Max Length: 255

'The description associated with ebps_code. See ebps_code for more information.'

Column Name: ebps_value

Column Type: varchar

Max Length: 4096

'The description associated with ebps_code. See ebps_code for more information.'

Column Name: external_system_id

Column Type: varchar

Max Length: 255

'External System Identifier'

Column Name: group_name_or_number
Column Type: varchar
Max Length: 50
The group this note is for.

Column Name: note_addresses
Column Type: varchar
Max Length: 40
Service that this note addresses.

Column Name: notes_field
Column Type: varchar
Max Length: 32766
The full note detail.

Column Name: note_time
Column Type: varchar
Max Length: 50
The time of the note.

Column Name: note_type_code
Column Type: varchar
Max Length: 50
The type of note (dictionary code).

Column Name: note_type_value
Column Type: varchar
Max Length: 50
The type of note (description).

Column Name: transition_of_care_code
Column Type: varchar
Max Length: 1
'Is This A Transition Of Care?'

Column Name: transition_of_care_value
Column Type: varchar
Max Length: 80
'The description associated with transition_of_care_code. See transition_of_care_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: user_to_send_cosign__code
Column Type: varchar
Max Length: 50

User to send a cosign notification to.

Column Name: user_to_send_scratch_code

Column Type: varchar

Max Length: 50

User to send the scratch to.

Documentation for form: Mental_Status_Assessment

Table Name: SYSTEM.cw_mental_status_assessment

Table Description: This table returns the information stored in the 'Mental Status Assessment' form.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: MSA_uniqueid

Column Type: varchar

Max Length: 20

The unique ID associated to a row of data.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: appearance_code_all

Column Type: varchar

Max Length: 5

'Appearance'

Column Name: appearance1_value

Column Type: varchar

Max Length: 40

The description associated with appearance1_code. See appearance1_code for more information.

Column Name: attitude_code_all

Column Type: varchar
Max Length: 40
'Attitude'

Column Name: attitude1_value
Column Type: varchar
Max Length: 40
The description associated with attitude1_code. See attitude1_code for more information.

Column Name: speech_code_all
Column Type: varchar
Max Length: 40
'Speech'

Column Name: speech1_value
Column Type: varchar
Max Length: 40
The description associated with speech1_code. See speech1_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: language1_value
Column Type: varchar
Max Length: 40
The description associated with language1_code. See language1_code for more information.

Column Name: orientation_code_all
Column Type: varchar
Max Length: 10
'Orientation'

Column Name: orientation1_value
Column Type: varchar
Max Length: 40
The description associated with orientation1_code. See orientation1_code for more information.

Column Name: affect_code_all
Column Type: varchar
Max Length: 40
'Affect'

Column Name: affect1_value
Column Type: varchar
Max Length: 40
The description associated with affect1_code. See affect1_code for more information.

Column Name: mood_code_all
Column Type: varchar

Max Length: 5
'Mood'

Column Name: mood1_value
Column Type: varchar
Max Length: 40
The description associated with mood1_code. See mood1_code for more information.

Column Name: thought_process_code_all
Column Type: varchar
Max Length: 40
'Thought Process'

Column Name: thought_process1_value
Column Type: varchar
Max Length: 40
The description associated with thought_process1_code. See thought_process1_code for more information.

Column Name: productivity_code_all
Column Type: varchar
Max Length: 40
'Productivity'

Column Name: productivity1_value
Column Type: varchar
Max Length: 40
The description associated with productivity1_code. See productivity1_code for more information.

Column Name: continuity_of_thought_code_all
Column Type: varchar
Max Length: 10
'Continuity of Thought'

Column Name: continuity_of_thought1_value
Column Type: varchar
Max Length: 40
The description associated with continuity_of_thought1_code. See continuity_of_thought1_code for more information.

Column Name: abstract_thinking_code_all
Column Type: varchar
Max Length: 10
'Abstract Thinking'

Column Name: abstract_thinking1_value
Column Type: varchar
Max Length: 40
The description associated with abstract_thinking1_code. See abstract_thinking1_code for more information.

Column Name: thought_content_code_all
Column Type: varchar
Max Length: 10
'Thought Content'

Column Name: thought_content1_value
Column Type: varchar
Max Length: 40
The description associated with thought_content1_code. See thought_content1_code for more information.

Column Name: form_and_content_code_all
Column Type: varchar
Max Length: 40
'Form and Content'

Column Name: form_and_content1_value
Column Type: varchar
Max Length: 40
The description associated with form_and_content1_code. See form_and_content1_code for more information.

Column Name: intellectual_functioning_code
Column Type: varchar
Max Length: 5
'Intellectual Functioning'

Column Name: intellectual_functioning_value
Column Type: varchar
Max Length: 40
The description associated with intellectual_functioning_code. See intellectual_functioning_code for more information.

Column Name: memory_code_all
Column Type: varchar
Max Length: 40
'Memory'

Column Name: memory1_value
Column Type: varchar
Max Length: 40
The description associated with memory1_code. See memory1_code for more information.

Column Name: concentration_code
Column Type: varchar
Max Length: 5
'Concentration'

Column Name: concentration_value
Column Type: varchar
Max Length: 40

The description associated with concentration_code. See concentration_code for more information.

Column Name: suicidal_code_all
Column Type: varchar
Max Length: 40
'Suicidal'

Column Name: suicidal1_value
Column Type: varchar
Max Length: 40
The description associated with suicidal1_code. See suicidal1_code for more information.

Column Name: homicidal_code_all
Column Type: varchar
Max Length: 40
'Homicidal'

Column Name: homicidal1_value
Column Type: varchar
Max Length: 40
The description associated with homicidal1_code. See homicidal1_code for more information.

Column Name: insight_code
Column Type: varchar
Max Length: 5
'Insight'

Column Name: insight_value
Column Type: varchar
Max Length: 40
The description associated with insight_code. See insight_code for more information.

Column Name: awareness_code
Column Type: varchar
Max Length: 5
'Awareness'

Column Name: awareness_value
Column Type: varchar
Max Length: 40
The description associated with awareness_code. See awareness_code for more information.

Column Name: assessing_clinician
Column Type: varchar
Max Length: 10
'Assessing Clinician'

Column Name: assessing_clinician_name
Column Type: varchar
Max Length: 40

The name associated with assessing_clinician.

Column Name: assessing_date

Column Type: date

'Assessing Date'

Column Name: assessing_time

Column Type: varchar

Max Length: 40

'Assessment Time'

Column Name: appearance_other

Column Type: varchar

Max Length: 40

'Other' associated with appearance.

Column Name: appearance_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with appearance.

Column Name: attitude_other

Column Type: varchar

Max Length: 40

'Other' associated with attitude.

Column Name: attitude_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with attitude.

Column Name: speech_other

Column Type: varchar

Max Length: 40

'Other' associated with speech.

Column Name: speech_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with speech.

Column Name: language_Other

Column Type: varchar

Max Length: 40

'Other' associated with language.

Column Name: language_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with language.

Column Name: orientation_other
Column Type: varchar
Max Length: 40
'Other' associated with orientation.

Column Name: orientation_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with orientation.

Column Name: affect_other
Column Type: varchar
Max Length: 40
'Other' associated with affect.

Column Name: affect_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with affect.

Column Name: mood_other
Column Type: varchar
Max Length: 40
'Other' associated with mood.

Column Name: mood_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with mood.

Column Name: thought_process_other
Column Type: varchar
Max Length: 40
'Other' associated with thought process.

Column Name: thought_process_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with thought process.

Column Name: productivity_other
Column Type: varchar
Max Length: 40
'Other' associated with productivity.

Column Name: productivity_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with productivity.

Column Name: continuity_of_thought_other
Column Type: varchar
Max Length: 40
'Other' associated with continuity of thought.

Column Name: continuity_of_thought_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with continuity of thought.

Column Name: abstract_thinking_other
Column Type: varchar
Max Length: 40
'Other' associated with abstract thinking.

Column Name: abstract_thinking_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with abstract thinking.

Column Name: thought_content_other
Column Type: varchar
Max Length: 40
'Other' associated with thought content.

Column Name: thought_content_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with thought content.

Column Name: form_and_content_other
Column Type: varchar
Max Length: 40
'Other' associated with form and content.

Column Name: describe_perceptual_distortions
Column Type: varchar
Max Length: 32766
'Describe Perceptual Distortions'

Column Name: intellectual_functioning_other
Column Type: varchar
Max Length: 40
'Other' associated with intellectual functioning.

Column Name: intellectual_functioning_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with intellectual functioning.

Column Name: memory_other
Column Type: varchar
Max Length: 40
'Other' associated with memory.

Column Name: memory_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with memory.

Column Name: concentration_other
Column Type: varchar
Max Length: 40
'Other' associated with concentration.

Column Name: concentration_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with concentration.

Column Name: insight_other
Column Type: varchar
Max Length: 40
'Other' associated with insight.

Column Name: insight_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with insight.

Column Name: awareness_other
Column Type: varchar
Max Length: 40
'Other' associated with awareness.

Column Name: awareness_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with awareness.

Column Name: social_judgement_other
Column Type: varchar
Max Length: 40
'Other' associated with social judgement.

Column Name: social_judgement_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with social judgement.

Column Name: social_judgement_code

Column Type: varchar

Max Length: 10

'Social judgement'

Column Name: social_judgement_value

Column Type: varchar

Max Length: 40

The description associated with social_judgement_code. See social_judgement_code for more information.

Column Name: suicidal_other

Column Type: varchar

Max Length: 40

'Other' associated with suicidal.

Column Name: suicidal_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with suicidal.

Column Name: homicidal_other

Column Type: varchar

Max Length: 40

'Other' associated with homicidal.

Column Name: homicidal_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with homicidal.

Column Name: potential_for_violence_code_all

Column Type: varchar

Max Length: 10

'Potential for Violence'

Column Name: potential_for_violence1_value

Column Type: varchar

Max Length: 40

The description associated with potential_for_violence1_code. See potential_for_violence1_code for more information.

Column Name: potential_for_violence_other

Column Type: varchar

Max Length: 40

'Other' associated with potential for violence.

Column Name: potential_for_violence_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with potential for violence.

Column Name: sexual_behavior_code_all
Column Type: varchar
Max Length: 40
'Sexual Behavior'

Column Name: sexual_behavior1_value
Column Type: varchar
Max Length: 40
The description associated with sexual_behavior1_code. See sexual_behavior1_code for more information.

Column Name: sexual_behavior_other
Column Type: varchar
Max Length: 40
'Other' associated with sexual behavior.

Column Name: sexual_behavior_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with sexual behavior.

Column Name: sexually_abused_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with sexually abused.

Column Name: physically_abused_comments
Column Type: varchar
Max Length: 32766
'Comments' associated with physically abused.

Column Name: mental_status_summary_comments
Column Type: varchar
Max Length: 32766
'Mental Status Summary'

Column Name: formulation
Column Type: varchar
Max Length: 32766
'Formulation'

Column Name: prognosis
Column Type: varchar
Max Length: 32766
'Prognosis'

Column Name: physically_abused_code
Column Type: varchar
Max Length: 10

'Physically Abused'

Column Name: physically_abused_value

Column Type: varchar

Max Length: 40

The description associated with physically_abused_code. See physically_abused_code for more information.

Column Name: sexually_abused_code

Column Type: varchar

Max Length: 10

'Sexually Abused'

Column Name: sexually_abused_value

Column Type: varchar

Max Length: 40

The description associated with sexually_abused_code. See sexually_abused_code for more information.

Column Name: appearance1_code

Column Type: varchar

Max Length: 40

The appearance 1 code.

Column Name: appearance2_code

Column Type: varchar

Max Length: 10

The appearance 2 code.

Column Name: appearance2_value

Column Type: varchar

Max Length: 40

The description associated with appearance2_code. See appearance2_code for more information.

Column Name: attitude1_code

Column Type: varchar

Max Length: 10

The attitude 1 code.

Column Name: attitude2_code

Column Type: varchar

Max Length: 40

The attitude 2 code.

Column Name: attitude2_value

Column Type: varchar

Max Length: 40

The description associated with attitude2_code. See attitude2_code for more information.

Column Name: speech1_code

Column Type: varchar

Max Length: 40

The speech 1 code.

Column Name: speech2_code

Column Type: varchar

Max Length: 40

The speech 2 code.

Column Name: speech2_value

Column Type: varchar

Max Length: 40

The description associated with speech2_code. See speech2_code for more information.

Column Name: language1_code

Column Type: varchar

Max Length: 40

The language 1 code.

Column Name: language2_code

Column Type: varchar

Max Length: 40

The language 2 code.

Column Name: language2_value

Column Type: varchar

Max Length: 40

The description associated with language2_code. See language2_code for more information.

Column Name: orientation1_code

Column Type: varchar

Max Length: 40

The orientation 1 code.

Column Name: orientation2_code

Column Type: varchar

Max Length: 40

The orientation 2 code.

Column Name: orientation2_value

Column Type: varchar

Max Length: 40

The description associated with orientation2_code. See orientation2_code for more information.

Column Name: affect1_code

Column Type: varchar

Max Length: 40

The affect 1 code.

Column Name: affect2_code

Column Type: varchar

Max Length: 40

The affect 2 code.

Column Name: affect2_value

Column Type: varchar

Max Length: 40

The description associated with affect2_code. See affect2_code for more information.

Column Name: mood1_code

Column Type: varchar

Max Length: 40

The mood 1 code.

Column Name: mood2_code

Column Type: varchar

Max Length: 40

The mood 2 code.

Column Name: mood2_value

Column Type: varchar

Max Length: 40

The description associated with mood2_code. See mood2_code for more information.

Column Name: thought_process1_code

Column Type: varchar

Max Length: 40

The thought process 1 code.

Column Name: thought_process2_code

Column Type: varchar

Max Length: 40

The thought process 2 code.

Column Name: thought_process2_value

Column Type: varchar

Max Length: 40

The description associated with thought_process2_code. See thought_process2_code for more information.

Column Name: productivity1_code

Column Type: varchar

Max Length: 40

The productivity 1 code.

Column Name: productivity2_code

Column Type: varchar

Max Length: 40

The productivity 2 code.

Column Name: productivity2_value

Column Type: varchar

Max Length: 40

The description associated with productivity2_code. See productivity2_code for more information.

Column Name: continuity_of_thought1_code

Column Type: varchar

Max Length: 40

The continuity of thought 1 code.

Column Name: continuity_of_thought2_code

Column Type: varchar

Max Length: 40

The continuity of thought 2 code.

Column Name: continuity_of_thought2_value

Column Type: varchar

Max Length: 40

The description associated with continuity_of_thought2_code. See continuity_of_thought2_code for more information.

Column Name: abstract_thinking1_code

Column Type: varchar

Max Length: 40

The abstract thinking 1 code.

Column Name: abstract_thinking2_code

Column Type: varchar

Max Length: 40

The abstract thinking 2 code.

Column Name: abstract_thinking2_value

Column Type: varchar

Max Length: 40

The description associated with abstract_thinking2_code. See abstract_thinking2_code for more information.

Column Name: thought_content1_code

Column Type: varchar

Max Length: 40

The thought content 1 code.

Column Name: thought_content2_code

Column Type: varchar

Max Length: 40

The thought content 2 code.

Column Name: thought_content2_value

Column Type: varchar

Max Length: 40

The description associated with thought_content2_code. See thought_content2_code for more information.

Column Name: form_and_content1_code

Column Type: varchar
Max Length: 40
The form and content 1 code.

Column Name: form_and_content2_code
Column Type: varchar
Max Length: 40
The form and content 2 code.

Column Name: form_and_content2_value
Column Type: varchar
Max Length: 40
The description associated with form_and_content2_code. See form_and_content2_code for more information.

Column Name: memory1_code
Column Type: varchar
Max Length: 40
The memory 1 code.

Column Name: memory2_code
Column Type: varchar
Max Length: 40
The memory 2 code.

Column Name: memory2_value
Column Type: varchar
Max Length: 40
The description associated with memory2_code. See memory2_code for more information.

Column Name: suicidal1_code
Column Type: varchar
Max Length: 40
The suicidal 1 code.

Column Name: suicidal2_code
Column Type: varchar
Max Length: 40
The suicidal 2 code.

Column Name: suicidal2_value
Column Type: varchar
Max Length: 40
The description associated with suicidal2_code. See suicidal2_code for more information.

Column Name: homicidal1_code
Column Type: varchar
Max Length: 40
The homicidal 1 code.

Column Name: homicidal2_code

Column Type: varchar

Max Length: 40

The homicidal 2 code.

Column Name: homicidal2_value

Column Type: varchar

Max Length: 40

The description associated with homicidal2_code. See homicidal2_code for more information.

Column Name: potential_for_violence1_code

Column Type: varchar

Max Length: 40

The potential for violence 1 code.

Column Name: potential_for_violence2_code

Column Type: varchar

Max Length: 40

The potential for violence 2 code.

Column Name: potential_for_violence2_value

Column Type: varchar

Max Length: 40

The description associated with potential_for_violence2_code. See potential_for_violence2_code for more information.

Column Name: sexual_behavior1_code

Column Type: varchar

Max Length: 40

The sexual behavior 1 code.

Column Name: sexual_behavior2_code

Column Type: varchar

Max Length: 40

The sexual behavior 2 code.

Column Name: sexual_behavior2_value

Column Type: varchar

Max Length: 40

The description associated with sexual_behavior2_code. See sexual_behavior2_code for more information.

Column Name: PARENT_CHILD_LINK

Column Type: varchar

Max Length: 40

The unique ID of MSA_uniqueid.

Column Name: abstract_thnkng_sh_value

Column Type: varchar

Max Length: 255

The description associated with abstract_thnkng_code limited to 255 characters. See abstract_thnkng_code for more information.

Column Name: abstract_thnkng_value

Column Type: varchar

Max Length: 4096

The description associated with abstract_thnkng_code. See abstract_thnkng_code for more information.

Column Name: affect_sh_value

Column Type: varchar

Max Length: 255

The description associated with affect_code limited to 255 characters. See affect_code for more information.

Column Name: affect_value

Column Type: varchar

Max Length: 4096

The description associated with affect_code. See affect_code for more information.

Column Name: appearance_sh_value

Column Type: varchar

Max Length: 255

The description associated with appearance_code limited to 255 characters. See appearance_code for more information.

Column Name: appearance_value

Column Type: varchar

Max Length: 4096

The description associated with appearance_code. See appearance_code for more information.

Column Name: assessment_status_code

Column Type: varchar

Max Length: 50

'Assessment Status'

Column Name: assessment_status_value

Column Type: varchar

Max Length: 40

The description associated with assessment_status_code. See assessment_status_code for more information.

Column Name: attitude_sh_value

Column Type: varchar

Max Length: 255

The description associated with attitude_code limited to 255 characters. See attitude_code for more information.

Column Name: attitude_value

Column Type: varchar

Max Length: 4096

The description associated with attitude_code. See attitude_code for more information.

Column Name: client_name

Column Type: varchar

Max Length: 50

The name associated with PATID.

Column Name: cntnuity_thght_value

Column Type: varchar

Max Length: 4096

The description associated with cntnuity_thght_code. See cntnuity_thght_code for more information.

Column Name: cntnuity_thought_sh_value

Column Type: varchar

Max Length: 255

The description associated with cntnuity_thought_code limited to 255 characters. See cntnuity_thought_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: document_routing_status
Column Type: varchar
Max Length: 50
Status of the document

Column Name: form_and_cntnt_value
Column Type: varchar
Max Length: 4096
The description associated with form_and_cntnt_code. See form_and_cntnt_code for more information.

Column Name: form_and_content_sh_value
Column Type: varchar
Max Length: 255
The description associated with form_and_content_code limited to 255 characters. See form_and_content_code for more information.

Column Name: homicidal_sh_value
Column Type: varchar
Max Length: 255
The description associated with homicidal_code limited to 255 characters. See homicidal_code for more information.

Column Name: homicidal_value
Column Type: varchar
Max Length: 4096
The description associated with homicidal_code. See homicidal_code for more information.

Column Name: language_code_all
Column Type: varchar
Max Length: 40

'Language'

Column Name: language_sh_value

Column Type: varchar

Max Length: 255

The description associated with language_code limited to 255 characters. See language_code for more information.

Column Name: language_value

Column Type: varchar

Max Length: 4096

The description associated with language_code. See language_code for more information.

Column Name: memory_sh_value

Column Type: varchar

Max Length: 255

The description associated with memory_code limited to 255 characters. See memory_code for more information.

Column Name: memory_value

Column Type: varchar

Max Length: 4096

The description associated with memory_code. See memory_code for more information.

Column Name: mood_sh_value

Column Type: varchar

Max Length: 255

The description associated with mood_code limited to 255 characters. See mood_code for more information.

Column Name: mood_value

Column Type: varchar

Max Length: 4096

The description associated with mood_code. See mood_code for more information.

Column Name: motoractivity1_code

Column Type: varchar

Max Length: 40

The motor activity 1 code.

Column Name: motoractivity1_value

Column Type: varchar

Max Length: 40

The description associated with motoractivity1_code. See motoractivity1_code for more information.

Column Name: motoractivity2_code

Column Type: varchar

Max Length: 40

The motor activity 2 code.

Column Name: motoractivity2_value

Column Type: varchar

Max Length: 40

The description associated with motoractivity2_code. See motoractivity2_code for more information.

Column Name: motoractivity_code_all

Column Type: varchar

Max Length: 40

'Motor Activity'

Column Name: motoractivity_comments

Column Type: varchar

Max Length: 32766

'Comments' associated with motor activity.

Column Name: motoractivity_other

Column Type: varchar

Max Length: 40

'Other' associated with motor activity.

Column Name: motoractivity_sh_value

Column Type: varchar

Max Length: 255

The description associated with motoractivity_code limited to 255 characters. See motoractivity_code for more information.

Column Name: motoractivity_value

Column Type: varchar

Max Length: 4096

The description associated with motoractivity_code. See motoractivity_code for more information.

Column Name: notify_practitioner

Column Type: varchar

Max Length: 10

'Select Staff To Notify'

Column Name: notify_practitioner_name

Column Type: varchar

Max Length: 40

The name of the practitioner to notify.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: orientation_sh_value

Column Type: varchar

Max Length: 255

The description associated with orientation_code limited to 255 characters. See orientation_code for more information.

Column Name: orientation_value

Column Type: varchar

Max Length: 4096

The description associated with orientation_code. See orientation_code for more information.

Column Name: productivity_sh_value

Column Type: varchar

Max Length: 255

The description associated with productivity_code limited to 255 characters. See productivity_code for more information.

Column Name: productivity_value

Column Type: varchar

Max Length: 4096

The description associated with productivity_code. See productivity_code for more information.

Column Name: ptntl_for_vlnc_sh_value

Column Type: varchar

Max Length: 255

The description associated with ptntl_for_vlnc_code limited to 255 characters. See ptntl_for_vlnc_code for more information.

Column Name: ptntl_for_vlnc_value

Column Type: varchar

Max Length: 4096

The description associated with ptntl_for_vlnc_code. See ptntl_for_vlnc_code for more information.

Column Name: reason_for_not_administering_code

Column Type: varchar

Max Length: 15

Column Name: reason_for_not_administering_value

Column Type: varchar

Max Length: 40

Column Name: sexual_behavior_sh_value

Column Type: varchar

Max Length: 255

The description associated with sexual_behavior_code limited to 255 characters. See sexual_behavior_code for more information.

Column Name: sexual_behavior_value

Column Type: varchar

Max Length: 4096

The description associated with sexual_behavior_code. See sexual_behavior_code for more information.

Column Name: speech_sh_value

Column Type: varchar

Max Length: 255

The description associated with speech_code limited to 255 characters. See speech_code for more information.

Column Name: speech_value

Column Type: varchar

Max Length: 4096

The description associated with speech_code. See speech_code for more information.

Column Name: suicidal_sh_value

Column Type: varchar

Max Length: 255

The description associated with suicidal_code limited to 255 characters. See suicidal_code for more information.

Column Name: suicidal_value

Column Type: varchar

Max Length: 4096

The description associated with suicidal_code. See suicidal_code for more information.

Column Name: thought_content_sh_value

Column Type: varchar

Max Length: 255

The description associated with thought_content_code limited to 255 characters. See thought_content_code for more information.

Column Name: thought_content_value

Column Type: varchar

Max Length: 4096

The description associated with thought_content_code. See thought_content_code for more information.

Column Name: thought_process_sh_value

Column Type: varchar

Max Length: 255

The description associated with thought_process_code limited to 255 characters. See thought_process_code for more information.

Column Name: thought_process_value

Column Type: varchar

Max Length: 4096

The description associated with thought_process_code. See thought_process_code for more information.

Documentation for form: Patient_Health_Questionnaire-2

Table Name: SYSTEM.cw_phq2_assessment

Table Description: This table returns the information stored in the 'Patient Health Questionnaire-2' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: FACILITY
Column Type: integer
The system code in which the client data is filed.

Column Name: PATID
Column Type: varchar
Max Length: 20
The unique ID of the client.

Column Name: PHT_unique_id
Column Type: varchar
Max Length: 15
This is a unique ID associated with this questionnaire.

Column Name: assessment_date
Column Type: date
Date the assessment was administered

Column Name: client_name
Column Type: varchar
Max Length: 50
Name of client associated with

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date

Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The source that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20
The date the row was last updated.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: feeling_down_code
Column Type: varchar
Max Length: 15
Rating for '2. Feeling down, depressed, irritable, or hopeless?'

Column Name: feeling_down_value
Column Type: varchar
Max Length: 40
Value associated with code in 'feeling_down_code'

Column Name: little_interest_code
Column Type: varchar
Max Length: 15
Rating for '1.Little interest or pleasure in doing things'

Column Name: little_interest_value
Column Type: varchar
Max Length: 40
Value associated with code in 'little_interest_code'

Column Name: option_id
Column Type: varchar
Max Length: 20
DOCUMENTATION option_id - The unique ID of the form that last updated the row.

Column Name: total_score
Column Type: varchar
Max Length: 15
Sum of rating in 2 questions.

Documentation for form: Patient_Health_Questionnaire-A

Table Name: SYSTEM.cw_phqa_assessment

Table Description: This table returns the information stored in the 'Patient Health Questionnaire-A' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: assessment_pract_code
Column Type: varchar
Max Length: 40
Avatar practitioner ID of staff in 'Assessment Practitioner' field

Column Name: assessment_pract_value
Column Type: varchar
Max Length: 128
Staff member name associated with ID in 'assessment_pract_code'

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: FACILITY

Column Type: integer

The system code in which the client data is filed.

Column Name: PATID

Column Type: varchar

Max Length: 20

The unique ID of the client.

Column Name: PHC_unique_id

Column Type: varchar

Max Length: 15

This is a unique ID associated with this questionnaire.

Column Name: appetite_problem_code

Column Type: varchar

Max Length: 15

Rating for '4.Poor appetite, weight loss, or overeating'

Column Name: appetite_problem_value

Column Type: varchar

Max Length: 50

Value associated with code in 'appetite_problem_code'

Column Name: assessment_date

Column Type: date

Date the assessment was administered

Column Name: assessment_status_code

Column Type: varchar

Max Length: 50

'Assessment Status' field with "Draft" or "Final" entry

Column Name: assessment_status_value

Column Type: varchar

Max Length: 50

value associated with code in 'assessment_status_code'

Column Name: client_name

Column Type: varchar

Max Length: 50

Name of client associated with

Column Name: concentrating_issue_code

Column Type: varchar

Max Length: 15

Rating for '7.Trouble concentrating on things like school work, reading, or watching TV'

Column Name: concentrating_issue_value
Column Type: varchar
Max Length: 50
Value associated with code in 'concentrating_issue_code'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20
The date the row was last updated.

Column Name: data_entry_user_name
Column Type: varchar

Max Length: 50

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: depression_evaluation_code

Column Type: varchar

Max Length: 15

'Depression Evaluation' field with "Negative" or "Positive" entry

Column Name: depression_evaluation_value

Column Type: varchar

Max Length: 50

The value associated with code in 'depression_evaluation_code'

Column Name: feeling_bad_code

Column Type: varchar

Max Length: 15

Rating for '6. Feeling bad about yourself-or feeling that you are a failure, or that you have let yourself or your family down'

Column Name: feeling_bad_value

Column Type: varchar

Max Length: 50

Value associated with code in 'feeling_bad_code'

Column Name: feeling_down_code

Column Type: varchar

Max Length: 15

Rating for '2. Feeling down, depressed, irritable, or hopeless?'

Column Name: feeling_down_value

Column Type: varchar

Max Length: 50

Value associated with code in 'feeling_down_code'

Column Name: feeling_tired_code

Column Type: varchar

Max Length: 15

Rating for '5. Feeling tired, or having little energy'

Column Name: feeling_tired_value

Column Type: varchar

Max Length: 50

Value associated with code in 'feeling_tired_code'

Column Name: little_interest_code

Column Type: varchar

Max Length: 15

Rating for '1.Little interest or pleasure in doing things'

Column Name: little_interest_value

Column Type: varchar

Max Length: 50

Value associated with code in 'little_interest_code'

Column Name: mvt_speed_unusual_code

Column Type: varchar

Max Length: 15

Rating for '8.Moving or speaking so slowly that other people could have noticed? Or the opposite-being so fidgety or restless that you were moving around a lot more than usual'

Column Name: mvt_speed_unusual_value

Column Type: varchar

Max Length: 50

Value associated with code in 'mvt_speed_unusual_code'

Column Name: option_id

Column Type: varchar

Max Length: 20

DOCUMENTATION option_id - The unique ID of the form that last updated the row.

Column Name: prorated_raw_score

Column Type: varchar

Max Length: 15

If one or two questions are left unanswered, the $\text{prorated_raw_score} = \text{total_raw_score} * 9 / (\text{number of questions answered})$. If all questions are answered, this is equal to the total_raw_score. If three or more questions are left unanswered, this total will not be calculated.

Column Name: reason_for_not_administering_code

Column Type: varchar

Max Length: 15

'Reason For Not Administering' field.

Column Name: reason_for_not_administering_value

Column Type: varchar

Max Length: 512

Value associated with code in 'reason_for_not_administering_code'

Column Name: self_hurt_thoughts_code

Column Type: varchar

Max Length: 15

Rating for '9.Thoughts that you would be better off dead, or of hurting yourself in some way'

Column Name: self_hurt_thoughts_value

Column Type: varchar

Max Length: 50

Value associated with code in 'self_hurt_thoughts_code'

Column Name: sleep_trouble_code
Column Type: varchar
Max Length: 15
Rating for '3. Trouble falling asleep, staying asleep, or sleeping too much?'

Column Name: sleep_trouble_value
Column Type: varchar
Max Length: 50
Value associated with code in 'sleep_trouble_code'

Column Name: ss_date_1
Column Type: date
Site Specific Date 1

Column Name: ss_date_2
Column Type: date

Documentation for form: Enter_Group_Default_Note_(Workflow)

Table Name: SYSTEM.cw_scratch_notes

Table Description: This table returns the information stored in the 'Enter Default Group Note' and 'Progress Notes (Group and Individual)' forms.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID that joins the note to the service.

Column Name: EPISODE_NUMBER

Column Type: integer
The episode number.

Column Name: FACILITY
Column Type: integer
The system code in which the data is stored.

Column Name: Option_Desc
Column Type: varchar
Max Length: 80
The description of the form that filed the note.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The unique identifier of the form that filed the note.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client id.

Column Name: SNOTuniqueid
Column Type: varchar
Max Length: 50
The unique ID that identifies the scratch note.

Column Name: TODO_ID
Column Type: varchar
Max Length: 20
The unique ID associated with the To-Do.

Column Name: clinical_quality_code
Column Type: varchar
Max Length: 255
'Clinical Quality Indicators'

Column Name: clinical_quality_sh_val
Column Type: varchar
Max Length: 255
'The description associated with clinical_quality_code. See clinical_quality_code for more information.'

Column Name: clinical_quality_value
Column Type: varchar
Max Length: 4096
'The description associated with clinical_quality_code. See clinical_quality_code for more information.'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

The user who last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: ebps_code

Column Type: varchar

Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: external_system_id
Column Type: varchar
Max Length: 255
'External System Identifier'

Column Name: group_name_or_number
Column Type: varchar
Max Length: 50
The group this note is for.

Column Name: note_addresses
Column Type: varchar
Max Length: 40
Service that this note addresses.

Column Name: notes_field
Column Type: varchar
Max Length: 32766
The full note detail.

Column Name: note_time
Column Type: varchar
Max Length: 50
The time of the note.

Column Name: note_type_code
Column Type: varchar
Max Length: 50
The type of note (dictionary code).

Column Name: note_type_value
Column Type: varchar
Max Length: 50
The type of note (description).

Column Name: transition_of_care_code
Column Type: varchar

Max Length: 1

'Is This A Transition Of Care?'

Column Name: transition_of_care_value

Column Type: varchar

Max Length: 80

'The description associated with transition_of_care_code. See transition_of_care_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: user_to_send_cosign__code

Column Type: varchar

Max Length: 50

User to send a cosign notification to.

Column Name: user_to_send_scratch_code

Column Type: varchar

Max Length: 50

User to send the scratch to.

Documentation for form: Review/Co-Sign_Notes_(Workflow)

Table Name: SYSTEM.cw_cosign_notes_voided

Table Description: This table returns data from the Review/Co-sign notes

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: CSNuniqueid
Column Type: varchar
Max Length: 50
Co-Sign Note unique ID.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number.

Column Name: FACILITY
Column Type: integer
The system code that generated the data.

Column Name: FILING_COUNTER
Column Type: integer
'Counter'

Column Name: NOT_filing_counter
Column Type: integer
The particular note being filed.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID.

Column Name: cosigners_comments
Column Type: varchar
Max Length: 32766
'Cosigner's Comments'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: list_of_notes_code
Column Type: varchar
Max Length: 50
'List of Notes code'

Column Name: list_of_notes_value
Column Type: varchar
Max Length: 50
The description associated with list_of_notes_code. See list_of_notes_code for more information.

Column Name: notes_entry_index_nu
Column Type: varchar

Max Length: 50
'Notes Entry Index Number for Internal Use'

Column Name: note_type_code
Column Type: varchar
Max Length: 50
'Note Type code'

Column Name: note_type_value
Column Type: varchar
Max Length: 50
The description associated with note_type_code. See note_type_code for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 80
'Option Description'

Column Name: option_id

'Option Id'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: void_data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row for a voided note.

Column Name: void_data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row for a voided note.

Column Name: void_data_entry_date
Column Type: date
The date the row was last updated for a voided note.

Column Name: void_data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated for a voided note.

Column Name: void_data_entry_user_id
Column Type: varchar

Max Length: 40

The 'User ID' that last updated the row for a voided note.

Column Name: void_data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the 'User ID' who voided the note.

Column Name: void_option_desc

Column Type: varchar

Max Length: 80

The description of the form that voided the note.

Column Name: void_option_id

Column Type: varchar

Max Length: 40

The form that voided the note.

Documentation for form: Review/Co-Sign_Notes_(Workflow)

Table Name: SYSTEM.cw_notes_review_and_cosign

Table Description: This table returns the information stored in the 'Review/Co-Sign Notes (Workflow)' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: CSNUniqueid

Column Type: varchar

Max Length: 50

The unique ID associated with a row of data.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: Option_Desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: cosigners_comments
Column Type: varchar
Max Length: 32766
'Co-Signer's Comments'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: list_of_notes_code

Column Type: varchar

Max Length: 50

'List of Notes'

Column Name: list_of_notes_value

Column Type: varchar

Max Length: 50

The description associated with list_of_notes_code. See list_of_notes_code for more information.

Column Name: notes_entry_index_nu

Column Type: varchar

Max Length: 50

'Notes Entry Index Number for Internal Use'

Column Name: note_type_code

Column Type: varchar

Max Length: 50

'Note Type'

Column Name: note_type_value

Column Type: varchar

Max Length: 50

The description associated with note_type_code. See note_type_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Clinical_Pathway_Enrollment

Table Name: SYSTEM.Clinical_Pathway_Enrollments

Table Description: This table stores Clinical Pathway Enrollment and Disenrollment information, and provides shared Methods to access those information

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50

Column Name: data_entry_date
Column Type: date

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: daysEnrolled
Column Type: integer

Column Name: discharge_date
Column Type: date

Column Name: discharge_success
Column Type: varchar
Max Length: 50

Column Name: disenroll_HG
Column Type: varchar
Max Length: 50

Column Name: disenrollment_reason_code
Column Type: varchar
Max Length: 50

Column Name: disenrollment_reason_value
Column Type: varchar
Max Length: 50

Column Name: enroll_HG

Documentation for form: Columbia_Suicide_Risk_Assessment

Table Name: SYSTEM.Columbia_Assessment

Table Description: This table stores information of 'Columbia Suicide Risk Assessment' form.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the record.

Column Name: aborted_suicide_attempt_lifetime_code
Column Type: varchar
Max Length: 50
'Aborted or Self-Interrupted Attempts in Lifetime?' code.

Column Name: aborted_suicide_attempt_past_months_code
Column Type: varchar
Max Length: 50
'Aborted or Self-Interrupted Attempts in Past 3 Months' code.

Column Name: aborted_suicide_attempt_past_months_value
Column Type: varchar
Max Length: 40
The value of the 'aborted_suicide_attempt_past_months_code'.

Column Name: aborted_ifyesdescribe
Column Type: varchar
Max Length: 32000
Aborted Attempt: 'If Yes,Describe' question.

Column Name: aborted_suicide_attempt_lifetime_value
Column Type: varchar
Max Length: 40
The value of the 'aborted_suicide_attempt_lifetime_code'.

Column Name: actual_lethality_initial_attempt
Column Type: integer
Actual Lethality section: 'Initial/First Attempt' question.

Column Name: actual_lethality_initial_attempt_date
Column Type: date
Actual Lethality section: 'Initial/First Attempt Date' question.

Column Name: actual_lethality_lethal_attempt
Column Type: integer

Actual Lethality section: 'Most Lethal Attempt' question.

Column Name: actual_lethality_lethal_attempt_date

Column Type: date

Actual Lethality section: 'Most Lethal Attempt Date' question.

Column Name: actual_lethality_recent_attempt

Column Type: integer

Actual Lethality section: 'Most Recent Attempt' question.

Column Name: actual_lethality_recent_attempt_date

Column Type: date

Actual Lethality section: 'Most Recent Attempt Date' question.

Column Name: actual_suicide_attempt_lifetime_code

Column Type: varchar

Max Length: 50

'Actual Suicide Attempt in Lifetime' code.

Column Name: actual_suicide_attempt_lifetime_value

Column Type: varchar

Max Length: 40

The value of the 'actual_suicide_attempt_lifetime_code'.

Column Name: actual_suicide_attempt_past_months_code

Column Type: varchar

Max Length: 50

'Actual Suicide Attempts in Past 3 Months' code.

Column Name: actual_suicide_attempt_past_months_value

Column Type: varchar

Max Length: 40

The value of the 'actual_suicide_attempt_past_months_code'.

Column Name: attempt_ifyesdescribe

Column Type: varchar

Max Length: 32000

Actual Attempt: 'If Yes,Describe' question.

Column Name: columbia_assessment_date

Column Type: date

Columbia assessment date.

Column Name: columbia_assessment_status_code

Column Type: varchar

Max Length: 50

'Columbia Assessment Status'.

Column Name: columbia_assessment_status_value

Column Type: varchar

Max Length: 40

The value of the 'columbia_assessment_status_code'.

Column Name: controllability_most_severe_lifetime

Column Type: integer

Controllability section: 'Most Severe in Lifetime' question.

Column Name: controllability_most_severe_past_month

Column Type: integer

Controllability section: 'Most Severe in Past 1 Month' question.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

Column Name: data_entry_date

Column Type: date

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: description_of_lifetime_ideation

Column Type: varchar

Max Length: 50

Description of lifetime ideation.

Column Name: description_of_recent_ideation

Column Type: varchar

Max Length: 32000

Description of recent ideation.

Column Name: deterrents_most_severe_lifetime

Column Type: integer

Deterrents section: 'Most Severe in Lifetime' question.

Column Name: deterrents_most_severe_past_month

Column Type: integer

Deterrents section: 'Most Severe in Past 1 Month' question.

Column Name: duration_most_severe_lifetime

Column Type: integer

Duration section: 'Most Severe in Lifetime' question.

Column Name: duration_most_severe_past_month

Column Type: integer

Duration section: 'Most Severe in Past 1 Month' question.

Column Name: enroll_in_pathway_code

Column Type: varchar

Max Length: 50

'Enroll in Clinical Pathway' code.

Column Name: enroll_in_pathway_value

Column Type: varchar

Max Length: 40

The value of the 'enroll_in_pathway_code'.

Column Name: episode

Column Type: varchar

Max Length: 20

The Episode associated with the record.

Column Name: frequency_most_severe_lifetime

Column Type: integer

Frequency section: 'Most Severe in Lifetime' question.

Column Name: frequency_most_severe_past_month

Column Type: integer

Frequency section: 'Most Severe in Past 1 Month' question.

Column Name: has_engaged_nonsuicidal_behavior_code

Column Type: varchar

Max Length: 50

'Has Subject Engaged in Non-Suicidal Self-Injurious Behavior?' code.

Column Name: has_engaged_nonsuicidal_behavior_value

Column Type: varchar

Max Length: 40

The value of the 'has_engaged_nonsuicidal_selfinjurious_behavior_code'.

Column Name: has_engaged_past_months_code

Column Type: varchar

Max Length: 50

'In the Past 3 Month?' code.

Column Name: has_engaged_past_months_value

Column Type: varchar

Max Length: 40

The value of the 'has_engaged_past_months_code'.

Column Name: hist_group

Column Type: varchar

Max Length: 50

Column Name: interrupted_ifyesdescribe

Column Type: varchar

Max Length: 32000

Interrupted Attempt: 'If Yes,Describe' question.

Column Name: interrupted_suicide_attempt_lifetime_code

Column Type: varchar

Max Length: 50

'Interrupted Suicide Attempts in Lifetime' code.

Column Name: interrupted_suicide_attempt_lifetime_value

Column Type: varchar

Max Length: 40

The value of the 'interrupted_suicide_attempt_lifetime_code'.

Column Name: interrupted_suicide_attempt_past_months_code

Column Type: varchar

Max Length: 50

'Interrupted Suicide Attempts in Past 3 Months' code.

Column Name: interrupted_suicide_attempt_past_months_value

Column Type: varchar

Max Length: 40

The value of the 'interrupted_suicide_attempt_past_months_code'.

Column Name: lifetime_most_severe_ideation

Column Type: integer

Intensity section: 'Lifetime - Most Severe Ideation(Type#1-5)' question.

Column Name: option_id

Column Type: varchar

Max Length: 50

Column Name: pathway_selection_code

Column Type: varchar

Max Length: 50

'Pathway List' code. The pathway ID.

Column Name: pathway_selection_value

Column Type: varchar

Max Length: 40

The value of the 'pathway_selection_code'.

Column Name: potential_lethality_initial_attempt

Column Type: integer

Potential Lethality section: 'Initial/First Attempt' question.

Column Name: potential_lethality_lethal_attempt

Column Type: integer

Potential Lethality section: 'Most Lethal Attempt' question.

Column Name: potential_lethality_recent_attempt

Column Type: integer

Potential Lethality section: 'Most Recent Attempt' question.

Column Name: preparatory_behavior_ifyesdescribe

Column Type: varchar

Max Length: 32000

Preparatory Acts or Behavior: 'If Yes,Describe' question.

Column Name: preparatory_behavior_lifetime_code

Column Type: varchar

Max Length: 50

'Preparatory Acts or Behavior in Lifetime?' code.

Column Name: preparatory_behavior_lifetime_value

Column Type: varchar

Max Length: 40

The value of the 'preparatory_behavior_lifetime_code'.

Column Name: preparatory_behavior_past_months_code

Column Type: varchar

Max Length: 50

'Preparatory Acts or Behavior in the Past 3 Months?' code.

Column Name: preparatory_behavior_past_months_value

Column Type: varchar

Max Length: 40

The value of the 'preparatory_behavior_past_months_code'.

Column Name: q1_ifyesdescribe

Column Type: varchar

Max Length: 32000

Question 1 'If Yes,Describe'.

Column Name: q1_inthepastmonth_code

Column Type: varchar

Max Length: 50

Question 1 'In the past Month' code.

Column Name: q1_inthepastmonth_value

Column Type: varchar

Max Length: 40

The value of the 'q1_inthepastmonth_code'.

Column Name: q1_inyourlifetime_code

Column Type: varchar

Max Length: 50

Question 1 'In your Lifetime' code.

Column Name: q1_inyourlifetime_value

Column Type: varchar

Max Length: 40

The value of the 'q1_inyourlifetime_code'.

Column Name: q2_ifyesdescribe

Column Type: varchar

Max Length: 32000

Question 2 'If Yes,Describe'.

Column Name: q2_inthepastmonth_code

Column Type: varchar

Max Length: 50

Question 2 'In the past Month' code.

Column Name: q2_inthepastmonth_value

Column Type: varchar

Max Length: 40

The value of the 'q2_inthepastmonth_code'.

Column Name: q2_inyourlifetime_code

Column Type: varchar

Max Length: 50

Question 2 'In your Lifetime' code.

Column Name: q2_inyourlifetime_value

Column Type: varchar

Max Length: 40

The value of the 'q2_inyourlifetime_code'.

Column Name: q3_ifyesdescribe

Column Type: varchar

Max Length: 32000

Question 3 'If Yes,Describe'.

Column Name: q3_inthepastmonth_code

Column Type: varchar

Max Length: 50

Question 3 'In the past Month' code.

Column Name: q3_inthepastmonth_value

Column Type: varchar

Max Length: 40

The value of the 'q3_inthepastmonth_code'.

Column Name: q3_inyourlifetime_code

Column Type: varchar

Max Length: 50

Question 3 'In your Lifetime' code.

Column Name: q3_inyourlifetime_value

Column Type: varchar

Max Length: 40

The value of the 'q3_inyourlifetime_code'.

Column Name: q4_ifyesdescribe

Column Type: varchar

Max Length: 32000

Question 4 'If Yes,Describe'.

Column Name: q4_inthepastmonth_code

Column Type: varchar

Max Length: 50

Question 4 'In the past Month' code.

Column Name: q4_inthepastmonth_value

Column Type: varchar

Max Length: 40

The value of the 'q4_inthepastmonth_code'.

Column Name: q4_inyourlifetime_code

Column Type: varchar

Max Length: 50

Question 4 'In your Lifetime' code.

Column Name: q4_inyourlifetime_value

Column Type: varchar

Max Length: 40

The value of the 'q4_inyourlifetime_code'.

Column Name: q5_ifyesdescribe

Column Type: varchar

Max Length: 32000

Question 5 'If Yes,Describe'.

Column Name: q5_inthepastmonth_code

Column Type: varchar

Max Length: 50

Question 5 'In the past Month' code.

Column Name: q5_inthepastmonth_value

Column Type: varchar

Max Length: 40

The value of the 'q5_inthepastmonth_code'.

Column Name: q5_inyourlifetime_code

Column Type: varchar

Max Length: 50

Question 5 'In your Lifetime' code.

Column Name: q5_inyourlifetime_value

Column Type: varchar

Max Length: 40

The value of the 'q5_inyourlifetime_code'.

Column Name: reason_not_enroll

Column Type: varchar

Max Length: 32000

Reason of not enrollment.

Column Name: reasons_most_severe_lifetime

Column Type: integer

Reasons section: 'Most Severe in Lifetime' question.

Column Name: reasons_most_severe_past_month
Column Type: integer
Reasons section: 'Most Severe in Past 1 Month' question.

Column Name: recent_most_severe_ideation
Column Type: integer
Intensity section: 'Recent - Most Severe Ideation(Type#1-5)' question.

Column Name: total_number_aborted_suicide_attempt_lifetime
Column Type: varchar
Max Length: 50
'Total Number of Aborted or Self-Interrupted Attempts in Lifetime' question.

Column Name: total_number_aborted_suicide_attempt_past_months
Column Type: varchar
Max Length: 50
'Total Number of Aborted or Self-Interrupted Attempts in Past 3 Months' question.

Column Name: total_number_interrupted_suicide_attempt_lifetime
Column Type: varchar
Max Length: 50
'Total Number of Interrupted Suicide Attempts in Lifetime' question.

Column Name: total_number_interrupted_suicide_attempt_past_months
Column Type: varchar
Max Length: 50
'Total Number of Interrupted Suicide Attempts in Past 3 Months' question.

Column Name: total_number_preparatory_attempt_lifetime
Column Type: varchar
Max Length: 50
'Total Number of Preparatory Attempt in Lifetime' question.

Column Name: total_number_preparatory_attempt_past_3_month
Column Type: varchar
Max Length: 50
'Total Number of Preparatory Attempt in Past 3 Months' question.

Column Name: total_number_suicide_attempt_lifetime
Column Type: varchar
Max Length: 50
'Total Number of Suicide Attempt in Lifetime' question.

Column Name: total_number_suicide_attempt_past_months
Column Type: varchar
Max Length: 50
'Total Number of Suicide Attempt in Past 3 Months' question.

Documentation for form: Columbia_SRA_Since_Last_Visit

Table Name: SYSTEM.Columbia_Last_Visit_Assessment

Table Description: This table stores information of 'Columbia SRA Last Visit' form.

Column Name: ID
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the record.

Column Name: aborted_ifyesdescribe
Column Type: varchar
Max Length: 50
Aborted Attempt: 'If Yes,Describe' question.
