Overview

This documentation describes each myAvatar EHI table as of 9/27/2023 at 4:00 PM EDT in the current released version. The documentation reflects the most current information at the time it was produced. The documentation is broken out by form (where applicable) and then table. Documentation from a specific organization might differ based on the organization's version of myAvatar, custom development, or definition of EHI data. Each table's file contains a description and column details. In addition to creating the extracts, the tool will also generate documentation specific to that organization's environment.

Glossary of Terms

In order to assist organizations in interpreting the information here, Netsmart is providing a glossary of terms for those commonly used field descriptions.

Field Name	Description
ID	The database row id of the selected record. When present, this field will often be considered a unique row identifier of the database content.
blank_row_id	A common back-end unique identifier of the record.
xxx_UniqueID	Each record may display three letters followed by uniqueid in the database, either with or without an underscore following the three letters (ex: ABC_uniqueid or ABCuniqueid). This is a form-specific unique identifier.
GUID	Some tables display a global unique identifier (GUID)
ss_ (Site Specific)	Core myAvatar forms that contain critical content are commonly protected, with limited agency capability to add configurable fields to the forms. The configurable fields are referred to as 'Site Specific (SS)' fields, and are prefaced in the database with ss_.
PATID	PATID is the typical method to indicate that unique patient identifier within the myAvatar environment. This is sometimes referred to as the medical record number or client ID.
FACILITY	myAvatar may be structured as facilities, which represent distinct sets of data based on separate but related system login. When multiple FACILITY codes exist, this may represent separate physical locations, or logical partitions of data.
EPISODE_NUMBER	An episode is defined as the period of an individual course of treatment from admission to discharge, or an episode of care. When an EPISODE_NUMBER is present, the documentation is built to refer to one specific episode of care.
data_entry_date	The date the row was last updated.
data_entry_time	The time the row was last updated.

data_entry_by	The user who last updated the row.
data_entry_by_option	The user name that last updated the row.
data_entry_time_j	Data entry time with fractional seconds when the data was last submitted
data_entry_timezone_info_all	The time zone information for when the data was saved.
data_entry_timezone_short	The short abbreviation for the timezone
data_entry_user_id	The 'User ID' that last updated the row.
data_entry_user_name	The username that last updated the row.
data_entry_utc	The UTC date and time the data was saved.
data_entry_offset	The offset in hours from UTC on when the data was saved.
data_entry_source	The name of the form that last updated the row.
option_id	The unique ID of the form that last updated the row.
option_desc	The description of the form used to submit data associated with the row.
STAFFID	Users may optionally be defined as staff members, which enables users to provide services and allows for documentation of credentials and taxonomy. When a table includes a reference to the staff member, that will be represented by their STAFFID.
JOIN_TO_xxx	When a table includes a column with a label beginning with JOIN_TO, the content of the column may be used as a join to a parent or child document.
LINK_TO_xxx	When a table includes a column with a label beginning with LINK_TO, the content of the column may be used as a join to a parent or child document.
SITEID	A site within the myAvatar environment may be a physical or logical location where appointments may be scheduled and services provided. When a site is referenced in documentation, it will be referenced with a SITEID.
SERIES_ID	Appointment Series Identifier
user_row_access_code	If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Recurring_Credits_Or_Debits

Table Name: SYSTEM.cf_acct_recurring_entries

Table Description: This table returns the recurring credits or debits

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The facility.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client id.

Column Name: REO_uniqueid

Column Type: varchar

Max Length: 12

The unique row id.

Column Name: amount

Column Type: numeric

The amount.

Column Name: TYPE_OF_TRANSACTION_CODE

Column Type: varchar

Max Length: 10

The type of transaction.

Column Name: type_of_transaction_value

Column Type: varchar

Max Length: 40

The description for the TYPE_OF_TRANSACTION_CODE. See TYPE_OF_TRANSACTION_CODE for more information.

Column Name: end_date

Column Type: date

The end date.

Column Name: ACCOUNT_NUMBER

Column Type: varchar

Max Length: 40

The account number.

Column Name: account_number_description
Column Type: varchar
Max Length: 40
The account number description.

Column Name: description_comments
Column Type: varchar
Max Length: 40
The description comments.

Column Name: TRANSACTION_CODE
Column Type: varchar
Max Length: 40
The transction code.

Column Name: description_of_transaction_code
Column Type: varchar
Max Length: 40
The description of the transaction code.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: start_date
Column Type: date
The start date.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Documentation for form: Detailed_Account_Ledger

Table Name: SYSTEM.cf_acct_transaction_detail

Table Description: Processes data from 'Detailed Account Ledger' option

Column Name: account_detail_transaction
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20

Column Name: ACC_uniqueid
Column Type: varchar

Max Length: 40

Column Name: dd
Column Type: varchar
Max Length: 40

Column Name: ACCOUNT_NUMBER
Column Type: varchar
Max Length: 40

Column Name: TRANSACTION_CODE
Column Type: varchar
Max Length: 40

Column Name: dollar_amount
Column Type: numeric
The Dollar Amount for the transaction

Column Name: credit_or_debit_code
Column Type: varchar
Max Length: 10

Column Name: credit_or_debit_value
Column Type: varchar
Max Length: 40

Column Name: description_of_transaction
Column Type: varchar
Max Length: 40

Column Name: check_number
Column Type: varchar
Max Length: 40

Column Name: withdrawal_number
Column Type: varchar
Max Length: 40

Column Name: receipt_number
Column Type: varchar
Max Length: 40

Column Name: posting_date
Column Type: date

Column Name: data_entry_date
Column Type: date

Column Name: data_entry_time
Column Type: varchar
Max Length: 40

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

Column Name: check_date
Column Type: date

Column Name: check_description
Column Type: varchar
Max Length: 40

Column Name: check_status_code
Column Type: varchar
Max Length: 10

Column Name: check_status_value
Column Type: varchar
Max Length: 40

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_time_j
Column Type: time

The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

The time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

The short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: payee_line_1

Column Type: varchar

Max Length: 40

Column Name: payee_line_2

Column Type: varchar

Max Length: 40

Column Name: payee_line_3

Column Type: varchar

Max Length: 40

Column Name: print_check_code

Column Type: varchar

Max Length: 40

Column Name: print_check_value

Column Type: varchar

Max Length: 40

Column Name: transaction_code_description
Column Type: varchar
Max Length: 40

Column Name: vendor_id
Column Type: varchar
Max Length: 40

Documentation for form: Add/Edit_Outreach_Target

Table Name: SYSTEM.audit_outreach_client

Table Description: This table contains audit records for outreach targets.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
System code where the outreach client will be admitted to.

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: PATID
Column Type: varchar
Max Length: 20
Avatar patient identifier. Present if the person referenced by the external id has ever been admitted to a program.

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_city
Column Type: varchar
Max Length: 30
Target's address - city.

Column Name: address_county
Column Type: varchar

Max Length: 60
Target's address - county.

Column Name: address_state
Column Type: varchar
Max Length: 40
Target's address - state.

Column Name: address_street
Column Type: varchar
Max Length: 100
Target's address - street.

Column Name: address_street2
Column Type: varchar
Max Length: 60
Target's address - apartment/unit.

Column Name: address_zipcode
Column Type: varchar
Max Length: 10
Target's Zipcode.

Column Name: audit_action
Column Type: varchar
Max Length: 50
The type of action that caused the change to the SYSTEM.OutreachClient row.

Column Name: cell_phone
Column Type: varchar
Max Length: 60
Target's cell phone.

Column Name: communication_pref
Column Type: varchar
Max Length: 40
Target's communication preference

Column Name: communication_pref_val
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: contact_email
Column Type: varchar
Max Length: 60
Target's email address.

Column Name: data_entry_by
Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_birth
Column Type: date
Target's date of birth.

Column Name: eligibility_end_date_1
Column Type: date
Target's financial eligibility end date postition 1.

Column Name: eligibility_end_date_2
Column Type: date
Target's financial eligibility end date postition 2.

Column Name: eligibility_end_date_3
Column Type: date
Target's financial eligibility end date postition 3.

Column Name: eligibility_end_date_4
Column Type: date
Target's financial eligibility end date postition 4.

Column Name: eligibility_end_date_5
Column Type: date
Target's financial eligibility end date postition 5.

Column Name: eligibility_start_date_1
Column Type: date
Target's financial eligibility start date postition 1.

Column Name: eligibility_start_date_2
Column Type: date
Target's financial eligibility start date postition 2.

Column Name: eligibility_start_date_3
Column Type: date
Target's financial eligibility start date postition 3.

Column Name: eligibility_start_date_4
Column Type: date
Target's financial eligibility start date postition 4.

Column Name: eligibility_start_date_5
Column Type: date
Target's financial eligibility start date postition 5.

Column Name: external_id
Column Type: varchar

Max Length: 100
External organizational identifier for the person.

Column Name: first_name
Column Type: varchar
Max Length: 40
Target's first name.

Column Name: guarantor_id_1
Column Type: varchar
Max Length: 40
Target's primary guarantor (coded value).

Column Name: guarantor_id_2
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 2.

Column Name: guarantor_id_3
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 3.

Column Name: guarantor_id_4
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 4.

Column Name: guarantor_id_5
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 5.

Column Name: guarantor_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor.

Column Name: guarantor_val_2
Column Type: varchar
Max Length: 40
Target's guarantor position 2.

Column Name: guarantor_val_3
Column Type: varchar
Max Length: 40
Target's guarantor position 3.

Column Name: guarantor_val_4
Column Type: varchar

Max Length: 40
Target's guarantor position 4.

Column Name: guarantor_val_5
Column Type: varchar
Max Length: 40
Target's guarantor position 5.

Column Name: home_phone
Column Type: varchar
Max Length: 60
Target's home phone.

Column Name: join_to_outreach_id
Column Type: varchar
Max Length: 50
Links to ID in SYSTEM.OutreachClient.

Column Name: last_name
Column Type: varchar
Max Length: 40
Target's last name.

Column Name: medicaid_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicaid ID number.

Column Name: medicaid_id_2
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 2.

Column Name: medicaid_id_3
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 3.

Column Name: medicaid_id_4
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 4.

Column Name: medicaid_id_5
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 5.

Column Name: medicare_id_1
Column Type: varchar

Max Length: 40
Target's primary Medicare ID number.

Column Name: medicare_id_2
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 2.

Column Name: medicare_id_3
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 3.

Column Name: medicare_id_4
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 4.

Column Name: medicare_id_5
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 5.

Column Name: middle_name
Column Type: varchar
Max Length: 40
Target's middle name.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: outside_facility_code
Column Type: varchar
Max Length: 50
Target's outside living facility (coded value). The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: outside_facility_value
Column Type: varchar
Max Length: 40
Target's outside living facility. The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: permission_to_text
Column Type: varchar
Max Length: 40
Target's permission to text.

Column Name: plan_id_1
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_2
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_3
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_4
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_5
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_2
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_3
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_4
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_5
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: policy_number_1
Column Type: varchar
Max Length: 40
Target's primary insurance policy number.

Column Name: policy_number_2
Column Type: varchar
Max Length: 40
Target's insurance policy number position 2.

Column Name: policy_number_3
Column Type: varchar
Max Length: 40
Target's insurance policy number position 3.

Column Name: policy_number_4
Column Type: varchar
Max Length: 40
Target's insurance policy number position 4.

Column Name: policy_number_5
Column Type: varchar
Max Length: 40
Target's insurance policy number position 5.

Column Name: primary_care_physician_id
Column Type: varchar
Max Length: 40
Target's primary care physician id.

Column Name: protocol_code
Column Type: varchar
Max Length: 50
Target's protocol (coded value) to apply to the appointment created on successful outreach.

Column Name: protocol_shval
Column Type: varchar
Max Length: 40
Target's protocol to apply to the appointment created on successful outreach.

Column Name: protocol_value
Column Type: varchar
Max Length: 40
Target's protocol to apply to the appointment created on successful outreach.

Column Name: risk_level_code
Column Type: varchar
Max Length: 50
Target's risk level (coded value).

Column Name: risk_level_value
Column Type: varchar
Max Length: 40
Target's risk level.

Column Name: sex_code
Column Type: varchar
Max Length: 5
Target's sex (coded value).

Column Name: sex_value
Column Type: varchar
Max Length: 40
Target's sex.

Column Name: subscriber_city_1
Column Type: varchar
Max Length: 30
Subscriber's address - city position 1.

Column Name: subscriber_city_2
Column Type: varchar
Max Length: 30
Subscriber's address - city position 2.

Column Name: subscriber_city_3
Column Type: varchar
Max Length: 30
Subscriber's address - city position 3.

Column Name: subscriber_city_4
Column Type: varchar
Max Length: 30
Subscriber's address - city position 4.

Column Name: subscriber_city_5
Column Type: varchar
Max Length: 30
Subscriber's address - city position 5.

Column Name: subscriber_county_1
Column Type: varchar
Max Length: 60
Subscriber's address - county position 1.

Column Name: subscriber_county_2
Column Type: varchar
Max Length: 60
Subscriber's address - county position 2.

Column Name: subscriber_county_3
Column Type: varchar
Max Length: 60
Subscriber's address - county position 3.

Column Name: subscriber_county_4
Column Type: varchar
Max Length: 60
Subscriber's address - county position 4.

Column Name: subscriber_county_5
Column Type: varchar
Max Length: 60
Subscriber's address - county position 5.

Column Name: subscriber_dob_1
Column Type: date
Subscriber's date of birth position 1.

Column Name: subscriber_dob_2
Column Type: date
Subscriber's date of birth position 2.

Column Name: subscriber_dob_3
Column Type: date
Subscriber's date of birth position 3.

Column Name: subscriber_dob_4
Column Type: date
Subscriber's date of birth position 4.

Column Name: subscriber_dob_5
Column Type: date
Subscriber's date of birth position 5.

Column Name: subscriber_first_name_1
Column Type: varchar
Max Length: 40
Subscriber's first name position 1.

Column Name: subscriber_first_name_2
Column Type: varchar
Max Length: 40
Subscriber's first name position 2.

Column Name: subscriber_first_name_3
Column Type: varchar
Max Length: 40
Subscriber's first name position 3.

Column Name: subscriber_first_name_4
Column Type: varchar
Max Length: 40
Subscriber's first name position 4.

Column Name: subscriber_first_name_5
Column Type: varchar
Max Length: 40
Subscriber's first name position 5.

Column Name: subscriber_last_name_1
Column Type: varchar
Max Length: 40
Subscriber's last name position 1.

Column Name: subscriber_last_name_2
Column Type: varchar
Max Length: 40
Subscriber's last name position 2.

Column Name: subscriber_last_name_3
Column Type: varchar
Max Length: 40
Subscriber's last name position 3.

Column Name: subscriber_last_name_4
Column Type: varchar
Max Length: 40
Subscriber's last name position 4.

Column Name: subscriber_last_name_5
Column Type: varchar
Max Length: 40
Subscriber's last name position 5.

Column Name: subscriber_middle_name_1
Column Type: varchar
Max Length: 40
Subscriber's middle name position 1.

Column Name: subscriber_middle_name_2
Column Type: varchar
Max Length: 40
Subscriber's middle name position 2.

Column Name: subscriber_middle_name_3
Column Type: varchar
Max Length: 40
Subscriber's middle name position 3.

Column Name: subscriber_middle_name_4
Column Type: varchar
Max Length: 40
Subscriber's middle name position 4.

Column Name: subscriber_middle_name_5
Column Type: varchar
Max Length: 40
Subscriber's middle name position 5.

Column Name: subscriber_phone_1
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 1.

Column Name: subscriber_phone_2
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 2.

Column Name: subscriber_phone_3
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 3.

Column Name: subscriber_phone_4
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 4.

Column Name: subscriber_phone_5
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 5.

Column Name: subscriber_relationship_1
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relationship_2
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relationship_3
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relationship_4
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relationship_5
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_relation_val_1
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relation_val_2
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relation_val_3
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relation_val_4
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relation_val_5
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_sex_code_1
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 1.

Column Name: subscriber_sex_code_2
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 2.

Column Name: subscriber_sex_code_3
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 3.

Column Name: subscriber_sex_code_4
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 4.

Column Name: subscriber_sex_code_5
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 5.

Column Name: subscriber_sex_value_1
Column Type: varchar
Max Length: 40
Subscriber's sex, position 1.

Column Name: subscriber_sex_value_2
Column Type: varchar
Max Length: 40
Subscriber's sex, position 2.

Column Name: subscriber_sex_value_3
Column Type: varchar
Max Length: 40
Subscriber's sex, position 3.

Column Name: subscriber_sex_value_4
Column Type: varchar
Max Length: 40
Subscriber's sex, position 4.

Column Name: subscriber_sex_value_5
Column Type: varchar
Max Length: 40
Subscriber's sex, position 5.

Column Name: subscriber_state_1
Column Type: varchar
Max Length: 40
Subscriber's address - state position 1.

Column Name: subscriber_state_2
Column Type: varchar
Max Length: 40
Subscriber's address - state position 2.

Column Name: subscriber_state_3
Column Type: varchar
Max Length: 40
Subscriber's address - state position 3.

Column Name: subscriber_state_4
Column Type: varchar
Max Length: 40
Subscriber's address - state position 4.

Column Name: subscriber_state_5
Column Type: varchar
Max Length: 40
Subscriber's address - state position 5.

Column Name: subscriber_street_1
Column Type: varchar
Max Length: 100
Subscriber's address - street position 1.

Column Name: subscriber_street_2
Column Type: varchar
Max Length: 100
Subscriber's address - street position 2.

Column Name: subscriber_street2_1
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 1.

Column Name: subscriber_street2_2
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 2.

Column Name: subscriber_street2_3
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 3.

Column Name: subscriber_street2_4
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 4.

Column Name: subscriber_street2_5
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 5.

Column Name: subscriber_street_3
Column Type: varchar
Max Length: 100
Subscriber's address - street position 3.

Column Name: subscriber_street_4
Column Type: varchar
Max Length: 100
Subscriber's address - street position 4.

Column Name: subscriber_street_5
Column Type: varchar
Max Length: 100
Subscriber's address - street position 5.

Column Name: subscriber_zipcode_1
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 1.

Column Name: subscriber_zipcode_2
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 2.

Column Name: subscriber_zipcode_3
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 3.

Column Name: subscriber_zipcode_4
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 4.

Column Name: subscriber_zipcode_5
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 5.

Column Name: target_adm_type_code
Column Type: varchar
Max Length: 50
Target's specified admission type (coded value) to be added to the admission record on appointment creation.

Column Name: target_adm_type_value
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: target_pre_program_code

Column Type: varchar

Max Length: 40

Target's specified pre-admit program (coded value) to be admitted to on appointment creation.

Column Name: target_pre_program_value

Column Type: varchar

Max Length: 40

Target's specified pre-admit program to be admitted to on appointment creation.

Column Name: target_program_code

Column Type: varchar

Max Length: 50

Target's specified admission program (coded value) to be admitted to on appointment creation.

Column Name: target_program_value

Column Type: varchar

Max Length: 40

Target's specified admission program to be admitted to on appointment creation.

Column Name: target_service_code

Column Type: varchar

Max Length: 50

Target's specified service (coded value) to be rendered at outreach appointment.

Column Name: target_service_value

Column Type: varchar

Max Length: 40

Target's specified service to be rendered at outreach appointment.

Column Name: target_status_code

Column Type: varchar

Max Length: 50

The current activity status of this target (coded value).

Column Name: target_status_value

Column Type: varchar

Max Length: 40

The current activity status of this target.

Column Name: work_phone

Column Type: varchar

Max Length: 60

Target's work phone.

Column Name: zone_code

Column Type: varchar

Max Length: 50

Target's assigned zone (coded value).

Column Name: zone_value
Column Type: varchar
Max Length: 40
Target's assigned zone.

Documentation for form: Add/Edit_Outreach_Target

Table Name: SYSTEM.outreach_client

Table Description: This table contains outreach targets.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
System code where the outreach client will be admitted to.

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: PATID
Column Type: varchar
Max Length: 20
Avatar patient identifier. Present if the person referenced by the external id has ever been admitted to a program.

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_city
Column Type: varchar
Max Length: 30
Target's address - city.

Column Name: address_county
Column Type: varchar
Max Length: 60
Target's address - county.

Column Name: address_state
Column Type: varchar

Max Length: 40
Target's address - state.

Column Name: address_street
Column Type: varchar
Max Length: 100
Target's address - street.

Column Name: address_street2
Column Type: varchar
Max Length: 60
Target's address - apartment/unit.

Column Name: address_zipcode
Column Type: varchar
Max Length: 10
Target's Zipcode.

Column Name: cell_phone
Column Type: varchar
Max Length: 60
Target's cell phone.

Column Name: communication_pref
Column Type: varchar
Max Length: 40
Target's communication preference

Column Name: communication_pref_val
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: contact_email
Column Type: varchar
Max Length: 60
Target's email address.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_birth

Column Type: date

Target's date of birth.

Column Name: eligibility_end_date_1

Column Type: date

Target's financial eligibility end date position 1.

Column Name: eligibility_end_date_2

Column Type: date

Target's financial eligibility end date position 2.

Column Name: eligibility_end_date_3

Column Type: date

Target's financial eligibility end date position 3.

Column Name: eligibility_end_date_4

Column Type: date

Target's financial eligibility end date position 4.

Column Name: eligibility_end_date_5

Column Type: date

Target's financial eligibility end date position 5.

Column Name: eligibility_start_date_1

Column Type: date

Target's financial eligibility start date position 1.

Column Name: eligibility_start_date_2

Column Type: date

Target's financial eligibility start date position 2.

Column Name: eligibility_start_date_3

Column Type: date

Target's financial eligibility start date position 3.

Column Name: eligibility_start_date_4

Column Type: date

Target's financial eligibility start date position 4.

Column Name: eligibility_start_date_5

Column Type: date

Target's financial eligibility start date position 5.

Column Name: external_id

Column Type: varchar

Max Length: 100

External organizational identifier for the person.

Column Name: first_name

Column Type: varchar

Max Length: 40

Target's first name.

Column Name: guarantor_id_1

Column Type: varchar

Max Length: 40
Target's primary guarantor (coded value).

Column Name: guarantor_id_2
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 2.

Column Name: guarantor_id_3
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 3.

Column Name: guarantor_id_4
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 4.

Column Name: guarantor_id_5
Column Type: varchar
Max Length: 40
Target's guarantor (coded value) position 5.

Column Name: guarantor_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor.

Column Name: guarantor_val_2
Column Type: varchar
Max Length: 40
Target's guarantor position 2.

Column Name: guarantor_val_3
Column Type: varchar
Max Length: 40
Target's guarantor position 3.

Column Name: guarantor_val_4
Column Type: varchar
Max Length: 40
Target's guarantor position 4.

Column Name: guarantor_val_5
Column Type: varchar
Max Length: 40
Target's guarantor position 5.

Column Name: home_phone
Column Type: varchar

Max Length: 60
Target's home phone.

Column Name: last_name
Column Type: varchar
Max Length: 40
Target's last name.

Column Name: medicaid_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicaid ID number.

Column Name: medicaid_id_2
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 2.

Column Name: medicaid_id_3
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 3.

Column Name: medicaid_id_4
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 4.

Column Name: medicaid_id_5
Column Type: varchar
Max Length: 40
Target's Medicaid ID number position 5.

Column Name: medicare_id_1
Column Type: varchar
Max Length: 40
Target's primary Medicare ID number.

Column Name: medicare_id_2
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 2.

Column Name: medicare_id_3
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 3.

Column Name: medicare_id_4
Column Type: varchar

Max Length: 40
Target's Medicare ID number position 4.

Column Name: medicare_id_5
Column Type: varchar
Max Length: 40
Target's Medicare ID number position 5.

Column Name: middle_name
Column Type: varchar
Max Length: 40
Target's middle name.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: outside_facility_code
Column Type: varchar
Max Length: 50
Target's outside living facility (coded value). The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: outside_facility_value
Column Type: varchar
Max Length: 40
Target's outside living facility. The address definition for the outside facility entity definition will denote target's address fields if they are not defined.

Column Name: permission_to_text
Column Type: varchar
Max Length: 40
Target's permission to text.

Column Name: plan_id_1
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_2
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_3
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_4
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_id_5
Column Type: varchar
Max Length: 40
Target's primary guarantor plan (coded value).

Column Name: plan_val_1
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_2
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_3
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_4
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: plan_val_5
Column Type: varchar
Max Length: 40
Target's primary guarantor plan.

Column Name: policy_number_1
Column Type: varchar
Max Length: 40
Target's primary insurance policy number.

Column Name: policy_number_2
Column Type: varchar
Max Length: 40
Target's insurance policy number position 2.

Column Name: policy_number_3
Column Type: varchar
Max Length: 40
Target's insurance policy number position 3.

Column Name: policy_number_4
Column Type: varchar
Max Length: 40
Target's insurance policy number position 4.

Column Name: policy_number_5
Column Type: varchar
Max Length: 40
Target's insurance policy number position 5.

Column Name: primary_care_physician_id
Column Type: varchar
Max Length: 40
Target's primary care physician id.

Column Name: protocol_code
Column Type: varchar
Max Length: 50
Target's protocol (coded value) to apply to the appointment created on successful outreach.

Column Name: protocol_shval
Column Type: varchar
Max Length: 40
Target's protocol to apply to the appointment created on successful outreach.

Column Name: protocol_value
Column Type: varchar
Max Length: 40
Target's protocol to apply to the appointment created on successful outreach.

Column Name: risk_level_code
Column Type: varchar
Max Length: 50
Target's risk level (coded value).

Column Name: risk_level_value
Column Type: varchar
Max Length: 40
Target's risk level.

Column Name: sex_code
Column Type: varchar
Max Length: 5
Target's sex (coded value).

Column Name: sex_value
Column Type: varchar
Max Length: 40
Target's sex.

Column Name: subscriber_city_1
Column Type: varchar
Max Length: 30
Subscriber's address - city position 1.

Column Name: subscriber_city_2
Column Type: varchar
Max Length: 30
Subscriber's address - city position 2.

Column Name: subscriber_city_3
Column Type: varchar
Max Length: 30
Subscriber's address - city position 3.

Column Name: subscriber_city_4
Column Type: varchar
Max Length: 30
Subscriber's address - city position 4.

Column Name: subscriber_city_5
Column Type: varchar
Max Length: 30
Subscriber's address - city position 5.

Column Name: subscriber_county_1
Column Type: varchar
Max Length: 60
Subscriber's address - county position 1.

Column Name: subscriber_county_2
Column Type: varchar
Max Length: 60
Subscriber's address - county position 2.

Column Name: subscriber_county_3
Column Type: varchar
Max Length: 60
Subscriber's address - county position 3.

Column Name: subscriber_county_4
Column Type: varchar
Max Length: 60
Subscriber's address - county position 4.

Column Name: subscriber_county_5
Column Type: varchar
Max Length: 60
Subscriber's address - county position 5.

Column Name: subscriber_dob_1
Column Type: date
Subscriber's date of birth position 1.

Column Name: subscriber_dob_2
Column Type: date
Subscriber's date of birth position 2.

Column Name: subscriber_dob_3
Column Type: date
Subscriber's date of birth position 3.

Column Name: subscriber_dob_4
Column Type: date
Subscriber's date of birth position 4.

Column Name: subscriber_dob_5
Column Type: date
Subscriber's date of birth position 5.

Column Name: subscriber_first_name_1
Column Type: varchar
Max Length: 40
Subscriber's first name position 1.

Column Name: subscriber_first_name_2
Column Type: varchar
Max Length: 40
Subscriber's first name position 2.

Column Name: subscriber_first_name_3
Column Type: varchar
Max Length: 40
Subscriber's first name position 3.

Column Name: subscriber_first_name_4
Column Type: varchar
Max Length: 40
Subscriber's first name position 4.

Column Name: subscriber_first_name_5
Column Type: varchar
Max Length: 40
Subscriber's first name position 5.

Column Name: subscriber_last_name_1
Column Type: varchar
Max Length: 40
Subscriber's last name position 1.

Column Name: subscriber_last_name_2
Column Type: varchar
Max Length: 40
Subscriber's last name position 2.

Column Name: subscriber_last_name_3
Column Type: varchar
Max Length: 40
Subscriber's last name position 3.

Column Name: subscriber_last_name_4
Column Type: varchar
Max Length: 40
Subscriber's last name position 4.

Column Name: subscriber_last_name_5
Column Type: varchar
Max Length: 40
Subscriber's last name position 5.

Column Name: subscriber_middle_name_1
Column Type: varchar
Max Length: 40
Subscriber's middle name position 1.

Column Name: subscriber_middle_name_2
Column Type: varchar
Max Length: 40
Subscriber's middle name position 2.

Column Name: subscriber_middle_name_3
Column Type: varchar
Max Length: 40
Subscriber's middle name position 3.

Column Name: subscriber_middle_name_4
Column Type: varchar
Max Length: 40
Subscriber's middle name position 4.

Column Name: subscriber_middle_name_5
Column Type: varchar
Max Length: 40
Subscriber's middle name position 5.

Column Name: subscriber_phone_1
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 1.

Column Name: subscriber_phone_2
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 2.

Column Name: subscriber_phone_3
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 3.

Column Name: subscriber_phone_4
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 4.

Column Name: subscriber_phone_5
Column Type: varchar
Max Length: 60
Subscriber's contact phone number position 5.

Column Name: subscriber_relationship_1
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relationship_2
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relationship_3
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relationship_4
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relationship_5
Column Type: varchar
Max Length: 20
Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_relation_val_1
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 1.

Column Name: subscriber_relation_val_2
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 2.

Column Name: subscriber_relation_val_3
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 3.

Column Name: subscriber_relation_val_4
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 4.

Column Name: subscriber_relation_val_5
Column Type: varchar
Max Length: 40
Target's relationship to subscriber (coded value) position 5.

Column Name: subscriber_sex_code_1
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 1.

Column Name: subscriber_sex_code_2
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 2.

Column Name: subscriber_sex_code_3
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 3.

Column Name: subscriber_sex_code_4
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 4.

Column Name: subscriber_sex_code_5
Column Type: varchar
Max Length: 5
Subscriber's sex (coded value), position 5.

Column Name: subscriber_sex_value_1
Column Type: varchar
Max Length: 40
Subscriber's sex, position 1.

Column Name: subscriber_sex_value_2
Column Type: varchar
Max Length: 40
Subscriber's sex, position 2.

Column Name: subscriber_sex_value_3
Column Type: varchar
Max Length: 40
Subscriber's sex, position 3.

Column Name: subscriber_sex_value_4
Column Type: varchar
Max Length: 40
Subscriber's sex, position 4.

Column Name: subscriber_sex_value_5
Column Type: varchar
Max Length: 40
Subscriber's sex, position 5.

Column Name: subscriber_state_1
Column Type: varchar
Max Length: 40
Subscriber's address - state position 1.

Column Name: subscriber_state_2
Column Type: varchar
Max Length: 40
Subscriber's address - state position 2.

Column Name: subscriber_state_3
Column Type: varchar
Max Length: 40
Subscriber's address - state position 3.

Column Name: subscriber_state_4
Column Type: varchar
Max Length: 40
Subscriber's address - state position 4.

Column Name: subscriber_state_5
Column Type: varchar
Max Length: 40
Subscriber's address - state position 5.

Column Name: subscriber_street_1
Column Type: varchar
Max Length: 100
Subscriber's address - street position 1.

Column Name: subscriber_street_2
Column Type: varchar
Max Length: 100
Subscriber's address - street position 2.

Column Name: subscriber_street2_1
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 1.

Column Name: subscriber_street2_2
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 2.

Column Name: subscriber_street2_3
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 3.

Column Name: subscriber_street2_4
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 4.

Column Name: subscriber_street2_5
Column Type: varchar
Max Length: 60
Subscriber's address - apartment/unit position 5.

Column Name: subscriber_street_3
Column Type: varchar
Max Length: 100
Subscriber's address - street position 3.

Column Name: subscriber_street_4
Column Type: varchar
Max Length: 100
Subscriber's address - street position 4.

Column Name: subscriber_street_5
Column Type: varchar
Max Length: 100
Subscriber's address - street position 5.

Column Name: subscriber_zipcode_1
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 1.

Column Name: subscriber_zipcode_2
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 2.

Column Name: subscriber_zipcode_3
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 3.

Column Name: subscriber_zipcode_4
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 4.

Column Name: subscriber_zipcode_5
Column Type: varchar
Max Length: 10
Subscriber's Zipcode position 5.

Column Name: target_adm_type_code
Column Type: varchar
Max Length: 50
Target's specified admission type (coded value) to be added to the admission record on appointment creation.

Column Name: target_adm_type_value
Column Type: varchar
Max Length: 40
Target's specified admission type to be added to the admission record on appointment creation.

Column Name: target_pre_program_code
Column Type: varchar
Max Length: 40
Target's specified pre-admit program (coded value) to be admitted to on appointment creation.

Column Name: target_pre_program_value
Column Type: varchar
Max Length: 40
Target's specified pre-admit program to be admitted to on appointment creation.

Column Name: target_program_code
Column Type: varchar
Max Length: 50
Target's specified admission program (coded value) to be admitted to on appointment creation.

Column Name: target_program_value
Column Type: varchar
Max Length: 40
Target's specified admission program to be admitted to on appointment creation.

Column Name: target_service_code
Column Type: varchar
Max Length: 50
Target's specified service (coded value) to be rendered at outreach appointment.

Column Name: target_service_value
Column Type: varchar
Max Length: 40
Target's specified service to be rendered at outreach appointment.

Column Name: target_status_code
Column Type: varchar
Max Length: 50
The current activity status of this target (coded value).

Column Name: target_status_value
Column Type: varchar
Max Length: 40
The current activity status of this target.

Column Name: work_phone
Column Type: varchar
Max Length: 60
Target's work phone.

Column Name: zone_code
Column Type: varchar
Max Length: 50
Target's assigned zone (coded value).

Column Name: zone_value
Column Type: varchar
Max Length: 40
Target's assigned zone.

Documentation for form: Scheduling_Calendar_-_Appointment_Details

Table Name: SYSTEM.AppointmentData

Table Description: Appointment Scheduling Data

Column Name: ID
Column Type: integer

Column Name: CO_STAFFID_1
Column Type: varchar
Max Length: 10
Co Staffid 1

Column Name: CO_STAFFID_2
Column Type: varchar
Max Length: 10
Co Staff Id 2

Column Name: duration
Column Type: varchar
Max Length: 10
Duration

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored. FACILITY

Column Name: GROUP_ID
Column Type: varchar
Max Length: 10
Group Id associated with the appointment.

Column Name: JOIN_TO_CO_STAFF_TX_HISTORY
Column Type: varchar
Max Length: 15
JOIN TO CO-STAFF TX STRING

Column Name: JOIN_TO_FOLLOW_UP_APD
Column Type: varchar
Max Length: 50
Join To Follow-up Appointment Link

Column Name: JOIN_TO_PREV_APD
Column Type: varchar
Max Length: 50
Join To Previous Appointment Link

Column Name: JOIN_TO_SECOND_CO_STAFF_TX_HISTORY
Column Type: varchar
Max Length: 15
JOIN TO SECOND CO-STAFF TX STRING

Column Name: JOIN_TO_STAFF_TX_HISTORY
Column Type: varchar

Max Length: 15
JOIN TO STAFF TX STRING

Column Name: JOIN_TO_SVCDocumentation
Column Type: varchar
Max Length: 40
JOIN to Service Documentation (99970)

Column Name: ROOMID
Column Type: varchar
Max Length: 40
The room associated with the appointment.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
Service code.

Column Name: SITEID
Column Type: varchar
Max Length: 10
Site Id.

Column Name: STAFFID
Column Type: varchar
Max Length: 40
The staff ID associated with the appointment.

Column Name: add_on_notes
Column Type: varchar
Max Length: 4096
Add-On Notes (11507)

Column Name: add_on_notes_stream
Column Type: longvarchar
Max Length: 2147483647
Add-On Notes Stream

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
Additional Service Information - Code (11505)

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
Additional Service Information - Short Value

Column Name: add_svc_info_value
Column Type: varchar

Max Length: 4096
Additional Service Information - Value

Column Name: add_svcs_grp_indicator
Column Type: varchar
Max Length: 32000
The individualized group members for the additional service entry

Column Name: add_svcs_indicator
Column Type: varchar
Max Length: 32000
The individualized group members for the additional service entry (recurring appointment)

Column Name: appointment_date
Column Type: date
Appointment date

Column Name: appointment_end_time
Column Type: varchar
Max Length: 50
Appointment end time

Column Name: appointment_end_time_j
Column Type: varchar
Max Length: 50
Appointment end time (julian)

Column Name: appointment_end_utc
Column Type: timestamp
the Appointment End as UTC date and time.

Column Name: appointment_notes
Column Type: varchar
Max Length: 4096
Appointment Notes (10100)

Column Name: appointment_notes_stream
Column Type: longvarchar
Max Length: 2147483647
Appointment Notes Stream

Column Name: appointment_start_time
Column Type: varchar
Max Length: 50
Appointment start time

Column Name: appointment_start_time_j
Column Type: varchar
Max Length: 50
Appointment start time (julian)

Column Name: appointment_start_utc
Column Type: timestamp
the Appointment Start as UTC date and time.

Column Name: appointment_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the appointment used to determine the offset from UTC.

Column Name: appt_req_follow_up_code
Column Type: varchar
Max Length: 5
Appointment Requires Follow-up

Column Name: appt_req_follow_up_value
Column Type: varchar
Max Length: 50
Appointment Requires Follow-up

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
Billing Status code

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The value of the 'billing_status_code'

Column Name: cancellation_reason_code
Column Type: varchar
Max Length: 40
The code for the appointment cancellation reason.

Column Name: cancellation_reason_value
Column Type: varchar
Max Length: 255
The description associated with cancellation reason_code.

Column Name: client_willing_pay_code
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: client_willing_pay_value
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: clinic_indicator

Column Type: integer

The clinical appointment flag. Set to 1 if this is a clinical appointment.

Column Name: costaff1_duration_min

Column Type: varchar

Max Length: 10

Duration (in minutes) - CoStaff

Column Name: co_staff_1_name

Column Type: varchar

Max Length: 40

Co Staff 1 Name

Column Name: costaff2_duration_min

Column Type: varchar

Max Length: 10

Duration (in minutes) - CoStaff2

Column Name: co_staff_2_name

Column Type: varchar

Max Length: 40

Co Staff 2 Name

Column Name: cost_of_service

Column Type: numeric

Cost of Service (field 19998)

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: duration_minutes
Column Type: varchar
Max Length: 10
Duration (in minutes)

Column Name: ebpss_csi_code
Column Type: varchar
Max Length: 200
Evidence-based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value
Column Type: varchar
Max Length: 200
Evidence-Based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value_long

Column Type: varchar
Max Length: 4096
Evidence-Based Practices / Service Strategies (CSI)

Column Name: external_appt_id
Column Type: varchar
Max Length: 4096
Appointment ID for the external source appointment (for example EVV sources)

Column Name: follow_up_appt_due_date
Column Type: date
Follow-up Appointment Due Date

Column Name: follow_up_status_code
Column Type: varchar
Max Length: 50
Follow-up Status

Column Name: follow_up_status_value
Column Type: varchar
Max Length: 50
Follow-up Status value

Column Name: group_name
Column Type: varchar
Max Length: 40
Group name

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Medical Diagnosis 1 JOIN (10050) and associated values

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Medical Diagnosis 2 JOIN (10051) and associated values

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Medical Diagnosis 3 JOIN (10080) and associated values

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Medical Diagnosis 4 JOIN (10081) and associated values

Column Name: location_code
Column Type: varchar

Max Length: 20
Appointment location code.

Column Name: location_value
Column Type: varchar
Max Length: 40
Appointment location description.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 1 Code

Column Name: medical_diagnosis1_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 DSM Value

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 Value

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 2 Code

Column Name: medical_diagnosis2_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 DSM Value

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 Value

Column Name: medical_diagnosis3_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 DSM Value

Column Name: medical_diagnosis4_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 DSM Value

Column Name: medical_diag_1_icd10_code
Column Type: varchar

Max Length: 40
ICD10 code for the medical diagnosis 1

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 1

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 1

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 1

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis 1

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 2

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 2

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 2

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 2

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis2

Column Name: medical_diag_3_icd10_code
Column Type: varchar

Max Length: 40
ICD10 code for the medical diagnosis 3

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 3

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 3

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 3

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis3

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 4

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 4

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 4

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 4

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis4

Column Name: medical_diagnosis3_code
Column Type: varchar

Max Length: 10
Medical Diagnosis 3 Code

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 Value

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 4 Code

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 Value

Column Name: minute_time_override
Column Type: integer
When the appointment has an end time of 12:00 AM this will be set to 1.

Column Name: modifiers
Column Type: varchar
Max Length: 50
Billing modifiers

Column Name: number_of_clients
Column Type: varchar
Max Length: 10
Number of clients (members) of the appointment

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: orig_entry_date
Column Type: date
Original creation date of the appointment.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 15
Original creation time of the appointment.

Column Name: orig_entry_user_name
Column Type: varchar
Max Length: 40
Original creator of the appointment.

Column Name: orig_sched_end_time
Column Type: varchar
Max Length: 50
Original end time of the appointment.

Column Name: orig_sched_start_time
Column Type: varchar
Max Length: 50
Original start time of the appointment.

Column Name: posted_as_service_code
Column Type: varchar
Max Length: 2
Posted as a service ?

Column Name: posted_as_service_value
Column Type: varchar
Max Length: 50
Posted as a service value

Column Name: posted_code
Column Type: varchar
Max Length: 2
Posted Appointment?

Column Name: posted_data_entry_by
Column Type: varchar
Max Length: 40
Appointment posted entry_by

Column Name: posted_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment posted entry_by_option

Column Name: posted_data_entry_date
Column Type: date
Appointment posted entry_date

Column Name: posted_data_entry_time
Column Type: varchar
Max Length: 15
Appointment posted entry_time

Column Name: posted_option_desc
Column Type: varchar
Max Length: 80
Appointment posted Option Description

Column Name: posted_option_id
Column Type: varchar
Max Length: 20
Appointment posted Option Id

Column Name: posted_value
Column Type: varchar
Max Length: 50
Posted appointment value

Column Name: posting_in_progress
Column Type: varchar
Max Length: 50
Posting in progress, this is for group appointments

Column Name: priority_code
Column Type: varchar
Max Length: 50
Appointment priority code

Column Name: priority_description
Column Type: varchar
Max Length: 50
Appointment priority description

Column Name: program_code
Column Type: varchar
Max Length: 10
Program Code

Column Name: program_value
Column Type: varchar
Max Length: 40
Program Value

Column Name: psycho_add_on_duration
Column Type: integer
Psychotherapy Add-On Duration (11506)

Column Name: reason_for_follow_up
Column Type: varchar
Max Length: 4096
Reason For Follow-up - String

Column Name: reason_for_follow_up_stream

Column Type: longvarchar
Max Length: 2147483647
Reason For Follow-up - Stream

Column Name: reason_svc_not_posted_code
Column Type: varchar
Max Length: 40
Reason Service Not Posted - Code

Column Name: reason_svc_not_posted_value
Column Type: varchar
Max Length: 50
Reason Service Not Posted - Value

Column Name: recurring_indicator
Column Type: integer
Flag for determining if this is a recurring appointment.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
Referring Practitioner Code

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
Referring Practitioner Name

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
Referring Provider Code

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
Referring Provider Name

Column Name: room_number
Column Type: varchar
Max Length: 50
Appointment room number

Column Name: service_description
Column Type: varchar
Max Length: 40
Service Description

Column Name: service_documentation_ns
Column Type: varchar

Max Length: 40
Service Documentation Namespace (99971)

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: staff_name
Column Type: varchar
Max Length: 40
The staff name associated with STAFFID.

Column Name: status_code
Column Type: varchar
Max Length: 40
The code for the appointment status.

Column Name: status_value
Column Type: varchar
Max Length: 40
The description associated with status_code.

Column Name: team_description
Column Type: varchar
Max Length: 50
Team description

Column Name: team_id
Column Type: varchar
Max Length: 50
Team

Column Name: units_of_service
Column Type: numeric
Units of Service (field 10014)

Column Name: unsigned_appointment
Column Type: bit
Flag for determining if this is an unsigned appointment.

Column Name: verified_code
Column Type: varchar
Max Length: 2
Appointment Verified ?

Column Name: verified_data_entry_by
Column Type: varchar
Max Length: 40
Appointment Verified entry_by

Column Name: verified_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment Verified entry_by_option

Column Name: verified_data_entry_date
Column Type: date
Appointment Verified entry_date

Column Name: verified_data_entry_time
Column Type: varchar
Max Length: 15
Appointment Verified entry_time

Column Name: verified_option_desc
Column Type: varchar
Max Length: 80
Appointment Verified Option Description

Column Name: verified_option_id
Column Type: varchar
Max Length: 20
Appointment Verified Option Id

Column Name: verified_value
Column Type: varchar
Max Length: 50
Appointment Verified value

Documentation for form: Scheduling_Calendar_-_Appointment_Details

Table Name: SYSTEM.AppointmentPartialEnrollSeries

Table Description: This table returns appointment series information for partially enrolled clients.

Column Name: ApptSData
Column Type: integer
Parent Series ID

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer

Patient Episode

Column Name: FACILITY

Column Type: integer

System facility code

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient Identifier

Column Name: SERIES_ID

Column Type: varchar

Max Length: 50

Appointment Series Identifier

Column Name: client_attending_days_code

Column Type: varchar

Max Length: 50

Client Attending Days Code

Column Name: client_attending_days_value

Column Type: varchar

Max Length: 200

Client Attending Days Value

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The 'User Description'.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The username that last updated the row.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option description associated with the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: patient_name
Column Type: varchar
Max Length: 40
Patient Name

Documentation for form: Scheduling_Calendar_-_Appointment_Details

Table Name: SYSTEM.site_specific_check_in

Table Description: Site Specific Client Check-In

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar

Max Length: 20
Patient ID.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
Service Code.

Column Name: SITEID
Column Type: varchar
Max Length: 20
Site ID.

Column Name: appointment_date
Column Type: date
The date of the appointment.

Column Name: appointment_object_id
Column Type: varchar
Max Length: 50
Appointment Object ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_1
Column Type: date
Site specific date.

Column Name: date_10
Column Type: date
Site specific date.

Column Name: date_2
Column Type: date
Site specific date.

Column Name: date_3
Column Type: date
Site specific date.

Column Name: date_4
Column Type: date
Site specific date..

Column Name: date_5
Column Type: date

Site specific date.

Column Name: date_6

Column Type: date

Site specific date.

Column Name: date_7

Column Type: date

Site specific date.

Column Name: date_8

Column Type: date

Site specific date.

Column Name: date_9

Column Type: date

Site specific date.

Column Name: dictionary_10_code

Column Type: varchar

Max Length: 50

Site specific single dictionary code.

Column Name: dictionary_10_value

Column Type: varchar

Max Length: 50

Site specific single dictionary value.

Column Name: dictionary_1_code

Column Type: varchar

Max Length: 50

Dictionary Y/N.

Column Name: dictionary_1_value

Column Type: varchar

Max Length: 50

The description associated with dictionary_2_code. See dictionary_2_code for more information.

Column Name: dictionary_2_code

Column Type: varchar

Max Length: 50

Dictionary Y/N.

Column Name: dictionary_2_value

Column Type: varchar

Max Length: 50

The description associated with dictionary_2_code. See dictionary_2_code for more information.

Column Name: dictionary_3_code

Column Type: varchar

Max Length: 50
Dictionary Y/N.

Column Name: dictionary_3_value
Column Type: varchar
Max Length: 50

The description associated with dictionary_3_code. See dictionary_3_code for more information.

Column Name: dictionary_4_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_4_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_5_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_5_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value

Column Name: dictionary_6_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_6_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value

Column Name: dictionary_7_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_7_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_8_code
Column Type: varchar

Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_8_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_9_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_9_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: free_text_20_1
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_10
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_20_2
Column Type: varchar
Max Length: 50
Site specific free text.

Site specific free text.

Column Name: free_text_40_2
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_3
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_4
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_5
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_6
Column Type: varchar

Max Length: 50
Site specific free text.

Column Name: free_text_40_7
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_8
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_40_9
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_1
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_10
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_2
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_3
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_4
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_5
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_6
Column Type: varchar

Max Length: 50
Site specific free text.

Column Name: free_text_80_7
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_8
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: free_text_80_9
Column Type: varchar
Max Length: 50
Site specific free text.

Column Name: multi_dictionary_10_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_10_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_10_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_1_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_1_shval
Column Type: varchar
Max Length: 255
Site specific property.

Column Name: multi_dictionary_1_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_2_code
Column Type: varchar

Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_2_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_2_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_3_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_3_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_3_value
Column Type: varchar
Max Length: 4096
Site specific property.

Column Name: multi_dictionary_4_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_4_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_4_value
Column Type: varchar
Max Length: 4096
Site specific property.

Column Name: multi_dictionary_5_code
Column Type: varchar
Max Length: 50
Site specific property.

Column Name: multi_dictionary_5_shval
Column Type: varchar

Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_5_value
Column Type: varchar
Max Length: 4096
Site specific property.

Column Name: multi_dictionary_6_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_6_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_6_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_7_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_7_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_7_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_8_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_8_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_8_value
Column Type: varchar

Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_9_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_9_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_9_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: scrolling_text_1
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_10
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_2
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_3
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_4
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_5
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_6
Column Type: varchar

Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_7
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_8
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_9
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Type: varchar

Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict9_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_scrollingtext_1
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_10
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_2
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_3
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_4
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_5
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_6
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_7
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_8
Column Type: varchar

Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_9
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Additional Service Information - Code (11505)

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
Additional Service Information - Short Value

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
Additional Service Information - Value

Column Name: add_svcs_grp_indicator
Column Type: varchar
Max Length: 32000
The individualized group members for the additional service entry

Column Name: add_svcs_indicator
Column Type: varchar
Max Length: 32000
The individualized group members for the additional service entry (recurring appointment)

Column Name: appointment_date
Column Type: date
Appointment date

Column Name: appointment_end_time
Column Type: varchar
Max Length: 50
Appointment end time

Column Name: appointment_end_time_j
Column Type: varchar
Max Length: 50
Appointment end time (julian)

Column Name: appointment_end_utc
Column Type: timestamp
the Appointment End as UTC date and time.

Column Name: appointment_notes
Column Type: varchar
Max Length: 4096
Appointment Notes (10100)

Column Name: appointment_notes_stream
Column Type: longvarchar
Max Length: 2147483647

Appointment Notes Stream

Column Name: appointment_start_time

Column Type: varchar

Max Length: 50

Appointment start time

Column Name: appointment_start_time_j

Column Type: varchar

Max Length: 50

Appointment start time (julian)

Column Name: appointment_start_utc

Column Type: timestamp

the Appointment Start as UTC date and time.

Column Name: appointment_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the appointment used to determine the offset from UTC.

Column Name: appt_req_follow_up_code

Column Type: varchar

Max Length: 5

Appointment Requires Follow-up

Column Name: appt_req_follow_up_value

Column Type: varchar

Max Length: 50

Appointment Requires Follow-up

Column Name: billing_status_code

Column Type: varchar

Max Length: 50

Billing Status code

Column Name: billing_status_value

Column Type: varchar

Max Length: 50

The value of the 'billing_status_code'

Column Name: cancellation_reason_code

Column Type: varchar

Max Length: 40

The code for the appointment cancellation reason.

Column Name: cancellation_reason_value

Column Type: varchar

Max Length: 255

The description associated with cancellation reason_code.

Column Name: client_willing_pay_code
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: client_willing_pay_value
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: clinic_indicator
Column Type: integer
The clinical appointment flag. Set to 1 if this is a clinical appointment.

Column Name: costaff1_duration_min
Column Type: varchar
Max Length: 10
Duration (in minutes) - CoStaff

Column Name: co_staff_1_name
Column Type: varchar
Max Length: 40
Co Staff 1 Name

Column Name: costaff2_duration_min
Column Type: varchar
Max Length: 10
Duration (in minutes) - CoStaff2

Column Name: co_staff_2_name
Column Type: varchar
Max Length: 40
Co Staff 2 Name

Column Name: cost_of_service
Column Type: numeric
Cost of Service (field 19998)

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date

Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: duration_minutes
Column Type: varchar
Max Length: 10
Duration (in minutes)

Column Name: ebpss_csi_code
Column Type: varchar
Max Length: 200
Evidence-based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value
Column Type: varchar
Max Length: 200
Evidence-Based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value_long
Column Type: varchar
Max Length: 4096
Evidence-Based Practices / Service Strategies (CSI)

Column Name: external_appt_id
Column Type: varchar
Max Length: 4096
Appointment ID for the external source appointment (for example EVV sources)

Column Name: follow_up_appt_due_date
Column Type: date
Follow-up Appointment Due Date

Column Name: follow_up_status_code
Column Type: varchar
Max Length: 50
Follow-up Status

Column Name: follow_up_status_value
Column Type: varchar
Max Length: 50
Follow-up Status value

Column Name: group_name
Column Type: varchar
Max Length: 40
Group name

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Medical Diagnosis 1 JOIN (10050) and associated values

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Medical Diagnosis 2 JOIN (10051) and associated values

Column Name: jointodiagnosisobject3

Column Type: varchar
Max Length: 40
Medical Diagnosis 3 JOIN (10080) and associated values

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Medical Diagnosis 4 JOIN (10081) and associated values

Column Name: location_code
Column Type: varchar
Max Length: 20
Appointment location code.

Column Name: location_value
Column Type: varchar
Max Length: 40
Appointment location description.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 1 Code

Column Name: medical_diagnosis1_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 DSM Value

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 Value

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 2 Code

Column Name: medical_diagnosis2_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 DSM Value

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 Value

Column Name: medical_diagnosis3_DSM_value

Column Type: varchar
Max Length: 80
Medical Diagnosis 3 DSM Value

Column Name: medical_diagnosis4_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 DSM Value

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 1

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 1

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 1

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 1

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis 1

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 2

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 2

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 2

Column Name: medical_diag_2_icd9_value

Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 2

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis2

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 3

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 3

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 3

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 3

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis3

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 4

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 4

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 4

Column Name: medical_diag_4_icd9_value

Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 4

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis4

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 3 Code

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 Value

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 4 Code

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 Value

Column Name: minute_time_override
Column Type: integer
When the appointment has an end time of 12:00 AM this will be set to 1.

Column Name: modifiers
Column Type: varchar
Max Length: 50
Billing modifiers

Column Name: number_of_clients
Column Type: varchar
Max Length: 10
Number of clients (members) of the appointment

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: orig_entry_date

Column Type: date

Original creation date of the appointment.

Column Name: orig_entry_time

Column Type: varchar

Max Length: 15

Original creation time of the appointment.

Column Name: orig_entry_user_name

Column Type: varchar

Max Length: 40

Original creator of the appointment.

Column Name: orig_sched_end_time

Column Type: varchar

Max Length: 50

Original end time of the appointment.

Column Name: orig_sched_start_time

Column Type: varchar

Max Length: 50

Original start time of the appointment.

Column Name: posted_as_service_code

Column Type: varchar

Max Length: 2

Posted as a service ?

Column Name: posted_as_service_value

Column Type: varchar

Max Length: 50

Posted as a service value

Column Name: posted_code

Column Type: varchar

Max Length: 2

Posted Appointment?

Column Name: posted_data_entry_by

Column Type: varchar

Max Length: 40

Appointment posted entry_by

Column Name: posted_data_entry_by_option

Column Type: varchar

Max Length: 40

Appointment posted entry_by_option

Column Name: posted_data_entry_date

Column Type: date

Appointment posted entry_date

Column Name: posted_data_entry_time

Column Type: varchar

Max Length: 15

Appointment posted entry_time

Column Name: posted_option_desc

Column Type: varchar

Max Length: 80

Appointment posted Option Description

Column Name: posted_option_id

Column Type: varchar

Max Length: 20

Appointment posted Option Id

Column Name: posted_value

Column Type: varchar

Max Length: 50

Posted appointment value

Column Name: posting_in_progress

Column Type: varchar

Max Length: 50

Posting in progress, this is for group appointments

Column Name: priority_code

Column Type: varchar

Max Length: 50

Appointment priority code

Column Name: priority_description

Column Type: varchar

Max Length: 50

Appointment priority description

Column Name: program_code

Column Type: varchar

Max Length: 10

Program Code

Column Name: program_value

Column Type: varchar

Max Length: 40

Program Value

Column Name: psycho_add_on_duration
Column Type: integer
Psychotherapy Add-On Duration (11506)

Column Name: reason_for_follow_up
Column Type: varchar
Max Length: 4096
Reason For Follow-up - String

Column Name: reason_for_follow_up_stream
Column Type: longvarchar
Max Length: 2147483647
Reason For Follow-up - Stream

Column Name: reason_svc_not_posted_code
Column Type: varchar
Max Length: 40
Reason Service Not Posted - Code

Column Name: reason_svc_not_posted_value
Column Type: varchar
Max Length: 50
Reason Service Not Posted - Value

Column Name: recurring_indicator
Column Type: integer
Flag for determining if this is a recurring appointment.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
Referring Practitioner Code

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
Referring Practitioner Name

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
Referring Provider Code

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
Referring Provider Name

Column Name: room_number

Column Type: varchar
Max Length: 50
Appointment room number

Column Name: service_description
Column Type: varchar
Max Length: 40
Service Description

Column Name: service_documentation_ns
Column Type: varchar
Max Length: 40
Service Documentation Namespace (99971)

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: staff_name
Column Type: varchar
Max Length: 40
The staff name associated with STAFFID.

Column Name: status_code
Column Type: varchar
Max Length: 40
The code for the appointment status.

Column Name: status_value
Column Type: varchar
Max Length: 40
The description associated with status_code.

Column Name: team_description
Column Type: varchar
Max Length: 50
Team description

Column Name: team_id
Column Type: varchar
Max Length: 50
Team

Column Name: units_of_service
Column Type: numeric
Units of Service (field 10014)

Column Name: unsigned_appointment
Column Type: bit

Flag for determining if this is an unsigned appointment.

Column Name: verified_code

Column Type: varchar

Max Length: 2

Appointment Verified ?

Documentation for form: Scheduling_Calendar_-_Overbook_Appointment

Table Name: SYSTEM.site_specific_check_in

Table Description: Site Specific Client Check-In

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
Service Code.

Column Name: SITEID
Column Type: varchar
Max Length: 20
Site ID.

Column Name: appointment_date
Column Type: date
The date of the appointment.

Column Name: appointment_object_id
Column Type: varchar
Max Length: 50
Appointment Object ID.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp

The UTC date and time the data was saved.

Column Name: date_1
Column Type: date
Site specific date.

Column Name: date_10
Column Type: date
Site specific date.

Column Name: date_2
Column Type: date
Site specific date.

Column Name: date_3
Column Type: date
Site specific date.

Column Name: date_4
Column Type: date
Site specific date..

Column Name: date_5
Column Type: date
Site specific date.

Column Name: date_6
Column Type: date
Site specific date.

Column Name: date_7
Column Type: date
Site specific date.

Column Name: date_8
Column Type: date
Site specific date.

Column Name: date_9
Column Type: date
Site specific date.

Column Name: dictionary_10_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_10_value
Column Type: varchar
Max Length: 50

Site specific single dictionary value.

Column Name: dictionary_1_code
Column Type: varchar
Max Length: 50
Dictionary Y/N.

Column Name: dictionary_1_value
Column Type: varchar
Max Length: 50
The description associated with dictionary_2_code. See dictionary_2_code for more information.

Column Name: dictionary_2_code
Column Type: varchar
Max Length: 50
Dictionary Y/N.

Column Name: dictionary_2_value
Column Type: varchar
Max Length: 50
The description associated with dictionary_2_code. See dictionary_2_code for more information.

Column Name: dictionary_3_code
Column Type: varchar
Max Length: 50
Dictionary Y/N.

Column Name: dictionary_3_value
Column Type: varchar
Max Length: 50
The description associated with dictionary_3_code. See dictionary_3_code for more information.

Column Name: dictionary_4_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_4_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value.

Column Name: dictionary_5_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_5_value
Column Type: varchar
Max Length: 50

Site specific single dictionary value

Column Name: dictionary_6_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Name: dictionary_6_value
Column Type: varchar
Max Length: 50
Site specific single dictionary value

Column Name: dictionary_7_code
Column Type: varchar
Max Length: 50
Site specific single dictionary code.

Column Type: varchar

Max Length: 255

Site specific multiple dictionary value (short).

Column Name: multi_dictionary_4_value

Column Type: varchar

Max Length: 4096

Site specific property.

Column Name: multi_dictionary_5_code

Column Type: varchar

Max Length: 50

Site specific property.

Column Name: multi_dictionary_5_shval

Column Type: varchar

Max Length: 255

Site specific multiple dictionary value (short).

Column Name: multi_dictionary_5_value

Column Type: varchar

Max Length: 4096

Site specific property.

Column Name: multi_dictionary_6_code

Column Type: varchar

Max Length: 50

Site specific multiple dictionary.

Column Name: multi_dictionary_6_shval

Column Type: varchar

Max Length: 255

Site specific multiple dictionary value (short).

Column Name: multi_dictionary_6_value

Column Type: varchar

Max Length: 4096

Site specific multiple dictionary value.

Column Name: multi_dictionary_7_code

Column Type: varchar

Max Length: 50

Site specific multiple dictionary.

Column Name: multi_dictionary_7_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_7_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_8_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_8_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_8_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: multi_dictionary_9_code
Column Type: varchar
Max Length: 50
Site specific multiple dictionary.

Column Name: multi_dictionary_9_shval
Column Type: varchar
Max Length: 255
Site specific multiple dictionary value (short).

Column Name: multi_dictionary_9_value
Column Type: varchar
Max Length: 4096
Site specific multiple dictionary value.

Column Name: scrolling_text_1
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_10
Column Type: varchar
Max Length: 32766

Site specific scrolling free text.

Column Name: scrolling_text_2
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_3
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_4
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_5
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_6
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_7
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_8
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Column Name: scrolling_text_9
Column Type: varchar
Max Length: 32766
Site specific scrolling free text.

Documentation for form: Scheduling_Calendar_- _Overbook_Appointment

Table Name: SYSTEM.site_specific_check_out

Table Description: Site Spesific Client Check-out

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Joins table to treatment history.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
Service Code.

Column Name: SITEID
Column Type: varchar
Max Length: 10
Site ID

Column Name: appointment_date
Column Type: date
The date of the appointment.

Column Name: appointment_object_id
Column Type: varchar
Max Length: 50
Appointment Object ID.

Column Name: check_in_date_1
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_10

Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_2
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_3
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_4
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_5
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_6
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_7
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_8
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_date_9
Column Type: date
Front Desk Check-In site specific date.

Column Name: check_in_free_text_20_1
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_10
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_2
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_3
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_4
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_5
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_6
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_7
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_8
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_20_9
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_1
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_10
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_2
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_3
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_4
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_5
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_6
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_7
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_8
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_40_9
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_1
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_10
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_2
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_3
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_4
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_5
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_6
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_7
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_8
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: check_in_free_text_80_9
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific free text.

Column Name: chk_in_dict_10_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_10_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_1_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_1_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_2_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_2_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_3_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_3_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_4_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_4_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_5_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_5_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_6_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_6_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_7_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_7_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_8_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_8_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_dict_9_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary code.

Column Name: chk_in_dict_9_value
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific single dictionary value.

Column Name: chk_in_multi_dict10_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict10_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict10_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict1_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict1_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict1_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict2_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict2_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict2_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict3_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict3_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict3_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict4_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict4_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict4_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict5_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict5_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict5_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict6_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict6_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict6_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict7_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict7_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict7_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict8_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict8_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict8_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_multi_dict9_code
Column Type: varchar
Max Length: 50
Front Desk Check-In site specific multiple dictionary.

Column Name: chk_in_multi_dict9_shval
Column Type: varchar
Max Length: 255
Front Desk Check-In site specific multiple dictionary value (short).

Column Name: chk_in_multi_dict9_value
Column Type: varchar
Max Length: 4096
Front Desk Check-In site specific multiple dictionary value.

Column Name: chk_in_scrollingtext_1
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_10
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_2
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_3
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_4
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_5
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_6
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_7
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_8
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: chk_in_scrollingtext_9
Column Type: varchar
Max Length: 32766
Front Desk Check-In site specific scrolling free text.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentData

Table Description: Appointment Scheduling Data

Column Name: ID
Column Type: integer

Column Name: CO_STAFFID_1
Column Type: varchar
Max Length: 10
Co Staffid 1

Column Name: CO_STAFFID_2
Column Type: varchar
Max Length: 10
Co Staff Id 2

Column Name: duration
Column Type: varchar
Max Length: 10
Duration

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored. FACILITY

Column Name: GROUP_ID
Column Type: varchar
Max Length: 10
Group Id associated with the appointment.

Column Name: JOIN_TO_CO_STAFF_TX_HISTORY
Column Type: varchar
Max Length: 15
JOIN TO CO-STAFF TX STRING

Column Name: JOIN_TO_FOLLOW_UP_APD
Column Type: varchar
Max Length: 50
Join To Follow-up Appointment Link

Column Name: JOIN_TO_PREV_APD
Column Type: varchar
Max Length: 50
Join To Previous Appointment Link

Column Name: JOIN_TO_SECOND_CO_STAFF_TX_HISTORY
Column Type: varchar
Max Length: 15
JOIN TO SECOND CO-STAFF TX STRING

Column Name: JOIN_TO_STAFF_TX_HISTORY
Column Type: varchar

Max Length: 15
JOIN TO STAFF TX STRING

Column Name: JOIN_TO_SVCDocumentation
Column Type: varchar
Max Length: 40
JOIN to Service Documentation (99970)

Column Name: ROOMID
Column Type: varchar
Max Length: 40
The room associated with the appointment.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
Service code.

Column Name: SITEID
Column Type: varchar
Max Length: 10
Site Id.

Column Name: STAFFID
Column Type: varchar
Max Length: 40
The staff ID associated with the appointment.

Column Name: add_on_notes
Column Type: varchar
Max Length: 4096
Add-On Notes (11507)

Column Name: add_on_notes_stream
Column Type: longvarchar
Max Length: 2147483647
Add-On Notes Stream

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
Additional Service Information - Code (11505)

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
Additional Service Information - Short Value

Column Name: add_svc_info_value
Column Type: varchar

Max Length: 4096
Additional Service Information - Value

Column Name: add_svcs_grp_indicator
Column Type: varchar
Max Length: 32000
The individualized group members for the additional service entry

Column Name: add_svcs_indicator
Column Type: varchar
Max Length: 32000
The individualized group members for the additional service entry (recurring appointment)

Column Name: appointment_date
Column Type: date
Appointment date

Column Name: appointment_end_time
Column Type: varchar
Max Length: 50
Appointment end time

Column Name: appointment_end_time_j
Column Type: varchar
Max Length: 50
Appointment end time (julian)

Column Name: appointment_end_utc
Column Type: timestamp
the Appointment End as UTC date and time.

Column Name: appointment_notes
Column Type: varchar
Max Length: 4096
Appointment Notes (10100)

Column Name: appointment_notes_stream
Column Type: longvarchar
Max Length: 2147483647
Appointment Notes Stream

Column Name: appointment_start_time
Column Type: varchar
Max Length: 50
Appointment start time

Column Name: appointment_start_time_j
Column Type: varchar
Max Length: 50
Appointment start time (julian)

Column Name: appointment_start_utc
Column Type: timestamp
the Appointment Start as UTC date and time.

Column Name: appointment_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the appointment used to determine the offset from UTC.

Column Name: appt_req_follow_up_code
Column Type: varchar
Max Length: 5
Appointment Requires Follow-up

Column Name: appt_req_follow_up_value
Column Type: varchar
Max Length: 50
Appointment Requires Follow-up

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
Billing Status code

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The value of the 'billing_status_code'

Column Name: cancellation_reason_code
Column Type: varchar
Max Length: 40
The code for the appointment cancellation reason.

Column Name: cancellation_reason_value
Column Type: varchar
Max Length: 255
The description associated with cancellation reason_code.

Column Name: client_willing_pay_code
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: client_willing_pay_value
Column Type: varchar
Max Length: 50
Client Willing To Pay At Front Desk

Column Name: clinic_indicator

Column Type: integer

The clinical appointment flag. Set to 1 if this is a clinical appointment.

Column Name: costaff1_duration_min

Column Type: varchar

Max Length: 10

Duration (in minutes) - CoStaff

Column Name: co_staff_1_name

Column Type: varchar

Max Length: 40

Co Staff 1 Name

Column Name: costaff2_duration_min

Column Type: varchar

Max Length: 10

Duration (in minutes) - CoStaff2

Column Name: co_staff_2_name

Column Type: varchar

Max Length: 40

Co Staff 2 Name

Column Name: cost_of_service

Column Type: numeric

Cost of Service (field 19998)

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: duration_minutes
Column Type: varchar
Max Length: 10
Duration (in minutes)

Column Name: ebpss_csi_code
Column Type: varchar
Max Length: 200
Evidence-based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value
Column Type: varchar
Max Length: 200
Evidence-Based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value_long

Column Type: varchar
Max Length: 4096
Evidence-Based Practices / Service Strategies (CSI)

Column Name: external_appt_id
Column Type: varchar
Max Length: 4096
Appointment ID for the external source appointment (for example EVV sources)

Column Name: follow_up_appt_due_date
Column Type: date
Follow-up Appointment Due Date

Column Name: follow_up_status_code
Column Type: varchar
Max Length: 50
Follow-up Status

Column Name: follow_up_status_value
Column Type: varchar
Max Length: 50
Follow-up Status value

Column Name: group_name
Column Type: varchar
Max Length: 40
Group name

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Medical Diagnosis 1 JOIN (10050) and associated values

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Medical Diagnosis 2 JOIN (10051) and associated values

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Medical Diagnosis 3 JOIN (10080) and associated values

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Medical Diagnosis 4 JOIN (10081) and associated values

Column Name: location_code
Column Type: varchar

Max Length: 20
Appointment location code.

Column Name: location_value
Column Type: varchar
Max Length: 40
Appointment location description.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 1 Code

Column Name: medical_diagnosis1_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 DSM Value

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 Value

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 2 Code

Column Name: medical_diagnosis2_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 DSM Value

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 Value

Column Name: medical_diagnosis3_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 DSM Value

Column Name: medical_diagnosis4_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 DSM Value

Column Name: medical_diag_1_icd10_code
Column Type: varchar

Max Length: 40
ICD10 code for the medical diagnosis 1

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 1

Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 4

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis4

Column Name: medical_diagnosis3_code
Column Type: varchar

Max Length: 10
Medical Diagnosis 3 Code

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 Value

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 4 Code

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 Value

Column Name: minute_time_override
Column Type: integer
When the appointment has an end time of 12:00 AM this will be set to 1.

Column Name: modifiers
Column Type: varchar
Max Length: 50
Billing modifiers

Column Name: number_of_clients
Column Type: varchar
Max Length: 10
Number of clients (members) of the appointment

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: orig_entry_date
Column Type: date
Original creation date of the appointment.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 15
Original creation time of the appointment.

Column Name: orig_entry_user_name
Column Type: varchar
Max Length: 40
Original creator of the appointment.

Column Name: orig_sched_end_time
Column Type: varchar
Max Length: 50
Original end time of the appointment.

Column Name: orig_sched_start_time
Column Type: varchar
Max Length: 50
Original start time of the appointment.

Column Name: posted_as_service_code
Column Type: varchar
Max Length: 2
Posted as a service ?

Column Name: posted_as_service_value
Column Type: varchar
Max Length: 50
Posted as a service value

Column Name: posted_code
Column Type: varchar
Max Length: 2
Posted Appointment?

Column Name: posted_data_entry_by
Column Type: varchar
Max Length: 40
Appointment posted entry_by

Column Name: posted_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment posted entry_by_option

Column Name: posted_data_entry_date
Column Type: date
Appointment posted entry_date

Column Name: posted_data_entry_time
Column Type: varchar
Max Length: 15
Appointment posted entry_time

Column Name: posted_option_desc
Column Type: varchar
Max Length: 80
Appointment posted Option Description

Column Name: posted_option_id
Column Type: varchar
Max Length: 20
Appointment posted Option Id

Column Name: posted_value
Column Type: varchar
Max Length: 50
Posted appointment value

Column Name: posting_in_progress
Column Type: varchar
Max Length: 50
Posting in progress, this is for group appointments

Column Name: priority_code
Column Type: varchar
Max Length: 50
Appointment priority code

Column Name: priority_description
Column Type: varchar
Max Length: 50
Appointment priority description

Column Name: program_code
Column Type: varchar
Max Length: 10
Program Code

Column Name: program_value
Column Type: varchar
Max Length: 40
Program Value

Column Name: psycho_add_on_duration
Column Type: integer
Psychotherapy Add-On Duration (11506)

Column Name: reason_for_follow_up
Column Type: varchar
Max Length: 4096
Reason For Follow-up - String

Column Name: reason_for_follow_up_stream

Column Type: longvarchar
Max Length: 2147483647
Reason For Follow-up - Stream

Column Name: reason_svc_not_posted_code
Column Type: varchar
Max Length: 40
Reason Service Not Posted - Code

Column Name: reason_svc_not_posted_value
Column Type: varchar
Max Length: 50
Reason Service Not Posted - Value

Column Name: recurring_indicator
Column Type: integer
Flag for determining if this is a recurring appointment.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
Referring Practitioner Code

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
Referring Practitioner Name

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
Referring Provider Code

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
Referring Provider Name

Column Name: room_number
Column Type: varchar
Max Length: 50
Appointment room number

Column Name: service_description
Column Type: varchar
Max Length: 40
Service Description

Column Name: service_documentation_ns
Column Type: varchar

Max Length: 40
Service Documentation Namespace (99971)

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: staff_name
Column Type: varchar
Max Length: 40
The staff name associated with STAFFID.

Column Name: status_code
Column Type: varchar
Max Length: 40
The code for the appointment status.

Column Name: status_value
Column Type: varchar
Max Length: 40
The description associated with status_code.

Column Name: team_description
Column Type: varchar
Max Length: 50
Team description

Column Name: team_id
Column Type: varchar
Max Length: 50
Team

Column Name: units_of_service
Column Type: numeric
Units of Service (field 10014)

Column Name: unsigned_appointment
Column Type: bit
Flag for determining if this is an unsigned appointment.

Column Name: verified_code
Column Type: varchar
Max Length: 2
Appointment Verified ?

Column Name: verified_data_entry_by
Column Type: varchar
Max Length: 40
Appointment Verified entry_by

Column Name: verified_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment Verified entry_by_option

Column Name: verified_data_entry_date
Column Type: date
Appointment Verified entry_date

Column Name: verified_data_entry_time
Column Type: varchar
Max Length: 15
Appointment Verified entry_time

Column Name: verified_option_desc
Column Type: varchar
Max Length: 80
Appointment Verified Option Description

Column Name: verified_option_id
Column Type: varchar
Max Length: 20
Appointment Verified Option Id

Column Name: verified_value
Column Type: varchar
Max Length: 50
Appointment Verified value

Documentation for form: Scheduling_Calendar

Table Name: [SYSTEM.AppointmentRes](#)

Table Description: This table returns appointment resource information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ApptData
Column Type: integer
'ApptData' (System Use Only).

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY

Column Type: integer
The system code in which the data was stored.

Column Name: RESOURCE_ID
Column Type: varchar
Max Length: 50
The resource ID assigned by cache.

Column Name: SITEID
Column Type: varchar
Max Length: 10
The unique ID of 'Site'.

Column Name: resource_description
Column Type: varchar
Max Length: 50
Resource Description.

Column Name: resource_unique_id
Column Type: varchar
Max Length: 50
The resource ID assigned by the user.

Column Name: site_name
Column Type: varchar
Max Length: 40
'Site'.

Column Name: childsub
Column Type: integer

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentResAudit

Table Description: This table returns appointment resource audit information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ApptData
Column Type: integer
'ApptData' (System Use Only).

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: RESOURCE_ID
Column Type: varchar
Max Length: 50
The resource ID assigned by cache.

Column Name: SITEID
Column Type: varchar
Max Length: 10
The unique ID of 'Site'.

Column Name: resource_description
Column Type: varchar
Max Length: 50
Resource Description.

Column Name: resource_unique_id
Column Type: varchar
Max Length: 50
The resource ID assigned by the user.

Column Name: site_name
Column Type: varchar
Max Length: 40
'Site'.

Column Name: childsub
Column Type: integer

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentResDeleted

Table Description: This table returns deleted appointment resource information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ApptData
Column Type: integer
'ApptData' (System Use Only).

Column Name: ID
Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: RESOURCE_ID

Column Type: varchar

Max Length: 50

The resource ID assigned by cache.

Column Name: SITEID

Column Type: varchar

Max Length: 10

The unique ID of 'Site'.

Column Name: resource_description

Column Type: varchar

Max Length: 50

Resource Description.

Column Name: resource_unique_id

Column Type: varchar

Max Length: 50

The resource ID assigned by the user.

Column Name: site_name

Column Type: varchar

Max Length: 40

'Site'.

Column Name: childsub

Column Type: integer

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentResSeries

Table Description: This table returns audited appointment resource series information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ApptSData

Column Type: integer

'ApptSData' (System Use Only).

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: RESOURCE_ID
Column Type: varchar
Max Length: 50
The resource ID assigned by cache.

Column Name: SITEID
Column Type: varchar
Max Length: 10
The unique ID of 'Site'.

Column Name: resource_description
Column Type: varchar
Max Length: 50
Resource Description

Column Name: resource_unique_id
Column Type: varchar
Max Length: 50
The resource ID assigned by the user.

Column Name: site_name
Column Type: varchar
Max Length: 40
'Site'.

Column Name: childsub
Column Type: integer

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentResSeriesAudit

Table Description: This table returns audited appointment resource series information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ApptSData
Column Type: integer

'ApptSData' (System Use Only).

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the appointment was filed.

Column Name: RESOURCE_ID
Column Type: varchar
Max Length: 50
The resource ID assigned by cache.

Column Name: SITEID
Column Type: varchar
Max Length: 10
The unique ID of 'Site'.

Column Name: resource_description
Column Type: varchar
Max Length: 50
Resource Description.

Column Name: resource_unique_id
Column Type: varchar
Max Length: 50
The resource ID assigned by the user.

Column Name: site_name
Column Type: varchar
Max Length: 40
'Site'.

Table Name: SYSTEM.AppointmentSeries

Table Description: This table returns appointment series information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ID
Column Type: integer

Column Name: CO_STAFFID_1
Column Type: varchar
Max Length: 10
The unique ID of 'Co Practitioner'.

Column Name: CO_STAFFID_2
Column Type: varchar
Max Length: 10
The unique ID of '2nd Co Practitioner'.

Column Name: duration
Column Type: varchar
Max Length: 10
'Duration'.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GROUP_ID
Column Type: varchar
Max Length: 10
The unique ID of 'Group'.

Column Name: ROOMID
Column Type: varchar
Max Length: 40
The room associated with the appointment.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
'Service Code'.

Column Name: SITEID
Column Type: varchar
Max Length: 10
The unique ID of 'Site'.

Column Name: STAFFID
Column Type: varchar
Max Length: 40
The unique ID of 'Practitioner'.

Column Name: active_code
Column Type: varchar

Max Length: 50
'active_code'.

Column Name: active_value
Column Type: varchar
Max Length: 50
'active_value'.

Column Name: add_on_notes
Column Type: varchar
Max Length: 4096
'Add-On Notes'.

Column Name: add_on_notes_stream
Column Type: longvarchar
Max Length: 2147483647
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The short value of add_svc_info_code.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The value of add_svc_info_code.

Column Name: appointment_date
Column Type: date
'Appointment Start Date'.

Column Name: appointment_end_time
Column Type: varchar
Max Length: 50
'End'.

Column Name: appointment_notes
Column Type: varchar
Max Length: 4096
'Appointment Notes'.

Column Type: longvarchar
Max Length: 2147483647

'Appointment Notes'.

Column Name: appointment_start_time
Column Type: varchar
Max Length: 50
'Start'.

Column Name: clinic_indicator
Column Type: integer
'clinic_indicator'.

Column Name: costaff1_duration_min
Column Type: varchar
Max Length: 10
'Co Practitioner Duration'.

Column Name: co_staff_1_name
Column Type: varchar
Max Length: 40
'Co Practitioner'.

Column Name: costaff2_duration_min
Column Type: varchar
Max Length: 10
'2nd Co Practitioner Duration'.

Column Name: co_staff_2_name
Column Type: varchar
Max Length: 40
'2nd Co Practitioner'.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description'.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The username that last updated the row.

Column Name: duration_minutes
Column Type: varchar
Max Length: 10
'Duration' in minutes.

Column Name: ebpss_csi_code
Column Type: varchar
Max Length: 200
'Evidence-based Practices / Service Strategies (CSI)'.

Column Name: ebpss_csi_value
Column Type: varchar
Max Length: 200
The value of ebpss_csi_code.

Column Name: ebpss_csi_value_long
Column Type: varchar
Max Length: 4096
The value of ebpss_csi_code.

Column Name: group_name
Column Type: varchar
Max Length: 40
'Group'.

Column Name: location_code
Column Type: varchar
Max Length: 20
'Location'.

Column Name: location_value
Column Type: varchar
Max Length: 40
The value of location_code.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'.

Column Name: medical_diagnosis1_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis1_code.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis1_code.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'.

Column Name: medical_diagnosis2_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis2_code.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis2_code.

Column Name: medical_diagnosis3_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis3_code.

Column Name: medical_diagnosis4_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis4_code.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis3_code.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis4_code.

Column Name: modifiers
Column Type: varchar
Max Length: 50
The elaboration of the service code.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option description associated with the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program associated with the row.

Column Name: program_value
Column Type: varchar
Max Length: 40
The value of program_code.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: recurr_end_by_code
Column Type: varchar
Max Length: 50
'recurr_end_by_code'.

Column Name: recurr_end_by_value
Column Type: varchar
Max Length: 50
'recurr_end_by_value'.

Column Name: recurring_indicator

Column Type: integer
'recurring_indicator'.

Column Name: recurr_number_of_sessions
Column Type: varchar
Max Length: 50
'recurr_number_of_sessions'.

Column Name: recurr_other_days
Column Type: varchar
Max Length: 50
'recurr_other_days'.

Column Name: recurr_schedule_code
Column Type: varchar
Max Length: 50
'recurr_schedule_code'.

Column Name: recurr_schedule_value
Column Type: varchar
Max Length: 50
'recurr_schedule_value'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
The code for referring_practitioner_name.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the 'Referring Provider'.

Column Name: service_description
Column Type: varchar
Max Length: 40
The description of the service.

Column Name: site_name
Column Type: varchar

Max Length: 40
'Site'.

Column Name: staff_name
Column Type: varchar
Max Length: 40
'Practitioner'.

Column Name: status_code
Column Type: varchar
Max Length: 40
'Status'.

Column Name: status_value
Column Type: varchar
Max Length: 40
The value of status_code.

Column Name: team_description
Column Type: varchar
Max Length: 50
'team_description'.

Column Name: team_id
Column Type: varchar
Max Length: 50
'team_id'.

Column Name: week_days_code
Column Type: varchar
Max Length: 50
'week_days_code'

Column Name: week_days_value
Column Type: varchar
Max Length: 4096
'week_days_value'

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentWaitingRoom

Table Description: Appointment Walk In Waiting Room

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: SITEID
Column Type: varchar
Max Length: 10
Site Id.

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: STAFFID
Column Type: varchar
Max Length: 40
The staff ID associated with the appointment.

Column Name: staff_name
Column Type: varchar
Max Length: 40
The staff name associated with STAFFID.

Column Name: waiting_room_date
Column Type: date
The date the record was added.

Column Name: waiting_room_time
Column Type: varchar
Max Length: 50
The time the record was added.

Column Name: waiting_room_order
Column Type: integer
The system code in which the data was stored.

Column Name: type_code
Column Type: varchar
Max Length: 40
The code for the client's type in waiting room.

Column Name: type_value
Column Type: varchar
Max Length: 40
The description associated with type_code.

Column Name: priority_code
Column Type: integer

Waiting room priority code

Column Name: priority_value

Column Type: varchar

Max Length: 50

The description associated with priority_code.

Column Name: phonein_code

Column Type: varchar

Max Length: 50

Waiting room phone-in/expected code

Column Name: phonein_value

Column Type: varchar

Max Length: 50

The description associated with phonein_code.

Column Name: telehealth_code

Column Type: varchar

Max Length: 50

Waiting room telehealth code

Column Name: telehealth_value

Column Type: varchar

Max Length: 50

The description associated with telehealth_code.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: patient_name

Column Type: varchar

Max Length: 255

The Client name associated with the PATID.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: program_code

Column Type: varchar

Max Length: 10

Program Code

Column Name: program_value

Column Type: varchar

Max Length: 40

Program Value

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 40

Service code.

Column Name: service_description

Column Type: varchar

Max Length: 40

Service Description

Column Name: location_code

Column Type: varchar

Max Length: 20

Appointment location code for the member.

Column Name: location_value

Column Type: varchar

Max Length: 512

Appointment location description.

Column Name: reason_for_visit_text

Column Type: varchar

Max Length: 1024

Reason for visit

Column Name: JOIN_TO_SLOT_ID

Column Type: varchar

Max Length: 50

'Site Registration - Time Slots Historic Unique ID

Column Name: status_code

Column Type: varchar

Max Length: 50

Waiting room status code

Column Name: status_value

Column Type: varchar

Max Length: 50

The description associated with status_code.

Column Name: display_code

Column Type: varchar

Max Length: 50

Waiting room display code

Column Name: display_value

Column Type: varchar

Max Length: 50

The description associated with display_code.

Column Name: JOIN_TO_APPT_ID
Column Type: varchar
Max Length: 50
Scheduling Calendar Appointment ID

Column Name: req_pract_type_code
Column Type: varchar
Max Length: 50
The code associated with Requested Practitioner Type Code (Discipline)

Column Name: req_pract_type_value
Column Type: varchar
Max Length: 4096
The description associated with Requested Practitioner Type Code (Discipline)

Column Name: req_pract_sex_code
Column Type: varchar
Max Length: 15
The code associated with Requested Practitioner Sex Code

Column Name: req_pract_sex_value
Column Type: varchar
Max Length: 15
The description associated with Requested Practitioner Sex Code

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 1000
A pointer to the Current value, only used by Audit table

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20

The unique ID of the form that last updated the row.

Column Name: staff_discipline

Column Type: varchar

Max Length: 4096

The description associated with discipline code of STAFFID

Column Name: staff_sex

Column Type: varchar

Max Length: 15

The description associated with sex code of STAFFID

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.AppointmentWaitingRoomAudit

Table Description: This table contains audit information for the 'SYSTEM.AppointmentWaitingRoom' table.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: SITEID

Column Type: varchar

Max Length: 10

Site Id.

Column Name: site_name

Column Type: varchar

Max Length: 40

Site Name

Column Name: STAFFID

Column Type: varchar

Max Length: 40

The staff ID associated with the appointment.

Column Name: staff_name

Column Type: varchar

Max Length: 40

The staff name associated with STAFFID.

Column Name: waiting_room_date

Column Type: date
The date the record was added.

Column Name: waiting_room_time
Column Type: varchar
Max Length: 50
The time the record was added.

Column Name: waiting_room_order
Column Type: integer
The system code in which the data was stored.

Column Name: type_code
Column Type: varchar
Max Length: 40
The code for the client's type in waiting room.

Column Name: type_value
Column Type: varchar
Max Length: 40
The description associated with type_code.

Column Name: priority_code
Column Type: integer
Waiting room priority code

Column Name: priority_value
Column Type: varchar
Max Length: 50
The description associated with priority_code.

Column Name: phonein_code
Column Type: varchar
Max Length: 50
Waiting room phone-in/expected code

Column Name: phonein_value
Column Type: varchar
Max Length: 50
The description associated with phonein_code.

Column Name: telehealth_code
Column Type: varchar
Max Length: 50
Waiting room telehealth code

Column Name: telehealth_value
Column Type: varchar
Max Length: 50
The description associated with telehealth_code.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: patient_name
Column Type: varchar
Max Length: 255
The Client name associated with the PATID.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: program_code
Column Type: varchar
Max Length: 10
Program Code

Column Name: program_value
Column Type: varchar
Max Length: 40
Program Value

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
Service code.

Column Name: service_description
Column Type: varchar
Max Length: 40
Service Description

Column Name: location_code
Column Type: varchar
Max Length: 20
Appointment location code for the member.

Column Name: location_value
Column Type: varchar
Max Length: 512
Appointment location description.

Column Name: reason_for_visit_text
Column Type: varchar
Max Length: 1024
Reason for visit

Column Name: JOIN_TO_SLOT_ID
Column Type: varchar
Max Length: 50
'Site Registration - Time Slots Historic Unique ID

Column Name: status_code
Column Type: varchar
Max Length: 50
Waiting room status code

Column Name: status_value
Column Type: varchar
Max Length: 50
The description associated with status_code.

Column Name: display_code
Column Type: varchar
Max Length: 50
Waiting room display code

Column Name: display_value
Column Type: varchar
Max Length: 50
The description associated with display_code.

Column Name: JOIN_TO_APPT_ID
Column Type: varchar
Max Length: 50
Scheduling Calendar Appointment ID

Column Name: req_pract_type_code
Column Type: varchar
Max Length: 50
The code associated with Requested Practitioner Type Code (Discipline)

Column Name: req_pract_type_value
Column Type: varchar
Max Length: 4096
The description associated with Requested Practitioner Type Code (Discipline)

Column Name: req_pract_sex_code
Column Type: varchar
Max Length: 15
The code associated with Requested Practitioner Sex Code

Column Name: req_pract_sex_value
Column Type: varchar
Max Length: 15
The description associated with Requested Practitioner Sex Code

Column Name: JOIN_TO_CURRENT
Column Type: varchar
Max Length: 1000
A pointer to the Current value, only used by Audit table

Column Name: JOIN_TO_PREVIOUS
Column Type: varchar
Max Length: 1000
Previous log entry

Column Name: data_entry_action
Column Type: varchar
Max Length: 40
The action that was performed, only used by Audit table

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 40
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 80
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: staff_discipline
Column Type: varchar
Max Length: 4096
The description associated with discipline code of STAFFID

Column Name: staff_sex
Column Type: varchar
Max Length: 15
The description associated with sex code of STAFFID

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.Appointment_Series_Audit

Table Description: This table returns audited appointment series information filed via the Appointment Scheduling 'Scheduling Calendar' and 'Post Staff Activity Log' form.

Column Name: ID
Column Type: integer

Column Name: CO_STAFFID_1
Column Type: varchar
Max Length: 10
The unique ID of 'Co Practitioner'.

Column Name: CO_STAFFID_2
Column Type: varchar
Max Length: 10
The unique ID of '2nd Co Practitioner'.

Column Name: duration
Column Type: varchar
Max Length: 10
'Duration'.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GROUP_ID
Column Type: varchar
Max Length: 10
The unique ID of 'Group'.

Column Name: ROOMID
Column Type: varchar
Max Length: 40
The room associated with the appointment.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
'Service Code'.

Column Name: SITEID
Column Type: varchar
Max Length: 10
The unique ID of 'Site'.

Column Name: STAFFID
Column Type: varchar
Max Length: 40
The unique ID of 'Practitioner'.

Column Name: active_code

Column Type: varchar
Max Length: 50
'active_code'.

Column Name: active_value
Column Type: varchar
Max Length: 50
'active_value'.

Column Name: add_on_notes
Column Type: varchar
Max Length: 4096
'Add-On Notes'.

Column Name: add_on_notes_stream
Column Type: longvarchar
Max Length: 2147483647
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The short value of add_svc_info_code.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The value of add_svc_info_code.

Column Name: appointment_date
Column Type: date
'Appointment Start Date'.

Column Name: appointment_end_time
Column Type: varchar
Max Length: 50
'End'.

Column Name: appointment_notes
Column Type: varchar
Max Length: 4096
'Appointment Notes'.

Column Name: appointment_notes_stream
Column Type: longvarchar

Max Length: 2147483647
'Appointment Notes'.

Column Name: appointment_start_time
Column Type: varchar
Max Length: 50
'Start'.

Column Name: clinic_indicator
Column Type: integer
'clinic_indicator'.

Column Name: costaff1_duration_min
Column Type: varchar
Max Length: 10
'Co Practitioner Duration'.

Column Name: co_staff_1_name
Column Type: varchar
Max Length: 40
'Co Practitioner'.

Column Name: costaff2_duration_min
Column Type: varchar
Max Length: 10
'2nd Co Practitioner Duration'.

Column Name: co_staff_2_name
Column Type: varchar
Max Length: 40
'2nd Co Practitioner'.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description'.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The username that last updated the row.

Column Name: duration_minutes
Column Type: varchar
Max Length: 10
'Duration'.

Column Name: ebpss_csi_code
Column Type: varchar
Max Length: 200
'Evidence-based Practices / Service Strategies (CSI)'.

Column Name: ebpss_csi_value
Column Type: varchar
Max Length: 200
The value of ebpss_csi_code.

Column Name: ebpss_csi_value_long
Column Type: varchar
Max Length: 4096
The long value of ebpss_csi_code.

Column Name: group_name
Column Type: varchar
Max Length: 40
'Group'.

Column Name: location_code
Column Type: varchar
Max Length: 20
'Location'.

Column Name: location_value
Column Type: varchar
Max Length: 40
The value of location_code.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'.

Column Name: medical_diagnosis1_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis1_code.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis1_code.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'.

Column Name: medical_diagnosis2_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis2_code.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis2_code.

Column Name: medical_diagnosis3_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis3_code.

Column Name: medical_diagnosis4_DSM_value
Column Type: varchar
Max Length: 80
The DSM value of medical_diagnosis4_code.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'.

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis3_code.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 80
The value of medical_diagnosis4_code.

Column Name: modifiers
Column Type: varchar
Max Length: 50
The elaboration of the service code.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The option description associated with the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: orig_appointment_series_id
Column Type: integer
The original appointment series ID.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program associated with the row.

Column Name: program_value
Column Type: varchar
Max Length: 40
The value of program_code.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: recurr_end_by_code
Column Type: varchar
Max Length: 50
'recurr_end_by_code'.

Column Name: recurr_end_by_value

Column Type: varchar
Max Length: 50
'recurr_end_by_value'.

Column Name: recurring_indicator
Column Type: integer
'recurring_indicator'.

Column Name: recurr_number_of_sessions
Column Type: varchar
Max Length: 50
'recurr_number_of_sessions'.

Column Name: recurr_other_days
Column Type: varchar
Max Length: 50
'recurr_other_days'.

Column Name: recurr_schedule_code
Column Type: varchar
Max Length: 50
'recurr_schedule_code'.

Column Name: recurr_schedule_value
Column Type: varchar
Max Length: 50
'recurr_schedule_value'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
The code for referring_practitioner_name.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the 'Referring Provider'.

Column Name: service_description
Column Type: varchar

Max Length: 40
The description of the service.

Column Name: site_name
Column Type: varchar
Max Length: 40
'Site'.

Column Name: staff_name
Column Type: varchar
Max Length: 40
'Practitioner'.

Column Name: status_code
Column Type: varchar
Max Length: 40
'Status'.

Column Name: status_value
Column Type: varchar
Max Length: 40
The value of status_code.

Column Name: team_description
Column Type: varchar
Max Length: 50
'team_description'.

Column Name: team_id
Column Type: varchar
Max Length: 50
'team_id'.

Column Name: week_days_code
Column Type: varchar
Max Length: 50
'week_days_code'

Column Name: week_days_value
Column Type: varchar
Max Length: 4096
'week_days_value'

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.appointment_evv_task

Table Description: This table returns appointment EVV task information filed via the Appointment Scheduling 'Scheduling Calendar'.

Column Name: ApptData
Column Type: integer
'ApptData' (System Use Only).

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.appt_recur_task_errors

Table Description: This table stores errors and warnings from appointment scheduling recurrence build process that is configured in 'System Task Scheduler' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code of the recurring appointment.

Column Name: build_date
Column Type: date
The date the build was run.

Column Name: audit_id
Column Type: integer
ID of the audit. This is different of each run of Appointment Scheduling Recurrence Build.

Column Name: recurring_indicator
Column Type: varchar
Max Length: 50
recurring_indicator field in SYSTEM.AppointmentSeries table. This can be used to track the appointment.

Column Name: line_number
Column Type: integer
An index used to distinguish between multiple errors.

Column Name: is_sys_error
Column Type: bit
If value is "0", it indicates the message is an appointment related issue. If value is "1", it indicates the message is is a server error.

Column Name: message
Column Type: varchar
Max Length: 256
The message related to the appointment recurrence series for a given build date.

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.primary_care_visits

Table Description: Link Table For Primary Care

Column Name: ID
Column Type: integer

Column Name: appointment_date
Column Type: date
appointment_date

Column Name: AppointmentObjectID
Column Type: varchar
Max Length: 50
Appointment ID related to this record.

Column Name: priority_code
Column Type: varchar
Max Length: 5
Appointment Priority Code

Column Name: priority_value
Column Type: varchar
Max Length: 40
Appointment Priority Value

Column Name: room_number
Column Type: varchar
Max Length: 40
Appointment Room Number

Column Name: SITEID
Column Type: varchar
Max Length: 10
SITEID

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: STAFFID
Column Type: varchar
Max Length: 40

Staff Member

Column Name: staff_name

Column Type: varchar

Max Length: 40

Staff Member Name

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: followup_notes

Column Type: longvarchar

Max Length: 2147483647

Notes for follow-up information

Column Name: followup_when

Column Type: varchar

Max Length: 50

follow-up when?

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: primary_care_physician_duration

Column Type: varchar

Max Length: 50

Primary Care Physican Duration

Column Name: PrimaryCareVisitSummary

Column Type: longvarchar

Max Length: 2147483647

Primary Care Visit Summary

Column Name: Processed

Column Type: varchar

Max Length: 50

Processed

Column Name: ProcessedTimeStamp

Column Type: timestamp

Processed Time Stamp

Column Name: appointment_deleted

Column Type: integer
Set to 1 if the linked appointment was deleted.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.telehealth_appt

Table Description: This table stores appointments scheduled with a 3rd party telehealth application

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
Reference to the telehealth client associated with this appointment.

Column Name: STAFFID
Column Type: varchar
Max Length: 20
Reference to the telehealth staff member associated with this appointment.

Column Name: appt_person_id
Column Type: varchar
Max Length: 254
Reference to the appointment person associated with this telehealth appointment.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: other_properties
Column Type: varchar
Max Length: 32749
Other properties associated with the telehealth appointment.

Column Name: vendor_id
Column Type: varchar
Max Length: 256
The ID for this appointment in the telehealth platform.

Column Name: vendor_name
Column Type: varchar
Max Length: 50
The vendor of the 3rd party telehealth platform the staff member is registered with.

Documentation for form: Scheduling_Calendar

Table Name: SYSTEM.telehealth_client

Table Description: This table stores clients registered with a 3rd party telehealth application

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar

Max Length: 20
The client ID associated with the data.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: internal_vendor_id
Column Type: varchar
Max Length: 50
The internal ID for this client in the telehealth platform.

Column Name: request_id
Column Type: varchar
Max Length: 50
The last request ID used to register this client (in case we need to re-check the status later.

Column Name: vendor_id
Column Type: varchar
Max Length: 256
The ID for this client in the telehealth platform.

Column Name: vendor_name
Column Type: varchar
Max Length: 50
The vendor of the 3rd party telehealth platform the client is registered with.

Appointment start time (julian)

Column Name: appointment_start_utc

Column Type: timestamp

the Appointment Start as UTC date and time.

Column Name: appointment_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the appointment used to determine the offset from UTC.

Column Name: appt_req_follow_up_code

Column Type: varchar

Max Length: 5

Appointment Requires Follow-up

Column Name: appt_req_follow_up_value

Column Type: varchar

Max Length: 50

Appointment Requires Follow-up

Column Name: billing_status_code

Column Type: varchar

Max Length: 50

Billing Status code

Column Name: billing_status_value

Column Type: varchar

Max Length: 50

The value of the 'billing_status_code'

Column Name: cancellation_reason_code

Column Type: varchar

Max Length: 40

The code for the appointment cancellation reason.

Column Name: cancellation_reason_value

Column Type: varchar

Max Length: 255

The description associated with cancellation reason_code.

Column Name: client_willing_pay_code

Column Type: varchar

Max Length: 50

Client Willing To Pay At Front Desk

Column Name: client_willing_pay_value

Column Type: varchar

Max Length: 50

Client Willing To Pay At Front Desk

Column Name: clinic_indicator

Column Type: integer

The clinical appointment flag. Set to 1 if this is a clinical appointment.

Column Name: costaff1_duration_min

Column Type: varchar

Max Length: 10

Duration (in minutes) - CoStaff

Column Name: co_staff_1_name

Column Type: varchar

Max Length: 40

Co Staff 1 Name

Column Name: costaff2_duration_min
Column Type: varchar
Max Length: 10
Duration (in minutes) - CoStaff2

Column Name: co_staff_2_name
Column Type: varchar
Max Length: 40
Co Staff 2 Name

Column Name: cost_of_service
Column Type: numeric
Cost of Service (field 19998)

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: duration_minutes

Column Type: varchar

Max Length: 10

Duration (in minutes)

Column Name: ebpss_csi_code

Column Type: varchar

Max Length: 200

Evidence-based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value

Column Type: varchar

Max Length: 200

Evidence-Based Practices / Service Strategies (CSI)

Column Name: ebpss_csi_value_long

Column Type: varchar

Max Length: 4096

Evidence-Based Practices / Service Strategies (CSI)

Column Name: external_appt_id

Column Type: varchar

Max Length: 4096

Appointment ID for the external source appointment (for example EVV sources)

Column Name: follow_up_appt_due_date

Column Type: date

Follow-up Appointment Due Date

Column Name: follow_up_status_code
Column Type: varchar
Max Length: 50
Follow-up Status

Column Name: follow_up_status_value
Column Type: varchar
Max Length: 50
Follow-up Status value

Column Name: group_name
Column Type: varchar
Max Length: 40
Group name

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Medical Diagnosis 1 JOIN (10050) and associated values

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Medical Diagnosis 2 JOIN (10051) and associated values

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Medical Diagnosis 3 JOIN (10080) and associated values

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Medical Diagnosis 4 JOIN (10081) and associated values

Column Name: location_code
Column Type: varchar
Max Length: 20
Appointment location code.

Column Name: location_value
Column Type: varchar
Max Length: 40
Appointment location description.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 1 Code

Column Name: medical_diagnosis1_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 DSM Value

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 1 Value

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 2 Code

Column Name: medical_diagnosis2_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 DSM Value

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 2 Value

Column Name: medical_diagnosis3_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 DSM Value

Column Name: medical_diagnosis4_DSM_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 DSM Value

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 1

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 1

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 1

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 1

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis 1

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 2

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 2

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 2

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 2

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis2

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 3

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 3

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 3

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 3

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis3

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
ICD10 code for the medical diagnosis 4

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
ICD10 description for the medical diagnosis 4

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
ICD9 code for the medical diagnosis 4

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
ICD9 description for the medical diagnosis 4

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
IMO description for the medical diagnosis4

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 3 Code

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 3 Value

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
Medical Diagnosis 4 Code

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 80
Medical Diagnosis 4 Value

Column Name: minute_time_override
Column Type: integer
When the appointment has an end time of 12:00 AM this will be set to 1.

Column Name: modifiers
Column Type: varchar
Max Length: 50
Billing modifiers

Column Name: number_of_clients
Column Type: varchar
Max Length: 10
Number of clients (members) of the appointment

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: orig_entry_date
Column Type: date
Original creation date of the appointment.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 15
Original creation time of the appointment.

Column Name: orig_entry_user_name
Column Type: varchar
Max Length: 40
Original creator of the appointment.

Column Name: orig_sched_end_time
Column Type: varchar
Max Length: 50
Original end time of the appointment.

Column Name: orig_sched_start_time
Column Type: varchar

Max Length: 50
Original start time of the appointment.

Column Name: posted_as_service_code
Column Type: varchar
Max Length: 2
Posted as a service ?

Column Name: posted_as_service_value
Column Type: varchar
Max Length: 50
Posted as a service value

Column Name: posted_code
Column Type: varchar
Max Length: 2
Posted Appointment?

Column Name: posted_data_entry_by
Column Type: varchar
Max Length: 40
Appointment posted entry_by

Column Name: posted_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment posted entry_by_option

Column Name: posted_data_entry_date
Column Type: date
Appointment posted entry_date

Column Name: posted_data_entry_time
Column Type: varchar
Max Length: 15
Appointment posted entry_time

Column Name: posted_option_desc
Column Type: varchar
Max Length: 80
Appointment posted Option Description

Column Name: posted_option_id
Column Type: varchar
Max Length: 20
Appointment posted Option Id

Column Name: posted_value
Column Type: varchar
Max Length: 50

Posted appointment value

Column Name: posting_in_progress

Column Type: varchar

Max Length: 50

Posting in progress, this is for group appointments

Column Name: priority_code

Column Type: varchar

Max Length: 50

Appointment priority code

Column Name: priority_description

Column Type: varchar

Max Length: 50

Appointment priority description

Column Name: program_code

Column Type: varchar

Max Length: 10

Program Code

Column Name: program_value

Column Type: varchar

Max Length: 40

Program Value

Column Name: psycho_add_on_duration

Column Type: integer

Psychotherapy Add-On Duration (11506)

Column Name: reason_for_follow_up

Column Type: varchar

Max Length: 4096

Reason For Follow-up - String

Column Name: reason_for_follow_up_stream

Column Type: longvarchar

Max Length: 2147483647

Reason For Follow-up - Stream

Column Name: reason_svc_not_posted_code

Column Type: varchar

Max Length: 40

Reason Service Not Posted - Code

Column Name: reason_svc_not_posted_value

Column Type: varchar

Max Length: 50

Reason Service Not Posted - Value

Column Name: recurring_indicator
Column Type: integer
Flag for determining if this is a recurring appointment.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
Referring Practitioner Code

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
Referring Practitioner Name

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
Referring Provider Code

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
Referring Provider Name

Column Name: room_number
Column Type: varchar
Max Length: 50
Appointment room number

Column Name: service_description
Column Type: varchar
Max Length: 40
Service Description

Column Name: service_documentation_ns
Column Type: varchar
Max Length: 40
Service Documentation Namespace (99971)

Column Name: site_name
Column Type: varchar
Max Length: 40
Site Name

Column Name: staff_name
Column Type: varchar
Max Length: 40
The staff name associated with STAFFID.

Column Name: status_code
Column Type: varchar
Max Length: 40
The code for the appointment status.

Column Name: status_value
Column Type: varchar
Max Length: 40
The description associated with status_code.

Column Name: team_description
Column Type: varchar
Max Length: 50
Team description

Column Name: team_id
Column Type: varchar
Max Length: 50
Team

Column Name: units_of_service
Column Type: numeric
Units of Service (field 10014)

Column Name: unsigned_appointment
Column Type: bit
Flag for determining if this is an unsigned appointment.

Column Name: verified_code
Column Type: varchar
Max Length: 2
Appointment Verified ?

Column Name: verified_data_entry_by
Column Type: varchar
Max Length: 40
Appointment Verified entry_by

Column Name: verified_data_entry_by_option
Column Type: varchar
Max Length: 40
Appointment Verified entry_by_option

Column Name: verified_data_entry_date
Column Type: date
Appointment Verified entry_date

Column Name: verified_data_entry_time
Column Type: varchar
Max Length: 15

Appointment Verified entry_time

Column Name: verified_option_desc

Column Type: varchar

Max Length: 80

Appointment Verified Option Description

Column Name: verified_option_id

Column Type: varchar

Max Length: 20

Appointment Verified Option Id

Column Name: verified_value

Column Type: varchar

Max Length: 50

Appointment Verified value

Documentation for form: Scheduling_Calendar_-_Check_In

Documentation for form: Scheduling_Calendar_-_Check_In

Table Name: SYSTEM.check_in_clients

Table Description: Check-In Clients

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code where this is being defined in.

Column Name: Option_Desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
Practitioner

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
Service Code

Column Name: SITEID
Column Type: varchar
Max Length: 10
Site ID

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data (for consistency)

Column Name: addt_staff_to_notify_code
Column Type: varchar
Max Length: 1
Selected Additional Staff to Notify

Column Name: addt_staff_to_notify_value
Column Type: varchar
Max Length: 1024
The description associated with addt_staff_to_notify_code.

Column Name: appointment_date
Column Type: date
The date of the appointment.

Column Name: appointment_end_time
Column Type: varchar
Max Length: 8
Appointment End Time

Column Name: appointment_object_id
Column Type: varchar
Max Length: 50
Appointment Object ID.

Column Name: appointment_start_time
Column Type: varchar
Max Length: 8
Appointment Start Time

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: duration

Column Type: varchar

Max Length: 50

Duration

Column Name: location_code

Column Type: varchar

Max Length: 50

Location Code

Column Name: notify_pract_of_arrival_code

Column Type: varchar

Max Length: 1

Notify Practitioner of Arrival

Column Name: notify_pract_of_arrival_value

Column Type: varchar

Max Length: 40

The description associated with notify_pract_of_arrival_code.

Column Name: patient_name

Column Type: varchar

Max Length: 100

Client Name

Column Name: program_code

Column Type: varchar

Max Length: 15

Program Code

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code.

Column Name: site_name
Column Type: varchar
Max Length: 40
The description associated with SITEID.

Column Name: start_end_time_of_appt
Column Type: varchar
Max Length: 50
Start Time - End Time

Column Name: time_of_arrival
Column Type: varchar
Max Length: 50
Time Of Arrival

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code.

Documentation for form: Scheduling_Calendar_-_Check_In

Table Name: SYSTEM.check_out_client_history

Table Description: Check-Out Client History

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY

Column Type: integer
The system code where this is being defined in.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
Guarantor ID

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id to service

Column Name: Option_Desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: Option_Id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
Practitioner

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 40
Service Code

Column Name: SITEID
Column Type: varchar
Max Length: 10
Site ID

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data (for consistency)

Column Name: appointment_date
Column Type: date

The date of the appointment.

Column Name: appointment_end_time

Column Type: varchar

Max Length: 8

Appointment End Time

Column Name: appointment_object_id

Column Type: varchar

Max Length: 50

Appointment Object ID.

Column Name: appointment_start_time

Column Type: varchar

Max Length: 8

Appointment Start Time

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: duration

Column Type: varchar

Max Length: 50

Duration

Column Name: encounter_start_time

Column Type: varchar

Max Length: 10

Encounter Start Time

Column Name: location
Column Type: varchar
Max Length: 50
Location Code

Column Name: location_code
Column Type: varchar
Max Length: 40
keeping field location in case its been used
DOCUMENTATION location_code - Location Code

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code.

Column Name: notify_pract_of_arrival_code
Column Type: varchar
Max Length: 1
Notify Practitioner of Arrival

Column Name: notify_pract_of_arrival_value
Column Type: varchar
Max Length: 40
The description associated with notify_pract_of_arrival_code.

Column Name: patient_name
Column Type: varchar
Max Length: 100
Client Name

Column Name: posting_code
Column Type: varchar
Max Length: 50
Posting Code

Column Name: program_code
Column Type: varchar
Max Length: 10
Program Code

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code.

Column Name: self_pay_amount
Column Type: varchar
Max Length: 50

Self-Pay Amount

Column Name: site_name

Column Type: varchar

Max Length: 40

The description associated with SITEID.

Column Name: start_end_time_of_appt

Column Type: varchar

Max Length: 50

Start Time - End Time

Column Name: time_of_arrival

Column Type: varchar

Max Length: 50

Time Of Arrival

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code.

Documentation for form: Individual_Cash_Posting

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the posting was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2

Column Type: varchar

Max Length: 15

The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment

Column Type: date

'Date Of Payment'.

Column Name: payment_type_code

Column Type: varchar

Max Length: 10

'Posting Code'.

Column Name: payment_type_value

Column Type: varchar

Max Length: 40

The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount

Column Type: numeric

The amount posted using the payment_type_code.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code

Column Type: varchar

Max Length: 10

'Program'.

Column Name: v_program_of_service_value

Column Type: varchar

Max Length: 100

The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar

Max Length: 20

'Service Code'.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE

Column Type: varchar

Max Length: 15

An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: check_number

Column Type: varchar

Max Length: 50

The check number.

Column Name: system_code

Column Type: varchar

Max Length: 50

System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number

Column Type: varchar

Max Length: 50

The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token

Column Type: varchar

Max Length: 50

The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 50

The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to

Column Type: varchar

Max Length: 50

The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code

Column Type: varchar

Max Length: 50

Adjustment Code.

Column Name: adjust_code_value

Column Type: varchar

Max Length: 4096

The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: contractual_write_off

Column Type: varchar
Max Length: 10
Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Date Of Receipt'.

Column Name: date_of_service
Column Type: date
'Date of Service'.

Column Name: device_name
Column Type: varchar
Max Length: 50
The name of the credit card device used to process the credit card payment.

Column Name: group_code_code
Column Type: varchar
Max Length: 50
'Group Code'.

Column Name: group_code_value
Column Type: varchar
Max Length: 4096
The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id
Column Type: varchar
Max Length: 50
The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num
Column Type: integer
The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code
Column Type: varchar
Max Length: 10
'Payment Location'.

Column Name: payment_location_value
Column Type: varchar
Max Length: 40
The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments
Column Type: varchar
Max Length: 80
'Posting Comments'

Column Name: receipt_reversed
Column Type: varchar
Max Length: 5
Will indicate if the receipt was reversed.

Column Name: type_of_payment

Column Type: varchar
Max Length: 50
Type Of payment.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist
Column Type: varchar
Max Length: 20
'Write Off By Liability Distribution'

Documentation for form: Individual_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close
Column Type: date
'Date of Service Closed'

Column Name: re_bill_claim_number
Column Type: varchar
Max Length: 50
This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value
Column Type: varchar
Max Length: 50
This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance
Column Type: double
Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level
Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar
Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value
Column Type: varchar
Max Length: 40
The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Individual_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar

Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Individual_Cash_Posting

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the service.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: accounting_period

Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar

Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40

The description associated with `medical_diag_1_icd9_code`. See `medical_diag_1_icd9_code` for more information.

Column Name: `medical_diag_1_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: `medical_diag_2_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: `medical_diag_2_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_2_icd10_code`. See `medical_diag_2_icd10_code` for more information.

Column Name: `medical_diag_2_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: `medical_diag_2_icd9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_2_icd9_code`. See `medical_diag_2_icd9_code` for more information.

Column Name: `medical_diag_2_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: `medical_diag_3_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: `medical_diag_3_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_3_icd10_code`. See `medical_diag_3_icd10_code` for more information.

Column Name: `medical_diag_3_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Cash_Posting

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the posting was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER
Column Type: integer

The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2

Column Type: varchar

Max Length: 15

The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment

Column Type: date

'Date Of Payment'.

Column Name: payment_type_code

Column Type: varchar

Max Length: 10

'Posting Code'.

Column Name: payment_type_value

Column Type: varchar

Max Length: 40

The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount

Column Type: numeric

The amount posted using the payment_type_code.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code

Column Type: varchar

Max Length: 10
'Program'.

Column Name: v_program_of_service_value

Column Type: varchar

Max Length: 100

The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar

Max Length: 20

'Service Code'.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE

Column Type: varchar

Max Length: 15

An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: check_number

Column Type: varchar

Max Length: 50

The check number.

Column Name: system_code

Column Type: varchar

Max Length: 50

System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number

Column Type: varchar

Max Length: 50

The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token

Column Type: varchar

Max Length: 50

The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 50

The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to

Column Type: varchar

Max Length: 50

The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code

Column Type: varchar

Max Length: 50

Adjustment Code.

Column Name: adjust_code_value

Column Type: varchar

Max Length: 4096

The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: contractual_write_off

Column Type: varchar

Max Length: 10

Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: date_of_receipt

Column Type: date

'Date Of Receipt'.

Column Name: date_of_service

Column Type: date

'Date of Service'.

Column Name: device_name

Column Type: varchar

Max Length: 50

The name of the credit card device used to process the credit card payment.

Column Name: group_code_code

Column Type: varchar

Max Length: 50

'Group Code'.

Column Name: group_code_value

Column Type: varchar

Max Length: 4096

The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id

Column Type: varchar

Max Length: 50

The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num

Column Type: integer

The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code

Column Type: varchar

Max Length: 10

'Payment Location'.

Column Name: payment_location_value

Column Type: varchar

Max Length: 40

The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments

Column Type: varchar

Max Length: 80

'Posting Comments'

Column Name: receipt_reversed

Column Type: varchar

Max Length: 5

Will indicate if the receipt was reversed.

Column Name: type_of_payment

Column Type: varchar

Max Length: 50

Type Of payment.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist

Column Type: varchar

Max Length: 20

'Write Off By Liability Distribution'

Documentation for form: Quick_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the service was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID for which the service is entered.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Quick_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Cash_Posting

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: STAFFID
Column Type: varchar
Max Length: 10
The staff ID associated with the data.

Column Name: STREG_INDEX
Column Type: varchar
Max Length: 20
A unique ID used to identify a row of data.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
'Service Code (10002)'

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the service.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: accounting_period

Column Type: date

'Accounting Period (10032)'

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

'Deleted Service Code (10033)'

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the service

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the service.

Column Name: duration

Column Type: varchar

Max Length: 50

'Duration'

Column Name: end_time

Column Type: varchar

Max Length: 10

'Service End Time (60022)'

Column Name: jointodiagnosisobject1

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar

Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Individual_Cash_Posting

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar
Max Length: 40
The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Individual_Cash_Posting

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the posting was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2

Column Type: varchar

Max Length: 15

The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment

Column Type: date

'Date Of Payment'.

Column Name: payment_type_code

Column Type: varchar

Max Length: 10

'Posting Code'.

Column Name: payment_type_value

Column Type: varchar

Max Length: 40

The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount

Column Type: numeric

The amount posted using the payment_type_code.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code

Column Type: varchar

Max Length: 10

'Program'.

Column Name: v_program_of_service_value

Column Type: varchar

Max Length: 100

The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar

Max Length: 20

'Service Code'.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE

Column Type: varchar

Max Length: 15

An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: check_number

Column Type: varchar

Max Length: 50

The check number.

Column Name: system_code

Column Type: varchar

Max Length: 50

System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number

Column Type: varchar

Max Length: 50

The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token

Column Type: varchar
Max Length: 50
The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 50
The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to
Column Type: varchar
Max Length: 50
The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code
Column Type: varchar
Max Length: 50
Adjustment Code.

Column Name: adjust_code_value
Column Type: varchar
Max Length: 4096
The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: contractual_write_off
Column Type: varchar
Max Length: 10
Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Date Of Receipt'.

Column Name: date_of_service
Column Type: date
'Date of Service'.

Column Name: device_name
Column Type: varchar
Max Length: 50
The name of the credit card device used to process the credit card payment.

Column Name: group_code_code
Column Type: varchar
Max Length: 50
'Group Code'.

Column Name: group_code_value
Column Type: varchar
Max Length: 4096
The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id
Column Type: varchar
Max Length: 50
The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num
Column Type: integer
The 'Transaction ID Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code
Column Type: varchar
Max Length: 10
'Payment Location'.

Column Name: payment_location_value
Column Type: varchar
Max Length: 40
The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments
Column Type: varchar
Max Length: 80
'Posting Comments'

Column Name: receipt_reversed
Column Type: varchar
Max Length: 5
Will indicate if the receipt was reversed.

Column Name: type_of_payment
Column Type: varchar
Max Length: 50
Type Of payment.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist
Column Type: varchar
Max Length: 20
'Write Off By Liability Distribution'

Documentation for form: Quick_Individual_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Quick_Individual_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code

Column Type: varchar

Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge

Column Type: numeric

The full charge for the service.

Column Name: total_payments

Column Type: numeric

Total payments for service

Column Name: date_charge_closed

Column Type: date

Date the service was closed.

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Individual_Cash_Posting

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: FACILITY
Column Type: integer
The facility of the service.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID of the service.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar

Max Length: 15

The number of clients in the group if this is a group service.

Column Name: cost_of_service

Column Type: numeric

The 'Cost Of Service' of the service.

Column Name: co_staff_member_2

Column Type: varchar

Max Length: 20

The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

The 'Covered Charge Category' for the service code.

Column Name: accounting_period

Column Type: date

The accounting period of the service.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: deleted_service_code

Column Type: varchar

Max Length: 20

The original service code if the service is now deleted.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description for the program_code. See program_code for more information.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 40

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description for the location_code. See location_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 100

The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 15
'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code
Column Type: varchar
Max Length: 15
'Program Type' for the program_code of the service.

Column Name: program_X_location_value
Column Type: varchar
Max Length: 40
The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 40
The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value
Column Type: varchar
Max Length: 40
The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name
Column Type: varchar
Max Length: 40
The name of the PATID of the service.

Column Name: age_on_date_of_service_
Column Type: numeric
The client's age at the time of service.

Column Name: appt_site_name
Column Type: varchar
Max Length: 40
The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC
Column Type: varchar
Max Length: 40
The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar

Max Length: 32768

'Add-On Notes'.

Column Name: add_svc_info_code

Column Type: varchar

Max Length: 50

'Additional Service Information'.

Column Name: add_svc_info_shval

Column Type: varchar

Max Length: 255

The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value

Column Type: varchar

Max Length: 4096

The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program

Column Type: varchar

Max Length: 10

The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time

Column Type: varchar

Max Length: 50

The 'Appointment End Time' related to this service.

Column Name: appt_group_id

Column Type: varchar

Max Length: 50

The 'Group #' related to this service.

Column Name: apt_group_name

Column Type: varchar

Max Length: 40

The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id

Column Type: varchar

Max Length: 50

The 'Appointment Site' related to this service.

Column Name: appt_start_time

Column Type: varchar

Max Length: 50

The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val

Column Type: varchar

Max Length: 50

The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code

Column Type: varchar

Max Length: 50

'Service Status'.

Column Name: billing_status_value

Column Type: varchar

Max Length: 50

The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units

Column Type: numeric

'Cal Billing Units'

Column Name: confidential_service_code

Column Type: varchar

Max Length: 50

'Confidential Service' from Avatar PH.

Column Name: confidential_service_val

Column Type: varchar

Max Length: 50

The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration

Column Type: numeric

'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member

Column Type: varchar

Max Length: 15

The 'Co-Practitioner' of the service.

Column Name: data_control_identifier

Column Type: varchar

Max Length: 40

'Data Control Identifier'.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.'

Column Name: emergency_ind_code
Column Type: varchar
Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar
Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject3

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar

Max Length: 40

Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon

Column Type: varchar

Max Length: 40

Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 100

The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number

Column Type: integer

The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code

Column Type: varchar

Max Length: 50

'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value

Column Type: varchar

Max Length: 50

The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837

Column Type: varchar

Max Length: 80

'Note Reference Text (837 Billing)'.

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date
Column Type: date
The date the service was first entered into the system.

Column Name: orig_entry_option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 50
The time the service was first entered into the system.

Column Name: orig_entry_user
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_user_id
Column Type: varchar
Max Length: 50
The user ID that first entered the service into the system.

Column Name: original_tx_code
Column Type: varchar
Max Length: 10
'Original Scheduled Service'.

Column Name: original_tx_value

Column Type: varchar

Max Length: 40

The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date

Column Type: date

'Orthodontic Banding Date'.

Column Name: primary_guarantor

Column Type: varchar

Max Length: 40

'Primary Guarantor'.

Column Name: prior_placement_date

Column Type: date

'Prior Placement Date'.

Column Name: prosth_crown_inlay_code

Column Type: varchar

Max Length: 50

'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value

Column Type: varchar

Max Length: 50

The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration

Column Type: integer

'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner'.

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

The name of the referring_practitioner_code.

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider'.

Column Name: referring_provider_name

Column Type: varchar

Max Length: 50

The name of the referring_provider_code.

Column Name: related_causes_code

Column Type: varchar

Max Length: 50

'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value

Column Type: varchar

Max Length: 255

The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS

Column Type: varchar

Max Length: 40

The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp

the End of Service as UTC date and time.

Column Name: service_start_utc

Column Type: timestamp

the Start of Service as UTC date and time.

Column Name: service_status_code

Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number
Column Type: varchar
Max Length: 50
'Tooth Number'.

Column Name: tooth_status_code
Column Type: varchar
Max Length: 50
'Tooth Status Code'.

Column Name: tooth_status_value
Column Type: varchar
Max Length: 50
The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code
Column Type: varchar
Max Length: 50
'Tooth Surface Code'.

Column Name: tooth_surface_shvalue
Column Type: varchar
Max Length: 255
The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value
Column Type: varchar
Max Length: 4096
The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
Is this a transfer service.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Quick_Individual_Cash_Posting

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service

Column Type: varchar

Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source

Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Remittance_Posting

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance

Column Type: numeric

Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date

Column Type: date

The admission date for the client's episode.

Column Name: v_discharge_date

Column Type: date

The discharge date for the client's episode.

Column Name: v_program_code

Column Type: varchar

Max Length: 10

The program of admission for the client's episode.

Column Name: v_program_value

Column Type: varchar

Max Length: 40

The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name

Column Type: varchar

Max Length: 40

The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Remittance_Posting

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the posting was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2
Column Type: varchar
Max Length: 15
The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment
Column Type: date
'Date Of Payment'.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value

Column Type: varchar

Max Length: 40

The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount

Column Type: numeric

The amount posted using the payment_type_code.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code

Column Type: varchar

Max Length: 10

'Program'.

Column Name: v_program_of_service_value

Column Type: varchar

Max Length: 100

The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar
Max Length: 20
'Service Code'.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE
Column Type: varchar
Max Length: 15
An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: reciept_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: check_number
Column Type: varchar
Max Length: 50
The check number.

Column Name: system_code
Column Type: varchar
Max Length: 50
System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number
Column Type: varchar
Max Length: 50
The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token
Column Type: varchar
Max Length: 50
The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 50
The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to

Column Type: varchar
Max Length: 50
The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code
Column Type: varchar
Max Length: 50
Adjustment Code.

Column Name: adjust_code_value
Column Type: varchar
Max Length: 4096
The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: contractual_write_off
Column Type: varchar
Max Length: 10
Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Date Of Receipt'.

Column Name: date_of_service
Column Type: date
'Date of Service'.

Column Name: device_name
Column Type: varchar
Max Length: 50
The name of the credit card device used to process the credit card payment.

Column Name: group_code_code
Column Type: varchar
Max Length: 50
'Group Code'.

Column Name: group_code_value
Column Type: varchar
Max Length: 4096
The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id
Column Type: varchar
Max Length: 50
The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num

Column Type: integer

The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code

Column Type: varchar

Max Length: 10

'Payment Location'.

Column Name: payment_location_value

Column Type: varchar

Max Length: 40

The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments

Column Type: varchar

Max Length: 80

'Posting Comments'

Column Name: receipt_reversed

Column Type: varchar

Max Length: 5

Will indicate if the receipt was reversed.

Column Name: type_of_payment

Column Type: varchar

Max Length: 50

Type Of payment.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist

Column Type: varchar

Max Length: 20

'Write Off By Liability Distribution'

Documentation for form: Spreadsheet_Remittance_Posting

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability
Column Type: numeric
The guarantor's liability.

Column Name: CLAIM_NUMBER
Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar
Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value
Column Type: varchar
Max Length: 40
The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers

Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Spreadsheet_Remittance_Posting

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Remittance_Posting

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code

Column Type: varchar

Max Length: 15

The program of the service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15

The practitioner ID of the service.

Column Name: duration

Column Type: numeric

The duration of the service.

Column Name: appointment_status_code

Column Type: varchar

Max Length: 15

The appointment status code related to this service.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time when this data row was last updated.

Column Name: billable_code

Column Type: varchar

Max Length: 5

'Billable'.

Column Name: number_of_clients

Column Type: varchar

Max Length: 15

The number of clients in the group if this is a group service.

Column Name: cost_of_service

Column Type: numeric

The 'Cost Of Service' of the service.

Column Name: co_staff_member_2

Column Type: varchar

Max Length: 20

The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name of the PROVIDER_ID of the service.

Column Name: date_of_service
Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar
Max Length: 20
Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar

Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar

Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar
Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date
Column Type: date
The date the service was first entered into the system.

Column Name: orig_entry_option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 50
The time the service was first entered into the system.

Column Name: orig_entry_user
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_user_id
Column Type: varchar
Max Length: 50
The user ID that first entered the service into the system.

Column Name: original_tx_code
Column Type: varchar
Max Length: 10
'Original Scheduled Service'.

Column Name: original_tx_value
Column Type: varchar
Max Length: 40
The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date
Column Type: date
'Orthodontic Banding Date'.

Column Name: primary_guarantor
Column Type: varchar
Max Length: 40
'Primary Guarantor'.

Column Name: prior_placement_date
Column Type: date
'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the service used to determine the offset from UTC.

Column Name: start_time
Column Type: varchar
Max Length: 10
The start time of the service.

Column Name: task_event_id
Column Type: varchar
Max Length: 40
The id of the task list event that created this service

Column Name: tooth_number
Column Type: varchar
Max Length: 50
'Tooth Number'.

Column Name: tooth_status_code
Column Type: varchar
Max Length: 50
'Tooth Status Code'.

Column Name: tooth_status_value
Column Type: varchar
Max Length: 50
The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code
Column Type: varchar

Max Length: 50
'Tooth Surface Code'.

Column Name: tooth_surface_shvalue
Column Type: varchar
Max Length: 255
The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value
Column Type: varchar
Max Length: 4096
The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
Is this a transfer service.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value
Column Type: varchar
Max Length: 50
The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service
Column Type: numeric
The units of the service.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Spreadsheet_Remittance_Posting

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service

Column Type: varchar

Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time

Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.Remittance_Batch_History

Table Description: This table returns the remittance batch data filed from the 'Spreadsheet Batch Remittance Posting' form.

Column Name: Remittance_Batch_History
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The facility where the remittance batch was created

Column Name: Adjustment_Amount
Column Type: double
Adjustment Amount

Column Name: Adjustment_Code
Column Type: varchar
Max Length: 50
Adjustment Code

Column Name: Adjustment_Value
Column Type: varchar
Max Length: 50
The description for the Adjustment_Code. See Adjustment_Code for more information.

Column Name: BATCHID
Column Type: varchar
Max Length: 50
Assigned batch ID.

Column Name: Batch_Description
Column Type: varchar
Max Length: 50
'Batch Description'

Column Name: Batch_Status
Column Type: varchar
Max Length: 50
Batch status - "O" (Open) or "C" (Closed)

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: Filed_By
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: Filed_By_Option
Column Type: varchar
Max Length: 40

Option Identifier

Column Name: Filed_By_User_Opt_ID
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: Filed_Date
Column Type: date
Data Entry Date

Column Name: Filed_Time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
Guarantor ID associated with the payment/adjustment.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 50
JOIN_TO_TX_HISTORY associated with the payment/adjustment.

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: Payment_Amount
Column Type: double
Payment Amount

Column Name: Payment_Code
Column Type: varchar
Max Length: 50
Payment Code

Column Name: Payment_Value
Column Type: varchar
Max Length: 50
The description for the Payment_Code. See Payment_Code for more information.

Column Name: Reversal_Status_Code
Column Type: varchar
Max Length: 50
Either "Y" or "N" - indicating if the remittance batch is reversed via the 'Batch Remittance Reversal' form.

Column Name: Reversal_Status_Value

Column Type: varchar

Max Length: 50

The description for the Reversal_Status_Code. See Reversal_Status_Code for more information.

Column Name: Transfer_Amount

Column Type: double

Transfer Amount

Column Name: Transfer_Code

Column Type: varchar

Max Length: 50

Transfer Code

Column Name: Transfer_Guarantor_ID

Column Type: varchar

Max Length: 50

Guarantor's name where the liability was transferred.

Column Name: Transfer_Guarantor_Name

Column Type: varchar

Max Length: 50

Guarantor where the liability was transferred.

Column Name: Transfer_Value

Column Type: varchar

Max Length: 50

The description for the Transfer_Code. See Transfer_Code for more information.

Column Name: Unique_Row_ID

Column Type: varchar

Max Length: 50

Unique Row ID

Column Name: check

Column Type: varchar

Max Length: 50

'Check #'

Column Name: date_of_receipt

Column Type: date

'Date Of Receipt'

Column Name: posting_date

Column Type: date

'Posting Date'

Column Name: receipt

Column Type: varchar

Max Length: 50

'Receipt'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.batch_remittance_claim

Table Description: This table returns claim information for Spreadsheet Batch Remittance Posting and 835s

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: BATCHID

Column Type: varchar

Max Length: 50

Assigned batch ID.

Column Name: CLAIMID

Column Type: varchar

Max Length: 50

Assigned Claim ID.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility where the remittance batch was created

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 50

Guarantor ID associated with the payment/adjustment.

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: adjustment_amount

Column Type: double

Adjustment Amount

Column Name: adjustment_code

Column Type: varchar

Max Length: 50

Adjustment Code

Column Name: adjustment_value

Column Type: varchar

Max Length: 50

The description for the adjustment_code. See adjustment_code for more information.

Column Name: balance

Column Type: double

Balance

Column Name: charge

Column Type: double

Total Charge

Column Name: check

Column Type: varchar

Max Length: 50

'Check #'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: description

Column Type: varchar

Max Length: 50

Description associated to the batch/835

Column Name: liability

Column Type: double

Liability

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: optionid

Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The name of the PATID of the service.

Column Name: payment_amount
Column Type: double
Payment Amount

Column Name: payment_code
Column Type: varchar
Max Length: 50
Payment Code

Column Name: payment_value
Column Type: varchar
Max Length: 50
The description for the payment_code. See payment_code for more information.

Column Name: posting_date
Column Type: date
'Posting Date'

Column Name: post_option
Column Type: varchar
Max Length: 50
835 or Spreadsheet Batch

Column Name: status
Column Type: varchar
Max Length: 50
Status - "O" (Open) or "C" (Closed)

Column Name: transfer_amount
Column Type: double
Transfer Amount

Column Name: transfer_code
Column Type: varchar
Max Length: 50
Transfer Code

Column Name: transfer_guar
Column Type: varchar
Max Length: 50
Guarantor where the liability was transferred.

Column Name: transfer_guar_name
Column Type: varchar
Max Length: 50
Guarantor's name where the liability was transferred.

Column Name: transfer_value
Column Type: varchar
Max Length: 50
The description for the transfer_code. See transfer_code for more information.

Column Name: uniqueID
Column Type: varchar
Max Length: 50
Unique ID inside of batch.

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode number.

Column Name: total_closed_charges
Column Type: numeric
Total dollar amount for all closed services in the episode.

Column Name: total_open_charges
Column Type: numeric
Total dollar amount for all open services in the episode.

Column Name: total_payments
Column Type: numeric
Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance
Column Type: numeric
Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar
Max Length: 40
The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The client's name.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the posting was entered.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2

Column Type: varchar

Max Length: 15

The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment
Column Type: date
'Date Of Payment'.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value
Column Type: varchar
Max Length: 40
The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount
Column Type: numeric
The amount posted using the payment_type_code.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code
Column Type: varchar
Max Length: 10
'Program'.

Column Name: v_program_of_service_value
Column Type: varchar
Max Length: 100
The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code
Column Type: varchar
Max Length: 10
The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value
Column Type: varchar
Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar

Max Length: 20

'Service Code'.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE

Column Type: varchar

Max Length: 15

An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: check_number

Column Type: varchar

Max Length: 50

The check number.

Column Name: system_code

Column Type: varchar

Max Length: 50

System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number

Column Type: varchar

Max Length: 50

The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token

Column Type: varchar

Max Length: 50

The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 50

The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to

Column Type: varchar

Max Length: 50

The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code

Column Type: varchar

Max Length: 50

Adjustment Code.

Column Name: adjust_code_value

Column Type: varchar

Max Length: 4096

The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: contractual_write_off

Column Type: varchar

Max Length: 10

Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: date_of_receipt

Column Type: date

'Date Of Receipt'.

Column Name: date_of_service

Column Type: date

'Date of Service'.

Column Name: device_name

Column Type: varchar

Max Length: 50

The name of the credit card device used to process the credit card payment.

Column Name: group_code_code

Column Type: varchar

Max Length: 50

'Group Code'.

Column Name: group_code_value

Column Type: varchar

Max Length: 4096

The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id

Column Type: varchar

Max Length: 50

The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num
Column Type: integer
The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code
Column Type: varchar
Max Length: 10
'Payment Location'.

Column Name: payment_location_value
Column Type: varchar
Max Length: 40
The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments
Column Type: varchar
Max Length: 80
'Posting Comments'

Column Name: receipt_reversed
Column Type: varchar
Max Length: 5
Will indicate if the receipt was reversed.

Column Name: type_of_payment
Column Type: varchar
Max Length: 50
Type Of payment.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist
Column Type: varchar
Max Length: 20
'Write Off By Liability Distribution'

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar

Max Length: 40

The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability

Column Type: numeric

The guarantor's liability.

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service'

Column Name: v_accounting_period
Column Type: date
The accounting period for the service.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the client ID.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date
Column Type: date
Date of entry

Column Name: v_claim_date
Column Type: date
'Date of Claim'

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid
Column Type: varchar
Max Length: 50
This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc
Column Type: varchar
Max Length: 50
This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar

Max Length: 5

'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code

Column Type: varchar

Max Length: 10

'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value

Column Type: varchar

Max Length: 40

The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage

Column Type: varchar

Max Length: 10

'Sliding Fee Coverage'

Column Name: split_units

Column Type: numeric

'Split Units'

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration

Column Type: varchar

Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers
Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5

The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge

Column Type: numeric

The full charge for the service.

Column Name: total_payments

Column Type: numeric

Total payments for service

Column Name: date_charge_closed

Column Type: date

Date the service was closed.

Column Name: transferred_service

Column Type: varchar

Max Length: 10

This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period

Column Type: date

Accounting Period

Column Name: client_name

Column Type: varchar

Max Length: 40

The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date

Column Type: date

The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code

Column Type: varchar

Max Length: 10

The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program of the service.

Column Name: PROVIDER_ID
Column Type: varchar
Max Length: 15
The practitioner ID of the service.

Column Name: duration
Column Type: numeric
The duration of the service.

Column Name: appointment_status_code
Column Type: varchar
Max Length: 15
The appointment status code related to this service.

Column Name: location_code
Column Type: varchar
Max Length: 50
'Location'.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: billable_code
Column Type: varchar
Max Length: 5
'Billable'.

Column Name: number_of_clients
Column Type: varchar
Max Length: 15
The number of clients in the group if this is a group service.

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: co_staff_member_2

Column Type: varchar
Max Length: 20
The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name of the PROVIDER_ID of the service.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar

Max Length: 20

Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Original Unique row id

Column Name: add_on_notes

Column Type: varchar

Max Length: 32768

'Add-On Notes'.

Column Name: add_svc_info_code

Column Type: varchar

Max Length: 50

'Additional Service Information'.

Column Name: add_svc_info_shval

Column Type: varchar

Max Length: 255

The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value

Column Type: varchar

Max Length: 4096

The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program

Column Type: varchar

Max Length: 10

The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time

Column Type: varchar

Max Length: 50

The 'Appointment End Time' related to this service.

Column Name: appt_group_id

Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar

Max Length: 50

The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration

Column Type: numeric

'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member

Column Type: varchar

Max Length: 15

The 'Co-Practitioner' of the service.

Column Name: data_control_identifier

Column Type: varchar

Max Length: 40

'Data Control Identifier'.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255

'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value

Column Type: varchar

Max Length: 4096

'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code

Column Type: varchar

Max Length: 50

'Emergency Indicator'.

Column Name: emergency_ind_value

Column Type: varchar

Max Length: 50

The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time

Column Type: varchar

Max Length: 10

The end time of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date

Column Type: date

'First Billing Date'.

Column Name: has_global_period_flag

Column Type: varchar

Max Length: 15

This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id

Column Type: varchar

Max Length: 15

The incident-to practitioner ID.

Column Name: incident_to_pract_name

Column Type: varchar

Max Length: 40

The name of the incident-to practitioner.

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4

Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar
Max Length: 40
'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar
Max Length: 32766
'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar

Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date
Column Type: date
The date the service was first entered into the system.

Column Name: orig_entry_option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 50
The time the service was first entered into the system.

Column Name: orig_entry_user
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_user_id
Column Type: varchar
Max Length: 50
The user ID that first entered the service into the system.

Column Name: original_tx_code
Column Type: varchar
Max Length: 10
'Original Scheduled Service'.

Column Name: original_tx_value
Column Type: varchar
Max Length: 40
The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date
Column Type: date
'Orthodontic Banding Date'.

Column Name: primary_guarantor
Column Type: varchar
Max Length: 40
'Primary Guarantor'.

Column Name: prior_placement_date
Column Type: date
'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value

Column Type: varchar

Max Length: 255

The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS

Column Type: varchar

Max Length: 40

The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc

Column Type: timestamp

the End of Service as UTC date and time.

Column Name: service_start_utc

Column Type: timestamp

the Start of Service as UTC date and time.

Column Name: service_status_code

Column Type: varchar

Max Length: 7

Is the service open or closed.

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone

Column Type: varchar

Max Length: 255

the timezone for the service used to determine the offset from UTC.

Column Name: start_time

Column Type: varchar

Max Length: 10

The start time of the service.

Column Name: task_event_id

Column Type: varchar

Max Length: 40

The id of the task list event that created this service

Column Name: tooth_number

Column Type: varchar

Max Length: 50

'Tooth Number'.

Column Name: tooth_status_code

Column Type: varchar

Max Length: 50

'Tooth Status Code'.

Column Name: tooth_status_value

Column Type: varchar

Max Length: 50

The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code

Column Type: varchar

Max Length: 50

'Tooth Surface Code'.

Column Name: tooth_surface_shvalue

Column Type: varchar

Max Length: 255

The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value

Column Type: varchar

Max Length: 4096

The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc

Column Type: varchar

Max Length: 40

Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service

Column Type: varchar

Max Length: 10

Is this a transfer service.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 50

'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 50

The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service

Column Type: numeric

The units of the service.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Spreadsheet_Batch_Remittance_Posting

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: program_code
Column Type: varchar
Max Length: 15
The code for the program in which the data is stored.

Column Name: cost_of_service
Column Type: varchar
Max Length: 10
'Cost Of Service (19999)'

Column Name: insurance_category_code
Column Type: varchar
Max Length: 15
'Insurance Charge Category (10021)'

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description associated with location_code. See location_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 40
The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service
Column Type: date
'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
Joins table to treatment history.

Column Name: CO_STAFFID
Column Type: varchar
Max Length: 40
'Co Staffid (10007)'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar

Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time
Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with `medical_diag_2_icd9_code`. See `medical_diag_2_icd9_code` for more information.

Column Name: `medical_diag_2_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: `medical_diag_3_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 ICD-10'

Column Name: `medical_diag_3_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_3_icd10_code`. See `medical_diag_3_icd10_code` for more information.

Column Name: `medical_diag_3_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 ICD-9'

Column Name: `medical_diag_3_icd9_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_3_icd9_code`. See `medical_diag_3_icd9_code` for more information.

Column Name: `medical_diag_3_imo_value`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 3 IMO'

Column Name: `medical_diag_4_icd10_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 4 ICD-10'

Column Name: `medical_diag_4_icd10_value`

Column Type: `varchar`

Max Length: 40

The description associated with `medical_diag_4_icd10_code`. See `medical_diag_4_icd10_code` for more information.

Column Name: `medical_diag_4_icd9_code`

Column Type: `varchar`

Max Length: 40

'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'

Column Name: notes_memo

Column Type: varchar

Max Length: 32766

'Appointment Notes Memo'

Column Name: notes_text

Column Type: varchar

Max Length: 255

'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service
Column Type: integer
'Is this a provider only service?'

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner Code'

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
'Referring Practitioner Name'

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider Code'

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
'Referring Provider Name'

Column Name: start_time
Column Type: varchar
Max Length: 10
'Service Start Time (60021)'

Column Name: units_of_service
Column Type: numeric
'Units Of Service (10014)'

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Client_Ledger

Table Name: SYSTEM.billing_tx_dist_fail_reason

Table Description: This table stores guarantors for which some or all liability failed to distribute, and the reasons why. This will only be stored if at least some liability ends up distributing to the guarantor of last resort.

Column Name: ID
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: date_of_service
Column Type: date
The date of the service.

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The ID of the guarantor to which the service liability either partially or fully failed to distribute.

Column Name: PLAN_ID
Column Type: varchar
Max Length: 10
The ID of the benefit plan to which the service liability either partially or fully failed to distribute.

Column Name: PLAN_LEVEL
Column Type: varchar
Max Length: 10
The number of the benefit plan level to which the service liability either partially or fully failed to distribute.

Column Name: messagecount
Column Type: integer
The unique ID for this distribution failure message.

Column Name: reason

Column Type: varchar

Max Length: 255

The explanation for why service liability partially or fully failed to distribute to the associated guarantor.

Documentation for form: Batch_Cash_Posting

Table Name: SYSTEM.billing_episode_totals

Table Description: This table returns the total dollar amount for services and postings in each episode for a client.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode number.

Column Name: total_closed_charges

Column Type: numeric

Total dollar amount for all closed services in the episode.

Column Name: total_open_charges

Column Type: numeric

Total dollar amount for all open services in the episode.

Column Name: total_payments

Column Type: numeric

Total dollar amount for all postings applied to services in the episode.

Column Name: episode_balance

Column Type: numeric

Remaining balance on the client's episode. Sum of 'total_closed_charges' and 'total_open_charges' less the 'total_payments' amount.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
The billing episode for the client. Will be "BEP" followed by the episode number.

Column Name: v_admit_date
Column Type: date
The admission date for the client's episode.

Column Name: v_discharge_date
Column Type: date
The discharge date for the client's episode.

Column Name: v_program_code
Column Type: varchar
Max Length: 10
The program of admission for the client's episode.

Column Name: v_program_value
Column Type: varchar
Max Length: 40
The description for the v_program_code. See program_code for more information.

Column Name: v_program_X_rrg_code
Column Type: varchar
Max Length: 10
The selection in the field 'RRG' of the 'Program Maintenance' form for the v_program_code.

Column Name: v_program_X_rrg_value
Column Type: varchar
Max Length: 40
The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The client's name.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Batch_Cash_Posting

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the posting was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2
Column Type: varchar
Max Length: 15
The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment
Column Type: date
'Date Of Payment'.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value

Column Type: varchar

Max Length: 40

The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount

Column Type: numeric

The amount posted using the payment_type_code.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code

Column Type: varchar

Max Length: 10

'Program'.

Column Name: v_program_of_service_value

Column Type: varchar

Max Length: 100

The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar
Max Length: 20
'Service Code'.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE
Column Type: varchar
Max Length: 15
An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: reciept_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: check_number
Column Type: varchar
Max Length: 50
The check number.

Column Name: system_code
Column Type: varchar
Max Length: 50
System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number
Column Type: varchar
Max Length: 50
The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token
Column Type: varchar
Max Length: 50
The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 50
The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to

Column Type: varchar
Max Length: 50
The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code
Column Type: varchar
Max Length: 50
Adjustment Code.

Column Name: adjust_code_value
Column Type: varchar
Max Length: 4096
The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: contractual_write_off
Column Type: varchar
Max Length: 10
Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Date Of Receipt'.

Column Name: date_of_service
Column Type: date
'Date of Service'.

Column Name: device_name
Column Type: varchar
Max Length: 50
The name of the credit card device used to process the credit card payment.

Column Name: group_code_code
Column Type: varchar
Max Length: 50
'Group Code'.

Column Name: group_code_value
Column Type: varchar
Max Length: 4096
The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id
Column Type: varchar
Max Length: 50
The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num

Column Type: integer

The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code

Column Type: varchar

Max Length: 10

'Payment Location'.

Column Name: payment_location_value

Column Type: varchar

Max Length: 40

The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments

Column Type: varchar

Max Length: 80

'Posting Comments'

Column Name: receipt_reversed

Column Type: varchar

Max Length: 5

Will indicate if the receipt was reversed.

Column Name: type_of_payment

Column Type: varchar

Max Length: 50

Type Of payment.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist

Column Type: varchar

Max Length: 20

'Write Off By Liability Distribution'

Documentation for form: Batch_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_detail

Table Description: This table returns the distribution of liability for a client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the service is entered.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for the which the guarantor_liability is assigned.

Column Name: guarantor_liability
Column Type: numeric
The guarantor's liability.

Column Name: CLAIM_NUMBER
Column Type: varchar

Max Length: 25

The claim number assigned to a client's service.

Column Name: guarantor_total_payments

Column Type: numeric

The sum of all postings for the guarantor's liability.

Column Name: v_SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code'

Column Name: v_program_of_visit_code

Column Type: varchar

Max Length: 40

'Program'

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 10

'Practitioner'

Column Name: v_program_X_rrg_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_rrg_value

Column Type: varchar

Max Length: 40

The description for the v_program_X_rrg_code. See v_program_X_rrg_code for more information.

Column Name: v_service_value

Column Type: varchar

Max Length: 100

The description for the v_service_code. See v_service_code for more information.

Column Name: v_program_of_visit_value

Column Type: varchar

Max Length: 40

The description for the v_program_of_visit_code. See v_program_of_visit_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: v_accounting_period

Column Type: date

The accounting period for the service.

Column Name: v_client_name

Column Type: varchar

Max Length: 40

The name associated with the client ID.

Column Name: v_PROVIDER_NAME

Column Type: varchar

Max Length: 40

The name associated with the v_PROVIDER_ID.

Column Name: data_entry_date

Column Type: date

Date of entry

Column Name: v_claim_date

Column Type: date

'Date of Claim'

Column Name: service_status_value

Column Type: varchar

Max Length: 10

The description for the service_status_code. See service_status_code for more information.

Column Name: JOIN_TO_PAYMENT_HISTORY_

Column Type: varchar

Max Length: 15

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: JOIN_TO_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the authorization.

Column Name: JOIN_TO_CER_unq_calc

Column Type: varchar

Max Length: 50

This is the link to the authorization that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: ORIG_JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: auth_number_calc

Column Type: varchar

Max Length: 50

This is the authorization number that is used to determine used dollars, units, and visits and will become locked once the service is closed. If no auth was valid at the time the service was closed, this field will be blank.

Column Name: authorization_number

Column Type: varchar

Max Length: 50

'Authorization Number'

Column Name: billing_units

Column Type: numeric

'Billing Units'

Column Name: claimed_CER_uniqueid

Column Type: varchar

Max Length: 50

This is the unique ID associated with the claimed authorization.

Column Name: claimed_auth_number

Column Type: varchar

Max Length: 50

'Claimed Authorization Number'

Column Name: date_of_svc_close

Column Type: date

'Date of Service Closed'

Column Name: re_bill_claim_number

Column Type: varchar

Max Length: 50

This will show the last claim under which this service was re-billed to this guarantor.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Code (such as "6", "7" or "8") associated with the re_bill_claim_number.

Column Name: re_bill_status_value

Column Type: varchar

Max Length: 50

This will show the Claim Submission Reason Value (such as "Corrected", "Replacement" or "Void") associated with the re_bill_claim_number.

Column Name: remaining_balance

Column Type: double

Remaining balance available to the guarantor. Equal to total liability - total payments.

Column Name: slide_fee_plan_level

Column Type: varchar
Max Length: 5
'Sliding Fee Plan Level'

Column Name: slide_fee_scale_val_code
Column Type: varchar
Max Length: 10
'Sliding Fee Scale Value'

Column Name: slide_fee_scale_val_value
Column Type: varchar
Max Length: 40
The description for the slide_fee_scale_val_code. See slide_fee_scale_val_code for more information.

Column Name: sliding_fee_coverage
Column Type: varchar
Max Length: 10
'Sliding Fee Coverage'

Column Name: split_units
Column Type: numeric
'Split Units'

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value
Column Type: varchar
Max Length: 40
The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_duration
Column Type: varchar
Max Length: 20
'Duration'

Column Name: v_location_code
Column Type: varchar
Max Length: 20
'Location'

Column Name: v_modifiers

Column Type: varchar
Max Length: 20
'Modifiers'

Documentation for form: Batch_Cash_Posting

Table Name: SYSTEM.billing_tx_charge_totals

Table Description: This table returns the billing service totals

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the service was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: bep_stuff
Column Type: varchar
Max Length: 15
This will return "BEP" followed by the episode number for the client.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: service_status_code
Column Type: varchar
Max Length: 5
The code for the status of the service. "O" if the service is "Open", otherwise "C".

Column Name: full_charge
Column Type: numeric
The full charge for the service.

Column Name: total_payments
Column Type: numeric
Total payments for service

Column Name: date_charge_closed
Column Type: date
Date the service was closed.

Column Name: transferred_service
Column Type: varchar
Max Length: 10
This will indicate if the row is the result of a transfer.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID in which the service was entered.

Column Name: v_accounting_period
Column Type: date
Accounting Period

Column Name: client_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: data_entry_date
Column Type: date
The date the row was last updated

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: transfer_to_guarantor_code
Column Type: varchar
Max Length: 10
The 'Guarantor_ID' the user selected to transfer liability to.

Column Name: transfer_to_guarantor_value

Column Type: varchar

Max Length: 40

The description for the transfer_to_guarantor_code. See transfer_to_guarantor_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Batch_Cash_Posting

Table Name: SYSTEM.billing_tx_history

Table Description: This table returns the history of client services

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: program_code

Column Type: varchar

Max Length: 15

The program of the service.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15

The practitioner ID of the service.

Column Name: duration

Column Type: numeric

The duration of the service.

Column Name: appointment_status_code

Column Type: varchar

Max Length: 15

The appointment status code related to this service.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time when this data row was last updated.

Column Name: billable_code

Column Type: varchar

Max Length: 5

'Billable'.

Column Name: number_of_clients

Column Type: varchar

Max Length: 15

The number of clients in the group if this is a group service.

Column Name: cost_of_service

Column Type: numeric

The 'Cost Of Service' of the service.

Column Name: co_staff_member_2

Column Type: varchar

Max Length: 20

The 'Second Co Staff Member' of the service.

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

The 'Covered Charge Category' for the service code.

Column Name: accounting_period
Column Type: date
The accounting period of the service.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
The original service code if the service is now deleted.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description for the program_code. See program_code for more information.

Column Name: appointment_status_value
Column Type: varchar
Max Length: 40
The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: location_value
Column Type: varchar
Max Length: 40
The description for the location_code. See location_code for more information.

Column Name: insurance_category_value
Column Type: varchar
Max Length: 100
The description for the insurance_category_code. See insurance_category_code for more information.

Column Name: v_service_value
Column Type: varchar
Max Length: 40
The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: v_PROVIDER_NAME
Column Type: varchar
Max Length: 40
The name of the PROVIDER_ID of the service.

Column Name: date_of_service
Column Type: date

The date of the service.

Column Name: billable_value

Column Type: varchar

Max Length: 20

The description for the billable_code. See billable_code for more information.

Column Name: program_X_address_city_state

Column Type: varchar

Max Length: 40

'Program Address - City', 'Program Address - State' and 'Program Address - Zipcode' for the program_code of the service.

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

'Location' for the program_code of the service.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 15

'RRG' for the program_code of the service.

Column Name: program_X_address_street

Column Type: varchar

Max Length: 40

'Program Address - Street' for the program_code of the service.

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Program Tax Id' for the program_code of the service.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 15

'Treatment Setting' for the program_code of the service.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 15

'Program Type' for the program_code of the service.

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description for the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description for the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description for the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description for the program_X_type_code. See program_X_type_code for more information.

Column Name: v_patient_name

Column Type: varchar

Max Length: 40

The name of the PATID of the service.

Column Name: age_on_date_of_service_

Column Type: numeric

The client's age at the time of service.

Column Name: appt_site_name

Column Type: varchar

Max Length: 40

The group name for the appt_site_id. See appt_site_id for more information.

Column Name: JOIN_TO_CCBHC

Column Type: varchar

Max Length: 40

The ID of the associated CCBHC service

Column Name: JOIN_TO_CODE_CHART_SERV

Column Type: varchar

Max Length: 100

The medical coding chart service row ID (SYSTEM.CodingServices) if the service originated from the medical coding chart.

Column Name: JOIN_TO_CODE_CHART_SUPP

Column Type: varchar

Max Length: 100

The medical coding chart supplemental diagnosis service row ID (SYSTEM.CodingServices).

Column Name: JOIN_TO_document_id

Column Type: varchar

Max Length: 50

The document in DocM.document_image associated with this service, as documentation in lieu of a progress note or other service documentation.

Column Name: JOIN_TO_ENC

Column Type: varchar

Max Length: 50

Join to Avatar PH encounter data from Encounter Recording, Encounter Recording (Charge Fee Access) (PH.encounter_history table) and Dental Encounter Recording (PH.dental_encounter table) forms.

Column Name: JOIN_TO_GROUP_NOTE

Column Type: varchar

Max Length: 40

Join to Group Note.

Column Name: JOIN_TO_PARENT_TX

Column Type: varchar

Max Length: 50

The parent service DD. This is available for the split service when the split service functionality is used.

Column Name: JOIN_TO_Roll_Up

Column Type: varchar

Max Length: 50

Join to the roll-up service.

Column Name: join_to_ss_tx_history

Column Type: varchar

Max Length: 40

Join to site specific treatment information (SYSTEM.site_specific_tx_history).

Column Name: JOIN_TO_SVCDocumentation

Column Type: varchar

Max Length: 40

The service documentation modeled table row the service is attached to.

Column Name: MSOCLAIMID

Column Type: integer

The Avatar MSO claim ID if the service originated in MSO.

Column Name: MSO_FUNDSRCID

Column Type: varchar

Max Length: 20

The Avatar MSO funding source ID if the service originated in MSO.

Column Name: MSO_PROVID

Column Type: varchar

Max Length: 20

The Avatar MSO provider ID if the service originated in MSO.

Column Name: MSO_authorization_number

Column Type: varchar

Max Length: 15

The Avatar MSO authorization number if the service originated in MSO.

Column Name: NOT_uniqueid

Column Type: varchar
Max Length: 20
Join to Avatar CWS Progress Notes.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Original Unique row id

Column Name: add_on_notes
Column Type: varchar
Max Length: 32768
'Add-On Notes'.

Column Name: add_svc_info_code
Column Type: varchar
Max Length: 50
'Additional Service Information'.

Column Name: add_svc_info_shval
Column Type: varchar
Max Length: 255
The description for the add_svc_info_code limited to 255 characters. See add_svc_info_code for more information.

Column Name: add_svc_info_value
Column Type: varchar
Max Length: 4096
The description for the add_svc_info_code. See add_svc_info_code for more information.

Column Name: admission_program
Column Type: varchar
Max Length: 10
The admission program for the PATID and EPISODE_NUMBER of the service.

Column Name: appt_end_time
Column Type: varchar
Max Length: 50
The 'Appointment End Time' related to this service.

Column Name: appt_group_id
Column Type: varchar
Max Length: 50
The 'Group #' related to this service.

Column Name: apt_group_name
Column Type: varchar
Max Length: 40
The group name for the appt_group_id. See appt_group_id for more information.

Column Name: appt_site_id
Column Type: varchar
Max Length: 50
The 'Appointment Site' related to this service.

Column Name: appt_start_time
Column Type: varchar
Max Length: 50
The 'Appointment Start Time' related to this service.

Column Name: auto_accident_place_code
Column Type: varchar
Max Length: 50
'Form Locator 10 (Auto Accident, Place)' (State Dictionary).

Column Name: auto_accident_place_val
Column Type: varchar
Max Length: 50
The description for the auto_accident_place_code. See auto_accident_place_code for more information.

Column Name: billing_status_code
Column Type: varchar
Max Length: 50
'Service Status'.

Column Name: billing_status_value
Column Type: varchar
Max Length: 50
The description for the billing_status_code. See billing_status_code for more information.

Column Name: cal_billing_units
Column Type: numeric
'Cal Billing Units'

Column Name: confidential_service_code
Column Type: varchar
Max Length: 50
'Confidential Service' from Avatar PH.

Column Name: confidential_service_val
Column Type: varchar
Max Length: 50
The description for the confidential_service_code. See confidential_service_code for more information.

Column Name: co_staff_duration
Column Type: numeric
'Co-Practitioner 2 Duration (Minutes)'

Column Name: co_staff_member
Column Type: varchar

Max Length: 15
The 'Co-Practitioner' of the service.

Column Name: data_control_identifier
Column Type: varchar
Max Length: 40
'Data Control Identifier'.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_accident
Column Type: date
'Date Of Accident (2300-DTP-03)'.

Column Name: date_to_bill_rollup_service
Column Type: date
Date To Bill Roll-Up Service.

Column Name: delay_reason_code
Column Type: varchar
Max Length: 15
'Delay Reason Code '.

Column Name: delay_reason_value
Column Type: varchar
Max Length: 50
The description for the delay_reason_code. See delay_reason_code for more information.

Column Name: det_age_on_date_of_svc
Column Type: varchar
Max Length: 50
The client's age in days, months and years at the time of service.

Column Name: discipline_code
Column Type: varchar
Max Length: 255
'Discipline'.

Column Name: discipline_value
Column Type: varchar
Max Length: 255
The description for the discipline_code. See discipline_code for more information.

Column Name: ebps_code
Column Type: varchar
Max Length: 255
'Evidence Based Practices'

Column Name: ebps_sh_val
Column Type: varchar
Max Length: 255
'The description associated with ebps_code. See ebps_code for more information.

Column Name: ebps_value
Column Type: varchar
Max Length: 4096
'The description associated with ebps_code. See ebps_code for more information.

Column Name: emergency_ind_code
Column Type: varchar

Max Length: 50
'Emergency Indicator'.

Column Name: emergency_ind_value
Column Type: varchar
Max Length: 50
The description for the emergency_ind_code. See emergency_ind_code for more information.

Column Name: end_time
Column Type: varchar
Max Length: 10
The end time of the service.

Column Name: fee_override_indicator
Column Type: varchar
Max Length: 50
Indicates if the fee for this service has been overridden from the original value.

Column Name: first_billing_date
Column Type: date
'First Billing Date'.

Column Name: has_global_period_flag
Column Type: varchar
Max Length: 15
This is set if the service code has a 'Global Period'.

Column Name: incident_to_pract_id
Column Type: varchar
Max Length: 15
The incident-to practitioner ID.

Column Name: incident_to_pract_name
Column Type: varchar
Max Length: 40
The name of the incident-to practitioner.

Column Name: initial_treatment_date
Column Type: date
'Initial Treatment Date (2300-DTP-03)'.

Column Name: is_ccbhc_service_code
Column Type: varchar
Max Length: 5
Indicates if this service was created as a CCBHC service.

Column Name: is_ccbhc_service_value
Column Type: varchar
Max Length: 10
The description for is_ccbhc_service_code. See is_ccbhc_service_code for more information.

Column Name: is_cqi
Column Type: bit
Flag for determining if this is a Clinical Quality Indicator service.

Column Name: is_overage_service_code
Column Type: varchar
Max Length: 5
Was this service created as an overage service.

Column Name: is_overage_service_value
Column Type: varchar
Max Length: 10
The description for the is_overage_service_code. See is_overage_service_code for more information.

Column Name: is_roll_up_service_code
Column Type: varchar
Max Length: 5
Was this service created as a roll-up service.

Column Name: is_roll_up_service_value
Column Type: varchar
Max Length: 10
The description for the is_roll_up_service_code. See is_roll_up_service_code for more information.

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
Not viewable in SQL.

Column Name: join_to_tx_hist_for_addon
Column Type: varchar
Max Length: 40
Join to unique row for the primary service of an add on service.

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 100
The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD10 code.

Column Name: medical_diag_1_icd10_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' ICD9 code.

Column Name: medical_diag_1_icd9_value
Column Type: varchar
Max Length: 40
The description for the medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1' IMO.

Column Name: medical_diag_2_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2' ICD10 code.

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' ICD9 code.

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2' IMO.

Column Name: medical_diag_3_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD10 code.

Column Name: medical_diag_3_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' ICD9 code.

Column Name: medical_diag_3_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 3' IMO.

Column Name: medical_diag_4_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD10 code.

Column Name: medical_diag_4_icd10_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' ICD9 code.

Column Name: medical_diag_4_icd9_value

Column Type: varchar

Max Length: 40

The description for the medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 4' IMO.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: missed_visit_notes

Column Type: varchar

Max Length: 32766

'Missed Visit Notes' from Avatar Appointment Scheduling.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: mso_eob_number
Column Type: integer
The Avatar MSO EOB number if the service originated in MSO.

Column Name: note_ref_code_837_code
Column Type: varchar
Max Length: 50
'Note Reference Code (837 Billing)'.

Column Name: note_ref_code_837_value
Column Type: varchar
Max Length: 50
The description for the note_ref_code_837_code. See note_ref_code_837_code for more information.

Column Name: note_ref_txt_837
Column Type: varchar
Max Length: 80
'Note Reference Text (837 Billing)'.

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes' from Avatar Appointment Scheduling.

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes' from Avatar Appointment Scheduling limited to 255 characters.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 40
The unique ID of the form that last updated the row.

Column Name: oral_cavity_desig_code
Column Type: varchar
Max Length: 50
'Oral Cavity Designation Code'.

Column Name: oral_cavity_desig_value
Column Type: varchar
Max Length: 50
The description for the oral_cavity_desig_code. See oral_cavity_desig_code for more information.

Column Name: orig_entry_by

Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_date
Column Type: date
The date the service was first entered into the system.

Column Name: orig_entry_option_id
Column Type: varchar
Max Length: 50
The unique ID of the form that first entered the service into the system.

Column Name: orig_entry_time
Column Type: varchar
Max Length: 50
The time the service was first entered into the system.

Column Name: orig_entry_user
Column Type: varchar
Max Length: 50
The username that first entered the service into the system.

Column Name: orig_entry_user_id
Column Type: varchar
Max Length: 50
The user ID that first entered the service into the system.

Column Name: original_tx_code
Column Type: varchar
Max Length: 10
'Original Scheduled Service'.

Column Name: original_tx_value
Column Type: varchar
Max Length: 40
The description for the original_tx_code. See original_tx_code for more information.

Column Name: orthodontic_banding_date
Column Type: date
'Orthodontic Banding Date'.

Column Name: primary_guarantor
Column Type: varchar
Max Length: 40
'Primary Guarantor'.

Column Name: prior_placement_date
Column Type: date
'Prior Placement Date'.

Column Name: prosth_crown_inlay_code
Column Type: varchar
Max Length: 50
'Prosthesis, Crown Or Inlay Code'.

Column Name: prosth_crown_inlay_value
Column Type: varchar
Max Length: 50
The description for the prosth_crown_inlay_code. See prosth_crown_inlay_code for more information.

Column Name: psycho_add_on_duration
Column Type: integer
'Psychotherapy Add-On Duration'.

Column Name: referring_practitioner_code
Column Type: varchar
Max Length: 10
'Referring Practitioner'.

Column Name: referring_practitioner_name
Column Type: varchar
Max Length: 50
The name of the referring_practitioner_code.

Column Name: referring_provider_code
Column Type: varchar
Max Length: 10
'Referring Provider'.

Column Name: referring_provider_name
Column Type: varchar
Max Length: 50
The name of the referring_provider_code.

Column Name: related_causes_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'.

Column Name: related_causes_mult_value
Column Type: varchar
Max Length: 255
The description for the related_causes_code. See related_causes_code for more information.

Column Name: service_documentation_NS
Column Type: varchar
Max Length: 40
The service documentation namespace that the modeled table resides in.

Column Name: service_end_utc
Column Type: timestamp
the End of Service as UTC date and time.

Column Name: service_start_utc
Column Type: timestamp
the Start of Service as UTC date and time.

Column Name: service_status_code
Column Type: varchar
Max Length: 7
Is the service open or closed.

Column Name: service_status_value
Column Type: varchar
Max Length: 10
The description for the service_status_code. See service_status_code for more information.

Column Name: service_utc_timezone
Column Type: varchar
Max Length: 255
the timezone for the service used to determine the offset from UTC.

Column Name: start_time
Column Type: varchar
Max Length: 10
The start time of the service.

Column Name: task_event_id
Column Type: varchar
Max Length: 40
The id of the task list event that created this service

Column Name: tooth_number
Column Type: varchar
Max Length: 50
'Tooth Number'.

Column Name: tooth_status_code
Column Type: varchar
Max Length: 50
'Tooth Status Code'.

Column Name: tooth_status_value
Column Type: varchar
Max Length: 50
The description for the tooth_status_code. See tooth_status_code for more information.

Column Name: tooth_surface_code
Column Type: varchar

Max Length: 50
'Tooth Surface Code'.

Column Name: tooth_surface_shvalue
Column Type: varchar
Max Length: 255
The description for the tooth_surface_code limited to 255 characters. See tooth_surface_code for more information.

Column Name: tooth_surface_value
Column Type: varchar
Max Length: 4096
The description for the tooth_surface_code. See tooth_surface_code for more information.

Column Name: total_duration_crisis_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Crisis".

Column Name: total_duration_other_svc
Column Type: varchar
Max Length: 40
Total duration if 'Service Code Type' of SERVICE_CODE is "Other".

Column Name: transferred_service
Column Type: varchar
Max Length: 10
Is this a transfer service.

Column Name: treatment_service_code
Column Type: varchar
Max Length: 50
'Treatment Service' for the program_code of the service.

Column Name: treatment_service_value
Column Type: varchar
Max Length: 50
The description for the treatment_service_code. See treatment_service_code for more information.

Column Name: units_of_service
Column Type: numeric
The units of the service.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_deleted_service_value

Column Type: varchar

Max Length: 40

The description for the deleted_service_code. See deleted_service_code for more information.

Documentation for form: Batch_Cash_Posting

Table Name: SYSTEM.staff_tx_history

Table Description: This table returns all staff services stored regardless of source.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: STAFFID

Column Type: varchar

Max Length: 10

The staff ID associated with the data.

Column Name: STREG_INDEX

Column Type: varchar

Max Length: 20

A unique ID used to identify a row of data.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

'Service Code (10002)'

Column Name: location_code

Column Type: varchar

Max Length: 15

'Location (10006)'

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: program_code

Column Type: varchar

Max Length: 15

The code for the program in which the data is stored.

Column Name: cost_of_service

Column Type: varchar

Max Length: 10

'Cost Of Service (19999)'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 15

'Insurance Charge Category (10021)'

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with v_service_code. See v_service_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: insurance_category_value

Column Type: varchar

Max Length: 40

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: date_of_service

Column Type: date

'Date Of Service (10001)'

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

Joins table to treatment history.

Column Name: CO_STAFFID

Column Type: varchar

Max Length: 40

'Co Staffid (10007)'

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode (12345)'

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the service.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: accounting_period
Column Type: date
'Accounting Period (10032)'

Column Name: deleted_service_code
Column Type: varchar
Max Length: 20
'Deleted Service Code (10033)'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the service

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the service.

Column Name: duration
Column Type: varchar
Max Length: 50
'Duration'

Column Name: end_time

Column Type: varchar
Max Length: 10
'Service End Time (60022)'

Column Name: jointodiagnosisobject1
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 JOIN (10050)'

Column Name: jointodiagnosisobject2
Column Type: varchar
Max Length: 40
'Medical Diagnosis 2 JOIN (10051)'

Column Name: jointodiagnosisobject3
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 JOIN (10080)'

Column Name: jointodiagnosisobject4
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 JOIN (10081)'

Column Name: medical_diagnosis1_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 1 Code'

Column Name: medical_diagnosis1_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 2 Code'

Column Name: medical_diagnosis2_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diag_1_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 1 ICD-10'

Column Name: medical_diag_1_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd10_code. See medical_diag_1_icd10_code for more information.

Column Name: medical_diag_1_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 ICD-9'

Column Name: medical_diag_1_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_1_icd9_code. See medical_diag_1_icd9_code for more information.

Column Name: medical_diag_1_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 1 IMO'

Column Name: medical_diag_2_icd10_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-10'

Column Name: medical_diag_2_icd10_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd10_code. See medical_diag_2_icd10_code for more information.

Column Name: medical_diag_2_icd9_code

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 ICD-9'

Column Name: medical_diag_2_icd9_value

Column Type: varchar

Max Length: 40

The description associated with medical_diag_2_icd9_code. See medical_diag_2_icd9_code for more information.

Column Name: medical_diag_2_imo_value

Column Type: varchar

Max Length: 40

'Medical Diagnosis 2 IMO'

Column Name: medical_diag_3_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-10'

Column Name: medical_diag_3_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd10_code. See medical_diag_3_icd10_code for more information.

Column Name: medical_diag_3_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 ICD-9'

Column Name: medical_diag_3_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_3_icd9_code. See medical_diag_3_icd9_code for more information.

Column Name: medical_diag_3_imo_value
Column Type: varchar
Max Length: 40
'Medical Diagnosis 3 IMO'

Column Name: medical_diag_4_icd10_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-10'

Column Name: medical_diag_4_icd10_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd10_code. See medical_diag_4_icd10_code for more information.

Column Name: medical_diag_4_icd9_code
Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 ICD-9'

Column Name: medical_diag_4_icd9_value
Column Type: varchar
Max Length: 40
The description associated with medical_diag_4_icd9_code. See medical_diag_4_icd9_code for more information.

Column Name: medical_diag_4_imo_value

Column Type: varchar
Max Length: 40
'Medical Diagnosis 4 IMO'

Column Name: medical_diagnosis3_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 3 Code'

Column Name: medical_diagnosis3_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code
Column Type: varchar
Max Length: 10
'Medical Diagnosis 4 Code'

Column Name: medical_diagnosis4_value
Column Type: varchar
Max Length: 40
The description associated with medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers
Column Type: varchar
Max Length: 50
'Modifiers'

Column Name: notes_memo
Column Type: varchar
Max Length: 32766
'Appointment Notes Memo'

Column Name: notes_text
Column Type: varchar
Max Length: 255
'Appointment Notes Text'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: provider_only_service

Column Type: integer

'Is this a provider only service?'

Column Name: referring_practitioner_code

Column Type: varchar

Max Length: 10

'Referring Practitioner Code'

Column Name: referring_practitioner_name

Column Type: varchar

Max Length: 50

'Referring Practitioner Name'

Column Name: referring_provider_code

Column Type: varchar

Max Length: 10

'Referring Provider Code'

Column Name: referring_provider_name

Column Type: varchar

Max Length: 50

'Referring Provider Name'

Column Name: start_time

Column Type: varchar

Max Length: 10

'Service Start Time (60021)'

Column Name: units_of_service

Column Type: numeric

'Units Of Service (10014)'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Print_Bill

Table Name: SYSTEM.billing_claim_history_tx_detail

Table Description: This table returns all services that currently have a claim number.

Column Name: billing_claim_history_tx_detail

Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the claim was created.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the claim was created.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the client ID for which the service is claimed.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the claim was created.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number assigned to the client's service.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 10
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: claim_date
Column Type: date
The date the claim was created.

Column Name: claim_submitter_id
Column Type: varchar
Max Length: 40
'Claim submitter ID'

Column Name: clm_sub_reas_code
Column Type: varchar

Max Length: 2

The value in Loop 2300, Segment CLM-05-3 of the 837 for the claim. Will be "1" for an Original claim, or the code for 'Claim Submission Reason Code' in the 'Electronic Re-Billing Service Assignment' form for re-bills.

Column Name: clm_sub_reas_value

Column Type: varchar

Max Length: 50

The description associated with clm_sub_reas_code. See clm_sub_reas_code for more information.

Column Name: date_of_claim

Column Type: varchar

Max Length: 15

The date entered in 'Date of Claim' when the claim was created.

Column Name: fac_code_qua

Column Type: varchar

Max Length: 2

Will be "A" for an 837 Institutional, and "B" for an 837 Professional 5010.

Column Name: fac_type_code

Column Type: varchar

Max Length: 2

The 'Place of Service' extended dictionary for the 'Location' dictionary value.

Column Name: fac_type_value

Column Type: varchar

Max Length: 50

The description associated with fac_type_code. See fac_type_code for more information.

Column Name: first_service_of_claim

Column Type: date

The date for the client ID's first service included in the claim.

Column Name: last_service_of_claim

Column Type: date

The date for the client ID's last service included in the claim.

Column Name: line_item_cont_num

Column Type: varchar

Max Length: 50

The line item count.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

The flag for a rebill of the claim.

Column Name: total_claim_liability

Column Type: numeric

The sum of all charges included in the claim. Will be equal to 'total_bill_amount' from the 'billing_claim_history' table.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Retroactive_Payor_Change

Table Name: SYSTEM.retro_payor_change

Table Description: This table returns the history of the 'Retroactive Payor Change' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 50

Unique row id.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: assign_to_payor

Column Type: varchar

Max Length: 20

The guarantor assigned to.

Column Name: compilation_date

Column Type: varchar

Max Length: 50

Date of compile.

Column Name: compilation_time
Column Type: varchar
Max Length: 50
Time of compile.

Column Name: compiled_by
Column Type: varchar
Max Length: 50
User ID that created the compile.

Column Name: compiled_or_posted
Column Type: varchar
Max Length: 50
Indicates if compiled or posted.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_option_id
Column Type: varchar
Max Length: 20
The form # that last updated this data row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 20
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name that last updated this data row.

Column Name: fc_trans_from
Column Type: varchar
Max Length: 32766
Financial class that liability transferred from.

Column Name: from_date
Column Type: varchar
Max Length: 20
From date.

Column Name: payor_code
Column Type: varchar
Max Length: 50
Guarantor number.

Column Name: payor_name
Column Type: varchar
Max Length: 50
Guarantor name.

Column Name: payors_trans_from
Column Type: varchar
Max Length: 32766
The guarantor transferred from.

Column Name: post_amount
Column Type: varchar
Max Length: 50
Posted amount.

Column Name: post_date
Column Type: varchar
Max Length: 20
Posted date.

Column Name: progs_to_excl
Column Type: varchar
Max Length: 32766
Programs to be excluded.

Column Name: receipt_date
Column Type: varchar
Max Length: 20
Date of receipt.

Column Name: to_date
Column Type: varchar
Max Length: 20
To date.

Column Name: transfer_code
Column Type: varchar
Max Length: 20
Transfer code used.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Crystal_Self_Pay_Bill

Table Name: SYSTEM.billing_selfpay_index

Table Description: This table returns index information for selfpay billing

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_NUMBER
Column Type: varchar
Max Length: 50
The unique file number.

Column Name: GUARANTOR_ID
Column Type: varchar

Max Length: 50
The guarantor ID associated with the data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: S_INDEX
Column Type: varchar
Max Length: 50
The unique historic associated with the data.

Column Name: adjustments
Column Type: numeric
Adjustments associated with the data.

Column Name: admission_date
Column Type: date
The date the client was admitted to the episode of service.

Column Name: aging_category_other_120
Column Type: numeric
Aging category other guarantor 120 days.

Column Name: aging_category_other_150
Column Type: numeric
Aging category other guarantor 150 days.

Column Name: aging_category_other_30
Column Type: numeric
Aging category other guarantor 30 days.

Column Name: aging_category_other_60
Column Type: numeric
Aging category other guarantor 60 days.

Column Name: aging_category_other_90
Column Type: numeric
Aging category other guarantor 90 days.

Column Name: aging_category_other_curr
Column Type: numeric
Aging category other guarantor current day.

Column Name: aging_category_self_120
Column Type: numeric
Aging category self pay 120 days.

Column Name: aging_category_self_150

Column Type: numeric
Aging category self pay 150 days.

Column Name: aging_category_self_30
Column Type: numeric
Aging category self pay 30 days.

Column Name: aging_category_self_60
Column Type: numeric
Aging category self pay 60 days.

Column Name: aging_category_self_90
Column Type: numeric
Aging category self pay 90 days.

Column Name: aging_category_self_curr
Column Type: numeric
Aging category self pay current day.

Column Name: balance_due
Column Type: numeric
Balance due.

Column Name: beginning_balance
Column Type: numeric
Beginning balance.

Column Name: bill_begin_date
Column Type: date
Beginning date for the bill.

Column Name: bill_end_date
Column Type: date
Ending date for the bill.

Column Name: checks_payable_to
Column Type: varchar
Max Length: 50
Checks payable to.

Column Name: claim_date
Column Type: date
Date of the Claim.

Column Name: contact_information
Column Type: varchar
Max Length: 80
Contact information.

Column Name: dunning_message

Column Type: varchar
Max Length: 1000
Message used for dunning.

Column Name: exclude_transfers_in
Column Type: numeric
Transfers into the guarantor that should be excluded from the bill.

Column Name: exclude_transfers_out
Column Type: numeric
Transfers out of the guarantor that should be excluded from the bill.

Column Name: facility_city_state_zip
Column Type: varchar
Max Length: 50
City, state and zip code of the facility.

Column Name: facility_name
Column Type: varchar
Max Length: 50
Name of the facility.

Column Name: facility_phone_number
Column Type: varchar
Max Length: 50
Phone number of the facility.

Column Name: facility_street
Column Type: varchar
Max Length: 50
Street address of the facility.

Column Name: guarantor_billed_id
Column Type: varchar
Max Length: 50
ID used when billing guarantor.

Column Name: guarantor_billed_name
Column Type: varchar
Max Length: 50
Name used when billing guarantor.

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
The guarantor name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: new_liability
Column Type: numeric
New liability.

Column Name: other_adjustments
Column Type: numeric
Adjustments related to guarantor other than self.

Column Name: other_beginning_balance
Column Type: numeric
Beginning balance related to guarantor other than self.

Column Name: other_new_liability
Column Type: numeric
New liability related to guarantor other than self.

Column Name: other_payments
Column Type: numeric
Payments related to guarantor other than self.

Column Name: patient_name
Column Type: varchar
Max Length: 50
'Client Name'

Column Name: payment_due_date
Column Type: date
Payment Due Date.

Column Name: payments
Column Type: numeric
Payments.

Column Name: program_balance
Column Type: numeric
The balance due for the program of service.

Column Name: program_code
Column Type: varchar
Max Length: 50
The program of service.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: stmt_begin_date
Column Type: date
Beginning date for the statement.

Column Name: stmt_end_date
Column Type: date

Ending date for the statement.

Column Name: subscriber_address_1
Column Type: varchar
Max Length: 50
Subscriber Address 1.

Column Name: subscriber_address_2
Column Type: varchar
Max Length: 50
Subscriber Address 2.

Column Name: subscriber_city
Column Type: varchar
Max Length: 50
Subscriber Address City.

Column Name: subscriber_name
Column Type: varchar
Max Length: 50
Subscriber Name.

Column Name: subscriber_state
Column Type: varchar
Max Length: 50
Subscriber Address State.

Column Name: subscriber_zip
Column Type: varchar
Max Length: 50
Subscriber Address Zip Code.

Column Name: title_XX_elig_criteria_code
Column Type: varchar
Max Length: 12
Title XX Eligibility Criteria Code.

Column Name: title_XX_elig_criteria_value
Column Type: varchar
Max Length: 40
Title XX Eligibility Value.

Column Name: total_balance
Column Type: numeric
Total Balance.

Column Name: transfers_in
Column Type: numeric
Transfers in.

Column Name: transfers_out
Column Type: numeric
Transfers out.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Crystal_Self_Pay_Bill

Table Name: SYSTEM.billing_selfpay_stmt

Table Description: This table returns the data for selfpay billing statements

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FILE_NUMBER
Column Type: varchar
Max Length: 50
The unique file number.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
The guarantor ID associated with the data.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 50
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar

Max Length: 50

The original unique ID assigned to the specific client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: PROVIDER_ID

Column Type: varchar

Max Length: 15

The provider ID associated with the data.

Column Name: accounting_period

Column Type: date

The accounting period of the service.

Column Name: appointment_status_code

Column Type: varchar

Max Length: 50

The appointment status code related to this service.

Column Name: appointment_status_value

Column Type: varchar

Max Length: 50

The description for the appointment_status_code. See appointment_status_code for more information.

Column Name: billable_code

Column Type: varchar

Max Length: 50

'Billable'.

Column Name: billable_value

Column Type: varchar

Max Length: 50

The description for the billable_code. See billable_code for more information.

Column Name: co_practitioner

Column Type: varchar

Max Length: 50

The 'Co-Practitioner' of the service.

Column Name: co_practitioner_2

Column Type: varchar

Max Length: 50

The second 'Co-Practitioner' of the service.

Column Name: co_practitioner_2_name

Column Type: varchar

Max Length: 50
The name of the second 'Co-Practitioner' of the service.

Column Name: co_practitioner_name
Column Type: varchar
Max Length: 50
The name of the 'Co-Practitioner' of the service.

Column Name: cost_of_service
Column Type: numeric
The cost of the service.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
data entry by (30001) - The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option (30003) - The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
data entry date (30000) - The date when this data row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
Data Entry Time (30002) - The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User Id (30009) - The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_service

Column Type: date

The date of the service.

Column Name: duration

Column Type: numeric

The duration of the service.

Column Name: fee_override_indicator

Column Type: varchar

Max Length: 50

Indicates if the fee for this service has been overridden from the original value.

Column Name: group_number

Column Type: varchar

Max Length: 50

Group Number.

Column Name: guarantor_liability

Column Type: numeric

The guarantor liability amount for the service and GUARANTOR_ID.

Column Name: hcpcs_code

Column Type: varchar

Max Length: 50

'HCPCS Code'

Column Name: insurance_category_code

Column Type: varchar

Max Length: 50

'Insurance Charge Category (10021)'

Column Name: insurance_category_value

Column Type: varchar

Max Length: 50

The description associated with insurance_category_code. See insurance_category_code for more information.

Column Name: location_code

Column Type: varchar

Max Length: 50

'Location'.

Column Name: location_value

Column Type: varchar

Max Length: 50

The description for the location_code. See location_code for more information.

Column Name: max_amt_to_dist_per_svc

Column Type: numeric

Maximum amount to distribute per service.

Column Name: medical_diagnosis1_code

Column Type: varchar

Max Length: 10

Code for 'Medical Diagnosis 1'.

Column Name: medical_diagnosis1_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis1_code. See medical_diagnosis1_code for more information.

Column Name: medical_diagnosis2_code

Column Type: varchar

Max Length: 10

Code for 'Medical Diagnosis 2'.

Column Name: medical_diagnosis2_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis2_code. See medical_diagnosis2_code for more information.

Column Name: medical_diagnosis3_code

Column Type: varchar

Max Length: 10

Code for 'Medical Diagnosis 3'.

Column Name: medical_diagnosis3_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis3_code. See medical_diagnosis3_code for more information.

Column Name: medical_diagnosis4_code

Column Type: varchar

Max Length: 10

Code for 'Medical Diagnosis 4'.

Column Name: medical_diagnosis4_value

Column Type: varchar

Max Length: 40

The description for the medical_diagnosis4_code. See medical_diagnosis4_code for more information.

Column Name: modifiers

Column Type: varchar

Max Length: 50

'Modifiers'.

Column Name: number_of_clients

Column Type: varchar

Max Length: 50

The number of clients in the group if this is a group service.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 50

The unique ID of the form that last updated the row.

Column Name: percentage_of_coverage

Column Type: numeric

Percentage of coverage.

Column Name: primary_guarantor_id

Column Type: varchar

Max Length: 50

Primary Guarantor ID.

Column Name: primary_guarantor_name

Column Type: varchar

Max Length: 50

Primary Guarantor Name.

Column Name: program_code

Column Type: varchar

Max Length: 50

The program of service.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: provider_name

Column Type: varchar

Max Length: 50

Provider Name

Column Name: revenue_code

Column Type: varchar

Max Length: 50

Revenue code for the service.

Column Name: revenue_description

Column Type: varchar

Max Length: 50

The description associated with revenue_code_code. See revenue_code_code for more information.

Column Name: service_code
Column Type: varchar
Max Length: 20
Service code

Column Name: service_value
Column Type: varchar
Max Length: 50
The description associated with service_code. See service_code for more information.

Column Name: state_reporting_code_1
Column Type: varchar
Max Length: 50
State Reporting Code 1 from Service Code Cross References

Column Name: transfer
Column Type: varchar
Max Length: 5
Transfers In.

Column Name: units_of_service
Column Type: numeric
The units of the service.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Inhibit_Billing_By_Service

Table Name: SYSTEM.inhibit_billing

Table Description: Inhibit Billing table

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
clients episode number

Column Name: FACILITY

Column Type: integer
System code

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40

Column Type: varchar
Max Length: 40
Program where service was rendered value

Column Name: units_of_service
Column Type: varchar
Max Length: 20
units

Documentation for form: Close_Charges

Table Name: SYSTEM.medicare_a_hold

Table Description: This table includes services placed on hold during liability distribution due to 'Bill Only When Full Denial Received For Medicare A No-Pay Guarantor'.

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the client ID in which the service was entered.

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor that is placed on hold.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

Unique row id.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: bep_stuff

Column Type: varchar

Max Length: 15

This will return "BEP" followed by the episode number for the client.

Column Name: medicare_a_id

Column Type: varchar

Max Length: 40

The ID of the Medicare A guarantor.

Documentation for form: Claim_Status_Request_(276)

Table Name: SYSTEM.billing_276_errors

Table Description: Claim Status Request (276) Errors

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
Guarantor ID

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
Data Entry Time

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: date_of_birth
Column Type: date
Date of Birth

Column Name: error_index
Column Type: integer
Error Index

Column Name: error_message
Column Type: varchar
Max Length: 256
Error Message

Column Name: file_description
Column Type: varchar
Max Length: 50
File Description

Column Name: file_index
Column Type: varchar
Max Length: 50
File Index

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
Financial Class

Column Name: financial_class_value
Column Type: varchar
Max Length: 50
The description associated with the financial_class_code. See financial_class_code for more information.

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 20
Option Identifier

Column Name: patient_name
Column Type: varchar
Max Length: 100
Client Name

Column Name: patient_sex_code
Column Type: varchar
Max Length: 50
Sex

Column Name: priority
Column Type: integer
Priority

Column Name: program_code
Column Type: varchar
Max Length: 50
Program

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Claim_Status_Notification_(277)

Table Name: SYSTEM.billing_277_report

Table Description: Claim Status Notification (277)

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: cost_of_service
Column Type: numeric
The 'Cost Of Service' of the service.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 50
Claim number.

Column Name: FACILITY
Column Type: integer
'Facility'

Column Name: FILE_ID
Column Type: varchar
Max Length: 50
Unique ID for the 277 file being reported on.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
Unique ID of the guarantor.

Column Name: SERVICE_CODE
Column Type: varchar
Max Length: 20
The service code of the service.

Column Name: VERSION
Column Type: varchar
Max Length: 50
The 277 version used to generate the file.

Column Name: clm_status
Column Type: varchar
Max Length: 50
'Claim Status'

Column Name: clm_status_cat_code
Column Type: varchar
Max Length: 50
'Status Category Code (Used by 276/277)' Code

Column Name: clm_status_cat_value
Column Type: varchar
Max Length: 256
The description associated with clm_status_cat_code. See clm_status_cat_code for more information.

Column Name: clm_status_code
Column Type: varchar
Max Length: 50
'Status Code (Used by 276/277)' Code

Column Name: clm_status_value
Column Type: varchar
Max Length: 256
The description associated with clm_status_code. See clm_status_code for more information.

Column Name: clm_update_date
Column Type: date
'Claim Update Date'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
'Data Entry By'

Column Name: data_entry_by_option

Column Type: varchar
Max Length: 40
'Data Entry By Option'

Column Name: data_entry_date
Column Type: date
'Data Entry Date'

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
'Data Entry Time'

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
'Data Entry User ID'

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
'Data Entry User Name'

Column Name: file_description
Column Type: varchar
Max Length: 50
'File Description'

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar
Max Length: 50
'File Name'

Column Name: file_status
Column Type: varchar
Max Length: 50
'File Status'

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
Name of the guarantor associated with 'GUARANTOR_ID'

Column Name: head_index

Column Type: integer
'head_index'

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 20
Option Identifier

Column Name: pat_control_num
Column Type: varchar
Max Length: 50
'Patient Control Number'

Column Name: rpt_last_stc
Column Type: varchar
Max Length: 50
'rpt_last_stc'

Column Name: status_type_code
Column Type: varchar
Max Length: 50
'277 Transaction Type Code' Code

Column Name: status_type_code_value
Column Type: varchar
Max Length: 50
The description associated with status_type_code. See status_type_code for more information.

Column Name: stc_counter
Column Type: varchar
Max Length: 50
'stc_counter'

Column Name: sub_claim_index
Column Type: integer
'sub_claim_index'

Column Name: subscriber_ID
Column Type: varchar
Max Length: 50
'Subscriber ID'

Column Name: subscriber_index
Column Type: varchar
Max Length: 50

'Subscriber Index'

Column Name: subscriber_name

Column Type: varchar

Max Length: 50

'Subscriber Name'

Column Name: svc_ID

Column Type: varchar

Max Length: 50

'Service ID'

Column Name: svc_code_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Column Name: svc_date

Column Type: date

'Service Date'

Column Name: svc_status

Column Type: varchar

Max Length: 50

'Service Status'

Column Name: svc_status_cat_code

Column Type: varchar

Max Length: 50

'Status Category Code (Used by 276/277)' Code

Column Name: svc_status_cat_value

Column Type: varchar

Max Length: 256

The description associated with svc_status_cat_code. See svc_status_cat_code for more information.

Column Name: svc_status_code

Column Type: varchar

Max Length: 50

'Status Code (Used by 276/277)' Code

Column Name: svc_status_value

Column Type: varchar

Max Length: 256

The description associated with svc_status_code. See svc_status_code for more information.

Column Name: option_id
Column Type: varchar
Max Length: 20

Column Name: option_desc
Column Type: varchar
Max Length: 80

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Billing

Table Name: SYSTEM.billing_claim_history_tx_detail

Table Description: This table returns all services that currently have a claim number.

Column Name: billing_claim_history_tx_detail
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the claim was created.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the claim was created.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the client ID for which the service is claimed.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the claim was created.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 40

The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The claim number assigned to the client's service.

Column Name: JOIN_TO_PAYMENT_HISTORY

Column Type: varchar

Max Length: 10

An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: claim_date

Column Type: date

The date the claim was created.

Column Name: claim_submitter_id

Column Type: varchar

Max Length: 40

'Claim submitter ID'

Column Name: clm_sub_reas_code

Column Type: varchar

Max Length: 2

The value in Loop 2300, Segment CLM-05-3 of the 837 for the claim. Will be "1" for an Original claim, or the code for 'Claim Submission Reason Code' in the 'Electronic Re-Billing Service Assignment' form for re-bills.

Column Name: clm_sub_reas_value

Column Type: varchar

Max Length: 50

The description associated with clm_sub_reas_code. See clm_sub_reas_code for more information.

Column Name: date_of_claim

Column Type: varchar

Max Length: 15

The date entered in 'Date of Claim' when the claim was created.

Column Name: fac_code_qua

Column Type: varchar

Max Length: 2

Will be "A" for an 837 Institutional, and "B" for an 837 Professional 5010.

Column Name: fac_type_code

Column Type: varchar

Max Length: 2

The 'Place of Service' extended dictionary for the 'Location' dictionary value.

Column Name: fac_type_value

Column Type: varchar

Max Length: 50

The description associated with fac_type_code. See fac_type_code for more information.

Column Name: first_service_of_claim

Column Type: date

The date for the client ID's first service included in the claim.

Column Name: last_service_of_claim

Column Type: date

The date for the client ID's last service included in the claim.

Column Name: line_item_cont_num

Column Type: varchar

Max Length: 50

The line item count.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

The flag for a rebill of the claim.

Column Name: total_claim_liability

Column Type: numeric

The sum of all charges included in the claim. Will be equal to 'total_bill_amount' from the 'billing_claim_history' table.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Quick_Billing

Table Name: SYSTEM.billing_qb_delay_reason

Table Description: This table returns delay reason code required service information of the compiled quick billing batch from the 'Quick Billing' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: BATCH_NUMBER
Column Type: integer
The batch number for the compiled quick billing file

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number information associated with the 'SYSTEM.billing_tx_history' table.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID associated with the 'SYSTEM.billing_tx_history' table.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the quick billing batch file

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The client name associated with PATID.

Column Name: program_code
Column Type: varchar
Max Length: 15
The program code information associated with the 'SYSTEM.billing_tx_history' table.

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with program_code. See program_code for more information.

Column Name: service_code
Column Type: varchar
Max Length: 20
The service code information associated with the 'SYSTEM.billing_tx_history' table.

Column Name: service_date
Column Type: date
The date of service associated with the 'SYSTEM.billing_tx_history' table.

Column Name: service_string
Column Type: varchar
Max Length: 32000
Service information string. (Private Column)

Column Name: service_value
Column Type: varchar
Max Length: 40
The description associated with service_code. See service_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_837_d_errors

Table Description: Electronic Billing 837 Dental Errors

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: EPISODE_NUMBER

Column Type: varchar

Max Length: 50

Episode Number

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 50

Guarantor ID

Column Name: batch_number

Column Type: varchar

Max Length: 50

Batch Number

Column Name: bill_type_code

Column Type: varchar

Max Length: 1

Billing Type Code

Column Name: bill_type_value

Column Type: varchar

Max Length: 12

The description associated with the bill_type_code. See bill_type_code for more information.

Column Name: client_interimb_code
Column Type: varchar
Max Length: 1
Client / Interim Batch Code

Column Name: client_interimb_value
Column Type: varchar
Max Length: 50
The description associated with the client_interimb_code. See client_interimb_code for more information.

Column Name: consolid_hcfa_sort
Column Type: varchar
Max Length: 1
Service Consolid HCFA Sort

Column Name: create_claims_code
Column Type: varchar
Max Length: 1
Create Claims

Column Name: create_claims_value
Column Type: varchar
Max Length: 5
The description associated with the create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: date_of_claim
Column Type: date
Date of Claim

Column Name: error_index
Column Type: integer
Error Index

Column Name: error_message
Column Type: varchar
Max Length: 256
Error Message

Column Name: file_description
Column Type: varchar
Max Length: 50
File Description

Column Name: file_index
Column Type: varchar
Max Length: 10
File Index

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
Financial Class Code

Column Name: financial_class_value
Column Type: varchar
Max Length: 50
The description associated with the financial_class_code. See financial_class_code for more information.

Column Name: first_date_of_service
Column Type: date
First Date Of Service

Column Name: guarantor_name
Column Type: varchar
Max Length: 50

The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: last_date_of_service
Column Type: date
Last Date Of Service

Column Name: medical_diag_sort
Column Type: varchar
Max Length: 1
Medical Diagnosis Sort

Column Name: patient_name
Column Type: varchar
Max Length: 100
Client Name

Column Name: priority
Column Type: integer
Priority

Column Name: program_code
Column Type: varchar
Max Length: 50
Program

Column Name: program_value
Column Type: varchar
Max Length: 50
The description associated with the program_code. See program_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version
Column Type: varchar
Max Length: 50
Version

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_837_d_rpt_header

Table Description: This table will return information regarding the status of an 837 Dental compile. Information regarding the compile criteria (selections in the Electronic Billing form) will also be returned.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the 837 was compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
The ID of the Guarantor/Payor being billed.

Column Name: batch_number
Column Type: varchar
Max Length: 50
'Interim Batch Number'

Column Name: bill_type_code
Column Type: varchar
Max Length: 1
'Billing Type'. "I" for Inpatient or "O" for Outpatient.

Column Name: bill_type_value
Column Type: varchar
Max Length: 12
The description for the associated bill_type_code. See bill_type_code for more information.

Column Name: client_interimb_code
Column Type: varchar
Max Length: 1
'All Clients or Interim Billing Batch'. "A" for All Clients or "I" for Interim Batch.

Column Name: client_interimb_value
Column Type: varchar
Max Length: 50
The description for the associated client_interimb_code. See client_interimb_code for more information.

Column Name: consolid_hcfa_sort
Column Type: varchar
Max Length: 1
"Y" if "Service Consolidation" was selected in 'HCFA-1500/837-P Billing Options'.

Column Name: create_claims_code
Column Type: varchar
Max Length: 1
'Create Claims'

Column Name: create_claims_value

Column Type: varchar

Max Length: 5

The description for the associated create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' of the user which last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: date_of_claim

Column Type: date

'Date Of Claim'

Column Name: file_description

Column Type: varchar

Max Length: 50

'File Description'

Column Name: file_index

Column Type: varchar

Max Length: 10

The unique id associated with the 837 compile file. Will be the Julian date of the date entered in the "Last Date Of Service To Include", followed by a period and a counter starting at 001.

Column Name: file_reissued

Column Type: varchar
Max Length: 50
Will indicate if a file has be re-issued after the original compile.

Column Name: file_status
Column Type: varchar
Max Length: 50
The status of the file.

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
'Type of Bill'

Column Name: financial_class_value
Column Type: varchar
Max Length: 50
The description for the financial_class_code. See financial_class_code for more information.

Column Name: first_date_of_service
Column Type: date
'First Date Of Service To Include'

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
The description for the GUARANTOR_ID. Will be the value entered in the field 'Guarantor Name For Alpha Lookup' of the Guarantors/Payors form.

Column Name: ind_all_guarantor_code
Column Type: varchar
Max Length: 1
'Individual Or All Guarantors'

Column Name: ind_all_guarantor_value
Column Type: varchar
Max Length: 50
The description for the ind_all_guarantor_code. See ind_all_guarantor_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service To Include'

Column Name: medical_diag_sort
Column Type: varchar
Max Length: 1
"Y" if "Medical Diagnosis" was selected during the 837 compile, otherwise "N". If selected, the 837 will only include services with a valid medical diagnosis on file for the Client or service.

Column Name: priority01_errors

Column Type: varchar
Max Length: 50
Priority 1 errors.

Column Name: priority02_errors
Column Type: varchar
Max Length: 50
Priority 2 errors.

Column Name: priority03_errors
Column Type: varchar
Max Length: 50
Priority 3 errors.

Column Name: priority04_errors
Column Type: varchar
Max Length: 50
Priority 4 errors.

Column Name: priority05_errors
Column Type: varchar
Max Length: 50
Priority 5 errors.

Column Name: quick_billing_batch
Column Type: integer
The quick billing batch number information if the 837 compile was created based on quick billing rule

Column Name: quick_billing_group_id
Column Type: integer
Quick bill group associated with the 837 compile. This would be the ID column in the
SYSTEM.table_quick_bill_rule_group table.

Column Name: submission_data
Column Type: varchar
Max Length: 50
Will indicate whether there was valid data to be submitted.

Column Name: version
Column Type: varchar
Max Length: 50
Will return the billing form "837D" followed by the HIPAA transaction version "v5010".

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_837_i_report

Table Description: This table is used to build the 837 Institutional compile report.

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_837_i_rpt_header

Table Description: This table will return information regarding the status of an 837 Institutional compile. Information regarding the compile criteria (selections in the Electronic Billing form) will also be returned.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the 837 was compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50

The ID of the Guarantor/Payor being billed.

Column Name: batch_number

Column Type: varchar

Max Length: 50

'Interim Batch Number'

Column Name: bill_type_code

Column Type: varchar

Max Length: 1

'Billing Type'. "I" for Inpatient or "O" for Outpatient.

Column Name: bill_type_value

Column Type: varchar

Max Length: 12

The description for the associated bill_type_code. See bill_type_code for more information.

Column Name: client_interimb_code

Column Type: varchar

Max Length: 1

'All Clients or Interim Billing Batch'. "A" for All Clients or "I" for Interim Batch.

Column Name: client_interimb_value

Column Type: varchar

Max Length: 50

The description for the associated client_interimb_code. See client_interimb_code for more information.

Column Name: consolid_hcfa_sort

Column Type: varchar

Max Length: 1

"Y" if "Service Consolidation" was selected in 'HCFA-1500/837-P Billing Options'.

Column Name: create_claims_code

Column Type: varchar

Max Length: 1

'Create Claims'

Column Name: create_claims_value

Column Type: varchar

Max Length: 5

The description for the associated create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' of the user which last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: date_of_claim

Column Type: date

'Date Of Claim'

Column Name: file_description

Column Type: varchar

Max Length: 50

'File Description'

Column Name: file_index

Column Type: varchar

Max Length: 10

The unique id associated with the 837 compile file. Will be the Julian date of the date entered in the "Last Date Of Service To Include", followed by a period and a counter starting at 001.

Column Name: file_reissued

Column Type: varchar

Max Length: 50

Will indicate if a file has be re-issued after the original compile.

Column Name: file_status

Column Type: varchar

Max Length: 50

The status of the file.

Column Name: financial_class_code

Column Type: varchar

Max Length: 50

'Type of Bill'

Column Name: financial_class_value

Column Type: varchar

Max Length: 50

The description for the financial_class_code. See financial_class_code for more information.

Column Name: first_date_of_service

Column Type: date

'First Date Of Service To Include'

Column Name: guarantor_name

Column Type: varchar

Max Length: 50

The description for the GUARANTOR_ID. Will be the value entered in the field 'Guarantor Name For Alpha Lookup' of the Guarantors/Payers form.

Column Name: ind_all_guarantor_code

Column Type: varchar

Max Length: 1

'Individual Or All Guarantors'

Column Name: ind_all_guarantor_value

Column Type: varchar

Max Length: 50

The description for the ind_all_guarantor_code. See ind_all_guarantor_code for more information.

Column Name: last_date_of_service

Column Type: date

'Last Date Of Service To Include'

Column Name: medical_diag_sort

Column Type: varchar

Max Length: 1

"Y" if "Medical Diagnosis" was selected during the 837 compile, otherwise "N". If selected, the 837 will only include services with a valid medical diagnosis on file for the Client or service.

Column Name: priority01_errors

Column Type: varchar

Max Length: 50

Priority 1 errors.

Column Name: priority02_errors

Column Type: varchar

Max Length: 50

Priority 2 errors.

Column Name: priority03_errors

Column Type: varchar

Max Length: 50

Priority 3 errors.

Column Name: priority04_errors
Column Type: varchar
Max Length: 50
Priority 4 errors.

Column Name: priority05_errors
Column Type: varchar
Max Length: 50
Priority 5 errors.

Column Name: quick_billing_batch
Column Type: integer
The quick billing batch number information if the 837 compile was created based on quick billing rule

Column Name: quick_billing_group_id
Column Type: integer
Quick bill group associated with the 837 compile. This would be the ID column in the SYSTEM.table_quick_bill_rule_group table.

Column Name: submission_data
Column Type: varchar
Max Length: 50
Will indicate whether there was valid data to be submitted.

Column Name: version
Column Type: varchar
Max Length: 50
Will return the billing form "837I" followed by the HIPAA transaction version "v5010".

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_837_p_file

Table Description: This table will return each segment created during an 837 compile. Information regarding the compile criteria (selections in the Electronic Billing form) will also be returned.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the 837 was compiled.

Column Name: batch_number

Column Type: varchar

Max Length: 50

The ID of the batch, created in the 'Create Interim Billing Batch' form, for which the 837 was compiled. Will be empty if "All Clients" was selected in 'All Clients or Interim Billing Batch'.

Column Name: bill_type_code

Column Type: varchar

Max Length: 1

The code for the selection in the 'Billing Type' field of the Electronic Billing form during the 837 compile. "I" for Inpatient or "O" for Outpatient.

Column Name: bill_type_value

Column Type: varchar

Max Length: 12

The description associated with bill_type_code. See bill_type_code for more information.

Column Name: client_interimb_code

Column Type: varchar

Max Length: 1

The code for the selection in the field 'All Clients or Interim Billing Batch' of the Electronic Billing form during the 837 compile. "A" for All Clients or "I" for Interim Batch.

Column Name: client_interimb_value

Column Type: varchar

Max Length: 50

The description associated with client_interimb_code. See client_interimb_code for more information.

Column Name: consolid_hcfa_sort

Column Type: varchar

Max Length: 1

Will be "Y" if "Service Consolidation" was selected in 'HCFA-1500/837-P Billing Options'.

Column Name: create_claims_code

Column Type: varchar

Max Length: 1

The code for the selection in the field 'Create Claims' of the Electronic Billing form during the 837 compile. "Y" if claims were created, otherwise "N".

Column Name: create_claims_value

Column Type: varchar

Max Length: 5

The description associated with create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user which last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user which last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: date_of_claim
Column Type: date
The date entered in the 'Date of Claim' field when the 837 was compiled. Will be empty if "No" was selected in 'Create Claims'.

Column Name: file_description
Column Type: varchar
Max Length: 50
'File Description/Name'

Column Name: file_index
Column Type: varchar
Max Length: 10
The unique id associated with the 837 compile file. Will be the Julian date of the date entered in the "Last Date Of Service To Include", followed by a period and a counter starting at 001.

Column Name: file_status
Column Type: varchar
Max Length: 50
Will return whether the file was "COMPILED" or "DELETED".

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
The code for the financial class selected in 'Type of Bill'.

Column Name: financial_class_value
Column Type: varchar

Max Length: 50

The description associated with financial_class_code. See financial_class_code for more information.

Column Name: first_date_of_service

Column Type: date

The date entered in the field 'First Date Of Service To Include' of the Electronic Billing form when the 837 was compiled. The compile will exclude any services prior to this date. Rebills are an exception, the 'First Date Of Service To Include' will not be evaluated.

Column Name: guarantor_id

Column Type: varchar

Max Length: 50

The ID of the Guarantor/Payor selected in the field 'Guarantor' of the Electronic Billing form. Will return an empty value if "All" was selected in the field 'Individual or All Guarantors'.

Column Name: ind_all_guarantor_code

Column Type: varchar

Max Length: 1

Returns whether the 837 file was compiled for "A": All Guarantors, or "I": an Individual Guarantor. The selection in 'Individual or All Guarantors'.

Column Name: ind_all_guarantor_value

Column Type: varchar

Max Length: 50

The description associated with ind_all_guarantor_code. See ind_all_guarantor_code for more information.

Column Name: last_date_of_service

Column Type: date

The date entered in the field 'Last Date Of Service To Include' of the Electronic Billing form when compiling the 837. The compile will exclude any services after this date. Rebills are an exception, the 'Last Date Of Service To Include' will not be evaluated.

Column Name: medical_diag_sort

Column Type: varchar

Max Length: 1

"Y" if "Medical Diagnosis" was selected during the 837 compile, otherwise "N". If selected, the 837 will only include services with a valid medical diagnosis on file for the Client or service.

Column Name: segment

Column Type: varchar

Max Length: 80

Will return the full segment from the 837 compile file based on the file_index and segment_counter.

Column Name: segment_counter

Column Type: integer

A counter for each segment within the 837 compile file. Will reset for each xx_index or file_index.

Column Name: version

Column Type: varchar

Max Length: 50

Will return the billing form, "837I" or "837P", followed by the HIPAA transaction version "v5010".

Column Name: xx_index

Column Type: varchar

Max Length: 20

"The guarantor index within the 837 compile. The guarantor index is the GUARANTOR_ID followed by
"".0000001""."

Documentation for form: Electronic_Billing

Max Length: 50
The ID of the Guarantor/Payor being billed.

Column Name: batch_number

Column Type: varchar
Max Length: 50
'Interim Batch Number'

Column Name: bill_type_code
Column Type: varchar
Max Length: 1
'Billing Type'. "I" for Inpatient or "O" for Outpatient.

Column Name: bill_type_value
Column Type: varchar
Max Length: 12
The description for the associated bill_type_code. See bill_type_code for more information.

Column Name: client_interimb_code
Column Type: varchar
Max Length: 1
'All Clients or Interim Billing Batch'. "A" for All Clients or "I" for Interim Batch.

Column Name: client_interimb_value
Column Type: varchar
Max Length: 50
The description for the associated client_interimb_code. See client_interimb_code for more information.

Column Name: consolid_hcfa_sort
Column Type: varchar
Max Length: 1
"Y" if "Service Consolidation" was selected in 'HCFA-1500/837-P Billing Options'.

Column Name: create_claims_code
Column Type: varchar
Max Length: 1
'Create Claims'

Column Name: create_claims_value
Column Type: varchar
Max Length: 5
The description for the associated create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: data_entry_date

Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user which last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user which last updated the row.

Column Name: date_of_claim
Column Type: date
'Date Of Claim'

Column Name: file_description
Column Type: varchar
Max Length: 50
'File Description'

Column Name: file_index
Column Type: varchar
Max Length: 10
The unique id associated with the 837 compile file. Will be the Julian date of the date entered in the "Last Date Of Service To Include", followed by a period and a counter starting at 001.

Column Name: file_reissued
Column Type: varchar
Max Length: 50
Will indicate if a file has be re-issued after the original compile.

Column Name: file_status
Column Type: varchar
Max Length: 50
The status of the file.

Column Name: financial_class_code
Column Type: varchar
Max Length: 50
'Type of Bill'

Column Name: financial_class_value
Column Type: varchar

Max Length: 50

The description for the financial_class_code. See financial_class_code for more information.

Column Name: first_date_of_service

Column Type: date

'First Date Of Service To Include'

Column Name: guarantor_name

Column Type: varchar

Max Length: 50

The description for the GUARANTOR_ID. Will be the value entered in the field 'Guarantor Name For Alpha Lookup' of the Guarantors/Payers form.

Column Name: ind_all_guarantor_code

Column Type: varchar

Max Length: 1

'Individual Or All Guarantors'

Column Name: ind_all_guarantor_value

Column Type: varchar

Max Length: 50

The description for the ind_all_guarantor_code. See ind_all_guarantor_code for more information.

Column Name: last_date_of_service

Column Type: date

'Last Date Of Service To Include'

Column Name: medical_diag_sort

Column Type: varchar

Max Length: 1

"Y" if "Medical Diagnosis" was selected during the 837 compile, otherwise "N". If selected, the 837 will only include services with a valid medical diagnosis on file for the Client or service.

Column Name: priority01_errors

Column Type: varchar

Max Length: 50

Priority 1 errors.

Column Name: priority02_errors

Column Type: varchar

Max Length: 50

Priority 2 errors.

Column Name: priority03_errors

Column Type: varchar

Max Length: 50

Priority 3 errors.

Column Name: priority04_errors

Column Type: varchar

Max Length: 50
Priority 4 errors.

Column Name: priority05_errors
Column Type: varchar
Max Length: 50
Priority 5 errors.

Column Name: quick_billing_batch
Column Type: integer
The quick billing batch number information if the 837 compile was created based on quick billing rule

Column Name: quick_billing_group_id
Column Type: integer
Quick bill group associated with the 837 compile. This would be the ID column in the SYSTEM.table_quick_bill_rule_group table.

Column Name: submission_data
Column Type: varchar
Max Length: 50
Will indicate whether there was valid data to be submitted.

Column Name: version
Column Type: varchar
Max Length: 50
Will return the billing form "837P" followed by the HIPAA transaction version "v5010".

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_837d_4010_errors

Table Description: Electronic Billing 837 Dental Version 4010 Errors

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: EPISODE_NUMBER
Column Type: varchar
Max Length: 50
Episode Number

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
Guarantor ID

Column Name: batch_number
Column Type: varchar
Max Length: 50
Batch Number

Column Name: bill_type_code
Column Type: varchar
Max Length: 1
Billing Type Code

Column Name: bill_type_value
Column Type: varchar
Max Length: 12
The description associated with the bill_type_code. See bill_type_code for more information.

Column Name: client_interimb_code
Column Type: varchar
Max Length: 1
Client / Interim Batch Code

Column Name: client_interimb_value
Column Type: varchar
Max Length: 50
The description associated with the client_interimb_code. See client_interimb_code for more information.

Column Name: consolid_hcfa_sort
Column Type: varchar
Max Length: 1
Service Consolid HCFA Sort

Column Name: create_claims_code
Column Type: varchar
Max Length: 1
Create Claims

Column Name: create_claims_value
Column Type: varchar
Max Length: 5
The description associated with the create_claims_code. See create_claims_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: date_of_claim
Column Type: date
Date of Claim

Column Name: error_index
Column Type: integer
Error Index

Column Name: error_message
Column Type: varchar
Max Length: 256
Error Message

Column Name: file_description
Column Type: varchar
Max Length: 50
File Description

Column Name: file_index
Column Type: varchar
Max Length: 10

File Index

Column Name: file_status

Column Type: varchar

Max Length: 50

File Status

Column Name: financial_class_code

Column Type: varchar

Max Length: 50

Financial Class Code

Column Name: financial_class_value

Column Type: varchar

Max Length: 50

The description associated with the financial_class_code. See financial_class_code for more information.

Column Name: first_date_of_service

Column Type: date

First Date Of Service

Column Name: guarantor_name

Column Type: varchar

Max Length: 50

The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: last_date_of_service

Column Type: date

Last Date Of Service

Column Name: medical_diag_sort

Column Type: varchar

Max Length: 1

Medical Diagnosis Sort

Column Name: patient_name

Column Type: varchar

Max Length: 100

Client Name

Column Name: priority

Column Type: integer

Priority

Column Name: program_code

Column Type: varchar

Max Length: 50

Program

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with the program_code. See program_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version

Column Type: varchar

Max Length: 50

Version

Documentation for form: Electronic_Billing

Table Name: SYSTEM.billing_claim_history_tx_detail

Table Description: This table returns all services that currently have a claim number.

Column Name: billing_claim_history_tx_detail
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the claim was created.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the claim was created.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the client ID for which the service is claimed.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the claim was created.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID assigned to the specific client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The claim number assigned to the client's service.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 10
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in julian date format and a counter starting with ".001".

Column Name: claim_date
Column Type: date
The date the claim was created.

Column Name: claim_submitter_id
Column Type: varchar
Max Length: 40
'Claim submitter ID'

Column Name: clm_sub_reas_code

Column Type: varchar

Max Length: 2

The value in Loop 2300, Segment CLM-05-3 of the 837 for the claim. Will be "1" for an Original claim, or the code for 'Claim Submission Reason Code' in the 'Electronic Re-Billing Service Assignment' form for re-bills.

Column Name: clm_sub_reas_value

Column Type: varchar

Max Length: 50

The description associated with clm_sub_reas_code. See clm_sub_reas_code for more information.

Column Name: date_of_claim

Column Type: varchar

Max Length: 15

The date entered in 'Date of Claim' when the claim was created.

Column Name: fac_code_qua

Column Type: varchar

Max Length: 2

Will be "A" for an 837 Institutional, and "B" for an 837 Professional 5010.

Column Name: fac_type_code

Column Type: varchar

Max Length: 2

The 'Place of Service' extended dictionary for the 'Location' dictionary value.

Column Name: fac_type_value

Column Type: varchar

Max Length: 50

The description associated with fac_type_code. See fac_type_code for more information.

Column Name: first_service_of_claim

Column Type: date

The date for the client ID's first service included in the claim.

Column Name: last_service_of_claim

Column Type: date

The date for the client ID's last service included in the claim.

Column Name: line_item_cont_num

Column Type: varchar

Max Length: 50

The line item count.

Column Name: re_bill_status

Column Type: varchar

Max Length: 50

The flag for a rebill of the claim.

Column Name: total_claim_liability

Column Type: numeric

The sum of all charges included in the claim. Will be equal to 'total_bill_amount' from the 'billing_claim_history' table.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: State_Specific_Remittance_File_Processing

Table Name: SYSTEM.state_remit_file_adj_rem

Table Description: State Specific Remittance File Processing adjustment remaining data.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The unique number associated with the claim included in the state remit file.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the Client ID included in the state remit file

Column Name: FACILITY
Column Type: integer
The system code in which state remit file is compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The ID of the guarantor associated with the Client.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with state remit file.

Column Name: amount_overage
Column Type: varchar
Max Length: 50
Overage amount.

Column Name: amount_received
Column Type: varchar
Max Length: 50
Received amount.

Column Name: amount_remaining
Column Type: varchar
Max Length: 50
Remaining amount.

Column Name: cas_cnt_index
Column Type: varchar
Max Length: 50
CAS Segment Counter Index.

Column Name: claim_adj_group_code
Column Type: varchar
Max Length: 50
Claim Adjustment Group Code.

Column Name: claim_adj_group_sh_value
Column Type: varchar
Max Length: 255
The description associated with claim_adj_group_code limited to 255 characters. See claim_adj_group_code for more information.

Column Name: claim_adj_group_value
Column Type: varchar
Max Length: 4096
The description associated with claim_adj_group_code. See claim_adj_group_code for more information.

Column Name: claim_adj_reason_code
Column Type: varchar
Max Length: 50
Adjustment Reason Code.

Column Name: claim_adj_reason_sh_value
Column Type: varchar
Max Length: 255
The description associated with claim_adj_reason_code limited to 255 characters. See claim_adj_reason_code for more information.

Column Name: claim_adj_reason_value
Column Type: varchar
Max Length: 4096
The description associated with claim_adj_reason_code. See claim_adj_reason_code for more information.

Column Name: claim_adj_remark_code
Column Type: varchar
Max Length: 50
Remark Code.

Column Name: claim_adj_remark_sh_value
Column Type: varchar

Max Length: 255

The description associated with claim_adj_remark_code limited to 255 characters. See claim_adj_remark_code for more information.

Column Name: claim_adj_remark_value

Column Type: varchar

Max Length: 4096

The description associated with claim_adj_remark_code. See claim_adj_remark_code for more information.

Column Name: claim_adj_response_code

Column Type: varchar

Max Length: 255

The response codes.

Column Name: claim_adj_response_desc

Column Type: varchar

Max Length: 4096

The description associated with the response codes.

Column Name: cnt_index

Column Type: varchar

Max Length: 50

Counter for each row.

Column Name: file_index

Column Type: varchar

Max Length: 50

File Index.

Column Name: file_type

Column Type: integer

The 'File Type'.

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

The name associated with the GUARANTOR_ID.

Column Name: original_guarantor_id

Column Type: varchar

Max Length: 10

The Original Guarantor ID, if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition' form.

Column Name: original_guarantor_name

Column Type: varchar

Max Length: 50

The guarantor name associated with the original_guarantor_id.

Column Name: patient_name

Column Type: varchar
Max Length: 40
The Client name associated with the PATID.

Column Name: period_end
Column Type: date
The end of the date range.

Column Name: period_start
Column Type: date
The beginning of the date range.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: State_Specific_Remittance_File_Processing

Table Name: SYSTEM.state_remit_file_errors

Table Description: State Specific Remittance File Processing error data.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which state remit file is compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The ID of the guarantor associated with the Client.

Column Name: adjustment_amount
Column Type: varchar
Max Length: 50
Adjustment amount.

Column Name: charge_amount
Column Type: varchar
Max Length: 50
Charge amount.

Column Name: error_claim_number

Column Type: varchar

Max Length: 50

The Claim number associated with Client ID included in the state remit file.

Column Name: error_cnt_index

Column Type: varchar

Max Length: 50

Error Counter.

Column Name: error_episode

Column Type: varchar

Max Length: 50

The episode number for the Client ID included in the state remit file.

Column Name: error_id

Column Type: varchar

Max Length: 50

The Client ID associated with state remit file.

Column Name: error_level

Column Type: varchar

Max Length: 50

Error Level.

Column Name: error_message

Column Type: varchar

Max Length: 1000

Error Message.

Column Name: error_priority

Column Type: varchar

Max Length: 50

Error Priority.

Column Name: file_index

Column Type: varchar

Max Length: 50

File Index.

Column Name: file_type

Column Type: integer

The State Specific file Type.

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

The name associated with the GUARANTOR_ID.

Column Name: original_guarantor_id

Column Type: varchar

Max Length: 10

The Original Guarantor ID, if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition ' form.

Column Name: original_guarantor_name

Column Type: varchar

Max Length: 50

The guarantor name associated with the original_guarantor_id.

Column Name: patient_name

Column Type: varchar

Max Length: 50

The Client name associated with the PATID.

Column Name: payment_amount

Column Type: varchar

Max Length: 50

Payment amount.

Documentation for form: State_Specific_Remittance_File_Processing

Table Name: SYSTEM.state_remit_file_header

Table Description: State Specific Remittance File Processing header data.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

Facility

Column Name: adjustment_overages

Column Type: varchar

Max Length: 50

Are there any Adjustment Overages.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

Data Entry By

Column Name: data_entry_by_option

Column Type: varchar
Max Length: 40
Data Entry By Option (30003)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: errors_file_load
Column Type: varchar
Max Length: 50
Are there any Errors Associated with File Load.

Column Name: errors_known_clients
Column Type: varchar
Max Length: 50
Are there any Errors Associated with Known Clients.

Column Name: errors_unknown_clients
Column Type: varchar
Max Length: 50
Are there any Errors Associated with Unknown Clients.

Column Name: file_description
Column Type: varchar
Max Length: 50
File description.

Column Name: file_index
Column Type: varchar
Max Length: 50
Filing Index

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar
Max Length: 120
File Name

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: file_type
Column Type: integer
The 'File Type'.

Column Name: posting_date
Column Type: date
Posting Date.

Column Name: submission_data
Column Type: varchar
Max Length: 50
Submission data.

Column Name: unpostable_adjustments

Column Type: varchar
Max Length: 50
Are there any Unpostable Adjustments.

Column Name: unpostable_payments
Column Type: varchar
Max Length: 50
Are there any Unpostable Payments.

Documentation for form: State_Specific_Remittance_File_Processing

Table Name: SYSTEM.state_remit_file_pay_adj

Table Description: State Specific Remittance File Processing payment/adjustment data.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The Claim number associated with Client ID included in the state remit file.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
Unique row id.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the Client ID included in the state remit file.

Column Name: FACILITY
Column Type: integer
The system code in which state remit file is compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The ID of the guarantor associated with the Client.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with state remit file.

Column Name: SERVICE_CODE

Column Type: varchar

Max Length: 20

The service code of the service.

Column Name: claim_adj_group_code

Column Type: varchar

Max Length: 50

Claim Adjustment Group Code.

Column Name: claim_adj_group_sh_value

Column Type: varchar

Max Length: 255

The description associated with claim_adj_group_code limited to 255 characters. See claim_adj_group_code for more information.

Column Name: claim_adj_group_value

Column Type: varchar

Max Length: 4096

The description associated with claim_adj_group_code. See claim_adj_group_code for more information.

Column Name: claim_adj_posting_code

Column Type: varchar

Max Length: 50

Adjustment Posting Code.

Column Name: claim_adj_posting_value

Column Type: varchar

Max Length: 80

The description associated with claim_adj_posting_code. See claim_adj_posting_code for more information.

Column Name: claim_adj_reason_code

Column Type: varchar

Max Length: 50

Adjustment Reason Code.

Column Name: claim_adj_reason_sh_value

Column Type: varchar

Max Length: 255

The description associated with claim_adj_reason_code limited to 255 characters. See claim_adj_reason_code for more information.

Column Name: claim_adj_reason_value

Column Type: varchar

Max Length: 4096

The description associated with claim_adj_reason_code. See claim_adj_reason_code for more information.

Column Name: claim_adj_remark_code

Column Type: varchar

Max Length: 50

Remark Code.

Column Name: claim_adj_remark_sh_value

Column Type: varchar

Max Length: 255

The description associated with claim_adj_remark_code limited to 255 characters. See claim_adj_remark_code for more information.

Column Name: claim_adj_remark_value

Column Type: varchar

Max Length: 4096

The description associated with claim_adj_remark_code. See claim_adj_remark_code for more information.

Column Name: claim_adj_response_code

Column Type: varchar

Max Length: 255

The response codes.

Column Name: claim_adj_response_desc

Column Type: varchar

Max Length: 4096

The description associated with the response codes.

Column Name: claim_orig_ref_num

Column Type: varchar

Max Length: 50

Other Claim Related Identifier.

Column Name: claim_status_code

Column Type: integer

The claim status code.

Column Name: cnt_index

Column Type: varchar

Max Length: 50

Counter for each row.

Column Name: compiled_not_posted_code

Column Type: varchar

Max Length: 1

Compiled Not Posted Code.

Column Name: compiled_not_posted_value

Column Type: varchar

Max Length: 3

Compiled Not Posted Value.

Column Name: file_index

Column Type: varchar

Max Length: 50
File Index.

Column Name: file_type
Column Type: integer
The State Specific file Type.

Column Name: forwarded_to_another_payor
Column Type: varchar
Max Length: 50
This will be "Y" if claim status code = 19, 20 or 21. This will be "N" otherwise.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with the GUARANTOR_ID.

Column Name: line_item_cont_num
Column Type: varchar
Max Length: 50
Line Item Control Number.

Column Name: original_balance
Column Type: varchar
Max Length: 50
Original Balance.

Column Name: original_guarantor_id
Column Type: varchar
Max Length: 10
The Original Guarantor ID, if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition ' form.

Column Name: original_guarantor_name
Column Type: varchar
Max Length: 50
The guarantor name associated with the original_guarantor_id.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The Client name associated with the PATID.

Column Name: payer_claim_cont_num
Column Type: varchar
Max Length: 50
Payer Claim Control Number.

Column Name: payment_adjustment_amount
Column Type: varchar

Max Length: 50
Adjustment amount.

Column Name: payment_or_adjustment
Column Type: varchar
Max Length: 50
Payment or Adjustment.

Column Name: remaining_balance
Column Type: varchar
Max Length: 50
Remaining amount.

Column Name: service_date
Column Type: date
The service date.

Column Name: skip_in_orig_bal_total
Column Type: varchar
Max Length: 1
This amount will not be included when calculating Total For Guarantor, Total For Client, and Report Total for Original Balance column of the report.

Column Name: skip_in_rem_bal_total
Column Type: varchar
Max Length: 1
This amount will not be included when calculating Total For Guarantor, Total For Client, and Report Total for Remaining Balance column of the report.

Column Name: transfer_detail
Column Type: varchar
Max Length: 255
Transfer Detail.

Column Name: transfer_flag
Column Type: varchar
Max Length: 50
Transfer Flag.

Column Name: transfer_info
Column Type: varchar
Max Length: 100
Transfer Information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description for the SERVICE_CODE. See SERVICE_CODE for more information.

Documentation for form: State_Specific_Remittance_File_Processing

Table Name: SYSTEM.state_remit_file_pay_rem

Table Description: State Specific Remittance File Processing payment remaining data.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The Claim number associated with Client ID included in the state remit file.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the Client ID included in the state remit file.

Column Name: FACILITY

Column Type: integer

The system code in which the state remit file is compiled.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 10

The ID of the guarantor associated with the Client.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID.

Column Name: amount_received

Column Type: varchar

Max Length: 50

Amount Received.

Column Name: amount_remaining

Column Type: varchar

Max Length: 50

Amount Remaining.

Column Name: cnt_index
Column Type: varchar
Max Length: 50
Counter.

Column Name: file_index
Column Type: varchar
Max Length: 50
The unique id associated with the state remit file. Date the state remit file was compiled in Julian date format followed by a counter starting at 001.

Column Name: file_type
Column Type: integer
The 'File Type'.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with the GUARANTOR_ID.

Column Name: original_guarantor_id
Column Type: varchar
Max Length: 10
The Original Guarantor ID, if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition ' form.

Column Name: original_guarantor_name
Column Type: varchar
Max Length: 50
The name associated with the original_guarantor_id.

Column Name: patient_name
Column Type: varchar
Max Length: 40
Client name associated with the PATID.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: State_Specific_Remittance_File_Processing

Table Name: SYSTEM.state_remit_file_raw

Table Description: State Specific Remittance File Processing raw file data.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility

Column Name: file_index
Column Type: varchar
Max Length: 50
Filing Index

Column Name: file_type
Column Type: integer
The 'File Type'.

Column Name: line
Column Type: varchar
Max Length: 80
Row of data from remittance file.

Column Name: line_index
Column Type: integer
Line index.

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.batch_remittance_claim

Table Description: This table returns claim information for Spreadsheet Batch Remittance Posting and 835s

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: BATCHID
Column Type: varchar
Max Length: 50
Assigned batch ID.

Column Name: CLAIMID
Column Type: varchar
Max Length: 50

Assigned Claim ID.

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode of the service.

Column Name: FACILITY

Column Type: integer

The facility where the remittance batch was created

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 50

Guarantor ID associated with the payment/adjustment.

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: adjustment_amount

Column Type: double

Adjustment Amount

Column Name: adjustment_code

Column Type: varchar

Max Length: 50

Adjustment Code

Column Name: adjustment_value

Column Type: varchar

Max Length: 50

The description for the adjustment_code. See adjustment_code for more information.

Column Name: balance

Column Type: double

Balance

Column Name: charge

Column Type: double

Total Charge

Column Name: check

Column Type: varchar

Max Length: 50

'Check #'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_date

Column Type: date

The date when this data row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time when this data row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user id that last updated this data row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp
the UTC date and time the data was saved.

Column Name: description
Column Type: varchar
Max Length: 50
Description associated to the batch/835

Column Name: liability
Column Type: double
Liability

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: optionid
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The name of the PATID of the service.

Column Name: payment_amount
Column Type: double
Payment Amount

Column Name: payment_code
Column Type: varchar
Max Length: 50
Payment Code

Column Name: payment_value
Column Type: varchar
Max Length: 50
The description for the payment_code. See payment_code for more information.

Column Name: posting_date
Column Type: date
'Posting Date'

Column Name: post_option
Column Type: varchar
Max Length: 50
835 or Spreadsheet Batch

Column Name: status
Column Type: varchar
Max Length: 50
Status - "O" (Open) or "C" (Closed)

Column Name: transfer_amount
Column Type: double
Transfer Amount

Column Name: transfer_code
Column Type: varchar
Max Length: 50
Transfer Code

Column Name: transfer_guar
Column Type: varchar
Max Length: 50
Guarantor where the liability was transferred.

Column Name: transfer_guar_name
Column Type: varchar
Max Length: 50
Guarantor's name where the liability was transferred.

Column Name: transfer_value
Column Type: varchar
Max Length: 50
The description for the transfer_code. See transfer_code for more information.

Column Name: uniqueID
Column Type: varchar
Max Length: 50
Unique ID inside of batch.

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.billing_835_adj_rem

Table Description: This table returns Payment Adjustment Information for 835 from '835 Health Care Claim Payment/Advice' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: CLAIM_NUMBER

Column Type: varchar
Max Length: 25
The unique number associated with the claim included in the 835 file.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the Client ID included in the 835 file

Column Name: FACILITY
Column Type: integer
The system code in which 835 file is compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The ID of the guarantor associated with the Client.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with 835 file.

Column Name: amount_overage
Column Type: varchar
Max Length: 50
Overage amount.

Column Name: amount_received
Column Type: varchar
Max Length: 50
Received amount.

Column Name: amount_remaining
Column Type: varchar
Max Length: 50
Remaining amount.

Column Name: cas_cnt_index
Column Type: varchar
Max Length: 50
CAS Segment Counter Index.

Column Name: claim_adj_group_code
Column Type: varchar
Max Length: 50
Claim Adjustment Group Code(2110-CAS-01).

Column Name: claim_adj_group_value
Column Type: varchar
Max Length: 50

The description associated with the claim_adj_group_code. See claim_adj_group_code for more information.

Column Name: claim_adj_reason_code
Column Type: varchar
Max Length: 50
Adjustment Reason Code(2110-CAS-02).

Column Name: claim_adj_reason_value
Column Type: varchar
Max Length: 100
The description associated with the claim_adj_reason_code. See claim_adj_reason_code for more information.

Column Name: claim_adj_remark_code
Column Type: varchar
Max Length: 50
Remark Code(2110-LQ-02).

Column Name: claim_adj_remark_value
Column Type: varchar
Max Length: 100
The description associated with the claim_adj_remark_code. See claim_adj_remark_code for more information.

Column Name: cnt_index
Column Type: varchar
Max Length: 50
Counter for each row.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: file_index
Column Type: varchar
Max Length: 50
'Filing Index'

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status).

Column Name: file_name
Column Type: varchar
Max Length: 50
'File Path/Name'.

Column Name: file_status
Column Type: varchar
Max Length: 50
Indicates the file status.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with the GUARANTOR_ID.

Column Name: original_guarantor_id
Column Type: varchar
Max Length: 10
The Original Guarantor ID, if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition ' form.

Column Name: original_guarantor_name
Column Type: varchar
Max Length: 50
The guarantor name associated with the original_guarantor_id.

Column Name: patient_name
Column Type: varchar
Max Length: 40
The Client name associated with the PATID.

Column Name: period_end
Column Type: date
The end of the date range for 835.

Column Name: period_start
Column Type: date
The beginning of the date range for 835.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version
Column Type: varchar
Max Length: 20
The HIPAA transaction version "v4010" or "v5010".

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.billing_835_auto_log

Table Description: This table returns a log of events encountered by the 835 automatic background process.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the 835 auto process is running.

Column Name: counter
Column Type: numeric
A unique counter associated to the message in case there is more than one message for this date and time.

Column Name: date
Column Type: date
The date that the message was logged.

Column Name: message
Column Type: varchar
Max Length: 1000
The 835 auto process message contents.

Column Name: time
Column Type: varchar
Max Length: 50
The time that the message was logged.

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.billing_835_pay_proc

Table Description: This table returns payment information for the 835 from the '835 Health Care Claim Payment/Advice' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The unique number associated with the claim included in the 835 file.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID associated with the 'SYSTEM.billing_tx_history' table.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID included in the 835 file.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The ID of the guarantor associated with the client.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the 835.

Column Name: SERVICE_CODE

Column Type: varchar
Max Length: 20
The service code which is rendered.

Column Name: cnt_index
Column Type: varchar
Max Length: 50
'Counter'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: file_index
Column Type: varchar
Max Length: 50
'Filing Index'

Column Name: file_info_str
Column Type: varchar
Max Length: 50
'File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)'

Column Name: file_name

Column Type: varchar
Max Length: 50
'File Path/Name'.

Column Name: file_status
Column Type: varchar
Max Length: 50
Indicates the file status.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with the GUARANTOR_ID.

Column Name: original_balance
Column Type: varchar
Max Length: 50
The original balance if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition ' form.

Column Name: patient_name
Column Type: varchar
Max Length: 40
Client name associated with the PATID.

Column Name: payment_amount
Column Type: varchar
Max Length: 50
'Payment Amount'

Column Name: remaining_balance
Column Type: varchar
Max Length: 50
'Remaining Balance'

Column Name: service_date
Column Type: date
The date the service was rendered for the client that is calculated from JOIN_TO_TX_HISTORY.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version
Column Type: varchar
Max Length: 20
The HIPAA transaction version of "v4010" or "v5010".

Column Name: v_service_value

Column Type: varchar

Max Length: 40

The description associated with the SERVICE_CODE. See SERVICE_CODE for more information.

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.billing_835_pay_rem

Table Description: This table returns payment information for 835 from '835 Health Care Claim Payment/Advice' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

The Claim number associated with Client ID included in the 835 file.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number for the Client ID included in the 835 file.

Column Name: FACILITY

Column Type: integer

The system code in which 835 file is compiled.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 10

The ID of the guarantor associated with the Client.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with 835.

Column Name: amount_received

Column Type: varchar

Max Length: 50

Amount Received.

Column Name: amount_remaining

Column Type: varchar

Max Length: 50
Amount Remaining.

Column Name: cnt_index
Column Type: varchar
Max Length: 50
Counter.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: file_description
Column Type: varchar
Max Length: 50
'File description'.

Column Name: file_index
Column Type: varchar
Max Length: 50
The unique id associated with the 835 file. Date the 835 was compiled in Julian date format. Followed by a counter starting at 001.

Column Name: file_info_str
Column Type: varchar

Max Length: 50

File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status).

Column Name: file_name

Column Type: varchar

Max Length: 50

'File Path/Name'.

Column Name: file_status

Column Type: varchar

Max Length: 50

Indicates the file status.

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

The name associated with the GUARANTOR_ID.

Column Name: original_guarantor_id

Column Type: varchar

Max Length: 10

The Original Guarantor ID, if the CAS segment is mapped to a transfer code in the 'Claim Adjustment Group/Reason Code Definition ' form.

Column Name: original_guarantor_name

Column Type: varchar

Max Length: 50

The name associated with the original_guarantor_id.

Column Name: patient_name

Column Type: varchar

Max Length: 40

Client name associated with the PATID.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version

Column Type: varchar

Max Length: 20

The HIPAA transaction version "v4010" or "v5010".

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.billing_pay_adj_history

Table Description: This table returns all payment and adjustment information entered for a Client's service.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the posting was entered.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID for which the posting was entered.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number of the Client ID for which the posting was entered.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: unique_row_id2
Column Type: varchar
Max Length: 15
The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the posting was entered.

Column Name: date_of_payment
Column Type: date
'Date Of Payment'.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value

Column Type: varchar

Max Length: 40

The description associated with payment_type_code. See payment_type_code for more information.

Column Name: payment_amount

Column Type: numeric

The amount posted using the payment_type_code.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: v_program_of_service_code

Column Type: varchar

Max Length: 10

'Program'.

Column Name: v_program_of_service_value

Column Type: varchar

Max Length: 100

The description associated with v_program_of_service_code. See v_program_of_service_code for more information.

Column Name: v_program_X_RRG_code

Column Type: varchar

Max Length: 10

The code for the selection in the field 'RRG' of the 'Program Maintenance' form for the Client's pre-admit/admission program.

Column Name: v_program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with v_program_X_RRG_code. See v_program_X_RRG_code for more information.

Column Name: v_PROVIDER_ID

Column Type: varchar

Max Length: 40

The Staff ID which rendered the service.

Column Name: v_service_code

Column Type: varchar
Max Length: 20
'Service Code'.

Column Name: v_client_name
Column Type: varchar
Max Length: 40
The name associated with the Client ID.

Column Name: JOIN_TO_BILLING_TX_CHARGE
Column Type: varchar
Max Length: 15
An additional unique ID for the service. See JOIN_TO_TX_HISTORY.

Column Name: reciept_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: check_number
Column Type: varchar
Max Length: 50
The check number.

Column Name: system_code
Column Type: varchar
Max Length: 50
System Code the user was logged in as when filing a payment/adjustment.

Column Name: return_ref_number
Column Type: varchar
Max Length: 50
The returned reference number for a credit card or ACH transaction.

Column Name: credit_card_token
Column Type: varchar
Max Length: 50
The credit card token received for credit card payments.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 50
The claim number assigned to a Client's service for which the posting was entered.

Column Name: GUARANTOR_ID_transfer_to
Column Type: varchar
Max Length: 40
The ID of the guarantor for which the user transfer the amount to.

Column Name: JOIN_TO_TX_HISTORY_tra_to

Column Type: varchar
Max Length: 50
The unique ID of the service created as a result of the transfer.

Column Name: ORIG_JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 15
The original unique ID assigned to the specific Client's service. Will be different than the JOIN_TO_TX_HISTORY if the row (or service) is the result of a transfer.

Column Name: adjust_code_code
Column Type: varchar
Max Length: 50
Adjustment Code.

Column Name: adjust_code_value
Column Type: varchar
Max Length: 4096
The description associated with adjust_code_code. See adjust_code_code for more information.

Column Name: automatic_receipt_number
Column Type: varchar
Max Length: 50
The receipt number.

Column Name: contractual_write_off
Column Type: varchar
Max Length: 10
Will indicate if the payment type code is a contractual write off code.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: date_of_receipt
Column Type: date
'Date Of Receipt'.

Column Name: date_of_service
Column Type: date
'Date of Service'.

Column Name: device_name
Column Type: varchar
Max Length: 50
The name of the credit card device used to process the credit card payment.

Column Name: group_code_code
Column Type: varchar
Max Length: 50
'Group Code'.

Column Name: group_code_value
Column Type: varchar
Max Length: 4096
The description associated with group_code_code. See group_code_code for more information.

Column Name: merchant_id
Column Type: varchar
Max Length: 50
The merchant ID (MID) associated with the credit card payment.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: pay_ack_transaction_num

Column Type: integer

The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_location_code

Column Type: varchar

Max Length: 10

'Payment Location'.

Column Name: payment_location_value

Column Type: varchar

Max Length: 40

The description associated with payment_location_code. See payment_location_code for more information.

Column Name: posting_comments

Column Type: varchar

Max Length: 80

'Posting Comments'

Column Name: receipt_reversed

Column Type: varchar

Max Length: 5

Will indicate if the receipt was reversed.

Column Name: type_of_payment

Column Type: varchar

Max Length: 50

Type Of payment.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: write_off_by_liab_dist

Column Type: varchar

Max Length: 20

'Write Off By Liability Distribution'

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.mod_835_add_adjustment

Table Description: This table returns all rows of data in the 835 Health Care Claim Payment/Advice workscreen if a file has been edited.

Column Name: ID
Column Type: integer

Column Name: data_entry_date
Column Type: date
The date the row was last updated in the work screen.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row in the work screen.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated in the work screen.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row in the work screen.

Column Name: FACILITY
Column Type: integer
The system code in which the work screen was saved.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 50
The unique ID assigned to the client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the claim

Column Name: adjustment_id
Column Type: varchar
Max Length: 50
Unique ID for the adjustment row associated with the claim in the file.

Column Name: amount
Column Type: varchar
Max Length: 50
'Amt' in the work screen.

Column Name: claim_number
Column Type: varchar

Max Length: 50
Claim number associated with the row.

Column Name: comment
Column Type: varchar
Max Length: 80
'Comment' from the work screen.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row in the work screen.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: file_data_entry_by
Column Type: varchar
Max Length: 40
The user who compiled the file.

Column Name: file_data_entry_date
Column Type: date
The date the file was compiled.

Column Name: file_data_entry_time
Column Type: varchar
Max Length: 10
The time the file was compiled.

Column Name: file_id
Column Type: varchar
Max Length: 50
The unique ID for the 835 file.

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar

Max Length: 50
The file path and file name of the 835 file.

Column Name: file_status
Column Type: varchar
Max Length: 50
The status of the file.

Column Name: group_code
Column Type: varchar
Max Length: 50
Group code for the adjustment

Column Name: group_value
Column Type: varchar
Max Length: 50
The description for 'group_code'. Please see 'group_code' for more information.

Column Name: post_cas_trans_code
Column Type: varchar
Max Length: 50
'Post CAS Transaction?' from the work screen.

Column Name: post_cas_trans_value
Column Type: varchar
Max Length: 50
The description for 'post_cas_trans_code'. Please see 'post_cas_trans_code' for more information.

Column Name: post_code_description
Column Type: varchar
Max Length: 50
The description for 'posting_code'. Please see 'posting_code' for more information.

Column Name: posting_code
Column Type: varchar
Max Length: 50
'Pay Code' from the work screen.

Column Name: reason_code
Column Type: varchar
Max Length: 50
Reason code for the adjustment.

Column Name: reason_value
Column Type: varchar
Max Length: 50
The description for 'reason_code'. Please see 'reason_code' for more information.

Column Name: remark_code
Column Type: varchar

Max Length: 50
'Rmk Code' in the work screen.

Column Name: remark_value
Column Type: varchar
Max Length: 50
The description for 'remark_code'. Please see 'remark_code' for more information.

Column Name: transfer_guar_code
Column Type: varchar
Max Length: 50
Transfer to Guarantor code

Column Name: trans_to_guar_desc
Column Type: varchar
Max Length: 50
The description for 'transfer_guar_code'. Please see 'transfer_guar_code' for more information.

Column Name: version
Column Type: varchar
Max Length: 50
The version of the 835 file.

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.mod_835_adjustment

Table Description: This table returns all adjustments in the 835 Health Care Claim Payment/Advice workscreen if a file has been edited.

Column Name: ID
Column Type: integer

Column Name: data_entry_date
Column Type: date
The date the row was last updated in the work screen.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row in the work screen.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated in the work screen.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row in the work screen.

Column Name: EPISODE_NUMBER
Column Type: integer
The client's episode number associated with the claim.

Column Name: FACILITY
Column Type: integer
The system code in which the work screen was saved.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 50
The unique ID assigned to the client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the claim

Column Name: adjust_amount
Column Type: varchar
Max Length: 50
Adjustment amount calculated when the file was compiled.

Column Name: claim_number
Column Type: varchar
Max Length: 50
Claim number associated with the row.

Column Name: comment
Column Type: varchar
Max Length: 80
'Comment' from the work screen.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row in the work screen.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'.

Column Name: file_data_entry_by
Column Type: varchar
Max Length: 40
The user who compiled the file.

Column Name: file_data_entry_date
Column Type: date
The date the file was compiled.

Column Name: file_data_entry_time
Column Type: varchar
Max Length: 10
The time the file was compiled.

Column Name: file_id
Column Type: varchar
Max Length: 50
The unique ID for the 835 file.

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar
Max Length: 50
The file path and file name of the 835 file.

Column Name: file_status
Column Type: varchar
Max Length: 50
The status of the file.

Column Name: mod_adjustment_amount
Column Type: varchar
Max Length: 10
'Amt' from the work screen.

Column Name: pay_adj_count
Column Type: integer
Payment/Adjustment count; used to join with specific line item in 835 file.

Column Name: post_cas_trans_code

Column Type: varchar
Max Length: 50
'Post CAS Transaction?' from the work screen.

Column Name: post_cas_trans_value
Column Type: varchar
Max Length: 50
The description for 'post_cas_trans_code'. Please see 'post_cas_trans_code' for more information.

Column Name: post_code_description
Column Type: varchar
Max Length: 50
The description for 'posting_code'. Please see 'posting_code' for more information.

Column Name: posting_code
Column Type: varchar
Max Length: 50
'Posting Code' from the work screen.

Column Name: transfer_guar_code
Column Type: varchar
Max Length: 50
Transfer to Guarantor code

Column Name: trans_to_guar_desc
Column Type: varchar
Max Length: 50
The description for 'transfer_guar_code'. Please see 'transfer_guar_code' for more information.

Column Name: version
Column Type: varchar
Max Length: 50
The version of the 835 file.

Documentation for form: 835_Health_Care_Claim_Payment/Advice

Table Name: SYSTEM.mod_835_payment_codes

Table Description: This table returns all payments in the 835 Health Care Claim Payment/Advice workscreen if a file has been edited.

Column Name: ID
Column Type: integer

Column Name: data_entry_date
Column Type: date

The date the row was last updated in the work screen.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row in the work screen.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated in the work screen.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row in the work screen.

Column Name: FACILITY

Column Type: integer

The system code in which the work screen was saved.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 50

The unique ID assigned to the client's service. Will be the date of service in julian date format followed by a counter starting with ".001".

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the claim

Column Name: claim_number

Column Type: varchar

Max Length: 50

Claim number associated with the row.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' who last updated the row in the work screen.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the 'User ID'.

Column Name: file_data_entry_by

Column Type: varchar

Max Length: 40

The user who compiled the file.

Column Name: file_data_entry_date

Column Type: date

The date the file was compiled.

Column Name: file_data_entry_time

Column Type: varchar

Max Length: 10

The time the file was compiled.

Column Name: file_id

Column Type: varchar

Max Length: 50

The unique ID for the 835 file.

Column Name: file_info_str

Column Type: varchar

Max Length: 50

File Information (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name

Column Type: varchar

Max Length: 50

The file path and file name of the 835 file.

Column Name: file_status

Column Type: varchar

Max Length: 50

The status of the file.

Column Name: pay_adj_count

Column Type: integer

Payment/Adjustment count; used to join with specific line item in 835 file.

Column Name: pay_code_description

Column Type: varchar

Max Length: 50

The description for 'payment_code'. Please see 'payment_code' for more information.

Column Name: payment_code

Column Type: varchar

Max Length: 50

'Pay Code' from the work screen.

Column Name: version
Column Type: varchar
Max Length: 50
The version of the 835 file.

Documentation for form: Delete_Claim

Table Name: SYSTEM.audit_deleted_claims

Table Description: This table represents audit trail data of deleted claims.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: CLAIM_NUMBER
Column Type: varchar
Max Length: 25
The unique number associated with the claim.

Column Name: EPISODE_NUMBER
Column Type: integer
Episode number associated to the PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20

The client ID associated with the deleted claim.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The form the service was last edited on.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the 'User ID'

Column Name: date_deleted

Column Type: varchar

Max Length: 50

Date the claim was deleted.

Column Name: date_of_claim

Column Type: varchar

Max Length: 50

Date the claim was created.

Column Name: first_service_date_of_claim

Column Type: date

The first date of service included in the claim.

Column Name: form_number

Column Type: varchar

Max Length: 50

Form number on which the deleted claim was printed.

Column Name: form_value

Column Type: varchar

Max Length: 50

The description associated with the form_number. See form_number for more information.

Column Name: guarantor_id

Column Type: varchar

Max Length: 50

The ID of the guarantor associated with the deleted claim.

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
The name associated with the guarantor_id.

Column Name: last_service_date_of_claim
Column Type: date
The last date of service included in the claim.

Column Name: option_desc
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: room_and_board_days
Column Type: varchar
Max Length: 50
The number of room and board days on the claim.

Column Name: service_code
Column Type: varchar
Max Length: 20
Service code associated with the client which has been deleted.

Column Name: service_value
Column Type: varchar
Max Length: 50
The description associated with the service_code. See service_code for more information.

Column Name: total_charges_billed
Column Type: numeric
'Total Service Charge'

Column Name: total_claim_liability
Column Type: numeric
Total liability for the payor.

Column Name: user_row_access_code
Column Type: varchar
Max Length: 50
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_bene_info

Table Description: This table returns the eligibility/benefit information (2110C/2110D) of a 271 response file

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
Client episode to which the response data is associated

Column Name: FACILITY
Column Type: integer
the facility in which the information is stored

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
Id of the guarantor associated with the response data

Column Name: PATID
Column Type: varchar
Max Length: 20
the patient associated with the 271 response data

Column Name: amt
Column Type: varchar
Max Length: 18
Benefit Information Amount (EB07)

Column Name: auth_or_cert_ind
Column Type: varchar
Max Length: 1
Benefit Information Authorization or Certification Indicator (EB11)

Column Name: auth_or_cert_value
Column Type: varchar
Max Length: 120
Benefit Information Authorization Or Certification Indicator Value (EB11)

Column Name: benefit_date_qua_code_1
Column Type: varchar
Max Length: 50
Benefit Date Qualifier Code (DTP01) x 1

Column Name: benefit_date_qua_code_2
Column Type: varchar
Max Length: 50
Benefit Date Qualifier Code (DTP01) x 2

Column Name: benefit_date_qua_code_3
Column Type: varchar
Max Length: 50
Benefit Date Qualifier Code (DTP01) x 3

Column Name: benefit_date_qua_code_4
Column Type: varchar
Max Length: 50
Benefit Date Qualifier Code (DTP01) x 4

Column Name: benefit_date_qua_value_1
Column Type: varchar
Max Length: 40
Benefit Date Qualifier Value (DTP01) x 1

Column Name: benefit_date_qua_value_2
Column Type: varchar
Max Length: 40
Benefit Date Qualifier Value (DTP01) x 2

Column Name: benefit_date_qua_value_3
Column Type: varchar
Max Length: 40
Benefit Date Qualifier Value (DTP01) x 3

Column Name: benefit_date_qua_value_4
Column Type: varchar
Max Length: 40
Benefit Date Qualifier Value (DTP01) x 4

Column Name: benefit_percent
Column Type: varchar
Max Length: 10
Benefit Information Percent (EB08)

Column Name: benefit_period_1
Column Type: varchar
Max Length: 50
Benefit Period (DTP03) x 1

Column Name: benefit_period_2
Column Type: varchar
Max Length: 50
Benefit Period (DTP03) x 2

Column Name: benefit_period_3
Column Type: varchar
Max Length: 50
Benefit Period (DTP03) x 3

Column Name: benefit_period_4
Column Type: varchar
Max Length: 50
Benefit Period (DTP03) x 4

Column Name: client_name
Column Type: varchar
Max Length: 100
Name of the client

Column Name: cov_level_code
Column Type: varchar
Max Length: 3
Benefit Information Coverage Level Code (EB02)

Column Name: cov_level_value
Column Type: varchar
Max Length: 120
Benefit Information Coverage Level Code (EB02)

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By (30001)

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option (30003)

Column Name: data_entry_date
Column Type: date
Data Entry Date (30000)

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved. (30033)

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time (30002)

Column Name: data_entry_time_j

Column Type: time
the time with fractional seconds when the data was saved. (30032)

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved. (30031)

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone (30034)

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id (30009)

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name (30009 - calculated)

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved. (30030)

Column Name: elig_info
Column Type: varchar
Max Length: 2
Benefit Information Code (EB01)

Column Name: elig_info_value
Column Type: varchar
Max Length: 120
Benefit Information Value (EB01- code value)

Column Name: elig_verified
Column Type: varchar
Max Length: 5
Eligibility Verified indicator based on benefit information code

Column Name: file_index
Column Type: varchar
Max Length: 50
Index under which the 271 file is stored

Column Name: file_info_str
Column Type: varchar
Max Length: 50

File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name

Column Type: varchar

Max Length: 50

File Name

Column Name: file_status

Column Type: varchar

Max Length: 50

File Status

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

Name of the guarantor

Column Name: inquiry_type

Column Type: varchar

Max Length: 5

The type of inquiry submitted (code)

Column Name: inquiry_type_desc

Column Type: varchar

Max Length: 80

The type of inquiry submitted (desc)

Column Name: ins_type_code

Column Type: varchar

Max Length: 3

Benefit Information Insurance Type Code (EB04)

Column Name: ins_type_value

Column Type: varchar

Max Length: 120

Benefit Information Insurance Type Indicator (EB04)

Column Name: msg

Column Type: varchar

Max Length: 3000

Free form text response message (2110C/2100 'MSG' Segment)

Column Name: plan_cov_desc

Column Type: varchar

Max Length: 50

Benefit Information Plan Coverage Description (EB05)

Column Name: plan_network_ind_code

Column Type: varchar

Max Length: 50
Benefit Information Yes/No Condition Or Response Code (EB12)

Column Name: plan_network_ind_value
Column Type: varchar
Max Length: 50
Benefit Information Yes/No Condition Or Response Value (EB12)

Column Name: procedure_code
Column Type: varchar
Max Length: 50
Benefit Information Procedure Code (EB13)

Column Name: procedure_value
Column Type: varchar
Max Length: 120
Benefit Information Procedure Code Value (EB13)

Column Name: program_code
Column Type: varchar
Max Length: 10
Program (code) associated with episode

Column Name: program_value
Column Type: varchar
Max Length: 40
Program (value) associated with episode

Column Name: quan
Column Type: varchar
Max Length: 15
Benefit Information Quantity (EB10)

Column Name: quan_qua
Column Type: varchar
Max Length: 2
Benefit Information Quantity Qualifier (EB09)

Column Name: quan_value
Column Type: varchar
Max Length: 120
Benefit Information Quantity Qualifier Value (EB09)

Column Name: rel_entity_first_name
Column Type: varchar
Max Length: 50
Name First (2120C/2120D 'NM1' Segment Field NM104)

Column Name: rel_entity_first_name_2
Column Type: varchar

Max Length: 50
Name First (2120C/2120D 'NM1' Segment Field NM104)

Column Name: rel_entity_first_name_3
Column Type: varchar
Max Length: 50
Name First (2120C/2120D 'NM1' Segment Field NM104)

Column Name: rel_entity_first_name_4
Column Type: varchar
Max Length: 50
Name First (2120C/2120D 'NM1' Segment Field NM104)

Column Name: rel_entity_last_name
Column Type: varchar
Max Length: 50
Name Last (2120C/2120D 'NM1' Segment Field NM103)

Column Name: rel_entity_last_name_2
Column Type: varchar
Max Length: 50
Name Last (2120C/2120D 'NM1' Segment Field NM103)

Column Name: rel_entity_last_name_3
Column Type: varchar
Max Length: 50
Name Last (2120C/2120D 'NM1' Segment Field NM103)

Column Name: rel_entity_last_name_4
Column Type: varchar
Max Length: 50
Name Last (2120C/2120D 'NM1' Segment Field NM103)

Column Name: rel_entity_middle_name
Column Type: varchar
Max Length: 50
Name Middle (2120C/2120D 'NM1' Segment Field NM105)

Column Name: rel_entity_middle_name_2
Column Type: varchar
Max Length: 50
Name Middle (2120C/2120D 'NM1' Segment Field NM105)

Column Name: rel_entity_middle_name_3
Column Type: varchar
Max Length: 50
Name Middle (2120C/2120D 'NM1' Segment Field NM105)

Column Name: rel_entity_middle_name_4
Column Type: varchar

Max Length: 50
Name Middle (2120C/2120D 'NM1' Segment Field NM105)

Column Name: rel_entity_type_code
Column Type: varchar
Max Length: 50
Entity Identifier Code (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_code_2
Column Type: varchar
Max Length: 50
Entity Identifier Code (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_code_3
Column Type: varchar
Max Length: 50
Entity Identifier Code (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_code_4
Column Type: varchar
Max Length: 50
Entity Identifier Code (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_qual_code
Column Type: varchar
Max Length: 50
Entity Type Qualifier Code (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_code_2
Column Type: varchar
Max Length: 50
Entity Type Qualifier Code (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_code_3
Column Type: varchar
Max Length: 50
Entity Type Qualifier Code (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_code_4
Column Type: varchar
Max Length: 50
Entity Type Qualifier Code (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_value
Column Type: varchar
Max Length: 40
Entity Type Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_value_2
Column Type: varchar

Max Length: 40
Entity Type Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_value_3
Column Type: varchar
Max Length: 40
Entity Type Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_qual_value_4
Column Type: varchar
Max Length: 40
Entity Type Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM102)

Column Name: rel_entity_type_value
Column Type: varchar
Max Length: 40
Entity Identifier Code (value) (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_value_2
Column Type: varchar
Max Length: 40
Entity Identifier Code (value) (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_value_3
Column Type: varchar
Max Length: 40
Entity Identifier Code (value) (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_entity_type_value_4
Column Type: varchar
Max Length: 40
Entity Identifier Code (value) (2120C/2120D 'NM1' Segment Field NM101)

Column Name: rel_id_code
Column Type: varchar
Max Length: 50
Identification Code (2120C/2120D 'NM1' Segment Field NM109)

Column Name: rel_id_code_2
Column Type: varchar
Max Length: 50
Identification Code (2120C/2120D 'NM1' Segment Field NM109)

Column Name: rel_id_code_3
Column Type: varchar
Max Length: 50
Identification Code (2120C/2120D 'NM1' Segment Field NM109)

Column Name: rel_id_code_4
Column Type: varchar

Max Length: 50
Identification Code (2120C/2120D 'NM1' Segment Field NM109)

Column Name: rel_id_code_qual_code
Column Type: varchar
Max Length: 50
Identification Code Qualifier Code (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_code_2
Column Type: varchar
Max Length: 50
Identification Code Qualifier Code (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_code_3
Column Type: varchar
Max Length: 50
Identification Code Qualifier Code (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_code_4
Column Type: varchar
Max Length: 50
Identification Code Qualifier Code (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_value
Column Type: varchar
Max Length: 40
Identification Code Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_value_2
Column Type: varchar
Max Length: 40
Identification Code Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_value_3
Column Type: varchar
Max Length: 40
Identification Code Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM108)

Column Name: rel_id_code_qual_value_4
Column Type: varchar
Max Length: 40
Identification Code Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM108)

Column Name: service_type_code
Column Type: varchar
Max Length: 1000
Benefit Information Service Type Code (EB03)

Column Name: service_type_value
Column Type: varchar

Max Length: 4096
Benefit Information Service Type Value (EB03)

Column Name: time_period_qua
Column Type: varchar
Max Length: 2
Benefit Information Time Period Qualifier (EB06)

Column Name: time_period_value
Column Type: varchar
Max Length: 120
Benefit Information Time Period Qualifier Value (EB06)

Column Name: trace_number
Column Type: varchar
Max Length: 50
Trace Number (2000C/2000D 'TRN' Segment Field TRN02)

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version
Column Type: varchar
Max Length: 20
version of the 271 file

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_dependent

Table Description: This table returns Eligibility, Coverage or Benefit Response (271) Dependent Information from 'Eligibility Response (271)' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the Client ID included in the 271 file.

Column Name: FACILITY
Column Type: integer
The system code in which the 271 file was compiled.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 10

The Guarantor ID included in the 271 file.

Column Name: JOIN_TO_DEPENDENT

Column Type: integer

The unique ID used as a link to the SYSTEM.billing_271_dependent table.

Column Name: JOIN_TO_HEADER

Column Type: integer

The unique ID used as a link to the SYSTEM.billing_271_header table.

Column Name: JOIN_TO_RECEIVER

Column Type: integer

The unique ID used as a link to the SYSTEM.billing_271_receiver table.

Column Name: JOIN_TO_SOURCE

Column Type: integer

The unique ID used as a link to the SYSTEM.billing_271_source table.

Column Name: JOIN_TO_SUBSCRIBER

Column Type: integer

The unique ID used as a link to the SYSTEM.billing_271_subscriber table.

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID associated with the 271 file.

Column Name: addr_line

Column Type: varchar

Max Length: 55

Dependent Address Line(2100D-N3-01).

Column Name: addr_line_2

Column Type: varchar

Max Length: 55

Dependent Address Line(2100D-N3-02).

Column Name: birth_date

Column Type: varchar

Max Length: 35

Dependent Birth Date(2100D-DMG-02).

Column Name: birth_seq_num

Column Type: varchar

Max Length: 9

Birth Sequence Number(2100D-INS-17).

Column Name: city
Column Type: varchar
Max Length: 30
Dependent City Name(2100D-N4-01).

Column Name: client_name
Column Type: varchar
Max Length: 100
Client name associated with the PATID.

Column Name: comm_num
Column Type: varchar
Max Length: 80
Benefit Related Entity Communication Number(2120D-PER-04).

Column Name: comm_num_2
Column Type: varchar
Max Length: 80
Benefit Related Entity Communication Number(2120D-PER-06).

Column Name: comm_num_3
Column Type: varchar
Max Length: 80
Benefit Related Entity Communication Number(2120D-PER-08).

Column Name: comm_num_qua
Column Type: varchar
Max Length: 2
Communication Number Qualifier(2120D-PER-03).

Column Name: comm_num_qua_2
Column Type: varchar
Max Length: 2
Communication Number Qualifier(2120D-PER-05).

Column Name: comm_num_qua_3
Column Type: varchar
Max Length: 2
Communication Number Qualifier(2120D-PER-07).

Column Name: con_fun_code
Column Type: varchar
Max Length: 2
Contact Function Code(2120-PER-01).

Column Name: con_name
Column Type: varchar
Max Length: 60
Benefit Related Entity Contact Name(2120D-PER-02).

Column Name: country_code
Column Type: varchar
Max Length: 3
Country Code(2100-N4-04).

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name who updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved. (NOTE: The data in this field is delimited by ":" instead of the usual ";")

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar
Max Length: 40
The user name associated with the data_entry_user_id.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_tim
Column Type: varchar
Max Length: 35
'Default Expiration Date (2100C/2100D-DTP-02)' field in the 'Guarantors/Payors (270/271/834)' form.

Column Name: date_tim_qua
Column Type: varchar
Max Length: 3
Date Time Qualifier(2100D-DTP-01).

Column Name: date_tim_value
Column Type: varchar
Max Length: 120
The description associated with the date_tim_qua. See date_tim_qua for more information.

Column Name: dep_id
Column Type: varchar
Max Length: 80
Dependent Primary Identifier(2100D-NM1-09).

Column Name: diagnosis_code1
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI01-2).

Column Name: diagnosis_code2
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI02-2).

Column Name: diagnosis_code3
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI03-2).

Column Name: diagnosis_code4
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI04-2).

Column Name: diagnosis_code5
Column Type: varchar

Max Length: 50
Industry Code(2100D-HI05-2).

Column Name: diagnosis_code6
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI06-2).

Column Name: diagnosis_code7
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI07-2).

Column Name: diagnosis_code8
Column Type: varchar
Max Length: 50
Industry Code(2100D-HI08-2).

Column Name: diagnosis_type_code1
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI01-1).

Column Name: diagnosis_type_code2
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI02-1).

Column Name: diagnosis_type_code3
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI03-1).

Column Name: diagnosis_type_code4
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI04-1).

Column Name: diagnosis_type_code5
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI05-1).

Column Name: diagnosis_type_code6
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI06-1).

Column Name: diagnosis_type_code7
Column Type: varchar

Max Length: 50
Code List Qualifier Code(2100D-HI07-1).

Column Name: diagnosis_type_code8
Column Type: varchar
Max Length: 50
Code List Qualifier Code(2100D-HI08-1).

Column Name: dmng_date_tim_format_qua
Column Type: varchar
Max Length: 3
Date Time Period Format Qualifier(2100D-DMG-01).

Column Name: dtp_date_tim_format_qua
Column Type: varchar
Max Length: 3
Date Time Period Format Qualifier(2100D-DTP-02).

Column Name: entity_id_code
Column Type: varchar
Max Length: 3
Entity Identifier Code(2100D-NM1-01).

Column Name: entity_id_value
Column Type: varchar
Max Length: 80
The description associated with the entity_id_code. See entity_id_code for more information.

Column Name: entity_type_qua
Column Type: varchar
Max Length: 1
Entity Type Qualifier(2100D-NM102).

Column Name: entity_type_value
Column Type: varchar
Max Length: 80
The description associated with the entity_type_qua. See entity_type_qua for more information.

Column Name: file_index
Column Type: varchar
Max Length: 50
The unique id associated with the 271 file. Date the 271 was compiled in julian date format.followed by a counter starting at 001.

Column Name: file_info_str
Column Type: varchar
Max Length: 50
The File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status).

Column Name: file_name
Column Type: varchar
Max Length: 50
The 'File Path\Name' field in the 'Eligibility Response(271)' form.

Column Name: file_status
Column Type: varchar
Max Length: 50
Indicates the file status.

Column Name: first_name
Column Type: varchar
Max Length: 25
Dependent First Name(2100D-NM1-04).

Column Name: follow_act_code
Column Type: varchar
Max Length: 1
Follow-up Action Code(2100D-AAA-04).

Column Name: follow_act_value
Column Type: varchar
Max Length: 120
The description associated with the follow_act_code. See follow_act_code for more information.

Column Name: gender_code
Column Type: varchar
Max Length: 1
Dependent Gender Code(2100D-DMG-03).

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: handicap_ind
Column Type: varchar
Max Length: 1
Handicap Indicator(2100D-INS-10).

Column Name: hier_child_code
Column Type: varchar
Max Length: 1
Hierarchical Child Code(2000D-HL-04).

Column Name: hier_id
Column Type: varchar
Max Length: 12
Hierarchical ID Number(2000D-HL-01).

Column Name: hier_level_code
Column Type: varchar
Max Length: 2
Hierarchical Level Code(2000D-HL-03).

Column Name: hier_parent_id
Column Type: varchar
Max Length: 12
Hierarchical Parent ID Number(2000D-HL-02).

Column Name: id_code_qua
Column Type: varchar
Max Length: 2
Identification Code Qualifier(2100D-NM1-08).

Column Name: id_code_value
Column Type: varchar
Max Length: 80
The description associated with the id_code_qua. See id_code_qua for more information.

Column Name: ind_rel_code
Column Type: varchar
Max Length: 2
Individual Relationship Code(2100D-INS-02).

Column Name: inquiry_type
Column Type: varchar
Max Length: 5
Inquiry Type.

Column Name: inquiry_type_desc
Column Type: varchar
Max Length: 80
The description associated with the inquiry_type. See inquiry_type for more information.

Column Name: ins_ind
Column Type: varchar
Max Length: 1
Insured Indicator(2100D-INS-01).

Column Name: last_name
Column Type: varchar
Max Length: 35
Dependent Last Name(2100D-NM1-03).

Column Name: maint_rea_code
Column Type: varchar
Max Length: 3
Maintenance Reason Code(2100D-INS-04).

Column Name: maint_type_code
Column Type: varchar
Max Length: 3
Maintenance Type Code(2100D-INS-03).

Column Name: middle_name
Column Type: varchar
Max Length: 25
Dependent Middle Name(2100D-NM1-05).

Column Name: plan_spon_name
Column Type: varchar
Max Length: 80
Plan Sponsor Name(2100D-REF-03).

Column Name: ref_id_qua
Column Type: varchar
Max Length: 3
Reference Identification Qualifier(2100D-PRV-02).

Column Name: reject_rea_code
Column Type: varchar
Max Length: 2
Reject Reason Code(2100D-AAA-03).

Column Name: segment
Column Type: varchar
Max Length: 50
Segment.

Column Name: segment_index
Column Type: integer
Segment Counter.

Column Name: state
Column Type: varchar
Max Length: 2
Dependent State Code(2100D-N4-02).

Column Name: stu_status_code
Column Type: varchar
Max Length: 2
Student Status Code(2100D-INS-09).

Column Name: suffix
Column Type: varchar
Max Length: 10
Dependent Name Suffix(2100D-NM1-07).

Column Name: supp_id

Column Type: varchar
Max Length: 30
Dependent Supplemental Identifier(2100D-REF-02).

Column Name: trace_assign_ent_id
Column Type: varchar
Max Length: 10
Trace Assigning Entity Identifier(2000D-TRN-03).

Column Name: trace_assign_ent_id_2
Column Type: varchar
Max Length: 30
Trace Assigning Entity Additional Identifier(2000D-TRN-04).

Column Name: trace_num
Column Type: varchar
Max Length: 30
Trace Number(2000D-TRN-02).

Column Name: trace_type_code
Column Type: varchar
Max Length: 2
Trace Type Code(2000D-TRN-01).

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: valid_req_ind
Column Type: varchar
Max Length: 1
Valid Request Indicator(2100D-AAA-01).

Column Name: valid_req_value
Column Type: varchar
Max Length: 120
The description associated with the valid_req_ind. See valid_req_ind for more information.

Column Name: version
Column Type: varchar
Max Length: 20
The HIPAA transaction version "v4010" or "v5010".

Column Name: zip
Column Type: varchar
Max Length: 15
Dependent Postal Zone or ZIP Code(2100D-N4-03).

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_resp

Table Description: This table returns Eligibility, Coverage or Benefit Response (271) Response Data from 'Eligibility Response (271)' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: varchar
Max Length: 50
Episode Number

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
Guarantor ID

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: amt
Column Type: varchar
Max Length: 18
Benefit Amount

Column Name: auth_or_cert_ind
Column Type: varchar
Max Length: 1
Authorization or Certification Indicator

Column Name: auth_or_cert_value
Column Type: varchar
Max Length: 120
The description associated with the auth_or_cert_ind. See auth_or_cert_ind for more information.

Column Name: benefit_percent

Column Type: varchar
Max Length: 10
Benefit Percent

Column Name: client_name
Column Type: varchar
Max Length: 100
Client Name

Column Name: cov_level_code
Column Type: varchar
Max Length: 3
Benefit Coverage Level Code

Column Name: cov_level_value
Column Type: varchar
Max Length: 120
The description associated with the cov_level_code. See cov_level_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: date_tim
Column Type: varchar

Max Length: 35
Date Time Period

Column Name: date_tim_format_qua
Column Type: varchar
Max Length: 3
Date Time Period Format Qualifier

Column Name: date_tim_format_value
Column Type: varchar
Max Length: 120
The description associated with the date_tim_format_qua. See date_tim_format_qua for more information.

Column Name: date_tim_qua
Column Type: varchar
Max Length: 3
Date/Time Qualifier

Column Name: date_tim_value
Column Type: varchar
Max Length: 120
The description associated with the date_tim_qua. See date_tim_qua for more information.

Column Name: diagnosis_code
Column Type: varchar
Max Length: 50
Diagnosis Code

Column Name: diagnosis_value
Column Type: varchar
Max Length: 120
The description associated with the diagnosis_code. See diagnosis_code for more information.

Column Name: elig_info
Column Type: varchar
Max Length: 2
Eligibility or Benefit Information

Column Name: elig_info_value
Column Type: varchar
Max Length: 120
The description associated with the elig_info. See elig_info for more information.

Column Name: elig_verified
Column Type: varchar
Max Length: 5
Eligibility Verified

Column Name: file_index
Column Type: varchar

Max Length: 50

File Index

Column Name: file_info_str

Column Type: varchar

Max Length: 50

File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name

Column Type: varchar

Max Length: 50

File Name

Column Name: file_status

Column Type: varchar

Max Length: 50

File Status

Column Name: follow_act_code

Column Type: varchar

Max Length: 1

Follow-up Action Code

Column Name: follow_act_value

Column Type: varchar

Max Length: 120

The description associated with the follow_act_code. See follow_act_code for more information.

Column Name: group_index

Column Type: integer

Group Index

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: inquiry_type

Column Type: varchar

Max Length: 5

Inquiry Type

Column Name: inquiry_type_desc

Column Type: varchar

Max Length: 80

The description associated with the inquiry_type. See inquiry_type for more information.

Column Name: inquiry_type_index

Column Type: integer

Inquiry Type Index

Column Name: ins_type_code

Column Type: varchar

Max Length: 3

Insurance Type Code

Column Name: ins_type_value

Column Type: varchar

Max Length: 120

The description associated with the ins_type_code. See ins_type_code for more information.

Column Name: modifier

Column Type: varchar

Max Length: 50

Modifier

Column Name: non_admitted_name

Column Type: varchar

Max Length: 50

Non Admitted Client Name

Column Name: plan_cov_desc

Column Type: varchar

Max Length: 50

Plan Coverage Description

Column Name: procedure_code

Column Type: varchar

Max Length: 50

Procedure Code

Column Name: procedure_value

Column Type: varchar

Max Length: 120

The description associated with the procedure_code. See procedure_code for more information.

Column Name: quan

Column Type: varchar

Max Length: 15

Benefit Quantity

Column Name: quan_qua

Column Type: varchar

Max Length: 2

Quantity Qualifier

Column Name: quan_value

Column Type: varchar

Max Length: 120

The description associated with the quan_qua. See quan_qua for more information.

Column Name: reject_rea_code
Column Type: varchar
Max Length: 2
Rejection Reason Code

Column Name: reject_rea_value
Column Type: varchar
Max Length: 120
The description associated with the reject_rea_code. See reject_rea_code for more information.

Column Name: segment
Column Type: varchar
Max Length: 50
Segment

Column Name: segment_data
Column Type: varchar
Max Length: 255
Segment Data

Column Name: segment_data_msg
Column Type: varchar
Max Length: 3000
Segment Data MSG (2110C 'MSG' Segment)

Column Name: segment_index
Column Type: integer
Segment Counter

Column Name: service_type_code
Column Type: varchar
Max Length: 1000
Service Type Code

Column Name: service_type_value
Column Type: varchar
Max Length: 4096
The description associated with the service_type_code. See service_type_code for more information.

Column Name: time_period_qua
Column Type: varchar
Max Length: 2
Time Period Qualifier

Column Name: time_period_value
Column Type: varchar
Max Length: 120
The description associated with the time_period_qua. See time_period_qua for more information.

Column Name: trace_number
Column Type: varchar
Max Length: 30
Trace Number

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: valid_request_ind
Column Type: varchar
Max Length: 50
Valid Request Indicator

Column Name: valid_request_value
Column Type: varchar
Max Length: 120
The description associated with the valid_request_ind. See valid_request_ind for more information.

Column Name: version
Column Type: varchar
Max Length: 20
271 Version

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_resp_chg

Table Description: This table returns Eligibility, Coverage or Benefit Response (271) Response Data from 'Eligibility Response (271)' form.

Column Name: FACILITY
Column Type: integer

Column Name: version
Column Type: varchar
Max Length: 20

Column Name: file_index
Column Type: varchar
Max Length: 50

Column Name: PATID
Column Type: varchar
Max Length: 20

Column Name: client_name
Column Type: varchar
Max Length: 100

Column Name: EPISODE_NUMBER
Column Type: integer

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50

Column Name: guarantor_name
Column Type: varchar
Max Length: 40

Column Name: inquiry_type
Column Type: varchar
Max Length: 5

Column Name: inquiry_type_desc
Column Type: varchar
Max Length: 80

Column Name: inquiry_type_index
Column Type: integer

Column Name: group_index
Column Type: integer

Column Name: data_entry_by
Column Type: varchar
Max Length: 40

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 50

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

Column Name: data_entry_date

Column Type: date

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

Column Name: file_info_str

Column Type: varchar

Max Length: 50

Column Name: file_name

Column Type: varchar

Max Length: 50

Column Name: file_status

Column Type: varchar

Max Length: 50

Column Name: segment

Column Type: varchar

Max Length: 50

Column Name: segment_index

Column Type: integer

Column Name: segment_data

Column Type: varchar

Max Length: 255

Column Name: segment_data_msg
Column Type: varchar
Max Length: 3000

Column Name: action_cd
Column Type: varchar
Max Length: 50

Column Name: action_val
Column Type: varchar
Max Length: 50

Column Name: previous_segment_data
Column Type: varchar
Max Length: 50

Column Name: previous_segment_data_msg
Column Type: varchar
Max Length: 3000

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_subscriber

Table Description: This table returns Eligibility, Coverage or Benefit Response (271) Subscriber Information from 'Eligibility Response (271)' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the Client ID included in the 271 file to compile.

Column Name: FACILITY
Column Type: integer
The system code in which the 271 file is compiled.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The Guarantor ID included in the 271 file to compile.

Column Name: JOIN_TO_HEADER
Column Type: integer
The unique ID used as a link to the SYSTEM.billing_271_header table.

Column Name: JOIN_TO_RECEIVER
Column Type: integer
The unique ID used as a link to the SYSTEM.billing_271_receiver table.

Column Name: JOIN_TO_SOURCE
Column Type: integer
The unique ID used as a link to the SYSTEM.billing_271_source table.

Column Name: JOIN_TO_SUBSCRIBER
Column Type: integer
The unique ID which represents the Subscriber Information Counter.

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID associated with the 271 file to compile.

Column Name: addr_line
Column Type: varchar
Max Length: 55
Subscriber Address Line.

Column Name: addr_line_2
Column Type: varchar
Max Length: 55
Subscriber Address Line 2.

Column Name: birth_date
Column Type: varchar
Max Length: 35
Subscriber Birth Date.

Column Name: birth_seq_num
Column Type: varchar
Max Length: 9
Birth Sequence Number(2100D-INS-17).

Column Name: city
Column Type: varchar
Max Length: 30
Subscriber City Name.

Column Name: client_name
Column Type: varchar
Max Length: 100
Client name associated with the PATID.

Column Name: comm_num
Column Type: varchar
Max Length: 80
Benefit Related Entity Communication Number(2120-PER-04).

Column Name: comm_num_2
Column Type: varchar
Max Length: 80
Benefit Related Entity Communication Number(2120-PER-06).

Column Name: comm_num_3
Column Type: varchar
Max Length: 80
Benefit Related Entity Communication Number(2120-PER-08).

Column Name: comm_num_qua
Column Type: varchar
Max Length: 2
Communication Number Qualifier(2120-PER-03).

Column Name: comm_num_qua_2
Column Type: varchar
Max Length: 2
Communication Number Qualifier(2120-PER-05).

Column Name: comm_num_qua_3
Column Type: varchar
Max Length: 2
Communication Number Qualifier(2120-PER-07).

Column Name: con_fun_code
Column Type: varchar
Max Length: 2
Contact Function Code(2120C-PER-01).

Column Name: con_name
Column Type: varchar
Max Length: 60
Subscriber Contact Name.

Column Name: country_code
Column Type: varchar
Max Length: 3
Country Code (2100C).

Column Name: country_sub_div_code
Column Type: varchar
Max Length: 50
County Sub Division Code

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name who updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved. (NOTE: The data in this field is delimited by ":" instead of the usual ";")

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user description associated with the data_entry_user_id. See data_entry_user_id for more information.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_tim
Column Type: varchar
Max Length: 35
The 'Default Expiration Date (2100C/2100D-DTP-02)' field in the 'Guarantors/Payors (270/271/834)'

Column Name: date_tim_qua
Column Type: varchar
Max Length: 3
Date Time Qualifier (2100C)

Column Name: date_tim_value
Column Type: varchar
Max Length: 120
The description associated with the date_tim_qua. See date_tim_qua for more information.

Column Name: diagnosis_code1
Column Type: varchar
Max Length: 50
Diagnosis Code 1 (2100C-HI01-2).

Column Name: diagnosis_code2
Column Type: varchar
Max Length: 50
Diagnosis Code 2 (2100C-HI02-2).

Column Name: diagnosis_code3
Column Type: varchar
Max Length: 50
Diagnosis Code 3 (2100C-HI03-2).

Column Name: diagnosis_code4
Column Type: varchar
Max Length: 50
Diagnosis Code 4 (2100C-HI04-2).

Column Name: diagnosis_code5
Column Type: varchar

Max Length: 50
Diagnosis Code 5 (2100C-HI05-2).

Column Name: diagnosis_code6
Column Type: varchar
Max Length: 50
Diagnosis Code 6 (2100C-HI06-2).

Column Name: diagnosis_code7
Column Type: varchar
Max Length: 50
Diagnosis Code 7 (2100C-HI07-2).

Column Name: diagnosis_code8
Column Type: varchar
Max Length: 50
Diagnosis Code 8 (2100C-HI08-2).

Column Name: diagnosis_type_code1
Column Type: varchar
Max Length: 50
Diagnosis Type Code 1 (2100C-HI01-1).

Column Name: diagnosis_type_code2
Column Type: varchar
Max Length: 50
Diagnosis Type Code 2 (2100CHI02-1).

Column Name: diagnosis_type_code3
Column Type: varchar
Max Length: 50
Diagnosis Type Code 3 (2100C-HI03-1).

Column Name: diagnosis_type_code4
Column Type: varchar
Max Length: 50
Diagnosis Type Code 4 (2100C-HI04-1).

Column Name: diagnosis_type_code5
Column Type: varchar
Max Length: 50
Diagnosis Type Code 5 (2100C-HI05-1).

Column Name: diagnosis_type_code6
Column Type: varchar
Max Length: 50
Diagnosis Type Code 6 (2100C-HI06-1).

Column Name: diagnosis_type_code7
Column Type: varchar

Max Length: 50
Diagnosis Type Code 7 (2100C-HI07-1).

Column Name: diagnosis_type_code8
Column Type: varchar
Max Length: 50
Diagnosis Type Code 8 (2100C-HI08-1).

Column Name: dmgt_date_tim_format_qua
Column Type: varchar
Max Length: 3
Date Time Period Format Qualifier(DMG).

Column Name: dtp_date_tim_format_qua
Column Type: varchar
Max Length: 3
Date Time Period Format Qualifier(DTP).

Column Name: entity_id_code
Column Type: varchar
Max Length: 3
Entity Identifier Code(2100C-NM1-01).

Column Name: entity_id_value
Column Type: varchar
Max Length: 80
The description associated with the entity_id_code. See entity_id_code for more information.

Column Name: entity_type_qua
Column Type: varchar
Max Length: 1
Entity Type Qualifier(2100C-NM1-02).

Column Name: entity_type_value
Column Type: varchar
Max Length: 80
The description associated with the entity_type_qua. See entity_type_qua for more information.

Column Name: file_index
Column Type: varchar
Max Length: 50
The unique id associated with the 271 file. Date the 271 was compiled in julian date format.followed by a counter starting at 001.

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar
Max Length: 50
The 'File Path\Name' field in the 'Eligibility Response(271)' form.

Column Name: file_status
Column Type: varchar
Max Length: 50
Indicates the file status.

Column Name: first_name
Column Type: varchar
Max Length: 25
Subscriber First Name(2100C).

Column Name: follow_act_code
Column Type: varchar
Max Length: 1
Follow-up Action Code(2110C-AAA-04).

Column Name: follow_act_value
Column Type: varchar
Max Length: 120
The description associated with the follow_act_code. See follow_act_code for more information.

Column Name: gender_code
Column Type: varchar
Max Length: 1
Subscriber Gender Code(2100C-DMG-03).

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: handicap_ind
Column Type: varchar
Max Length: 1
Handicap Indicator(2100D-INS-10).

Column Name: hier_child_code
Column Type: varchar
Max Length: 1
Hierarchical Child Code(2000C-HL-04).

Column Name: hier_id
Column Type: varchar
Max Length: 12
Hierarchical ID Number(2000C-HL-01).

Column Name: hier_level_code
Column Type: varchar
Max Length: 2
Hierarchical Level Code(2000C-HL-03).

Column Name: hier_parent_id
Column Type: varchar
Max Length: 12
Hierarchical Parent ID Number(2000C-HL-01).

Column Name: id_code_qua
Column Type: varchar
Max Length: 2
Identification Code Qualifier

Column Name: id_code_value
Column Type: varchar
Max Length: 80
The description associated with the id_code_qua. See id_code_qua for more information.

Column Name: ind_rel_code
Column Type: varchar
Max Length: 2
Individual Relationship Code(2100C-INS-02).

Column Name: inquiry_type
Column Type: varchar
Max Length: 5
Inquiry Type

Column Name: inquiry_type_desc
Column Type: varchar
Max Length: 80
Inquiry Type Description

Column Name: ins_ind
Column Type: varchar
Max Length: 1
Insured Indicator(2100D-INS-01).

Column Name: last_name
Column Type: varchar
Max Length: 35
Subscriber Last Name(2100C-NM1-03).

Column Name: loc_id_code
Column Type: varchar
Max Length: 30
Location Identification Code.

Column Name: loc_qua
Column Type: varchar
Max Length: 2
Location Qualifier(2120C-N4-05).

Column Name: maint_rea_code
Column Type: varchar
Max Length: 3
Maintenance Reason Code(2100C-INS-04).

Column Name: maint_type_code
Column Type: varchar
Max Length: 3
Maintenance Type Code(2100C).

Column Name: middle_name
Column Type: varchar
Max Length: 25
Subscriber Middle Name(2100C-NM1-05).

Column Name: plan_spon_name
Column Type: varchar
Max Length: 80
Plan Sponsor Name(2110C-REF-03).

Column Name: prefix
Column Type: varchar
Max Length: 10
Subscriber Name Prefix(2100C)

Column Name: provider_code
Column Type: varchar
Max Length: 50
Provider Code(2100C-PRV-01).

Column Name: provider_ref_id
Column Type: varchar
Max Length: 50
Reference Identification(2100C-REF-02).

Column Name: provider_ref_id_qua
Column Type: varchar
Max Length: 50
Reference Identification Qualifier(2100C-REF-01).

Column Name: ref_id_qua
Column Type: varchar
Max Length: 3
Reference Identification Qualifier(2100C).

Column Name: reject_rea_code
Column Type: varchar
Max Length: 2
Reject Reason Code(2100C-AAA-03).

Column Name: segment
Column Type: varchar
Max Length: 50
Segment.

Column Name: segment_index
Column Type: integer
Segment Counter.

Column Name: state
Column Type: varchar
Max Length: 2
Subscriber State or Province Code(2100C-N4-02).

Column Name: stu_status_code
Column Type: varchar
Max Length: 2
Student Status Code(2100D-INS-09).

Column Name: sub_id
Column Type: varchar
Max Length: 80
Subscriber Primary Identifier(2100C).

Column Name: suffix
Column Type: varchar
Max Length: 10
Subscriber Name Suffix(2100C-NM1-07).

Column Name: supp_id
Column Type: varchar
Max Length: 30
Subscriber Supplemental Identifier.

Column Name: trace_assign_ent_id
Column Type: varchar
Max Length: 10
Trace Assigning Entity Identifier(2000C-TRN-03).

Column Name: trace_assign_ent_id_2
Column Type: varchar
Max Length: 30
Trace Assigning Entity Additional Identifier(2000C-TRN-04).

Column Name: trace_num

Column Type: varchar
Max Length: 30
Trace Number(2000C-TRN-02).

Column Name: trace_type_code
Column Type: varchar
Max Length: 2
Trace Type Code(2000C-TRN-01).

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: valid_req_ind
Column Type: varchar
Max Length: 1
Valid Request Indicator(2110-AAA-01).

Column Name: valid_req_value
Column Type: varchar
Max Length: 120
The description associated with the valid_req_ind. See valid_req_ind for more information.

Column Name: version
Column Type: varchar
Max Length: 20
The billing form number 271, followed by the HIPAA transaction version "v4010" or "v5010".

Column Name: zip
Column Type: varchar
Max Length: 15
Subscriber Postal Code(2100C-N4-03).

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_updated_info

Table Description: This table returns the Subscriber Relationship (INS) information (2100C/2100D) of a 271 response file

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer
Client episode to which the response data is associated

Column Name: FACILITY
Column Type: integer
the facility in which the information is stored

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
Id of the guarantor associated with the response data

Column Name: PATID
Column Type: varchar
Max Length: 20
the patient associated with the 271 response data

Column Name: address_line
Column Type: varchar
Max Length: 50
Address Line 1 (2100C/2100D 'N3' Segment Field N301)

Column Name: address_line_2
Column Type: varchar
Max Length: 50
Address Line 2 (2100C/2100D 'N3' Segment Field N302)

Column Name: city
Column Type: varchar
Max Length: 50
City (2100C/2100D 'N4' Segment Field N401)

Column Name: client_name
Column Type: varchar
Max Length: 100
Name of the client

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By (30001)

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option (30003)

Column Name: data_entry_date
Column Type: date
Data Entry Date (30000)

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved. (30033)

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time (30002)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved. (30032)

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved. (30031)

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone (30034)

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id (30009)

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name (30009 - calculated)

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved. (30030)

Column Name: date_of_birth
Column Type: varchar
Max Length: 50
Birth Date (2100C/2100D 'DMG' Segment Field DMG02)

Column Name: entity_first_name
Column Type: varchar
Max Length: 50
Name First (2120C/2120D 'NM1' Segment Field NM104)

Column Name: entity_last_name
Column Type: varchar

Max Length: 50
Name Last (2120C/2120D 'NM1' Segment Field NM103)

Column Name: entity_middle_name
Column Type: varchar
Max Length: 50
Name Middle (2120C/2120D 'NM1' Segment Field NM105)

Column Name: entity_type_code
Column Type: varchar
Max Length: 50
Entity Identifier Code (2120C/2120D 'NM1' Segment Field NM101)

Column Name: entity_type_qual_code
Column Type: varchar
Max Length: 50
Entity Type Qualifier Code (2120C/2120D 'NM1' Segment Field NM102)

Column Name: entity_type_qual_value
Column Type: varchar
Max Length: 40
Entity Type Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM102)

Column Name: entity_type_value
Column Type: varchar
Max Length: 40
Entity Identifier Code (value) (2120C/2120D 'NM1' Segment Field NM101)

Column Name: file_index
Column Type: varchar
Max Length: 50
Index under which the 271 file is stored

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar
Max Length: 50
File Name

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: gender_code

Column Type: varchar
Max Length: 50
Gender Code (2100C/2100D 'DMG' Segment Field DMG03)

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
Name of the guarantor

Column Name: id_code
Column Type: varchar
Max Length: 50
Identification Code (2120C/2120D 'NM1' Segment Field NM109)

Column Name: id_code_qual_code
Column Type: varchar
Max Length: 50
Identification Code Qualifier Code (2120C/2120D 'NM1' Segment Field NM108)

Column Name: id_code_qual_value
Column Type: varchar
Max Length: 40
Identification Code Qualifier Code (value) (2120C/2120D 'NM1' Segment Field NM108)

Column Name: inquiry_type
Column Type: varchar
Max Length: 5
The type of inquiry submitted (code)

Column Name: inquiry_type_desc
Column Type: varchar
Max Length: 80
The type of inquiry submitted (desc)

Column Name: maint_reason_code
Column Type: varchar
Max Length: 50
Maintenance Reason Code (2100C/2100D 'INS' Segment Field INS04)

Column Name: maint_type_code
Column Type: varchar
Max Length: 50
Maintenance Type Code (2100C/2100D 'INS' Segment Field INS03)

Column Name: state
Column Type: varchar
Max Length: 50
State (2100C/2100D 'N4' Segment Field N402)

Column Name: trace_number

Column Type: varchar
Max Length: 50
Trace Number (2000C/2000D 'TRN' Segment Field TRN02)

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version
Column Type: varchar
Max Length: 20
version of the 271 file

Column Name: zip_code
Column Type: varchar
Max Length: 50
Zip Code (2100C/2100D 'N4' Segment Field N403)

Documentation for form: Eligibility_Response_(271)

Table Name: SYSTEM.billing_271_validate_info

Table Description: This table returns the validation (AAA) information (2110C/2110D) of a 271 response file

Column Name: ID
Column Type: integer

Column Name: EPISODE_NUMBER
Column Type: integer
Client episode to which the response data is associated

Column Name: FACILITY
Column Type: integer
the facility in which the information is stored

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
Id of the guarantor associated with the response data

Column Name: PATID
Column Type: varchar
Max Length: 20
the patient associated with the 271 response data

Column Name: client_name
Column Type: varchar
Max Length: 100
Name of the client

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By (30001)

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option (30003)

Column Name: data_entry_date
Column Type: date
Data Entry Date (30000)

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved. (30033)

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time (30002)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved. (30032)

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved. (30031)

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone (30034)

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id (30009)

Column Name: data_entry_user_name
Column Type: varchar

Max Length: 40
data entry user name (30009 - calculated)

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved. (30030)

Column Name: file_index
Column Type: varchar
Max Length: 50
Index under which the 271 file is stored

Column Name: file_info_str
Column Type: varchar
Max Length: 50
File Information String (Data Entry By, Data Entry By Option, Date Entry Date, Data Entry Time, File Name, File Status)

Column Name: file_name
Column Type: varchar
Max Length: 50
File Name

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: followup_action_code
Column Type: varchar
Max Length: 50
Followup Action Code (AAA04)

Column Name: followup_action_value
Column Type: varchar
Max Length: 50
Followup Action Value (AAA04)

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
Name of the guarantor

Column Name: inquiry_type
Column Type: varchar
Max Length: 5
The type of inquiry submitted (code)

Column Name: inquiry_type_desc
Column Type: varchar

Max Length: 80
The type of inquiry submitted (desc)

Column Name: msg
Column Type: varchar
Max Length: 3000
Free form text response message (2110C/2100 'MSG' Segment)

Column Name: program_code
Column Type: varchar
Max Length: 10
Program (code) associated with episode

Column Name: program_value
Column Type: varchar
Max Length: 40
Program (value) associated with episode

Column Name: reject_reason_code
Column Type: varchar
Max Length: 50
Reject Reason Code (AAA03)

Column Name: reject_reason_value
Column Type: varchar
Max Length: 50
Reject Reason Value (AAA03)

Column Name: trace_number
Column Type: varchar
Max Length: 50
Trace Number (2000C/2000D 'TRN' Segment Field TRN02)

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: valid_request_ind_code
Column Type: varchar
Max Length: 50
Valid Request Indicator (AAA01)

Column Name: valid_request_ind_value
Column Type: varchar
Max Length: 50
Valid Request Indicator Value (AAA01)

Column Name: version

Column Type: varchar
Max Length: 20
version of the 271 file

Documentation for form: Benefit_Enrollment_and_Maintenance_(834)

Table Name: SYSTEM.bem_834_errors

Table Description: Benefit Enrollment and Maintenance (834) Submission Errors

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 50
Guarantor ID

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
Data Entry By (Option)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: episode_index
Column Type: varchar
Max Length: 50
Episode Index for report

Column Name: error_index
Column Type: integer
Error Index for report

Column Name: error_message
Column Type: varchar
Max Length: 256
Error Message

Column Name: file_description
Column Type: varchar
Max Length: 50
File Description

Column Name: file_index
Column Type: varchar
Max Length: 50
834 File Index

Column Name: file_status
Column Type: varchar
Max Length: 50
834 File Status

Column Name: guarantor_name
Column Type: varchar
Max Length: 50
The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: patient_name

Column Type: varchar
Max Length: 100
Client Name

Column Name: priority
Column Type: integer
Error Priority

Column Name: program_code
Column Type: varchar
Max Length: 50
Program

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: through_date
Column Type: date
Through Date

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Type: integer
FACILITY

Column Name: GUARANTOR_ID

Column Type: varchar
Max Length: 10
Guarantor ID

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data entry user name

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: error_cnt_index
Column Type: varchar
Max Length: 50
Error Counter

Column Name: error_episode
Column Type: varchar
Max Length: 50
Episode Number Or An Error Of No Episode

Column Name: error_id
Column Type: varchar
Max Length: 50
Patient ID Number Or An Error Of No ID

Column Name: error_level
Column Type: varchar
Max Length: 50
Error Level

Column Name: error_message
Column Type: varchar
Max Length: 200
Error Message

Column Name: error_priority
Column Type: varchar
Max Length: 50
Error Priority

The UTC date and time the data was saved.

Column Name: file_index
Column Type: varchar
Max Length: 50
File Index

Column Name: file_info_str

Column Type: varchar

Max Length: 500

File Information String (File Status, Date Entry Date, Data Entry By, Data Entry Time, Data Entry By Option, File Name, Data Entry User Id, Option Id, Data Entry UTC Timestamp, Data Entry Workstation Timezone, Data Entry Local Time, Data Entry Offset, Data Entry Calculated Timezone)

Column Name: file_name

Column Type: varchar

Max Length: 200

File Name

Column Name: file_status

Column Type: varchar

Max Length: 50

File Status

Column Name: func_group_count

Column Type: varchar

Max Length: 5

0 - IEA - Number of Included Functional Groups

Column Name: group_cont_num

Column Type: varchar

Max Length: 9

0 - GE - Group Control Number

Column Name: intcx_cont_num

Column Type: varchar

Max Length: 9

0 - IEA - Interchange Control Number

Column Name: segment

Column Type: varchar

Max Length: 50

Segment

Column Name: segment_index

Column Type: integer

Segment Counter

Column Name: tx_segment_count

Column Type: varchar

Max Length: 10

0 - SE - Transaction Segment Count

Column Name: tx_set_cont_num

Column Type: varchar

Max Length: 9

0 - SE - Transaction Set Control Number

Column Name: tx_set_count
Column Type: varchar
Max Length: 6
0 - GE - Number of Transaction Sets Included

Column Name: version
Column Type: varchar
Max Length: 20
834 Version

Documentation for form: Benefit_Enrollment_and_Maintenance_(834)

Table Name: SYSTEM.billing_834_update

Table Description: Benefit Enrollment and Maintenance (834) Update Information

Column Name: ID
Column Type: varchar

Column Type: integer
Coverage

Column Name: FACILITY
Column Type: integer
FACILITY

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
Guarantor ID

Column Name: MEMBER
Column Type: integer
Member

Column Name: PAYER
Column Type: integer
Payer

Column Name: county
Column Type: varchar
Max Length: 40
Financial Responsible County

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp

The UTC date and time the data was saved.

Column Name: dependent_unique_id
Column Type: varchar
Max Length: 40
Dependent Unique ID

Column Name: eligibility_eff_date
Column Type: date
Eligibility Effective Date

Column Name: eligibility_exp_date
Column Type: date
Eligibility Expiration Date

Column Name: error_cnt_index
Column Type: varchar
Max Length: 50
Error Counter

Column Name: error_message
Column Type: varchar
Max Length: 200
Error Message

Column Name: file_index
Column Type: varchar
Max Length: 50
File Index

Column Name: file_info_str
Column Type: varchar
Max Length: 500
File Information String (File Status, Date Entry Date, Data Entry By, Data Entry Time, Data Entry By Option, File Name, Data Entry User Id, Option Id, Data Entry UTC Timestamp, Data Entry Workstation Timezone, Data Entry Local Time, Data Entry Offset, Data Entry Calculated Timezone)

Column Name: file_name
Column Type: varchar
Max Length: 200
File Name

Column Name: file_status
Column Type: varchar
Max Length: 50
File Status

Column Name: member_address_1
Column Type: varchar
Max Length: 40

Member Address 1

Column Name: member_address_2

Column Type: varchar

Max Length: 40

Member Address 2

Column Name: member_address_city

Column Type: varchar

Max Length: 40

Member Address City

Column Name: member_address_state

Column Type: varchar

Max Length: 40

Member Address State

Column Name: member_address_zip

Column Type: varchar

Max Length: 40

Member Address ZIP

Column Name: member_dob

Column Type: date

Member Date of Birth

Column Name: member_first_name

Column Type: varchar

Max Length: 40

Member First Name

Column Name: member_gender

Column Type: varchar

Max Length: 40

Member Gender

Column Name: member_last_name

Column Type: varchar

Max Length: 40

Member Last Name

Column Name: member_phone_number

Column Type: varchar

Max Length: 40

Member Phone Number

Column Name: member_ssn

Column Type: varchar

Max Length: 40

Member Social Security Number

Column Name: missing_coverage
Column Type: bit
missing coverage flag

Column Name: subscriber_unique_id
Column Type: varchar
Max Length: 40
Subscriber Unique ID

Column Type: varchar

Max Length: 120

The description associated with the reject_rea_code. See reject_rea_code for more information.

Column Name: revenue_code

Column Type: varchar

Max Length: 30

SV2 - Revenue Code

Column Name: revenue_value

Column Type: varchar

Max Length: 30

The description associated with the revenue_code. See revenue_code for more information.

Column Name: segment

Column Type: varchar

Max Length: 50

Segment

Column Name: segment_data

Column Type: varchar

Max Length: 255

Segment Data

Column Name: segment_index

Column Type: integer

Segment Counter

Column Name: trace_number

Column Type: varchar

Max Length: 30

TRN -Trace Number

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: version

Column Type: varchar

Max Length: 20

278 Version

Documentation for form: Deposit_Entry

Table Name: SYSTEM.unacknowledged_payments

Table Description: This table holds a record of all unacknowledged payments.

Column Name: ID

Column Type: integer

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number of the Client ID for which the payment was entered.

Column Name: FACILITY

Column Type: integer

The system code in which the payment was entered.

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

The ID of the guarantor for which the payment was entered.

Column Name: JOIN_TO_TX_HISTORY

Column Type: varchar

Max Length: 15

The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: PATID

Column Type: varchar

Max Length: 20

The Client ID for which the payment was entered.

Column Name: automatic_receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: check_number

Column Type: varchar

Max Length: 50

The check number.

Column Name: credit_card_token

Column Type: varchar

Max Length: 50

The credit card token received for credit card payments.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name that last updated this data row.

Column Name: data_entry_utc

Column Type: timestamp

The UTC date and time the data was saved.

Column Name: date_of_payment

Column Type: date

'Date Of Payment'.

Column Name: date_of_receipt

Column Type: date

'Date Of Receipt'.

Column Name: device_name

Column Type: varchar

Max Length: 50

The name of the credit card device used to process the credit card payment.

Column Name: form_code

Column Type: varchar

Max Length: 50

Which form filed the payment (code).

Column Name: form_value

Column Type: varchar

Max Length: 50
Which form filed the payment (value).

Column Name: merchant_id
Column Type: varchar
Max Length: 50
The merchant ID (MID) associated with the credit card payment.

Column Name: name_source
Column Type: varchar
Max Length: 50
Name source.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: payment_amount
Column Type: numeric
The amount posted using the payment_type_code.

Column Name: payment_location_code
Column Type: varchar
Max Length: 10
'Payment Location'.

Column Name: payment_location_value
Column Type: varchar
Max Length: 40
The description associated with payment_location_code. See payment_location_code for more information.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value
Column Type: varchar
Max Length: 40
The description associated with payment_type_code. See payment_type_code for more information.

Column Name: posting_comments
Column Type: varchar
Max Length: 80

'Posting Comments'

Column Name: receipt_number

Column Type: varchar

Max Length: 50

The receipt number.

Column Name: return_ref_number

Column Type: varchar

Max Length: 50

The returned reference number for a credit card or ACH transaction.

Column Name: service_code

Column Type: varchar

Max Length: 20

'Service Code'.

Column Name: treatment_service_code

Column Type: varchar

Max Length: 20

'Treatment Service' code.

Column Name: treatment_service_value

Column Type: varchar

Max Length: 20

'Treatment Service' name.

Documentation for form: Compile/Post_AB_Services

Table Name: SYSTEM.ab_compile

Table Description: AB Service Compile

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: bill_b_code

Column Type: varchar

Max Length: 50

Bill Type B Services code

Column Name: bill_b_value
Column Type: varchar
Max Length: 50
Bill Type B Services value.

Column Name: compile_by
Column Type: varchar
Max Length: 40
Compiled by

Column Name: compile_by_option
Column Type: varchar
Max Length: 40
Form where compile record was created

Column Name: compile_date
Column Type: date
Date of compile

Column Name: compile_time
Column Type: varchar
Max Length: 50
Time of compile

Column Name: compile_user_id
Column Type: varchar
Max Length: 40
Compiled by user ID

Column Name: compile_user_name
Column Type: varchar
Max Length: 40
User that compiled file.

Column Name: file_id
Column Type: varchar
Max Length: 50
Compile ID

Column Name: month_year
Column Type: varchar
Max Length: 50
Month and year compiled

Column Name: post_by
Column Type: varchar
Max Length: 40
Posted by

Column Name: post_by_option

Column Type: varchar
Max Length: 40
Form where post occurred

Column Name: post_date
Column Type: date
Date posted

Column Name: posted
Column Type: varchar
Max Length: 50
Has compile been posted

Column Name: post_time
Column Type: varchar
Max Length: 50
Time Posted

Column Name: post_user_id
Column Type: varchar
Max Length: 40
Posted by user ID

Column Name: post_user_name
Column Type: varchar
Max Length: 40
Posted by user name

Documentation for form: Compile/Post_AB_Services

Table Name: SYSTEM.ab_compile_a_service

Table Description: AB Service Compile A Services

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar

Max Length: 20
Patient ID

Column Name: a_service
Column Type: varchar
Max Length: 50
A Service Code description

Column Name: a_service_code
Column Type: varchar
Max Length: 50
A Service code

Column Name: a_service_date
Column Type: date
Date that A Service occurred

Column Name: a_service_id
Column Type: varchar
Max Length: 50
A Service ID

Column Name: a_service_posted
Column Type: varchar
Max Length: 50
Was A Service posted

Column Name: file_id
Column Type: varchar
Max Length: 50
Compile record ID

Column Name: month_year
Column Type: varchar
Max Length: 50
Month and year of compile

Column Name: patient_name
Column Type: varchar
Max Length: 50
Patient name.

Column Type: varchar
Max Length: 5012
Type Code

Column Name: TypeCodeDisplayName
Column Type: varchar
Max Length: 5012
Type Code Display Name

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar

Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: description

Column Type: varchar

Max Length: 500

Product's description

Column Name: enabled

Column Type: varchar

Max Length: 500

Enable status of the product

Column Name: event_types

Column Type: varchar

Max Length: 32000

Associated event types

Column Name: option_desc

Column Type: varchar

Max Length: 80

Option Description

Column Name: option_id

Column Type: varchar

Max Length: 20

Option Id

Column Name: product_id
Column Type: integer
Product Id

Column Name: product_sdk_instanceid
Column Type: varchar
Max Length: 500
Product SDK Instance ID

Column Name: product_type
Column Type: varchar
Max Length: 500
Product Type

Column Name: todo_user
Column Type: varchar
Max Length: 512
User to send To-Dos (CareManager setting)

Column Name: type_of_admission_code
Column Type: varchar
Max Length: 5
Default Type Of Admission

Column Name: type_of_admission_value
Column Type: varchar
Max Length: 40
Default Type Of Admission

Column Name: type_of_discharge_code
Column Type: varchar
Max Length: 5
Default Type Of Discharge

Column Name: type_of_discharge_value
Column Type: varchar
Max Length: 80
Default Type Of Discharge

Documentation for form: CareFabric_Assessment_Mapping

Table Name: SYSTEM.carefabric_assessment_mapping

Table Description: Assessment mapping with user modeled forms

Column Name: ID

Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: AssessmentDisplayPlanID
Column Type: varchar
Max Length: 4096
Assessment display plan id provided by assessment engine.

Column Name: assessment_name
Column Type: varchar
Max Length: 1024
Assessment name provided by assessment engine.

Column Name: assessment_field
Column Type: varchar
Max Length: 8192
Field name for the assessment table.

Column Name: modeled_form
Column Type: varchar
Max Length: 1024
Modeled form id.

Column Name: modeled_form_name
Column Type: varchar
Max Length: 1024
Modeled form name.

Column Name: modeled_form_field
Column Type: varchar
Max Length: 1024
Field name for the modeled form.

Column Name: modeled_form_field_name
Column Type: varchar
Max Length: 1024
Modeled form field name.

Column Name: modeled_form_field_table
Column Type: varchar
Max Length: 1024
Modeled form table name for the field.

Column Name: data_entry_by
Column Type: varchar

Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Documentation for form: CareFabric_Assessment_Mapping

Table Name: SYSTEM.carefabric_assessment_mapping_client

Table Description: Assessment mapping with user modeled forms

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: AssessmentDisplayPlanID
Column Type: varchar
Max Length: 4096
Assessment display plan id provided by assessment engine.

Column Name: assessment_name
Column Type: varchar
Max Length: 1024
Assessment name provided by assessment engine.

Column Name: modeled_form
Column Type: varchar
Max Length: 1024
Modeled form id.

Column Name: modeled_form_name
Column Type: varchar
Max Length: 1024
Modeled form name.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client id that the data associated with.

Column Name: allow_final_to_draft
Column Type: bit
Set to 1 when the mapped data is (will be) finalized in Avatar.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: documentID

Column Type: varchar

Max Length: 255

Document id provided by assessment engine.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: unique_row_id

Column Type: varchar

Max Length: 50

The unique row id that the data associated with.

Documentation for form:

CareFabric_External_Application_Configuration

Table Name: SYSTEM.carefabric_app_launch

Table Description: Client ID Unique ID Mapping for external app launch.

Column Name: ID

Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: ContextID
Column Type: varchar
Max Length: 1024
A unique identifier

Column Name: launch_type
Column Type: varchar
Max Length: 1024
Launch Type

Column Name: checked
Column Type: bit
Indicates if this context is already used.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_checkby
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_checkby_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_checkdate
Column Type: date
The date the row was last updated.

Column Name: data_entry_checkoffset
Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_checksource

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_checktime

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_checktime_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_checktimezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_checktimezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_checkuser_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_checkuser_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_checkutc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Documentation for form:

Compile_General_Ledger_Payment/Adjustment_Interface_File

Table Name: GL.comp_pay_ack_int_detail

Table Description: This table returns detail Payment Acknowledgement GL Interface Compile data.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was generated.

Column Name: JOIN_TO_PAYMENT_HISTORY
Column Type: varchar
Max Length: 15
An additional unique ID used to link the payment/adjustment tables. Will be "B" followed by the date of service in Julian date format and a counter starting with ".001".

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40
The unique ID assigned to the specific Client's service. Will be the date of service in Julian date format followed by a counter starting with ".001".

Column Name: PATID
Column Type: varchar
Max Length: 20
The Client ID for which the posting was entered.

Column Name: amount
Column Type: numeric
The amount associated with the transaction.

Column Name: end_posting_date
Column Type: date
'End Posting Date'.

Column Name: gl_credit_number
Column Type: varchar
Max Length: 40
Credit G/L Charge Account Number

Column Name: gl_debit_number
Column Type: varchar
Max Length: 40

Debit G/L Charge Account Number

Column Name: gl_posting_date

Column Type: date

GL Posting Date

Column Name: incl_in_reverse_tot_code

Column Type: varchar

Max Length: 50

Reversal Charge Code

Column Name: incl_in_reverse_tot_value

Column Type: varchar

Max Length: 50

Reversal Charge Value

Column Name: interface_comp_1_desc

Column Type: varchar

Max Length: 50

Interface Component 1 Description (Field Name)

Column Name: interface_comp_2_desc

Column Type: varchar

Max Length: 50

Interface Component 2 Description (Field Name)

Column Name: interface_comp_3_desc

Column Type: varchar

Max Length: 50

Interface Component 3 Description (Field Name)

Column Name: interface_component_1_cd

Column Type: varchar

Max Length: 50

Interface Component 1 code

Column Name: interface_component_1_val

Column Type: varchar

Max Length: 50

Interface Component 1 Value

Column Name: interface_component_2_cd

Column Type: varchar

Max Length: 50

Interface Component 2 code

Column Name: interface_component_2_val

Column Type: varchar

Max Length: 50

Interface Component 2 Value

Column Name: interface_component_3_cd
Column Type: varchar
Max Length: 50
Interface Component 3 code

Column Name: interface_component_3_val
Column Type: varchar
Max Length: 50
Interface Component 3 Value

Column Name: join_to_post_pay_entry
Column Type: integer
The row ID in the SYSTEM.pay_ack_post_pay_acc_ent sql table.

Column Name: pay_ack_transaction_num
Column Type: integer
The 'Transaction Number' in the 'Payment Acknowledgement' form.

Column Name: payment_type_code
Column Type: varchar
Max Length: 10
'Posting Code'.

Column Name: payment_type_value
Column Type: varchar
Max Length: 40
The description associated with payment_type_code. See payment_type_code for more information.

Column Name: start_posting_date
Column Type: date
'Start Posting Date'.

Column Name: transaction_type_code
Column Type: varchar
Max Length: 50
Transaction Type Code

Column Name: transaction_type_value
Column Type: varchar
Max Length: 50
Transaction Type Value

Column Name: unique_row_id2
Column Type: varchar
Max Length: 15
The unique ID assigned to the posting for each service. Will be "CR" followed by the posting date (date of payment).

Documentation for form: Block_Client_Chart

Table Name: SYSTEM.RADplus_audit_blocked_clients

Table Description: This table audits data filed via the 'Block Client Chart' Form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: audit_counter

Column Type: integer

Count of how many times row has been filed

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID being blocked.

Column Name: allow_emergency_access_code

Column Type: varchar

Max Length: 50

'Allow Emergency Access for User/User Role' field value

Column Name: allow_emergency_access_value

Column Type: varchar

Max Length: 50

The description associated with allow_emergency_access_code.

Column Name: audit_action_code

Column Type: varchar

Max Length: 50

The action type which created the audit record.

Column Name: audit_action_value

Column Type: varchar

Max Length: 50

The description associated to audit_action_code.

Column Name: block_user_roles_code

Column Type: varchar

Max Length: 50

'Block User Roles' field value

Column Name: block_user_roles_value
Column Type: varchar
Max Length: 200
The description associated with block_user_roles_code.

Column Name: block_users_code
Column Type: varchar
Max Length: 50
'Block Users' field value

Column Name: block_users_value
Column Type: varchar
Max Length: 200
The description associated with block_users_code.

Column Name: comments
Column Type: varchar
Max Length: 32000
'Comments' field value

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The process that last updated the row.

Column Name: data_entry_time
Column Type: varchar

Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 50
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: reason_code
Column Type: varchar
Max Length: 50
'Reason for Blocking' field value

Column Name: reason_value
Column Type: varchar
Max Length: 200
The description associated with reason_code.

Column Name: selected_user_descs
Column Type: varchar
Max Length: 32000
The description associated with selected_user_ids.

Column Name: selected_user_ids
Column Type: varchar
Max Length: 32000
'Selected Users' field value

Column Name: selected_user_roles
Column Type: varchar
Max Length: 32000
'Selected User Roles' field value

Documentation for form: Acuity_Compile

Table Name: SYSTEM.acuity_compile

Table Description: This table returns acuity compile metadata.

Column Name: ID
Column Type: integer

Column Name: compile_date
Column Type: date
The date that this compile record was run for.

Column Name: compile_end_time
Column Type: varchar
Max Length: 50
The date/time when this compile record completed compiling.

Column Name: compile_start_time
Column Type: varchar
Max Length: 50
The date/time when this compile record started compiling.

Column Name: compile_time
Column Type: varchar
Max Length: 50
The time that this compile record was run for.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time when this data row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient identification number. Present if the compile was run for an individual patient record.

Column Name: post_end_time
Column Type: varchar
Max Length: 50
The date/time when this compile record completed posting.

Column Name: post_start_time
Column Type: varchar
Max Length: 50
The date/time when this compile record started posting.

Column Name: program
Column Type: varchar
Max Length: 3200
The '&' delimited list of program codes that this compile was run for.

Column Name: status
Column Type: varchar
Max Length: 50
The current status of this compile record.

Column Name: unit
Column Type: varchar

Max Length: 500

The '&' delimited list of unit codes that this compile was run for.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The option name that last updated this data row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The option identifier that last updated this data_row.

Documentation for form: Acuity_Compile

Table Name: SYSTEM.acuity_compile_error

Table Description: This table returns errors produced by the acuity compile process.

Column Name: Compile

Column Type: integer

The compile record id which produced this error.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: action

Column Type: varchar

Max Length: 400

The compile action that was executing when this error occurred.

Column Name: error

Column Type: varchar

Max Length: 400

The error message.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: rule_id

Column Type: varchar

Max Length: 50

The rule id (if applicable) that this error occurred for.

Column Name: childsub

Column Type: integer

Documentation for form: Acuity_Compile

Table Name: SYSTEM.acuity_domain_score

Table Description: This view returns acuity score totals by practitioner category and acuity domain.

Column Name: FACILITY

Column Type: integer

Column Name: practitioner_cat_code

Column Type: varchar

Max Length: 50

Column Name: practitioner_cat_value

Column Type: varchar

Column Type: varchar
Max Length: 50

Column Name: rule_id
Column Type: integer

Column Name: uncalculated_score
Column Type: double

Column Name: score
Column Type: double

Documentation for form: Acuity_Compile

Table Name: SYSTEM.acuity_score

Table Description: The table returns acuity scores created by the acuity compile process.

Column Name: ID
Column Type: integer

Column Name: compile
Column Type: integer
The compile record id which produced this score.

Column Name: compile_date
Column Type: date
The date this score was created for.

Column Name: domain_code
Column Type: varchar
Max Length: 50
The domain that this score is categorized under.

Column Name: domain_value
Column Type: varchar
Max Length: 50
The dictionary value for the domain code.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The patient identification number for this score record.

Column Name: posted
Column Type: bit
The posted (finalized) status of this score record.

Column Name: practitioner_cat_code
Column Type: varchar
Max Length: 50
Practitioner category dictionary code for the acuity rule that produced this score.

Column Name: practitioner_cat_value
Column Type: varchar
Max Length: 50
Practitioner category dictionary value.

Column Name: rule_id
Column Type: integer
The acuity rule record id which produced this score.

Column Name: score
Column Type: numeric
The score value.

Column Name: subdomain
Column Type: varchar
Max Length: 50
The subdomain of the acuity rule that produced this score.

Column Name: uncalculated_score
Column Type: double
The uncalculated score value.

Documentation for form: Acuity_Compile

Table Name: SYSTEM.acuity_subdomain_score

Table Description: This view returns acuity conditionally grouped score by facility, PATID, compile, domain, sub-domain, practitioner category.

Column Name: FACILITY
Column Type: integer

Column Name: PATID
Column Type: varchar
Max Length: 20

Column Name: compile
Column Type: integer

Column Name: compile_date
Column Type: date

Column Name: posted
Column Type: bit

Column Name: domain_code
Column Type: varchar
Max Length: 50

Column Name: domain_value
Column Type: varchar
Max Length: 50

Column Name: subdomain
Column Type: varchar
Max Length: 50

Column Name: practitioner_cat_code
Column Type: varchar
Max Length: 50

Column Name: practitioner_cat_value
Column Type: varchar
Max Length: 50

Column Name: rule_id
Column Type: integer

Column Name: uncalculated_score
Column Type: double

Column Name: score
Column Type: varchar
Max Length: 20

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams

Table Description: This table stores an audit of the 'Team Definition' form.

Column Name: ID
Column Type: integer

Column Name: audit_counter
Column Type: integer
Count of how many times row has been filed.

Column Name: FACILITY
Column Type: integer
The root system code in which the data was stored.

Column Name: active
Column Type: varchar
Max Length: 50
'Active'

Column Name: add_edit_delete
Column Type: varchar
Max Length: 50
The action being audited.

Column Name: consult_code
Column Type: varchar
Max Length: 50
consult_code - 'Team Accepts Consult Orders' code

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The description of what application filed the audit.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: description

Column Type: varchar

Max Length: 80

'Team Description'

Column Name: disable_caseload_add

Column Type: varchar

Max Length: 1

'Team Finalizer'

Column Name: team_id

Column Type: varchar

Max Length: 50

'Team ID'

Column Name: type
Column Type: varchar
Max Length: 50
'Type'

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams_caseload
Table Description: This table stores an audit of the 'Individual Client Assignment' section of the 'Team Definition' form.

Column Name: ID
Column Type: integer

Column Name: audit_counter
Column Type: integer
Count of how many times row has been filed.

Column Name: EPISODENUMBER
Column Type: integer
'Episode(s)'

Column Name: FACILITY
Column Type: integer
The root system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
'Client ID'

Column Name: add_remove
Column Type: varchar
Max Length: 50
The action being audited.

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option

Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The description of what application filed the audit.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: radteamaudit
Column Type: integer

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams_programs

Table Description: This table stores an audit of the 'Select Programs' field on the 'Team Definition' form.

Column Name: ID
Column Type: integer

Column Name: audit_counter
Column Type: integer
Count of how many times row has been filed.

Column Name: FACILITY
Column Type: integer
The root system code in which the data was stored.

Column Name: add_remove
Column Type: varchar
Max Length: 50
The action being audited.

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar

Max Length: 50

The ID of the form that updated the row.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The description of what application filed the audit.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: program

Column Type: varchar

Max Length: 80

The selected program.

Column Name: radteamaudit

Column Type: integer

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams_role

Table Description: This table stores an audit of the 'Select Roles' field on the 'Team Definition' form.

Column Name: ID
Column Type: integer

Column Name: audit_counter
Column Type: integer
Count of how many times row has been filed.

Column Name: FACILITY
Column Type: integer
The root system code in which the data was stored.

Column Name: add_remove
Column Type: varchar
Max Length: 50
The action being audited.

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The description of what application filed the audit.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: radrole

Column Type: varchar

Max Length: 50

The user role ID.

Column Name: radteamaudit

Column Type: integer

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams_sites

Table Description: This table stores an audit of the 'Select Sites' field on the 'Team Definition' form.

Column Name: ID

Column Type: integer

Column Name: audit_counter

Column Type: integer

Count of how many times row has been filed.

Column Name: FACILITY
Column Type: integer
The root system code in which the data was stored.

Column Name: add_remove
Column Type: varchar
Max Length: 50
The action being audited.

Column Name: data_entry_by_login
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The description of what application filed the audit.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: radteamaudit
Column Type: integer

Column Name: site
Column Type: varchar
Max Length: 50
The site ID.

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams_units

Table Description: This table stores an audit of the 'Select Units' field on the 'Team Definition' form.

Column Name: ID
Column Type: integer

Column Name: audit_counter
Column Type: integer
Count of how many times row has been filed.

Column Name: FACILITY
Column Type: integer
The root system code in which the data was stored.

Column Name: add_remove
Column Type: varchar
Max Length: 50
The action being audited.

Column Name: data_entry_by_login

Column Type: varchar

Max Length: 50

The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option

Column Type: varchar

Max Length: 50

The ID of the form that updated the row.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The description of what application filed the audit.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: radteamaudit

Column Type: integer

Column Name: unit

Column Type: varchar

Max Length: 50

The unit ID.

Documentation for form: Team_Definition

Table Name: SYSTEM.RADplus_audit_teams_user

Table Description: This table stores an audit of the 'Select Users' field on the 'Team Definition' form.

Column Name: ID

Column Type: integer

Column Name: audit_counter

Column Type: integer

Count of how many times row has been filed.

Column Name: FACILITY

Column Type: integer

The root system code in which the data was stored.

Column Name: add_remove

Column Type: varchar

Max Length: 50

The action being audited.

Column Name: data_entry_by_login

Column Type: varchar

Max Length: 50

The user name that last updated the row (logged into Avatar).

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row (logged into the filing form).

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_option
Column Type: varchar
Max Length: 50
The ID of the form that updated the row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The description of what application filed the audit.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: radteamaudit
Column Type: integer

Column Name: raduser
Column Type: varchar
Max Length: 50
The user ID.

Documentation for form: Service_Documentation_Corrections

Table Name: SYSTEM.service_doc_corrections

Table Description: This table returns service documentation corrections data.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
Facility number the service documentation correction is for

Column Name: PATID
Column Type: varchar
Max Length: 20
Client id the service documentation correction is for

Column Name: Service_Doc_Hist
Column Type: varchar
Max Length: 20
Historic the service documentation correction is for

Column Name: Service_Doc_App
Column Type: varchar
Max Length: 20
Application the service documentation correction is for

Column Name: aps_link
Column Type: varchar
Max Length: 40
Appointment link if applicable

Column Name: service_link
Column Type: varchar
Max Length: 40
Service link

Column Name: data_entry_date
Column Type: date

Last date this table row was updated

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

Last user to update this table row

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

Last user to update this table row

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

Last user to update this table row

Column Name: option_id

Column Type: varchar

Max Length: 40

Column Name: option_desc

Column Type: varchar

Table Description: This table returns draft data stored from the 'LA Community Outreach Services Entry' form.

Column Name: ID
Column Type: integer

Column Name: location_code
Column Type: varchar
Max Length: 15
'Location'

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID

Column Name: age_category_code
Column Type: varchar
Max Length: 50
'Age Category'

Column Name: age_category_value
Column Type: varchar
Max Length: 50
The description associated with age_category_code. See age_category_code for more information.

Column Name: client_id
Column Type: varchar
Max Length: 50
'Client ID'

Column Name: client_id_episode
Column Type: integer
'Client ID Episode'

Column Name: cost_of_service
Column Type: numeric
'Cost Of Service'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_by_option
Column Type: varchar

Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar

the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_of_service
Column Type: date
'Date Of Service'

Column Name: duration
Column Type: numeric

'Duration (Minutes)'

Column Name: ethnicity_code

Column Type: varchar

Max Length: 50

'Ethnicity'

Column Name: ethnicity_value

Column Type: varchar

Max Length: 50

The description associated with ethnicity_code. See ethnicity_code for more information.

Column Name: location_value

Column Type: varchar

Max Length: 40

The description associated with location_code. See location_code for more information.

Column Name: number_persons_contacted

Column Type: integer

'Number of Persons Contacted'

Column Name: practitioner_id

Column Type: varchar

Max Length: 15

'Practitioner'

Column Name: practitioner_name

Column Type: varchar

Max Length: 40

The name associated with the practitioner_id.

Column Name: primary_language_code

Column Type: varchar

Max Length: 50

'Primary Language'

Column Name: primary_language_value

Column Type: varchar

Max Length: 50

The description associated with primary_language_code. See primary_language_code for more information.

Column Name: program_area_code

Column Type: varchar

Max Length: 50

'Program Area'

Column Name: program_area_value

Column Type: varchar

Max Length: 50

The description associated with program_area_code. See program_area_code for more information.

Column Name: program_code
Column Type: varchar
Max Length: 15
'Program Code'

Column Name: program_value
Column Type: varchar
Max Length: 70
The description associated with program_code. See program_code for more information.

Column Name: progress_note
Column Type: varchar
Max Length: 32766
'Progress Notes (Include presenting problems, goals, content, process and outcome)'

Column Name: recipient_type_code
Column Type: varchar
Max Length: 50
'Service Recipient Type'

Column Name: recipient_type_value
Column Type: varchar
Max Length: 50
The description associated with recipient_type_code. See recipient_type_code for more information.

Column Name: recommendations
Column Type: varchar
Max Length: 32766
'Future Plans/Recommendations (Include major topics or problem areas to be addressed and any special problems or successful techniques which might be helpful in the future consultation)'

Column Name: service_code
Column Type: varchar
Max Length: 40
'Service Code'

Column Name: service_type_code
Column Type: varchar
Max Length: 50
'Service Type'

Column Name: service_type_value
Column Type: varchar
Max Length: 50
The description associated with service_type. See service_type for more information.

Documentation for form: LA_Community_Outreach_Service_Entry

Table Name: LAPROV.la_cos_tx_history

Table Description: This table returns data stored from the 'LA Community Outreach Services Entry' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number for the client ID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: JOIN_TO_TX_HISTORY
Column Type: varchar
Max Length: 40

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID

Column Name: age_category_code
Column Type: varchar
Max Length: 50
'Age Category'

Column Name: age_category_value
Column Type: varchar
Max Length: 50
The description associated with age_category_code. See age_category_code for more information.

Column Name: client_id
Column Type: varchar
Max Length: 50
'Client ID'

Column Name: client_id_episode
Column Type: integer
'Client ID Episode'

Column Name: cos_unique_id
Column Type: varchar
Max Length: 20

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_service

Column Type: date

'Date Of Service'

Column Name: ethnicity_code

Column Type: varchar

Max Length: 50

'Ethnicity'

Column Name: ethnicity_value

Column Type: varchar

Max Length: 50

The description associated with ethnicity_code. See ethnicity_code for more information.

Column Name: number_persons_contacted

Column Type: integer

'Number of Persons Contacted'

Column Name: primary_language_code

Column Type: varchar

Max Length: 50

'Primary Language'

Column Name: primary_language_value

Column Type: varchar

Max Length: 50

The description associated with primary_language_code. See primary_language_code for more information.

Column Name: program_area_code

Column Type: varchar

Max Length: 50

'Program Area'

Column Name: program_area_value

Column Type: varchar

Max Length: 50

The description associated with program_area_code. See program_area_code for more information.

Column Name: progress_note

Column Type: varchar

Max Length: 32766

'Progress Notes (Include presenting problems, goals, content, process and outcome)'

Column Name: recipient_type_code

Column Type: varchar
Max Length: 50
'Service Recipient Type'

Column Name: recipient_type_value
Column Type: varchar
Max Length: 50
The description associated with recipient_type_code. See recipient_type_code for more information.

Column Name: recommendations
Column Type: varchar
Max Length: 32766
'Future Plans/Recommendations (Include major topics or problem areas to be addressed and any special problems or successful techniques which might be helpful in the future consultation)'

Column Name: service_type_code
Column Type: varchar
Max Length: 50
'Service Type'

Column Name: service_type_value
Column Type: varchar
Max Length: 50
The description associated with service_type. See service_type for more information.

Documentation for form: LA_CSI_Assessment_Entry

Table Name: LAPROV.csi_assessment_log

Table Description: CSI Assessment Log

Column Name: ID
Column Type: integer

Column Name: Data_Entry_By_Login
Column Type: varchar
Max Length: 40

Column Name: Data_Entry_By_Option
Column Type: varchar
Max Length: 40

Column Name: Data_Entry_Date
Column Type: date

Column Name: Data_Entry_Source
Column Type: varchar
Max Length: 255

Column Name: Data_Entry_Time
Column Type: varchar
Max Length: 10

Column Name: Data_Entry_User_Id
Column Type: varchar

Column Name: referred_to_value
Column Type: varchar
Max Length: 256

Documentation for form: Medication_Order

Table Name: Methadone.history_client_med_order

Table Description: This table returns Methadone Medication Order Information.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: LINK_TO_ORDER_CLIENT
Column Type: varchar
Max Length: 50
Joins table to medication order data.

Column Name: LINK_TO_SIGNATURE
Column Type: varchar
Max Length: 50
Joins table to signature data.

Column Name: MORuniqueid
Column Type: varchar
Max Length: 50
Unique ID for the medication order record.

Column Name: PATID
Column Type: varchar

Max Length: 20
The client ID associated with the data.

Column Name: active_code
Column Type: varchar
Max Length: 50
'Active'

Column Name: active_value
Column Type: varchar
Max Length: 50
The description associated with active_code. See active_code for more information.

Column Name: blind_dosing_code
Column Type: varchar
Max Length: 50
'Blind Dosing'

Column Name: blind_dosing_value
Column Type: varchar
Max Length: 50
The description associated with blind_dosing_code. See blind_dosing_code for more information.

Column Name: clinic_visit_days_code
Column Type: varchar
Max Length: 255
'Clinic Visit Days'

Column Name: clinic_visit_days_shval
Column Type: varchar
Max Length: 255
The description associated with clinic_visit_days_code. See clinic_visit_days_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_activated
Column Type: date
'Date Activated'

Column Name: dispense_dose2_on_exp_date
Column Type: varchar
Max Length: 50
'Dispense Dosage 2 On Expiration Date'

Column Name: dispense_dose3_on_exp_date
Column Type: varchar
Max Length: 50
'Dispense Dosage 3 On Expiration Date'

Column Name: dispensing_info_all
Column Type: varchar

Max Length: 50
'Dispensing Information'

Column Name: dosage_1_mg
Column Type: numeric
'Dosage 1 (mg)'

Column Name: dosage_2_mg
Column Type: numeric
'Dosage 2 (mg)'

Column Name: dosage_3_mg
Column Type: numeric
'Dosage 3 (mg)'

Column Name: dosage_on_effective_date
Column Type: varchar
Max Length: 50
'Dosage On Effective Date'

Column Name: dosage_type_code
Column Type: varchar
Max Length: 50
'Dosage Type'

Column Name: dosage_type_value
Column Type: varchar
Max Length: 50
The description associated with dosage_type_code. See dosage_type_code for more information.

Column Name: effective_date
Column Type: date
'Effective Date'

Column Name: episode_select_for_query
Column Type: varchar
Max Length: 70
Use this to select episode in queries

Column Name: expiration_date
Column Type: date
'Expiration Date'

Column Name: link_to_external_row_id
Column Type: integer
Joins table to external orders

Column Name: medication_order_code
Column Type: varchar
Max Length: 50

'Medication Order Template'

Column Name: medication_order_value

Column Type: varchar

Max Length: 50

'Medication Order Template' Name

Column Name: medication_type_code

Column Type: varchar

Max Length: 50

'Medication Type'

Column Name: medication_type_value

Column Type: varchar

Max Length: 50

The description associated with medication_type_code. See medication_type_code for more information.

Column Name: med_order_type_code

Column Type: varchar

Max Length: 50

'Medication Order Type'

Column Name: med_order_type_value

Column Type: varchar

Max Length: 50

The description associated with med_order_type_code. See med_order_type_code for more information.

Column Name: notes

Column Type: varchar

Max Length: 32766

'Notes'

Column Name: order_type_code

Column Type: varchar

Max Length: 50

'Order Type'

Column Name: order_type_value

Column Type: varchar

Max Length: 50

The description associated with order_type_code. See order_type_code for more information.

Column Name: order_date

Column Type: date

'Order Date'

Column Name: order_number

Column Type: varchar

'Client Name'

Column Name: v_number_of_weeks
Column Type: varchar
Max Length: 50
'Number Of Weeks'

Column Name: v_program_value
Column Type: varchar
Max Length: 50
The description associated with v_program_code. See v_program_code for more information.

Documentation for form: Medication_Order

Table Name: Methadone.history_fixed_med_order
Table Description: This table returns Methadone Medication Fixed Order Information.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: FMOUniqueid
Column Type: varchar
Max Length: 50
Unique ID for the medication fixed order record.

Column Name: LINK_TO_ORDER_CLIENT
Column Type: varchar
Max Length: 50
Joins table to medication order data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: day_of_week_code
Column Type: varchar
Max Length: 50

'Day Of Week'

Column Name: day_of_week_value

Column Type: varchar

Max Length: 50

The description associated with day_of_week_code. See day_of_week_code for more information.

Column Name: dosage_1_mg

Column Type: numeric

'Dosage 1 (mg)'

Column Name: dosage_2_mg

Column Type: numeric

'Dosage 2 (mg)'

Column Name: dosage_3_mg

Column Type: numeric

'Dosage 3 (mg)'

Column Name: link_to_med_order_history

Column Type: varchar

Max Length: 50

Joins table to medication order data.

Column Name: medication_date

Column Type: date

'Date'

Column Name: visit_schedule_2_code

Column Type: varchar

Max Length: 50

'Visit Schedule 2'

Column Name: visit_schedule_2_value

Column Type: varchar

Max Length: 50

The description associated with visit_schedule_2_code. See visit_schedule_2_code for more information.

Column Name: visit_schedule_3_code

Column Type: varchar

Max Length: 50

'Visit Schedule 3'

Column Name: visit_schedule_3_value

Column Type: varchar

Max Length: 50

The description associated with visit_schedule_3_code. See visit_schedule_3_code for more information.

Column Name: visit_schedule_code

Column Type: varchar

Max Length: 50
'Visit Schedule'

Column Name: visit_schedule_value

Column Type: varchar

Max Length: 50

The description associated with visit_schedule_code. See visit_schedule_code for more information.

Documentation for form: Medication_Order

Table Name: Methadone.history_recur_med_order

Table Description: This table returns Methadone Medication Fixed Order Information.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: LINK_TO_ORDER_CLIENT

Column Type: varchar

Max Length: 50

Joins table to medication order data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: RMOuniqueid

Column Type: varchar

Max Length: 50

Unique ID for the medication recurring order record.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: day_of_week_code
Column Type: varchar
Max Length: 50
'Day Of Week'

Column Name: day_of_week_value
Column Type: varchar
Max Length: 50

The description associated with day_of_week_code. See day_of_week_code for more information.

Column Name: dosage_1_mg
Column Type: numeric
'Dosage 1 (mg)'

Column Name: medication_type_value
Column Type: varchar
Max Length: 50
The description associated with medication_type_code. See medication_type_code for more information.

Column Name: med_order_type_code
Column Type: varchar
Max Length: 50
'Medication Order Type'

Column Name: med_order_type_value
Column Type: varchar
Max Length: 50
The description associated with med_order_type_code. See med_order_type_code for more information.

Column Name: notes
Column Type: varchar
Max Length: 32766
'Notes'

Column Name: order_type_code
Column Type: varchar
Max Length: 50
'Order Type'

Column Name: order_type_value
Column Type: varchar
Max Length: 50
The description associated with order_type_code. See order_type_code for more information.

Column Name: order_date
Column Type: date
'Order Date'

Column Name: order_number
Column Type: varchar
Max Length: 50
'Medication Order Unique Number'

Column Name: order_practitioner
Column Type: varchar
Max Length: 50
'Ordering Practitioner'

Column Name: order_practitioner_name

Column Type: varchar
Max Length: 50
'Ordering Practitioner' NAME

Column Name: overlapping_order
Column Type: varchar
Max Length: 50
'Overlapping Order'

Column Name: prescription_number
Column Type: varchar
Max Length: 50
'Prescription Number'

Column Name: prog_change_dose_by
Column Type: varchar
Max Length: 50
'Program Order Change Dose By (mg)'

Column Name: prog_days_between_change
Column Type: varchar
Max Length: 50
'Program Order Days Between Dose Change'

Column Name: prog_end_dosage_mg
Column Type: varchar
Max Length: 50
'Program Order End Dose (mg)'

Column Name: prog_start_dosage_mg
Column Type: varchar
Max Length: 50
'Program Order Start Dose (mg)'

Column Name: recur_takeout_sched_code
Column Type: varchar
Max Length: 50
'Recurring Takeout Schedule'

Column Name: recur_takeout_sched_value
Column Type: varchar
Max Length: 50
The description associated with recur_takeout_sched_code. See recur_takeout_sched_code for more information.

Column Name: template_start_day
Column Type: varchar
Max Length: 50
'Fixed Order Template Start Day'

Column Name: time_activated
Column Type: varchar
Max Length: 50
'Time Activated'

Column Name: user_activated
Column Type: varchar
Max Length: 50
'User Activated'

Column Name: v_admit_date
Column Type: date
'Preadmit/Admission Date'

Column Name: v_current_phase_code
Column Type: varchar
Max Length: 50
'Phase'

Column Name: v_current_phase_value
Column Type: varchar
Max Length: 50
The description associated with v_current_phase_code. See v_current_phase_code for more information.

Column Name: v_disch_date
Column Type: date
'Date Of Discharge'

Column Name: v_epn_info
Column Type: varchar
Max Length: 50
Episode Information

Column Name: v_program_code
Column Type: varchar
Max Length: 50
'Program'

Column Name: v_client_name
Column Type: varchar
Max Length: 50
'Client Name'

Column Name: v_number_of_weeks
Column Type: varchar
Max Length: 50
'Number Of Weeks'

Column Name: v_program_value
Column Type: varchar

Max Length: 50

The description associated with v_program_code. See v_program_code for more information.

Documentation for form: Quick_Medication_Order

Table Name: Methadone.history_fixed_med_order

Table Description: This table returns Methadone Medication Fixed Order Information.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: FMOuniqueid

Column Type: varchar

Max Length: 50

Unique ID for the medication fixed order record.

Column Name: LINK_TO_ORDER_CLIENT

Column Type: varchar

Max Length: 50

Joins table to medication order data.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: day_of_week_code
Column Type: varchar
Max Length: 50
'Day Of Week'

Column Name: day_of_week_value
Column Type: varchar
Max Length: 50
The description associated with day_of_week_code. See day_of_week_code for more information.

Column Name: dosage_1_mg
Column Type: numeric
'Dosage 1 (mg)'

Column Name: dosage_2_mg
Column Type: numeric
'Dosage 2 (mg)'

Column Name: dosage_3_mg
Column Type: numeric
'Dosage 3 (mg)'

Column Name: link_to_med_order_history
Column Type: varchar
Max Length: 50
Joins table to medication order data.

Column Name: medication_date
Column Type: date
'Date'

Column Name: visit_schedule_2_code
Column Type: varchar
Max Length: 50
'Visit Schedule 2'

Column Name: visit_schedule_2_value
Column Type: varchar
Max Length: 50
The description associated with visit_schedule_2_code. See visit_schedule_2_code for more information.

Column Name: visit_schedule_3_code
Column Type: varchar
Max Length: 50
'Visit Schedule 3'

Column Name: visit_schedule_3_value
Column Type: varchar
Max Length: 50
The description associated with visit_schedule_3_code. See visit_schedule_3_code for more information.

Column Name: visit_schedule_code
Column Type: varchar
Max Length: 50
'Visit Schedule'

Column Name: visit_schedule_value
Column Type: varchar
Max Length: 50
The description associated with visit_schedule_code. See visit_schedule_code for more information.

Documentation for form: Quick_Medication_Order

Table Name: Methadone.history_recur_med_order

Table Description: This table returns Methadone Medication Fixed Order Information.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: LINK_TO_ORDER_CLIENT
Column Type: varchar
Max Length: 50
Joins table to medication order data.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: RMOuniqueid
Column Type: varchar
Max Length: 50
Unique ID for the medication recurring order record.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time

Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: day_of_week_code
Column Type: varchar
Max Length: 50
'Day Of Week'

Column Name: day_of_week_value
Column Type: varchar
Max Length: 50
The description associated with day_of_week_code. See day_of_week_code for more information.

Column Name: dosage_1_mg
Column Type: numeric
'Dosage 1 (mg)'

Column Name: dosage_2_mg
Column Type: numeric
'Dosage 2 (mg)'

Column Name: dosage_3_mg
Column Type: numeric
'Dosage 3 (mg)'

Column Name: link_to_med_order_history
Column Type: varchar
Max Length: 50
Joins table to medication order data.

Column Name: visit_schedule_2_code
Column Type: varchar
Max Length: 50
'Visit Schedule 2'

Column Name: visit_schedule_2_value
Column Type: varchar
Max Length: 50
The description associated with visit_schedule_2_code. See visit_schedule_2_code for more information.

Column Name: visit_schedule_3_code
Column Type: varchar
Max Length: 50
'Visit Schedule 3'

Column Name: visit_schedule_3_value
Column Type: varchar
Max Length: 50
The description associated with visit_schedule_3_code. See visit_schedule_3_code for more information.

Column Name: visit_schedule_code
Column Type: varchar
Max Length: 50
'Visit Schedule'

Column Name: visit_schedule_value
Column Type: varchar
Max Length: 50
The description associated with visit_schedule_code. See visit_schedule_code for more information.

Column Name: week
Column Type: varchar
Max Length: 50
'Week'

Documentation for form: Spill/RTI/Exception_Doses

Table Name: Methadone.history_client_rti

Table Description: This table is for Client RTI History.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: BOTTLEID
Column Type: varchar
Max Length: 50
Bottle Id Number

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number.

Column Name: FACILITY
Column Type: integer
The facility.

Column Name: LINK_TO_DISP_CLIENT
Column Type: varchar
Max Length: 50
Link to Dispense Client

Column Name: LINK_TO_RTI_CLIENT
Column Type: varchar
Max Length: 50
Link to RTI Client

Column Name: LINK_TO_RTI_INV
Column Type: varchar
Max Length: 50
Link To RTI Inventory

Column Name: PATID
Column Type: varchar
Max Length: 20
The client id.

Column Name: RTIuniqueid
Column Type: varchar
Max Length: 50
RTI Unique ID

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: dose_date
Column Type: date
Date of Dose

Column Name: reason
Column Type: varchar
Max Length: 32766
Reason

Column Name: rti_date
Column Type: date
Date of RTI

Column Name: v_medication_type_code
Column Type: varchar
Max Length: 50
Medication Type Code

Column Name: v_medication_type_value
Column Type: varchar
Max Length: 50
Medication Type Value

Column Name: v_amount
Column Type: numeric
Amount

Column Name: v_bottle_id
Column Type: varchar
Max Length: 50
Inventory Number

Column Name: v_inventory_type_description
Column Type: varchar
Max Length: 50
Inventory Type Description

Column Name: v_label_id
Column Type: varchar
Max Length: 40
Label Number

Column Name: v_medication_date
Column Type: date
Date of Medication

Documentation for form: Spill/RTI/Exception_Doses

Table Name: Methadone.history_client_spill

Table Description: This table is for Client Spill History.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: BOTTLEID
Column Type: varchar
Max Length: 50

Bottle Id Number

Column Name: EPISODE_NUMBER

Column Type: integer

Episode Number.

Column Name: FACILITY

Column Type: integer

The facility.

Column Name: LINK_TO_DISP_CLIENT

Column Type: varchar

Max Length: 50

Link to Dispense Client

Column Name: LINK_TO_SPILL_CLIENT

Column Type: varchar

Max Length: 50

Link to SPILL Client.

Column Name: LINK_TO_SPILL_HISTORY

Column Type: varchar

Max Length: 50

Link To Transaction History (System Use)

Column Name: PATID

Column Type: varchar

Max Length: 20

The client id.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: dose_date
Column Type: date
Date of Dose

Column Name: medication_date
Column Type: date
Date of Medication.

Column Name: reason
Column Type: varchar
Max Length: 32766
Reason

Column Name: spill_date
Column Type: date
Date of Spill

Column Name: splUniqueld
Column Type: varchar

Max Length: 50
Spill Unique ID

Column Name: v_medication_type_code
Column Type: varchar
Max Length: 50
Medication Type Code

Column Name: v_medication_type_value
Column Type: varchar
Max Length: 50
Medication Type Value

Column Name: v_program_code
Column Type: varchar
Max Length: 50
Program Code

Column Name: v_amount
Column Type: numeric
Amount

Column Name: v_bottle_id
Column Type: varchar
Max Length: 50
Inventory Number

Column Name: v_inventory_type_description
Column Type: varchar
Max Length: 50
Inventory Type Description

Column Name: v_label_id
Column Type: varchar
Max Length: 40
Label Number

Column Name: v_program_value
Column Type: varchar
Max Length: 50
Program

Column Name: v_transaction_date
Column Type: date
Transaction Date

Documentation for form: Fast_Dose_Dispensing

Client's Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_state_code
Column Type: varchar

Max Length: 50
Client's Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50
Client's Address - Street 1

Column Name: client_mail_street2
Column Type: varchar
Max Length: 50
Client's Address - Street 2

Column Name: client_mail_zipcode
Column Type: varchar
Max Length: 50
Client's Address - Zip Code

Column Name: communication_pref_code
Column Type: varchar
Max Length: 50
Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar

Max Length: 4096

Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short

Column Type: varchar

Max Length: 255

Client Declined To Provide Information On The Following

Column Name: education_value

Column Type: varchar

Max Length: 255

education - Value (625)

Column Name: ethnic_origin_X_NRI_code

Column Type: varchar

Max Length: 10

Ethnic Origin X NRI

Column Name: ethnic_origin_X_NRI_value

Column Type: varchar

Max Length: 255

Ethnic Origin X NRI

Column Name: eth_orig_X_NRI_2014_value

Column Type: varchar

Max Length: 255

Ethnic Origin X NRI 2014

Column Name: eth_orig_X_NRI_2014_code

Column Type: varchar

Max Length: 10

Ethnic Origin X NRI 2014

Column Name: expected_due_date

Column Type: date

Expected Due Date

Column Name: external_mpi_id

Column Type: varchar

Max Length: 50

External MPI ID

Column Name: fam_agric_worker_code

Column Type: varchar

Max Length: 5

'Do you have family members that are agricultural workers?'

Column Name: fam_agric_worker_value

Column Type: varchar

Max Length: 40

description for 'Do you have family members that are agricultural workers?'

Column Name: family_name

Column Type: varchar

Max Length: 50

Family name

Column Name: former_agric_worker_code

Column Type: varchar

Max Length: 5

'Are you an aged and disabled former migratory agricultural worker?'

Column Name: former_agric_worker_value

Column Type: varchar

Max Length: 40

description for 'Are you an aged and disabled former migratory agricultural worker?'

Column Name: gender_identity_code

Column Type: varchar

Max Length: 5

Patient's Gender Identity code

Column Name: gender_identity_value

Column Type: varchar

Max Length: 40

Patient's Gender Identity value

Column Name: guarantor_1

Column Type: varchar

Max Length: 10

Guarantor 1

Column Name: patient_add_country_code

Column Type: varchar

Max Length: 20

Patient Address Country Code

Column Name: patient_add_country_value

Column Type: varchar

Max Length: 40

Patient Address Country Value

Column Name: patient_cell_phone

Column Type: varchar

Max Length: 60

Patient cell phone

Column Name: patient_name_first

Column Type: varchar

Max Length: 40

Patient Name First

Column Name: patient_name_last

Column Type: varchar

Max Length: 40

Patient Last Name

Column Name: patient_name_middle

Column Type: varchar

Max Length: 40

Patient Middle Name

Column Name: patient_name_prefix_code

Column Type: varchar

Max Length: 40

Patient Name Prefix Code

Column Name: patient_name_prefix_value

Column Type: varchar

Max Length: 40

Patient Name Prefix Value

Column Name: patient_name_suffix_code

Column Type: varchar

Max Length: 40

Patient Name Suffix Code

Column Name: patient_name_suffix_value

Column Type: varchar

Max Length: 40

Patient Name Suffix Value

Column Name: patient_sex_X_NRI_code

Column Type: varchar

Max Length: 10

Patient Sex X NRI

Column Name: patient_sex_X_NRI_value

Column Type: varchar

Max Length: 40

Patient Sex X NRI

Column Name: patient_ssn_2

Column Type: varchar

Max Length: 15

Patient's social security number 2

Column Name: patient_ssn_3

Column Type: varchar

Max Length: 15

Patient's social security number 3

Column Name: patient_ssn_4

Column Type: varchar

Max Length: 15

Patient's social security number 4

Column Name: personal_pronouns

Column Type: varchar

Max Length: 40

'Personal Pronouns'

Column Name: policy_number_1

Column Type: varchar

Max Length: 20

policy number 1

Column Name: policy_number_10
Column Type: varchar
Max Length: 20
policy number 10

Column Name: policy_number_2

The description associated with ss_demographics_mult_11_code. See ss_demographics_mult_11_code for more information.

Column Name: ss_demographics_mult_12_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 12' Code

Column Name: ss_demographics_mult_12_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_12_code limited to 255 characters. See ss_demographics_mult_12_code for more information.

Column Name: ss_demographics_mult_12_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_12_code. See ss_demographics_mult_12_code for more information.

Column Name: ss_demographics_mult_13_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 13' Code

Column Name: ss_demographics_mult_13_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_13_code limited to 255 characters. See ss_demographics_mult_13_code for more information.

Column Name: ss_demographics_mult_13_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_13_code. See ss_demographics_mult_13_code for more information.

Column Name: ss_demographics_mult_14_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 14' Code

Column Name: ss_demographics_mult_14_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_14_code limited to 255 characters. See ss_demographics_mult_14_code for more information.

Column Name: ss_demographics_mult_14_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_14_code. See ss_demographics_mult_14_code for more information.

Column Name: ss_demographics_mult_15_code

Column Type: varchar

Max Length: 50

'SS Demographics Multiple Select Dictionary 15' Code

Column Name: ss_demographics_mult_15_shval

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_mult_15_code limited to 255 characters. See ss_demographics_mult_15_code for more information.

Column Name: ss_demographics_mult_15_value

Column Type: varchar

Max Length: 4096

The description associated with ss_demographics_mult_15_code. See ss_demographics_mult_15_code for more information.

Column Name: ss_demographics_mult_1_code

Column Type: varchar

Max Length: 50

SS Demographics Multiple Select Dictionary 1 Code

Column Name: ss_demographics_mult_1_shval

Column Type: varchar

Max Length: 255

SS Demographics Multiple Select Dictionary 1 Short Value

Column Name: ss_demographics_mult_1_value

Column Type: varchar

Max Length: 4096

SS Demographics Multiple Select Dictionary 1 Value

Column Name: ss_demographics_mult_2_code

Column Type: varchar

Max Length: 50

SS Demographics Multiple Select Dictionary 2 Code

Column Name: ss_demographics_mult_2_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 2 Short Value

Column Name: ss_demographics_mult_2_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 2 Value

Column Name: ss_demographics_mult_3_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 3 Code

Column Name: ss_demographics_mult_3_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 3 Short Value

Column Name: ss_demographics_mult_3_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 3 Value

Column Name: ss_demographics_mult_4_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 4 Code

Column Name: ss_demographics_mult_4_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 4 Short Value

Column Name: ss_demographics_mult_4_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 4 Value

Column Name: ss_demographics_mult_5_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 5 Code

Column Name: ss_demographics_mult_5_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 5 Short Value

Column Name: ss_demographics_mult_5_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 5 Value

Column Name: ss_demographics_mult_6_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 6 Code

Column Name: ss_demographics_mult_6_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 6 Short Value

Column Name: ss_demographics_mult_6_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 6 Value

Column Name: ss_demographics_mult_7_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 7 Code

Column Name: ss_demographics_mult_7_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 7 Short Value

Column Name: ss_demographics_mult_7_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 7 Value

Column Name: ss_demographics_mult_8_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 8 Code

Column Name: ss_demographics_mult_8_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 8 Short Value

Column Name: ss_demographics_mult_8_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 8 Value

Column Name: ss_demographics_mult_9_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 9 Code

Column Name: ss_demographics_mult_9_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 9 Short Value

Column Name: ss_demographics_mult_9_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 9 Value

Column Name: ss_demographics_phone_1
Column Type: varchar
Max Length: 50
Site Specific Phone Number 1

Column Name: ss_demographics_phone_2
Column Type: varchar
Max Length: 50
Site Specific Phone Number 2

Column Name: ss_demographics_phone_3
Column Type: varchar
Max Length: 50
Site Specific Phone Number 3

Column Name: ss_demographics_phone_4
Column Type: varchar
Max Length: 50
Site Specific Phone Number 4

Column Name: ss_demographics_phone_5
Column Type: varchar
Max Length: 50
Site Specific Phone Number 5

Column Name: ss_demographics_staff_1
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 1

Column Name: ss_demographics_staff_2
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 2

Column Name: ss_demographics_staff_3
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 3

Column Name: ss_demographics_staff_4
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 4

Column Name: ss_demographics_staff_5
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 5

Column Name: ss_demographics_time_1
Column Type: varchar
Max Length: 10
SS Demographics Time 1

Column Name: ss_demographics_time_2
Column Type: varchar
Max Length: 10
SS Demographics Time 2

Column Name: ss_demographics_time_3
Column Type: varchar
Max Length: 10
SS Demographics Time 3

Column Name: ss_demographics_time_4
Column Type: varchar
Max Length: 10
SS Demographics Time 4

Column Name: ss_demographics_time_5
Column Type: varchar
Max Length: 10
SS Demographics Time 5

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Update_Client_Data

Table Name: SYSTEM.patient_demographic_history

Table Description: Patient Demographic History

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

Facility

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: MPI_uniqueid

Column Type: varchar

Max Length: 12

MPI unique ID

Column Name: patient_name

Column Type: varchar

Max Length: 40

Patient Name

Column Name: sex_code

Column Type: varchar

Max Length: 5

Sex

Column Name: sex_value

Column Type: varchar

Max Length: 40

Sex

Column Name: ethnic_origin_code

Column Type: varchar

Max Length: 5

Ethnic Origin

Column Name: ethnic_origin_value

Column Type: varchar

Max Length: 255

Ethnic Origin

Column Name: date_of_birth
Column Type: date
Date Of Birth

Column Name: patient_street_1
Column Type: varchar
Max Length: 40
Patient's Address - Street

Column Name: patient_city
Column Type: varchar
Max Length: 20
Patients Address - City

Column Name: patient_state
Column Type: varchar
Max Length: 40
Patient's Address - State

Column Name: patient_county_code
Column Type: varchar
Max Length: 5
Patient's Address - County

Column Name: patient_county_value
Column Type: varchar
Max Length: 40
patient's Address - County

Column Name: patient_zipcode
Column Type: varchar
Max Length: 60
Patient's Address - Zipcode

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient's Home Phone

Column Name: patient_street_2
Column Type: varchar
Max Length: 40
Patient's Address - Street 2

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_by

Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: social_security_number
Column Type: varchar
Max Length: 15
SS Number (6)

Column Name: religion_code
Column Type: varchar
Max Length: 5
Client Religion (9)

Column Name: religion_value
Column Type: varchar
Max Length: 255
Religion Value (9)

Column Name: marital_status_code
Column Type: varchar
Max Length: 10
Marital status code (10)

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Marital Status Value (10)

Column Name: client_work_phone
Column Type: varchar
Max Length: 60
Work Phone

Column Name: maiden_name
Column Type: varchar
Max Length: 40
Maiden Name

Column Name: client_race_Code

Column Type: varchar
Max Length: 10
Client Race - Code (116)

Column Name: client_race_value
Column Type: varchar
Max Length: 40
Client Race - Value (116)

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility Chart Number

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: education_value
Column Type: varchar
Max Length: 255
education - Value (625)

Column Name: place_of_birth

Column Type: varchar
Max Length: 40
Place of Birth

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: InfoScribLegacyID
Column Type: varchar
Max Length: 50
InfoScribLegacyID

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_start_date
Column Type: date
Address Start Date

Column Name: citizenship_code
Column Type: varchar
Max Length: 50
Citizenship

Column Name: citizenship_value
Column Type: varchar
Max Length: 50
Citizenship

Column Name: client_alias_10
Column Type: varchar
Max Length: 80
Client Alias 10

Column Name: client_alias_2
Column Type: varchar
Max Length: 80
Client Alias 2

Column Name: client_alias_3
Column Type: varchar
Max Length: 80
Client Alias 3

Column Name: client_alias_4
Column Type: varchar
Max Length: 80

Client Alias 4

Column Name: client_alias_5
Column Type: varchar
Max Length: 80
Client Alias 5

Column Name: client_alias_6
Column Type: varchar
Max Length: 80
Client Alias 6

Column Name: client_alias_7
Column Type: varchar
Max Length: 80
Client Alias 7

Column Name: client_alias_8
Column Type: varchar
Max Length: 80
Client Alias 8

Column Name: client_alias_9
Column Type: varchar
Max Length: 80
Client Alias 9

Column Name: client_conf_city
Column Type: varchar
Max Length: 50
Client Confidential Address - City

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Code

Column Name: client_conf_cntry_value
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Value

Column Name: client_conf_phone
Column Type: varchar
Max Length: 50
Client Confidential Address - Phone Number

Column Name: client_conf_state_code
Column Type: varchar
Max Length: 50

Client Confidential Address - State Code

Column Name: client_conf_state_value

Column Type: varchar

Max Length: 50

Client Confidential Address - State Value

Column Name: client_conf_street

Column Type: varchar

Max Length: 50

Client Confidential Address - Street

Column Name: client_conf_street2

Column Type: varchar

Max Length: 50

Client Confidential Address - Street 2

Column Name: client_conf_zipcode

Column Type: varchar

Max Length: 50

Client Confidential Address - Zip code

Column Name: client_email_addr

Column Type: varchar

Max Length: 50

Client's Email Address

Column Name: client_mail_city

Column Type: varchar

Max Length: 50

Client's Mailing Address - City

Column Name: client_mail_cntry_code

Column Type: varchar

Max Length: 50

Client's Mailing Address - Country

Column Name: client_mail_cntry_value

Column Type: varchar

Max Length: 50

Client's Mailing Address - Country

Column Name: client_mail_state_code

Column Type: varchar

Max Length: 50

Client's Mailing Address - State

Column Name: client_mail_state_value

Column Type: varchar

Max Length: 50

Client's Mailing Address - State

Column Name: client_mail_street

Column Type: varchar

Max Length: 50

Client's Mailing Address - Street 1

Column Name: client_mail_street2

Column Type: varchar

Max Length: 50

Client's Mailing Address - Street 2

Column Name: client_mail_zipcode

Column Type: varchar

Max Length: 50

Client's Mailing Address - Zip Code

Column Name: communication_pref_code

Column Type: varchar

Max Length: 50

Communication Preference Code

Column Name: communication_pref_value

Column Type: varchar

Max Length: 50

Communication Preference Value

Column Name: country_of_origin_code

Column Type: varchar

Max Length: 50

Country of Origin

Column Name: country_of_origin_value

Column Type: varchar

Max Length: 50

Country of Origin

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar
Max Length: 4096
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short
Column Type: varchar
Max Length: 255
Client Declined To Provide Information On The Following

Column Name: ethnic_origin_X_NRI_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI

Column Name: ethnic_origin_X_NRI_value
Column Type: varchar
Max Length: 255
Ethnic Origin X NRI

Column Name: eth_orig_X_NRI_2014_value

Column Type: varchar
Max Length: 255
Ethnic Origin X NRI 2014

Column Name: eth_orig_X_NRI_2014_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI 2014

Column Name: expected_due_date
Column Type: date
Expected Due Date

Documentation for form: Update_Client_Data

Table Name: SYSTEM.pce_client_mapping
Table Description: This table returns information on ProviderConnect Enterprise client mappings.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: external_PATID
Column Type: varchar
Max Length: 20
The client ID used at the external system

Column Name: local_PATID
Column Type: varchar
Max Length: 20
The client ID used on the local system

Column Name: managing_organization_ID
Column Type: integer
The external PCE organization

Documentation for form: Practitioner_Assignment_-_Other

Table Name: SYSTEM.history_oth_practitioner

Table Description: Practitioner Assignment - Other history

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number (12345)

Column Name: FACILITY
Column Type: integer
Facility

Column Name: OTH_uniqueid
Column Type: varchar
Max Length: 12
Unique row id

Column Name: PATID
Column Type: varchar
Max Length: 20
patient id

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By (30001)

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option) (30003)

Column Name: data_entry_date
Column Type: date
Data Entry Date (30000)

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time (30002)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id (30009)

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 50
Option Identifier (30010)

Column Name: pract_assignment_date
Column Type: date

Practitioner Assignment Date (14103)

Column Name: pract_assignment_time

Column Type: varchar

Max Length: 40

Max Length: 50

'UB-04 Form Locator 81B-2'

Column Name: ub04_frm_loc_81_b3

Column Type: varchar

Max Length: 50

'UB-04 Form Locator 81B-3'

Column Name: ub04_frm_loc_81_c1_code

Column Type: varchar

Max Length: 50

'UB-04 Form Locator 81C-1'

Column Name: ub04_frm_loc_81_c1_value

Column Type: varchar

Max Length: 50

The description associated with b04_frm_loc_81_c1_code. See b04_frm_loc_81_c1_code for more information.

Column Name: ub04_frm_loc_81_c2

Column Type: varchar

Max Length: 50

'UB-04 Form Locator 81C-2'

Column Name: ub04_frm_loc_81_c3

Column Type: varchar

Max Length: 50

Column Name: ub04_frm_loc_81_d1_code

Column Type: varchar

Max Length: 50

'UB-04 Form Locator 81D-1'

Column Name: ub04_frm_loc_81_d1_value

Column Type: varchar

Max Length: 50

The description associated with ub04_frm_loc_81_d1_code. See ub04_frm_loc_81_d1_code for more information.

Column Name: ub04_frm_loc_81_d2

Column Type: varchar

Max Length: 50

'UB-04 Form Locator 81D-2'

Column Name: ub04_frm_loc_81_d3

Column Type: varchar

Max Length: 50

'UB-04 Form Locator 81D-3'

Column Name: ub04_type_of_bill_ovr_ride

Column Type: varchar

Max Length: 50

'Type Of Bill Override (UB-04 Form Locator 4)'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: HCFA-1500/837P_Billing_Maintenance_Screen

Table Name: SYSTEM.billing_maint_hist_hcfa

Table Description: This table returns the information stored in the 'HCFA-1500/837P Billing Maintenance Screen' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: EPSDT_referral_code
Column Type: varchar
Max Length: 50
'Was An EPSDT Referral Given To The Patient (2300-CRC-02)'

Column Name: EPSDT_referral_value
Column Type: varchar
Max Length: 50
The description associated with EPSDT_referral_code. See EPSDT_referral_code for more information.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: accident_hour_code
Column Type: varchar
Max Length: 50
'Accident Hour (Electronic HCFA-1500 Only)'

Column Name: accident_hour_value
Column Type: varchar
Max Length: 50
The description associated with accident_hour_code. See accident_hour_code for more information.

Column Name: adjudication_date_837p
Column Type: date

'Adjudication Or Payment Date (2330B-DTP-03)'

Column Name: billing_date_of_birth

Column Type: date

'Billing Date of Birth'

Column Name: billing_name

Column Type: varchar

Max Length: 87

'Billing Name'

Column Name: claim_note_ref_837p_code

Column Type: varchar

Max Length: 50

'Claim Note Reference Code (837P-2300-NTE-01)'

Column Name: claim_note_ref_837p_value

Column Type: varchar

Max Length: 50

The description associated with claim_note_ref_837p_code. See claim_note_ref_837p_code for more information.

Column Name: claim_note_text_837p

Column Type: varchar

Max Length: 80

'Claim Note Text (837P-2300-NTE-02)'

Column Name: condition_1_crc03_code

Column Type: varchar

Max Length: 50

'Condition Code (2300-CRC-03)'

Column Name: condition_1_crc03_value

Column Type: varchar

Max Length: 50

The description associated with condition_1_crc03_code. See condition_1_crc03_code for more information.

Column Name: condition_2_crc04_code

Column Type: varchar

Max Length: 50

'Condition Code (2300-CRC-04)'

Column Name: condition_2_crc04_value

Column Type: varchar

Max Length: 50

The description associated with condition_2_crc04_code. See condition_2_crc04_code for more information.

Column Name: condition_3_crc05_code

Column Type: varchar
Max Length: 50
'Condition Code (2300-CRC-05)'

Column Name: condition_3_crc05_value
Column Type: varchar
Max Length: 50
The description associated with condition_3_crc05_code. See condition_3_crc05_code for more information.

Column Name: curr_illness_injury_date
Column Type: date
'Onset of Current Illness or Injury Date (2300-DTP-03)'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: date_last_seen
Column Type: date
'Date Last Seen (2300-DTP-03)'

Column Name: date_menstrual_period
Column Type: date
'Date Of Last Menstrual Period (2300-DTP-03)'

Column Name: date_of_accident_837p
Column Type: date
'Date Of Accident (2300-DTP-03)'

Column Name: disability_type_code
Column Type: varchar
Max Length: 50
'Disability Type (Electronic HCFA-1500 Only)'

Column Name: disability_type_value
Column Type: varchar
Max Length: 50
The description associated with disability_type_code. See disability_type_code for more information.

Column Name: external_cause_of_accident
Column Type: varchar
Max Length: 50
'External Cause Of Accident (Electronic HCFA-1500 Only)'

Column Name: guarantor_code
Column Type: varchar
Max Length: 50

'Guarantor'

Column Name: HCF_uniqueid

Column Type: varchar

Max Length: 50

A unique ID used to identify a row of data.

Column Name: ident_code_837p

Column Type: varchar

Max Length: 50

'Identification Code (2300-PWK-06)'

Column Name: initial_treatment_date

Column Type: date

'Initial Treatment Date (2300-DTP-03)'

Column Name: loc_10_auto_accident_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Auto Accident)'

Column Name: loc_10_auto_accident_place

Column Type: varchar

Max Length: 50

'Form Locator 10 (Auto Accident, Place)'

Column Name: loc_10_auto_accident_value

Column Type: varchar

Max Length: 50

The description associated with loc_10_auto_accident_code. See loc_10_auto_accident_code for more information.

Column Name: loc_10_employment_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Employment)'

Column Name: loc_10_employment_value

Column Type: varchar

Max Length: 50

The description associated with loc_10_employment_code. See loc_10_employment_code for more information.

Column Name: loc_10_other_accident_code

Column Type: varchar

Max Length: 50

'Form Locator 10 (Other Accident)'

Column Name: loc_10_other_accident_value

Column Type: varchar

Max Length: 50

The description associated with loc_10_other_accident_code. See loc_10_other_accident_code for more information.

Column Name: loc_15_first_date_illness

Column Type: date

'Other Date (Form Locator 15)'

Column Name: loc_16_unable_to_work_from

Column Type: date

'Form Locator 16 (Date Patient Unable To Work, From)'

Column Name: loc_16_unable_to_work_to

Column Type: date

'Form Locator 16 (Date Patient Unable To Work, To)'

Column Name: loc_17_a_referring_id

Column Type: varchar

Max Length: 50

'ID # Of Referring Provider (Form Locator 17)'

Column Name: loc_17_referring_name

Column Type: varchar

Max Length: 50

'Name of Referring Provider (Form Locator 17)'

Column Name: loc_18_hospitalization_from

Column Type: date

'Form Locator 18 (Hospitalization Dates, From)'

Column Name: loc_18_hospitalization_to

Column Type: varchar

Max Length: 50

'Form Locator 18 (Hospitalization Dates, To)'

Column Name: loc_19

Column Type: varchar

Max Length: 50

'Form Locator 19'

Column Name: loc_20_outside_lab_charges

Column Type: varchar

Max Length: 50

'Form Locator 20 (Outside Lab Charges)'

Column Name: loc_20_outside_lab_code

Column Type: varchar

Max Length: 50

'Form Locator 20 (Outside Lab)'

Column Name: loc_20_outside_lab_value

Column Type: varchar

Max Length: 50

The description associated with loc_20_outside_lab_code. See loc_20_outside_lab_code for more information.

Column Name: loc_22_original_ref_no

Column Type: varchar

Max Length: 50

'Form Locator 22 (Medicaid Resubmission Original Ref No)'

Column Name: loc_22_resubmission_code

Column Type: varchar

Max Length: 50

'Form Locator 22 (Medicaid Resubmission Code)'

Column Name: loc_27_accept_assignment_code

Column Type: varchar

Max Length: 50

'Form Locator 27 (Accept Assignment)'

Column Name: loc_27_accept_assignment_value

Column Type: varchar

Max Length: 50

The description associated with loc_27_accept_assignment_code. See loc_27_accept_assignment_code for more information.

Column Name: loc_9_override_guarantor

Column Type: varchar

Max Length: 50

'Form Locator 9 Over-Ride Guarantor'

Column Name: npi_loc_17a_other_id

Column Type: varchar

Max Length: 50

'Form Locator 17-A (Other ID # Of Referring Physician) (HCFA-1500-NPI Version Only)'

Column Name: npi_loc_17a_qual_code

Column Type: varchar

Max Length: 50

'Form Locator 17-A (Other ID # Qualifier Of Referring Physician) (HCFA-1500-NPI Version Only)'

Column Name: npi_loc_17a_qual_value

Column Type: varchar

Max Length: 50

The description associated with npi_loc_17a_qual_code. See npi_loc_17a_qual_code for more information.

Column Name: npi_loc_17b_npi_num

Column Type: varchar

Max Length: 50

'Form Locator 17-B (NPI # Of Referring Physician) (HCFA-1500-NPI Version Only)'

Column Name: oth_date_qual_code

Column Type: varchar

Max Length: 50

'Other Date Code Qualifier (Form Locator 15)'

Column Name: oth_date_qual_value

Column Type: varchar

Max Length: 50

The description associated with oth_date_qual_code. See oth_date_qual_code for more information.

Column Name: oth_payor_2nd_ident_837p

Column Type: varchar

Max Length: 50

'Other Payer Secondary Identifier (2330B-REF-02)'

Column Name: oth_sub_sec_id

Column Type: varchar

Max Length: 50

'Other Subscriber Secondary Identification (2330A-REF-02)'

Column Name: pregnancy_ind_code

Column Type: varchar

Max Length: 50

'Pregnancy Indicator (2000B/2000C-PAT-09)'

Column Name: pregnancy_ind_value

Column Type: varchar

Max Length: 50

The description associated with pregnancy_ind_code. See pregnancy_ind_code for more information.

Column Name: prop_cas_clm_id_qlf_code

Column Type: varchar

Max Length: 50

'Property And Casualty Claim Number ID Qualifier (837 Billing)'

Column Name: prop_cas_clm_id_qlf_value

Column Type: varchar

Max Length: 50

The description associated with prop_cas_clm_id_qlf_code. See prop_cas_clm_id_qlf_code for more information.

Column Name: prop_cas_clm_num

Column Type: varchar

Max Length: 50

'Property And Casualty Claim Number (837 Billing)'

Column Name: prv_2nd_id_ref_id

Column Type: varchar

Max Length: 50
'Referring Provider Secondary Identifier Reference Identification (2310A-REF-02)'

Column Name: prv_2nd_ref_id_qual_code
Column Type: varchar
Max Length: 50
'Referring Provider Secondary Reference Identification Qualifier (2310A-REF-01)'

Column Name: prv_2nd_ref_id_qual_value
Column Type: varchar
Max Length: 50
The description associated with prv_2nd_ref_id_qual_code. See prv_2nd_ref_id_qual_code for more information.

Column Name: prv_entity_typ_qual_code
Column Type: varchar
Max Length: 50
'Referring Provider Entity Type Qualifier (2310A-NM1-02)'

Column Name: prv_entity_typ_qual_value
Column Type: varchar
Max Length: 50
The description associated with prv_entity_typ_qual_code. See prv_entity_typ_qual_code for more information.

Column Name: prv_id_code
Column Type: varchar
Max Length: 50
'Referring Provider Identification Code (2310A-NM1-09)'

Column Name: prv_id_code_qual_code
Column Type: varchar
Max Length: 50
'Referring Provider Identification Code Qualifier (2310A-NM1-08)'

Column Name: prv_id_code_qual_value
Column Type: varchar
Max Length: 50
The description associated with prv_id_code_qual_code. See prv_id_code_qual_code for more information.

Column Name: prv_last_name_or_org
Column Type: varchar
Max Length: 50
'Referring Provider Name Last or Organization Name (2310A-NM1-03)'

Column Name: prv_name_first
Column Type: varchar
Max Length: 50
'Referring Provider Name First (2310A-NM1-04)'

Column Name: prv_name_middle
Column Type: varchar
Max Length: 50
'Referring Provider Name Middle (2310A-NM1-05)'

Column Name: prv_name_suffix
Column Type: varchar
Max Length: 50
'Referring Provider Name Suffix (2310A-NM1-07)'

Column Name: prv_ref_id
Column Type: varchar
Max Length: 50
'Referring Provider Reference Identification (2310A-PRV-03)'

Column Name: ref_ident_qua_837p_code
Column Type: varchar
Max Length: 50
'Reference Identification Qualifier (2330B-REF-01)'

Column Name: ref_ident_qua_837p_value
Column Type: varchar
Max Length: 50
The description associated with ref_ident_qua_837p_code. See ref_ident_qua_837p_code for more information.

Column Name: ref_prv_qual_code
Column Type: varchar
Max Length: 50
'Referring Provider Or Other Source Code Qualifier (Form Locator 17)'

Column Name: ref_prv_qual_value
Column Type: varchar
Max Length: 50
The description associated with ref_prv_qual_code. See ref_prv_qual_code for more information.

Column Name: related_causes_837p_code
Column Type: varchar
Max Length: 50
'Related Causes Information (2300-CLM-11)'

Column Name: related_causes_837p_shval
Column Type: varchar
Max Length: 255
The short description (255 bytes) associated with related_causes_837p_code. See related_causes_837p_code for more information.

Column Name: related_causes_837p_value
Column Type: varchar
Max Length: 4096

The long description (4096 bytes) associated with related_causes_837p_code. See related_causes_837p_code for more information.

Column Name: report_trans_837p_code
Column Type: varchar
Max Length: 50
'Report Transmission Code (2300-PWK-02)'

Column Name: report_trans_837p_value
Column Type: varchar
Max Length: 50
The description associated with report_trans_837p_code. See report_trans_837p_code for more information.

Column Name: report_type_837p_code
Column Type: varchar
Max Length: 50
'Report Type Code (2300-PWK-01)'

Column Name: report_type_837p_value
Column Type: varchar
Max Length: 50
The description associated with report_type_837p_code. See report_type_837p_code for more information.

Column Name: responsibility_indicator_code
Column Type: varchar
Max Length: 50
'Responsibility Indicator (Electronic HCFA-1500 Only)'

Column Name: responsibility_indicator_value
Column Type: varchar
Max Length: 50
The description associated with responsibility_indicator_code. See responsibility_indicator_code for more information.

Column Name: subs_sec_id_837
Column Type: varchar
Max Length: 50
'Subscriber Secondary Identification (837 Billing)'

Column Name: subs_sec_id_qfl_837_code
Column Type: varchar
Max Length: 50
'Subscriber Secondary Identification ID Qualifier (837 Billing)'

Column Name: subs_sec_id_qfl_837_value
Column Type: varchar
Max Length: 50

'The description associated with subs_sec_id_qfl_837_code. See subs_sec_id_qfl_837_code for more information.

Column Name: svc_note_ref_837p_code

Column Type: varchar

Max Length: 50

'Service Note Reference Code (837P-2400-NTE-01)'

Column Name: svc_note_ref_837p_value

Column Type: varchar

Max Length: 50

The description associated with svc_note_ref_837p_code. See svc_note_ref_837p_code for more information.

Column Name: svc_note_text_837p

Column Type: varchar

Max Length: 80

'Service Note Text (837P-2400-NTE-02)'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Claim_Follow-Up

Table Name: SYSTEM.claim_follow_up

Table Description: This table returns denial information stored in the 'Claim Follow-Up' form.

Column Name: claim_follow_up

Column Type: varchar

Max Length: 254

Column Name: CLAIM_NUMBER

Column Type: varchar

Max Length: 25

'Claim'

Column Name: DEN_stuff

Column Type: varchar

Max Length: 15

A unique ID used to identify a row of data.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
'Guarantor'

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: amount_billed
Column Type: varchar
Max Length: 40
'Amount Billed'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: denial_reason_code

Column Type: varchar

Max Length: 50

'Insurance Based Denial Reason'

Column Name: denial_reason_value_long

Column Type: varchar

Max Length: 4096

The description associated with denial_reason_code up to 4096 characters. See denial_reason_code for more information.

Column Name: denial_reason_value_short

Column Type: varchar

Max Length: 255

The description associated with denial_reason_code up to 255 characters. See denial_reason_code for more information.

Column Name: denial_type_code

Column Type: varchar

Max Length: 40

'Denial Type'

Column Name: denial_type_value

Column Type: varchar

Max Length: 40

The description associated with denial_type_code. See denial_type_code for more information.

Column Name: den_patient_account_num

Column Type: varchar

Max Length: 32000

'Patient Account Numbers Denied'

Column Name: den_reas_835_code

Column Type: varchar

Max Length: 50

'835 Denial Reason'

Column Name: den_reas_835_value_long

Column Type: varchar

Max Length: 4096

The description associated with den_reas_835_code up to 4096 characters. See den_reas_835_code for more information.

Column Name: den_reas_835_value_short

Column Type: varchar

Max Length: 255

The description associated with den_reas_835_code up to 255 characters. See den_reas_835_code for more information.

Column Name: option_desc

Column Type: varchar

Max Length: 80

The name of the form that last updated the row.

Column Name: option_id

Column Type: varchar

Max Length: 20

The unique ID of the form that last updated the row.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: void_repl_complete_date

Column Type: date

'Void/Replace Completed Date'

Column Name: void_repl_complete_user

Column Type: varchar
Max Length: 40
'Void/Replace Completed User'

Column Name: void_repl_mso
Column Type: varchar
Max Length: 1
'Void/Replace MSO'

Column Name: void_repl_pending_date
Column Type: date
'Void/Replace Pending Date'

Column Name: void_repl_pending_user
Column Type: varchar
Max Length: 40
'Void/Replace Pending User'

Column Name: void_repl_remit_rcvd_date
Column Type: date
'Void/Replace Remittance Received Date'

Column Name: void_repl_remit_rcvd_user
Column Type: varchar
Max Length: 40
'Void/Replace Remittance Received User'

Documentation for form: Claim_Follow-Up

Table Name: SYSTEM.claim_follow_up_data

Table Description: This table returns the claim follow-up records stored via the 'Claim Follow-up' form.

Column Name: claim_follow_up_data
Column Type: varchar
Max Length: 254

Column Name: CFU_stuff
Column Type: varchar
Max Length: 15
The unique identifier for the client's follow-up record.

Column Name: DEN_stuff
Column Type: varchar
Max Length: 15
The unique identifier for the client's denial record with which this follow-up is associated.

Column Name: FACILITY
Column Type: integer
The system code in which the follow-up was created.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID for which the follow-up was created.

Column Name: comments
Column Type: varchar
Max Length: 32766
'Comments'

Column Name: completion_date
Column Type: date
'Completion Date'

Column Name: current_crn
Column Type: varchar
Max Length: 40
"Current CRN#"

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The name of the user who last updated the follow-up record.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The name of the user who last updated the follow-up record.

Column Name: data_entry_date
Column Type: date
The date the follow-up record was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that was last used to update the follow-up record.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10

The time of day the follow-up record was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The ID of the user who last updated the follow-up record.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The name of the user who last updated the follow-up record.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: denial_crn

Column Type: varchar

Max Length: 40

'Denial CRN#'

Column Name: followed_up_code

Column Type: varchar

Max Length: 40

'Claim Followed Up'

Column Name: followed_up_value

Column Type: varchar

Max Length: 40

The description associated with claim_followed_up. See claim_followed_up for more information.

Column Name: follow_up_date

Column Type: date

'Follow-Up Date'

Column Name: follow_up_status_code

Column Type: varchar
Max Length: 40
'Follow-Up Status'

Column Name: follow_up_status_value
Column Type: varchar
Max Length: 40
The description associated with follow_up_status_code. See follow_up_status_code for more information.

Column Name: next_follow_up_date
Column Type: date
'Next Follow-Up Date'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that was last used to update the follow-up record.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that was last used to update the follow-up record.

Documentation for form: NCPDP_Intermediary_Authorizations

Table Name: SYSTEM.ncdpd_intermediary_auths
Table Description: The table returns 'Intermediary Authorizations (NCPDP)' data

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: IAU_uniqueid
Column Type: varchar
Max Length: 12
IAU unique ID

Column Name: EPISODE_NUMBER

Column Type: integer
The episode number associated with PATID.

Column Name: FACILITY
Column Type: integer
Facility

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By (30001)

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By Option (30003)

Column Name: data_entry_date
Column Type: date
Data Entry Date (30000)

Column Name: data_entry_offset
Column Type: numeric
Data Entry Offset (30033)

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (300015)

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
Data Entry Time (30002)

Column Name: data_entry_time_j
Column Type: time
Data Entry Local Time (30032)

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
Data Entry Workstation Timezone (30031)

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
Data Entry Calculated Timezone (30034)

Column Name: data_entry_user_id

Column Type: varchar
Max Length: 40
Data Entry User Id (30009)

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
Data Entry UTC Timestamp (30030)

Column Name: effective_date
Column Type: date
Effective Date

Column Name: expiration_date
Column Type: date
Expiration Date

Column Name: int_auth_id
Column Type: varchar
Max Length: 50
Intermediary Authorization ID

Column Name: int_auth_type_code
Column Type: varchar
Max Length: 50
Intermediary Authorization Type code

Column Name: int_auth_type_value
Column Type: varchar
Max Length: 80
Intermediary Authorization Type code value

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 20
Option Identifier (30010)

Column Name: prescription_num
Column Type: varchar
Max Length: 50
Prescription Number

Column Name: service_codes
Column Type: varchar
Max Length: 50
Service Code(s)

Column Name: service_codes_shval
Column Type: varchar
Max Length: 255
Service Code(s) value (short)

Column Name: service_codes_value
Column Type: varchar
Max Length: 4096
Service Code(s) value

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Bed_Assignment

Table Name: SYSTEM.history_bed_assignment

Table Description: This table returns information about client bed assignments.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: BA_uniqueid
Column Type: varchar
Max Length: 12

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: notesstream
Column Type: longvarchar
Max Length: 2147483647

Documentation for form: Cross_Episode_Financial_Eligibility

Table Name: SYSTEM.billing_guar_subs_data_no_ep
Table Description: This table returns 'Cross Episode Financial Eligibility' subscriber data.

Column Name: subs_data_row_id
Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: PAY_INDEX

Column Type: varchar

Max Length: 10

The unique historic associated with the data.

Column Name: subs_name

Column Type: varchar

Max Length: 87

'Subscriber's Name'

Column Name: client_relation_to_subcode

Column Type: varchar

Max Length: 5

'Client's Relationship To Subscriber'.

Column Name: client_relation_to_subvalue

Column Type: varchar

Max Length: 40

The description associated with client_relation_to_subcode. See client_relation_to_subcode for more information.

Column Name: subs_address_street1

Column Type: varchar

Max Length: 40

'Subscriber's Address - Street Line 1'.

Column Name: subs_address_street2

Column Type: varchar

Max Length: 40

'Subscriber's Address - Street Line 2'.

Column Name: subs_address_city

Column Type: varchar

Max Length: 40

'Subscriber Address - City (250)'.

Column Name: subs_address_state

Column Type: varchar

Max Length: 2
'Subscriber Address - State'.

Column Name: subs_address_zip
Column Type: varchar
Max Length: 60
'Subscriber's Address - Zipcode'

Column Name: subs_phone_number
Column Type: varchar
Max Length: 60
'Subscriber's Phone Number'.

Column Name: subs_ss_number
Column Type: varchar
Max Length: 15
'Subscriber's Social Security #'.

Column Name: subs_sex_code
Column Type: varchar
Max Length: 5
'Subscriber's Sex'.

Column Name: subs_sex_value
Column Type: varchar
Max Length: 40
The description associated with subs_sex_code. See subs_sex_code for more information.

Column Name: subs_policy
Column Type: varchar
Max Length: 20
'Subscriber's Policy #'.

Column Name: subs_group_name
Column Type: varchar
Max Length: 40
'Subscriber's Group Name'.

Column Name: subs_group
Column Type: varchar
Max Length: 40
'Subscriber's Group #'.

Column Name: subs_branch_service_code
Column Type: varchar
Max Length: 5
'Subscriber's Branch Of Service'

Column Name: subs_branch_service_value
Column Type: varchar

Max Length: 40

The description associated with subs_branch_service_code. See subs_branch_service_code for more information.

Column Name: subs_military_status_code

Column Type: varchar

Max Length: 5

'Subscriber's Military Status'.

Column Name: subs_military_status_value

Column Type: varchar

Max Length: 40

The description associated with subs_military_status_code. See subs_military_status_code for more information.

Column Name: subs_tx_auth_code

Column Type: varchar

Max Length: 5

'Subscriber's Treatment Authorization'.

Column Name: subs_tx_auth_value

Column Type: varchar

Max Length: 40

The description associated with subs_tx_auth_code. See subs_tx_auth_code for more information.

Column Name: subs_assignment_benefits_code

Column Type: varchar

Max Length: 5

'Subscriber's Assignment Of Benefits'.

Column Name: subs_assignment_benefits_value

Column Type: varchar

Max Length: 40

The description associated with subs_assignment_benefits_code. See subs_assignment_benefits_code for more information.

Column Name: subs_release_info_code

Column Type: varchar

Max Length: 5

'Subscriber's Release Of Information'.

Column Name: subs_release_info_value

Column Type: varchar

Max Length: 40

The description associated with subs_release_info_code. See subs_release_info_code for more information.

Column Name: subs_birth_date

Column Type: date

'Subscriber's Birth Date'.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The guarantor ID associated with the data.

Column Name: subs_medicare_number
Column Type: varchar
Max Length: 20
'Subscriber Medicare #'.

Column Name: subs_work_phone
Column Type: varchar
Max Length: 60
'Subscriber's Work Phone'.

Column Name: subs_address_county_code
Column Type: varchar
Max Length: 5
'Subscriber Address - County'.

Column Name: subs_address_county_value
Column Type: varchar
Max Length: 40
The description associated with subs_address_county_code. See subs_address_county_code for more information.

Column Name: subs_mcaid_number
Column Type: varchar
Max Length: 20
'Subscriber Medicaid #'.

Column Name: subs_covered_days
Column Type: numeric
'Subscriber's Covered Days'.

Column Name: subs_max_covered_dollars
Column Type: numeric
'Maximum Covered Dollars'.

Column Name: client_rel_sub_X_bill_code
Column Type: varchar
Max Length: 50
'Billing Patient's Relationship To Insured'.

Column Name: client_rel_sub_X_bill_value
Column Type: varchar
Max Length: 50
The description associated with client_rel_sub_X_bill_code. See client_rel_sub_X_bill_code for more information.

Column Name: contract_code
Column Type: varchar
Max Length: 50
'Contract Code (2300-CN1-04)'.

Column Name: contract_type_code
Column Type: varchar
Max Length: 50
'Contract Type Code (2300-CN1-01)'.

Column Name: contract_type_value
Column Type: varchar
Max Length: 50
The description associated with contract_type_code. See contract_type_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The 'User Description' of the user that last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The 'User ID' of the user that last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The 'User Description' of the user that last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: guarantor_name

Column Type: varchar

Max Length: 40

The name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: guarantor_order

Column Type: integer

The guarantor order for this GUARANTOR_ID.

Column Name: ins_plan_prog_name_fl_11c

Column Type: varchar

Max Length: 50

'Insurance Plan Name Or Program Name (HCFA-1500 Form Locator 11-C)'.

Column Name: insurance_type_code

Column Type: varchar

Max Length: 50

'Insurance Type Code (2000B/2320-SBR-05)'.

Column Name: insurance_type_value

Column Type: varchar

Max Length: 50

The description associated with insurance_type_code. See insurance_type_code for more information.

Column Name: lifetime_reserve_days

Column Type: varchar

Max Length: 50

'Lifetime Reserve Days'.

Column Name: maint_rsn_834_ins04_code
Column Type: varchar
Max Length: 5
'Maintenance Reason Code (834-2000-INS-04)'

Column Name: maint_rsn_834_ins04_value
Column Type: varchar
Max Length: 60
The description associated with maint_rsn_834_ins04_code. See maint_rsn_834_ins04_code for more information.

Column Name: ncpdp_e1_req_response
Column Type: varchar
Max Length: 999
'NCPDP Eligibility Verification (E1) Request Response'.

Column Name: ncpdp_e1_req_status_code
Column Type: varchar
Max Length: 50
'NCPDP Eligibility Verification (E1) Request Status'.

Column Name: ncpdp_e1_req_status_val
Column Type: varchar
Max Length: 40
The description associated with ncpdp_e1_req_status_code. See ncpdp_e1_req_status_code for more information.

Column Name: pat_signature_src_code
Column Type: varchar
Max Length: 50
'Patient Signature Source Code (2300-CLM-10 and 2320-OI-04)'.

Column Name: pat_signature_src_value
Column Type: varchar
Max Length: 50
The description associated with pat_signature_src_code. See pat_signature_src_code for more information.

Column Name: prg_override_code
Column Type: varchar
Max Length: 50
'Program Override For Eligibility Inquiry (270) Submission'.

Column Name: prg_override_value_long
Column Type: varchar
Max Length: 4096
The description associated with prg_override_code. See prg_override_code for more information.

Column Name: prg_override_value_short
Column Type: varchar
Max Length: 255

The description associated with prg_override_code. See prg_override_code for more information.

Column Name: sub_add_id_ident

Column Type: varchar

Max Length: 50

'Subscriber Additional Id Identifier (270-2100C-REF-02)'.

Column Name: sub_add_id_qua_code

Column Type: varchar

Max Length: 50

'Subscriber Additional Id Qualifier (270-2100C-REF-01)'.

Column Name: sub_add_id_qua_value

Column Type: varchar

Max Length: 50

The description associated with sub_add_id_qua_code. See sub_add_id_qua_code for more information.

Column Name: sub_client_index_num

Column Type: varchar

Max Length: 50

'Subscriber Client Index Number'.

Column Name: subs_address_country_code

Column Type: varchar

Max Length: 20

'Subscriber Address Country Code'.

Column Name: subs_address_country_value

Column Type: varchar

Max Length: 40

The description associated with subs_address_country_code. See subs_address_country_code for more information.

Column Name: subs_ethnicity_code

Column Type: varchar

Max Length: 5

'Subscriber's Ethnicity'.

Column Name: subs_ethnicity_value

Column Type: varchar

Max Length: 40

The description associated with subs_ethnicity_code. See subs_ethnicity_code for more information.

Column Name: subs_id_card_issue_date

Column Type: date

'Subscriber ID Card Issue Date'

Column Name: subs_marital_stat_code

Column Type: varchar

Max Length: 5

'Subscriber's Marital Status'

Column Name: subs_marital_stat_value

Column Type: varchar

Max Length: 40

The description associated with subs_marital_stat_code. See subs_marital_stat_code for more information.

Column Name: subs_name_first

Column Type: varchar

Max Length: 40

'Subscriber's First Name'.

Column Name: subs_name_last

Column Type: varchar

Max Length: 40

'Subscriber's Last Name'.

Column Name: subs_name_middle

Column Type: varchar

Max Length: 40

'Subscriber's Middle Name'.

Column Name: subs_name_prefix_code

Column Type: varchar

Max Length: 40

'Subscriber's Prefix'.

Column Name: subs_name_prefix_value

Column Type: varchar

Max Length: 40

The description associated with subs_name_prefix_code. See subs_name_prefix_code for more information.

Column Name: subs_name_suffix_code

Column Type: varchar

Max Length: 40

'Subscriber's Suffix'.

Column Name: subs_name_suffix_value

Column Type: varchar

Max Length: 40

The description associated with subs_name_suffix_code. See subs_name_suffix_code for more information.

Column Name: subs_policy_override

Column Type: varchar

Max Length: 50

'Subscriber Policy Number Override'.

Column Name: subs_policy_suffix

Column Type: varchar

Max Length: 2
'Subscriber's Policy # Suffix'.

Column Name: subs_race_code
Column Type: varchar
Max Length: 5
'Subscriber's Race'

Column Name: subs_race_value
Column Type: varchar
Max Length: 40
The description associated with subs_race_code. See subs_race_code for more information.

Column Name: subs_secondary_id
Column Type: varchar
Max Length: 50
'Subscriber Secondary Identification (837 Billing)'

Column Name: subs_secondary_id2
Column Type: varchar
Max Length: 50
'Property And Casualty Claim Number (837 Billing)'

Column Name: subs_secondary_id2_bill
Column Type: varchar
Max Length: 50
'Subscriber Secondary Identifier - 2 (837 Electronic Billing)'

Column Name: subs_secondary_id_qual_code
Column Type: varchar
Max Length: 50
'Subscriber Secondary Identification ID Qualifier (837 Billing)'

Column Name: subs_secondary_id_qual_value
Column Type: varchar
Max Length: 50
The description associated with subs_secondary_id_qual_code. See subs_secondary_id_qual_code for more information.

Column Name: subs_second_id_qual2_code
Column Type: varchar
Max Length: 50
'Property And Casualty Claim Number ID Qualifier (837 Billing)'

Column Name: subs_second_id_qual2_val
Column Type: varchar
Max Length: 50
The description associated with subs_second_id_qual2_code. See subs_second_id_qual2_code for more information.

Column Name: supplement_identifier_q4
Column Type: varchar
Max Length: 50
'Supplemental Identifier (Q4 - Prior Identifier Number)'.

Column Name: supplement_identifier_qq
Column Type: varchar
Max Length: 50
'Supplemental Identifier (QQ - Unit Number)'.

Column Name: supplement_identifier_zz
Column Type: varchar
Max Length: 50
'Supplemental Identifier (ZZ - Mutually Defined)'.

Column Name: title_XX_area_assigned_code
Column Type: varchar
Max Length: 12
'Title XX Area Assigned'.

Column Name: title_XX_area_assigned_value
Column Type: varchar
Max Length: 40
The description associated with title_XX_area_assigned_code. See title_XX_area_assigned_code for more information.

Column Name: title_XX_date_verified
Column Type: date
'Title XX Date Verified'.

Column Name: title_XX_elig_criteria_code
Column Type: varchar
Max Length: 12
'Title XX Eligibility Criteria'.

Column Name: title_XX_elig_criteria_value
Column Type: varchar
Max Length: 40
The description associated with title_XX_elig_criteria_code. See title_XX_elig_criteria_code for more information.

Column Name: tmhp_waiver_ref_num
Column Type: varchar
Max Length: 50
'TMHP Waiver Reference Number'

Documentation for form: Client_Self_Pay_Dunning_Messages

Table Name: SYSTEM.billing_client_sp_dunn_msg

Table Description: This table returns information filed in 'Client Self Pay Dunning Messages Information' form.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
Data Entry Time

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40

Data Entry User ID

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

Data Entry User Name

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: effective_date

Column Type: date

Effective Date

Column Name: expiration_date

Column Type: date

Expiration Date

Column Name: guarantor_description

Column Type: varchar

Max Length: 50

The Guarantor name associated with the GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: min_payment_amount

Column Type: numeric

Minimum Payment Amount

Column Name: option_desc

Column Type: varchar

Max Length: 80

Option Description

Column Name: option_id

Column Type: varchar

Max Length: 20

Option Identifier

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Consent_For_Access

Table Name: SYSTEM.audit_consent_for_access

Table Description: This table audits information on client's HIE consents.

Column Name: ID

Column Type: integer

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: audit_data_entry_action

Column Type: varchar

Max Length: 50

The user who last updated the row.

Column Name: audit_data_entry_by

Column Type: varchar

Max Length: 50

The user who last updated the row.

Column Name: audit_data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: audit_data_entry_source

Column Type: varchar

Max Length: 50

The name of the form that last updated the row.

Column Name: audit_data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that last updated the row.

Column Name: audit_data_entry_user_name

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: audit_date

Column Type: date

The date the row was updated.

Column Name: audit_option_desc

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: audit_option_id

Column Type: varchar

Max Length: 50

The unique ID for the form that last updated the row.

Column Name: audit_time

Column Type: time

The time the row was updated.

Column Name: cah_unique_id

Column Type: varchar

Max Length: 20

hst uniqueid

Column Name: consent_for_code

Column Type: varchar

Max Length: 50

'Consent For' - Determines if the consent is for Network or Organization

Column Name: consent_for_value

Column Type: varchar

Max Length: 50

Dictionary value for the column 'consent_for_code'

Column Name: consent_send_code

Column Type: varchar

Max Length: 50

'Consent to Send' for the HIE consent

Column Name: consent_send_value

Column Type: varchar

Max Length: 50

Dictionary value for the column 'consent_send_code'

Column Name: consent_type_code

Column Type: varchar

Max Length: 50

'Consent to Query' for the HIE consent

Column Name: consent_type_value

Column Type: varchar

Max Length: 50

Dictionary value for the column 'consent_type_code'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row. entry_by

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row. entry_by_option

Column Name: data_entry_date

Column Type: date

The date the row was last updated. entry_date

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_time

Column Type: varchar

Max Length: 15

The time the row was last updated. entry_time

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row. entry_user_id

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row. entry_user_name

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: end_date
Column Type: date
End date for the consent

Column Name: hie_access_code
Column Type: varchar
Max Length: 50
HIE to Access

Column Name: hie_access_scopeid
Column Type: varchar
Max Length: 50
Scope ID for the column 'hie_access_code'

Column Name: hie_access_value
Column Type: varchar
Max Length: 50
Dictionary value for the column 'hie_access_code'

Column Name: organization
Column Type: varchar
Max Length: 50
Organization ID (when the consent for Organization)

Column Name: organization_name
Column Type: varchar
Max Length: 50
Organization Name for 'organization'

Column Name: organization_scopeid
Column Type: varchar
Max Length: 50
Organization Scope ID for 'organization'

Column Name: provider_code
Column Type: varchar
Max Length: 10000
'Agencies Specified' for the HIE consent

Column Name: provider_value
Column Type: varchar
Max Length: 30000
& delimited dictionary values for the column 'provider_code'

Column Name: recorded_by
Column Type: varchar
Max Length: 40
Recorded by user id

Column Name: recorded_by_user_name
Column Type: varchar
Max Length: 40
Recorded by user name

Column Name: start_date
Column Type: date
Start date for the consent

Documentation for form: Consent_For_Access

Table Name: SYSTEM.audit_referral_consent

Table Description: This table audits the information on client's referral consents.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: audit_data_entry_action
Column Type: varchar
Max Length: 50
The user who last updated the row.

Column Name: audit_data_entry_by
Column Type: varchar
Max Length: 50
The user who last updated the row.

Column Name: audit_data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: audit_data_entry_source
Column Type: varchar
Max Length: 50

The name of the form that last updated the row.

Column Name: audit_data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID that last updated the row.

Column Name: audit_data_entry_user_name

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: audit_date

Column Type: date

The date the row was updated.

Column Name: audit_option_desc

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: audit_option_id

Column Type: varchar

Max Length: 50

The unique ID for the form that last updated the row.

Column Name: audit_time

Column Type: time

The time the row was updated.

Column Name: car_unique_id

Column Type: varchar

Max Length: 20

Historic unique id

Column Name: cfr_code

Column Type: varchar

Max Length: 50

This is on the main tab of the 'Consent for Access' form

Column Name: cfr_value

Column Type: varchar

Max Length: 80

Dictionary value for the column 'cfr_code'

Column Name: consent_send_code

Column Type: varchar

Max Length: 50

'Consent to Send' for the Referral consent

Column Name: consent_send_value
Column Type: varchar
Max Length: 50
Dictionary value for the column 'consent_send_code'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 15
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: end_date

Column Type: date

End date for the consent

Column Name: provider_code

Column Type: varchar

Max Length: 10000

& delimited providers

Column Name: provider_scopeid

Column Type: varchar

Max Length: 30000

& delimited provider scope ids for the column 'provider_code'

Column Name: provider_value

Column Type: varchar

Max Length: 30000

& delimited provider names for the column 'provider_code'

Column Name: start_date

Column Type: date

Start date for the consent

Documentation for form: Consent_For_Access

Table Name: SYSTEM.consent_for_access

Table Description: This table returns information on client's HIE consents.

Column Name: ID

Column Type: varchar

The user ID who last updated the row. entry_user_id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row. entry_user_name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: end_date
Column Type: date
End date for the consent

Column Name: hie_access_code

Column Type: varchar
Max Length: 50
HIE to Access

Column Name: hie_access_scopeid
Column Type: varchar
Max Length: 50
Scope ID for the column 'hie_access_code'

Column Name: hie_access_value
Column Type: varchar
Max Length: 50
Dictionary value for the column 'hie_access_code'

Column Name: organization
Column Type: varchar
Max Length: 50
Organization ID (when the consent for Organization)

Column Name: organization_name
Column Type: varchar
Max Length: 50
Organization Name for 'organization'

Column Name: organization_scopeid
Column Type: varchar
Max Length: 50
Organization Scope ID for 'organization'

Column Name: provider_code
Column Type: varchar
Max Length: 10000
'Agencies Specified' for the HIE consent

Column Name: provider_value
Column Type: varchar
Max Length: 30000
& delimited dictionary values for the column 'provider_code'

Column Name: recorded_by
Column Type: varchar
Max Length: 40
Recorded by user id

Column Name: recorded_by_user_name
Column Type: varchar
Max Length: 40
Recorded by user name

Column Name: start_date

Column Type: date
Start date for the consent

Documentation for form: Consent_For_Access

Table Name: SYSTEM.referral_consent

& delimited provider names for the column 'provider_code'

Column Name: start_date

Column Type: date

Start date for the consent

Documentation for form: Disclosure_Management

Table Name: SYSTEM.disclo_mgmt

Table Description: This table returns information filed in 'Disclosure Management' form.

Column Name: ID

Column Type: varchar

Max Length: 254

Column Name: DMGuniqueid

Column Type: varchar

Max Length: 50

Unique ID for the client Disclosure Management record.

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: agency
Column Type: varchar
Max Length: 50
'Department'.

Column Name: agency_city
Column Type: varchar
Max Length: 50
'City'.

Column Name: agency_contact
Column Type: varchar
Max Length: 50
'Contact'.

Column Name: agency_fax_number
Column Type: varchar
Max Length: 50
'Fax Number'.

Column Name: agency_phone_number
Column Type: varchar
Max Length: 50
'Phone Number'.

Column Name: agency_state
Column Type: varchar
Max Length: 50
'State'.

Column Name: agency_street_1
Column Type: varchar
Max Length: 50
'Street Address 1'

Column Name: agency_street_2
Column Type: varchar
Max Length: 50
'Street Address 2'

Column Name: agency_zip_code
Column Type: varchar
Max Length: 50
'Zip Code'.

Column Name: authorization_end_date
Column Type: date
'Authorization End Date'.

Column Name: authorization_episodes
Column Type: varchar
Max Length: 4096
'Authorization Episode(s)'

Column Name: authorization_start_date
Column Type: date
'Authorization Start Date'.

Column Name: authorization_status_code
Column Type: varchar
Max Length: 50

Column Name: authorization_status_val
Column Type: varchar
Max Length: 80
The description associated with authorization_status_code. See authorization_status_code for more information.

Column Name: authorizatio_origin_code
Column Type: varchar
Max Length: 50
'Authorization Origin'.

Column Name: authorizatio_origin_value
Column Type: varchar
Max Length: 50
The description associated with authorizatio_origin_code. See authorizatio_origin_code for more information.

Column Name: authorized_other_code
Column Type: varchar
Max Length: 50
'Specify Other - Authorized For Disclosure'.

Column Name: authorized_other_info
Column Type: varchar
Max Length: 32766
'Specify Other - Authorized For Disclosure Info'.

Column Name: authorized_other_value

Column Type: varchar

Max Length: 50

The description associated with authorized_other_code. See authorized_other_code for more information.

Column Name: client_name

Column Type: varchar

Max Length: 100

Client name associated with the PATID.

Column Name: cost

Column Type: varchar

Max Length: 50

'Cost'.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 50

The user name that last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 50

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: date_of_denial

Column Type: date

'Date of Denial'.

Column Name: discl_denied_reason_code

Column Type: varchar

Max Length: 50

'Disclosure Denied Reason'.

Column Name: discl_denied_reason_value

Column Type: varchar

Max Length: 50

The description associated with discl_denied_reason_code. See discl_denied_reason_code for more information.

Column Name: disclo_processed_by_desc

Column Type: varchar

Max Length: 32766

The description associated with disclo_processed_by_user or disclosure_processed_by. See disclo_processed_by_user and disclosure_processed_by for more information.

Column Name: disclo_processed_by_user

Column Type: varchar

Max Length: 50

'Disclosure Processed By'.

Column Name: disclos_method_spec_other

Column Type: varchar

Max Length: 50

'Disclosure Method - Specify Other'.

Column Name: disclosure_comments
Column Type: varchar
Max Length: 32766
'Disclosure Comments'.

Column Name: disclosure_date
Column Type: date
'Disclosure Date'.

Column Name: disclosure_denied_code
Column Type: varchar
Max Length: 50
'Disclosure Denied?'.

Column Name: disclosure_denied_value
Column Type: varchar
Max Length: 50
The description associated with disclosure_denied_code. See disclosure_denied_code for more information.

Column Name: disclosure_doc_images
Column Type: varchar
Max Length: 4096
'Disclosure Images'.

Column Name: disclosure_doc_images_val
Column Type: varchar
Max Length: 4096
value associated with codes in 'disclosure_doc_images'

Column Name: disclosure_info_end_date
Column Type: date
'Disclosure Information End Date'.

Column Name: disclosure_informat_code
Column Type: varchar
Max Length: 4096
'Chart Disclosure Information'.

Column Name: disclosure_informat_shval
Column Type: varchar
Max Length: 255
The short description associated with disclosure_informat_code. See disclosure_informat_code for more information.

Column Name: disclosure_informat_value
Column Type: varchar
Max Length: 32766

The description associated with disclosure_informat_code. See disclosure_informat_code for more information.

Column Name: disclosure_info_strt_date
Column Type: date
'Disclosure Information Start Date'.

Column Name: disclosure_method_code
Column Type: varchar
Max Length: 50
'Disclosure Method'.

Column Name: disclosure_method_value
Column Type: varchar
Max Length: 50
The description associated with disclosure_method_code. See disclosure_method_code for more information.

Column Name: disclosure_num_of_pages
Column Type: varchar
Max Length: 50
'Disclosure # of Pages'.

Column Name: disclosure_processed_by
Column Type: varchar
Max Length: 50
'Disclosure Processed By'.

Column Name: disclosure_status_code
Column Type: varchar
Max Length: 50
'Status' field in Disclosure Tab.

Column Name: disclosure_status_val
Column Type: varchar
Max Length: 80
The description associated with disclosure_status_code. See disclosure_status_code for more information.

Column Name: disclosure_time
Column Type: varchar
Max Length: 50
'Disclosure Time'.

Column Name: disclosur_info_spec_other
Column Type: varchar
Max Length: 32766
'Disclosure Information - Specify Other'.

Column Name: do_not_disclo_info_code
Column Type: varchar

Max Length: 50
'Do Not Disclose Information'.

Column Name: do_not_disclo_info_shval
Column Type: varchar
Max Length: 255
The short description associated with do_not_disclo_info_code. See do_not_disclo_info_code for more information.

Column Name: do_not_disclo_info_value
Column Type: varchar
Max Length: 4096
The description associated with do_not_disclo_info_code. See do_not_disclo_info_code for more information.

Column Name: do_not_disclose_specify
Column Type: varchar
Max Length: 32766
'Do Not Disclose Information - Specify Other'.

Column Name: mean_use_cli_inf_dis_code
Column Type: varchar
Max Length: 50
'Meaningful Use Clinical Info Exchange' from Disclosure Tab.

Column Name: mean_use_cli_inf_dis_val
Column Type: varchar
Max Length: 50
The description associated with mean_use_cli_inf_dis_code. See mean_use_cli_inf_dis_code for more information.

Column Name: mean_use_cli_inf_req_code
Column Type: varchar
Max Length: 50
'Meaningful Use Clinical Info Exchange' from Request Tab.

Column Name: mean_use_cli_inf_req_val
Column Type: varchar
Max Length: 50
The description associated with mean_use_cli_inf_req_code. See mean_use_cli_inf_req_code for more information.

Column Name: option_desc
Column Type: varchar
Max Length: 50
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 50

The unique ID of the form that last updated the row.

Column Name: organization

Column Type: varchar

Max Length: 4096

'Organization'.

Column Name: payment_received_code

Column Type: varchar

Max Length: 50

'Payment Received'.

Column Name: payment_received_val

Column Type: varchar

Max Length: 40

The description associated with payment_received_code. See payment_received_code for more information.

Column Name: process_type_code

Column Type: varchar

Max Length: 50

'Disclosure Process'.

Column Name: process_type_value

Column Type: varchar

Max Length: 50

The description associated with process_type_code. See process_type_code for more information.

Column Name: purpose_of_informat_code

Column Type: varchar

Max Length: 50

'Purpose of Disclosure'.

Column Name: purpose_of_informat_shval

Column Type: varchar

Max Length: 255

The short description associated with purpose_of_informat_code. See purpose_of_informat_code for more information.

Column Name: purpose_of_informat_value

Column Type: varchar

Max Length: 4096

The description associated with purpose_of_informat_code. See purpose_of_informat_code for more information.

Column Name: reason_for_denial

Column Type: varchar

Max Length: 32766

'Reason For Denial Notes'.

Column Name: reason_for_denial_code
Column Type: varchar
Max Length: 50
'Reason for Denial'.

Column Name: reason_for_denial_shval
Column Type: varchar
Max Length: 255
The short description associated with reason_for_denial_code. See reason_for_denial_code for more information.

Column Name: reason_for_denial_value
Column Type: varchar
Max Length: 4096
The description associated with reason_for_denial_code. See reason_for_denial_code for more information.

Column Name: request_assigned_to
Column Type: varchar
Max Length: 80
'Assigned To'.

Column Name: request_assigned_to_name
Column Type: varchar
Max Length: 40
The description associated with request_assigned_to. See request_assigned_to for more information.

Column Name: request_date
Column Type: date
'Request Date'.

Column Name: requested_chart_items
Column Type: varchar
Max Length: 4096
'Requested Chart Items'.

Column Name: requested_chart_items_val
Column Type: varchar
Max Length: 32766
The description associated with requested_chart_items. See requested_chart_items for more information.

Column Name: requested_doc_images
Column Type: varchar
Max Length: 4096
'Requested Document Images'.

Column Name: requested_doc_images_val
Column Type: varchar
Max Length: 4096
value associated with codes in 'requested_doc_images'

Column Name: requested_episodes
Column Type: varchar
Max Length: 4096
'Request Episode(s)'.

Column Name: requested_status_code
Column Type: varchar
Max Length: 50
Request Tab
DOCUMENTATION requested_status_code - 'Status' field in Request tab.

Column Name: requested_status_val
Column Type: varchar
Max Length: 80
The description associated with requested_status_code. See requested_status_code for more information.

Column Name: requester_notified_code
Column Type: varchar
Max Length: 50
'Requester Notified'.

Column Name: requester_notified_val
Column Type: varchar
Max Length: 40
The description associated with requester_notified_code. See requester_notified_code for more information.

Column Name: request_info_end_date
Column Type: date
'Request Information End Date'.

Column Name: request_information_code
Column Type: varchar
Max Length: 50
'Request Information'.

Column Name: request_information_shval
Column Type: varchar
Max Length: 255
The short description associated with request_information_code. See request_information_code for more information.

Column Name: request_information_value
Column Type: varchar
Max Length: 4096
The description associated with request_information_code. See request_information_code for more information.

Column Name: request_info_spec_other
Column Type: varchar

Max Length: 32766
'Request Information - Specify Other'.

Column Name: request_info_start_date
Column Type: date
'Request Information Start Date'.

Column Name: revoke_code
Column Type: varchar
Max Length: 50
'Revoke?'.

Column Name: revoke_date
Column Type: date
'Revoke Date'.

Column Name: revoke_reason_code
Column Type: varchar
Max Length: 50
'Revoke Reason'.

Column Name: revoke_reason_value
Column Type: varchar
Max Length: 50
The description associated with revoke_reason_code. See revoke_reason_code for more information.

Column Name: revoke_value
Column Type: varchar
Max Length: 50
The description associated with revoke_code. See revoke_code for more information.

Column Name: signed_authorization_code
Column Type: varchar
Max Length: 50
Authorization Tab
DOCUMENTATION signed_authorization_code - 'Signed Authorization on file'.

Column Name: signed_authorization_val
Column Type: varchar
Max Length: 80
The description associated with signed_authorization_code. See signed_authorization_code for more information.

Column Name: tracking_number
Column Type: varchar
Max Length: 40
'Tracking Number'.

Documentation for form: Disclosure_Management

Table Name: SYSTEM.disclo_mgmt_req_org

Table Description: This table stores Requesting Organization information from Disclosure Management form to support 'Requesting Organization or Individual' custom search.

Column Name: ID
Column Type: integer

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: city
Column Type: varchar
Max Length: 50
'City'

Column Name: contact_name
Column Type: varchar
Max Length: 50
'Contact Name'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 50
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 50
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: department
Column Type: varchar
Max Length: 50
'Department'.

Column Name: fax_number
Column Type: varchar
Max Length: 50
'Fax Number'

Column Name: option_desc
Column Type: varchar
Max Length: 80
The name of the form that last updated the row.

Column Name: option_id
Column Type: varchar
Max Length: 20
The unique ID of the form that last updated the row.

Column Name: organization
Column Type: varchar
Max Length: 50
'Organization'.

Column Name: phone_number
Column Type: varchar
Max Length: 50
'Phone Number'.

Column Name: state
Column Type: varchar
Max Length: 50
'State'.

Column Name: street_address_1
Column Type: varchar
Max Length: 50
'Street Address 1'

Column Name: street_address_2
Column Type: varchar
Max Length: 50

Column Name: zip_code
Column Type: varchar
Max Length: 50
'Zip Code'

Documentation for form: Financial_Eligibility

Table Name: SYSTEM.billing_guar_emp_data
Table Description: This table returns subscriber employer information stored in the 'Financial Eligibility' form.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: S_INDEX
Column Type: varchar
Max Length: 15
Unique ID for this row of guarantor coverage information.

Column Name: date_benefits_terminated
Column Type: date
'Date Benefits Terminated'

Column Name: date_benefits_denied
Column Type: date
'Date Benefits Denied'

Column Name: denial_code
Column Type: varchar
Max Length: 10
'Denial Code'

Column Name: denial_value

Column Type: varchar

Max Length: 40

The description associated with denial_code. See denial_code for more information.

Column Name: lifetime_reserve_days

Column Type: varchar

Max Length: 5

'Lifetime Reserve Days'

Column Name: GUARANTOR_ID

Column Type: varchar

Max Length: 40

'Guarantor #'

Column Name: cov_effective_date

Column Type: date

'Coverage Effective Date'

Column Name: cov_expiration_date

Column Type: date

'Coverage Expiration Date'

Column Name: contract_effective_date

Column Type: date

'Effective Date Of Contract'

Column Name: contract_expiration_date

Column Type: date

'Expiration Date Of Contract'

Column Name: managed_care_contract_code

Column Type: varchar

Max Length: 5

'Is This A Managed Care Contract'

Column Name: managed_care_contract_value

Column Type: varchar

Max Length: 40

The description associated with managed_care_contract_code. See managed_care_contract_code for more information.

Column Name: ins_code_mcaid_tape

Column Type: varchar

Max Length: 40

'Insurance Code/Medicaid Tape'

Column Name: eligibility_verified_code

Column Type: varchar

Max Length: 5

'Eligibility Verified'

Column Name: eligibility_verified_value

Column Type: varchar

Max Length: 40

The description associated with eligibility_verified_code. See eligibility_verified_code for more information.

Column Name: coordination_benefits_code

Column Type: varchar

Max Length: 5

'Coordination Of Benefits'

Column Name: coordination_benefits_value

Column Type: varchar

Max Length: 40

The description associated with coordination_benefits_code. See coordination_benefits_code for more information.

Column Name: date_of_accident

Column Type: date

'Date Of Accident'

Column Name: interim_billing_days

Column Type: numeric

'Number Of Days For Interim Billing'

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: subs_employer

Column Type: varchar

Max Length: 50

'Subscriber Employer Name'

Column Name: subs_emp_address_city

Column Type: varchar

Max Length: 40

'Subscriber Employer 's Add - City'

Column Name: subs_emp_address_county_code

Column Type: varchar

Max Length: 2

'Subscriber Employer Add - County'

Column Name: subs_emp_address_street

Column Type: varchar

Max Length: 40

'Subscriber Employer 's Add - Street'

Column Name: subs_emp_address_zip

Column Type: varchar
Max Length: 10
'Subscriber Employer Add - Zip'

Column Name: subs_employee_id_number
Column Type: varchar
Max Length: 20
'Subscriber Employee ID #'

Column Name: subs_emp_address_state
Column Type: varchar
Max Length: 2
'Subscriber Employer 's Add - State'

Column Name: subs_emp_status_code
Column Type: varchar
Max Length: 5
'Subscriber's Employment Status'

Column Name: subs_emp_status_value
Column Type: varchar
Max Length: 40
The description associated with subs_emp_status_code. See subs_emp_status_code for more information.

Column Name: subs_emp_address_county_value
Column Type: varchar
Max Length: 40
The description associated with subs_emp_address_county_code. See subs_emp_address_county_code for more information.

Column Name: subs_employer_id_number
Column Type: varchar
Max Length: 20
'Subscriber Employer ID Number'

Column Name: inquiry_270_status_code
Column Type: varchar
Max Length: 50
'Eligibility Inquiry (270) Status'

Column Name: inquiry_270_status_value
Column Type: varchar
Max Length: 50
The description associated with inquiry_270_status_code. See inquiry_270_status_code for more information.

Column Name: resp_271_rej_rea_code
Column Type: varchar
Max Length: 50
'Eligibility Response (271) Reject Reason Code'

Column Name: resp_271_rej_rea_value

Column Type: varchar

Max Length: 50

The description associated with resp_271_rej_rea_code. See resp_271_rej_rea_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Financial_Eligibility

Table Name: SYSTEM.billing_guar_subs_data

Table Description: This table returns 'Financial Eligibility' subscriber data.

Column Name: subs_data_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: S_INDEX

Column Type: varchar

Max Length: 15

The unique historic associated with the data.

Column Name: subs_name

Column Type: varchar

Max Length: 87

'Subscriber's Name'

Column Name: client_relation_to_subs_code

Column Type: varchar

Max Length: 5

'Client's Relationship To Subscriber'.

Column Name: client_relation_to_subs_value

Column Type: varchar

Max Length: 40

The description associated with client_relation_to_subs_code. See client_relation_to_subs_code for more information.

Column Name: subs_address_street1

Column Type: varchar

Max Length: 40

'Subscriber's Address - Street Line 1'.

Column Name: subs_address_street2

Column Type: varchar

Max Length: 40

'Subscriber's Address - Street Line 2'.

Column Name: subs_address_city

Column Type: varchar

Max Length: 40

'Subscriber Address - City (250)'.

Column Name: subs_address_state

Column Type: varchar

Max Length: 2

'Subscriber Address - State'.

Column Name: subs_address_zip

Column Type: varchar

Max Length: 60

'Subscriber's Address - Zipcode'

Column Name: subs_phone_number

Column Type: varchar

Max Length: 60

'Subscriber's Phone Number'.

Column Name: subs_ss_number

Column Type: varchar

Max Length: 15

'Subscriber's Social Security #'.

Column Name: subs_sex_code

Column Type: varchar

Max Length: 5

'Subscriber's Sex'.

Column Name: subs_sex_value

Column Type: varchar

Max Length: 40

The description associated with subs_sex_code. See subs_sex_code for more information.

Column Name: subs_policy
Column Type: varchar
Max Length: 20
'Subscriber's Policy #'.

Column Name: subs_group_name
Column Type: varchar
Max Length: 40
'Subscriber's Group Name'.

Column Name: subs_group
Column Type: varchar
Max Length: 40
'Subscriber's Group #'.

Column Name: subs_branch_service_code
Column Type: varchar
Max Length: 5
'Subscriber's Branch Of Service'

Column Name: subs_branch_service_value
Column Type: varchar
Max Length: 40
The description associated with subs_branch_service_code. See subs_branch_service_code for more information.

Column Name: subs_military_status_code
Column Type: varchar
Max Length: 5
'Subscriber's Military Status'.

Column Name: subs_military_status_value
Column Type: varchar
Max Length: 40
The description associated with subs_military_status_code. See subs_military_status_code for more information.

Column Name: subs_tx_auth_code
Column Type: varchar
Max Length: 5
'Subscriber's Treatment Authorization'.

Column Name: subs_tx_auth_value
Column Type: varchar
Max Length: 40
The description associated with subs_tx_auth_code. See subs_tx_auth_code for more information.

Column Name: subs_assignment_benefits_code
Column Type: varchar

Max Length: 5
'Subscriber's Assignment Of Benefits'.

Column Name: subs_assignment_benefits_value
Column Type: varchar
Max Length: 40
The description associated with subs_assignment_benefits_code. See subs_assignment_benefits_code for more information.

Column Name: subs_release_info_code
Column Type: varchar
Max Length: 5
'Subscriber's Release Of Information'.

Column Name: subs_release_info_value
Column Type: varchar
Max Length: 40
The description associated with subs_release_info_code. See subs_release_info_code for more information.

Column Name: subs_birth_date
Column Type: date
'Subscriber's Birth Date'.

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 10
The guarantor ID associated with the data.

Column Name: subs_medicare_number
Column Type: varchar
Max Length: 20
'Subscriber Medicare #'.

Column Name: subs_work_phone
Column Type: varchar
Max Length: 60
'Subscriber's Work Phone'.

Column Name: subs_address_county_code
Column Type: varchar
Max Length: 5
'Subscriber Address - County'.

Column Name: subs_address_county_value
Column Type: varchar
Max Length: 40
The description associated with subs_address_county_code. See subs_address_county_code for more information.

Column Name: subs_mcaid_number

Column Type: varchar
Max Length: 20
'Subscriber Medicaid #'.

Column Name: subs_covered_days
Column Type: numeric
'Subscriber's Covered Days'.

Column Name: subs_max_covered_dollars
Column Type: numeric
'Maximum Covered Dollars'.

Column Name: EPISODE_NUMBER
Column Type: integer
The episode associated with the data.

Column Name: client_rel_sub_X_bill_code
Column Type: varchar
Max Length: 50
'Billing Patient's Relationship To Insured'.

Column Name: client_rel_sub_X_bill_value
Column Type: varchar
Max Length: 50
The description associated with client_rel_sub_X_bill_code. See client_rel_sub_X_bill_code for more information.

Column Name: contract_code
Column Type: varchar
Max Length: 50
'Contract Code (2300-CN1-04)'.

Column Name: contract_type_code
Column Type: varchar
Max Length: 50
'Contract Type Code (2300-CN1-01)'.

Column Name: contract_type_value
Column Type: varchar
Max Length: 50
The description associated with contract_type_code. See contract_type_code for more information.

Column Name: guarantor_name
Column Type: varchar
Max Length: 40
The name associated with GUARANTOR_ID. See GUARANTOR_ID for more information.

Column Name: guarantor_order
Column Type: integer
The guarantor order for this GUARANTOR_ID.

Column Name: ins_plan_prog_name_fl_11c
Column Type: varchar
Max Length: 50
'Insurance Plan Name Or Program Name (HCFA-1500 Form Locator 11-C)'.

Column Name: insurance_type_code
Column Type: varchar
Max Length: 50
'Insurance Type Code (2000B/2320-SBR-05)'.

Column Name: insurance_type_value
Column Type: varchar
Max Length: 50
The description associated with insurance_type_code. See insurance_type_code for more information.

Column Name: lifetime_reserve_days
Column Type: varchar
Max Length: 50
'Lifetime Reserve Days'.

Column Name: maint_rsn_834_ins04_code
Column Type: varchar
Max Length: 5
'Maintenance Reason Code (834-2000-INS-04)'

Column Name: maint_rsn_834_ins04_value
Column Type: varchar
Max Length: 60
The description associated with maint_rsn_834_ins04_code. See maint_rsn_834_ins04_code for more information.

Column Name: ncpdp_e1_req_response
Column Type: varchar
Max Length: 999
'NCPDP Eligibility Verification (E1) Request Response'.

Column Name: ncpdp_e1_req_status_code
Column Type: varchar
Max Length: 50
'NCPDP Eligibility Verification (E1) Request Status'.

Column Name: ncpdp_e1_req_status_val
Column Type: varchar
Max Length: 40
The description associated with ncpdp_e1_req_status_code. See ncpdp_e1_req_status_code for more information.

Column Name: pat_signature_src_code
Column Type: varchar

Max Length: 50
'Patient Signature Source Code (2300-CLM-10 and 2320-OI-04)'.

Column Name: pat_signature_src_value
Column Type: varchar
Max Length: 50
The description associated with pat_signature_src_code. See pat_signature_src_code for more information.

Column Name: prg_override_code
Column Type: varchar
Max Length: 50
'Program Override For Eligibility Inquiry (270) Submission'.

Column Name: prg_override_value_long
Column Type: varchar
Max Length: 4096
The description associated with prg_override_code. See prg_override_code for more information.

Column Name: prg_override_value_short
Column Type: varchar
Max Length: 255
The description associated with prg_override_code. See prg_override_code for more information.

Column Name: sub_add_id_ident
Column Type: varchar
Max Length: 50
'Subscriber Additional Id Identifier (270-2100C-REF-02)'.

Column Name: sub_add_id_qua_code
Column Type: varchar
Max Length: 50
'Subscriber Additional Id Qualifier (270-2100C-REF-01)'.

Column Name: sub_add_id_qua_value
Column Type: varchar
Max Length: 50
The description associated with sub_add_id_qua_code. See sub_add_id_qua_code for more information.

Column Name: sub_client_index_num
Column Type: varchar
Max Length: 50
'Subscriber Client Index Number'.

Column Name: subs_address_country_code
Column Type: varchar
Max Length: 20
'Subscriber Address Country Code'.

Column Name: subs_address_country_value
Column Type: varchar

Max Length: 40

The description associated with subs_address_country_code. See subs_address_country_code for more information.

Column Name: subs_ethnicity_code

Column Type: varchar

Max Length: 5

'Subscriber's Ethnicity'.

Column Name: subs_ethnicity_value

Column Type: varchar

Max Length: 40

The description associated with subs_ethnicity_code. See subs_ethnicity_code for more information.

Column Name: subs_id_card_issue_date

Column Type: date

'Subscriber ID Card Issue Date'

Column Name: subs_marital_stat_code

Column Type: varchar

Max Length: 5

'Subscriber's Marital Status'

Column Name: subs_marital_stat_value

Column Type: varchar

Max Length: 40

The description associated with subs_marital_stat_code. See subs_marital_stat_code for more information.

Column Name: subs_name_first

Column Type: varchar

Max Length: 40

'Subscriber's First Name'.

Column Name: subs_name_last

Column Type: varchar

Max Length: 40

'Subscriber's Last Name'.

Column Name: subs_name_middle

Column Type: varchar

Max Length: 40

'Subscriber's Middle Name'.

Column Name: subs_name_prefix_code

Column Type: varchar

Max Length: 40

'Subscriber's Prefix'.

Column Name: subs_name_prefix_value

Column Type: varchar

Max Length: 40

The description associated with subs_name_prefix_code. See subs_name_prefix_code for more information.

Column Name: subs_name_suffix_code

Column Type: varchar

Max Length: 40

'Subscriber's Suffix'.

Column Name: subs_name_suffix_value

Column Type: varchar

Max Length: 40

The description associated with subs_name_suffix_code. See subs_name_suffix_code for more information.

Column Name: subs_policy_override

Column Type: varchar

Max Length: 50

'Subscriber Policy Number Override'.

Column Name: subs_policy_suffix

Column Type: varchar

Max Length: 2

'Subscriber's Policy # Suffix'.

Column Name: subs_race_code

Column Type: varchar

Max Length: 5

'Subscriber's Race'

Column Name: subs_race_value

Column Type: varchar

Max Length: 40

The description associated with subs_race_code. See subs_race_code for more information.

Column Name: subs_secondary_id

Column Type: varchar

Max Length: 50

'Subscriber Secondary Identification (837 Billing)'

Column Name: subs_secondary_id2

Column Type: varchar

Max Length: 50

'Property And Casualty Claim Number (837 Billing)'

Column Name: subs_secondary_id2_bill

Column Type: varchar

Max Length: 50

'Subscriber Secondary Identifier - 2 (837 Electronic Billing)'

Column Name: subs_secondary_id_qual_code

Column Type: varchar
Max Length: 50
'Subscriber Secondary Identification ID Qualifier (837 Billing)'

Column Name: subs_secondary_id_qual_value
Column Type: varchar
Max Length: 50
The description associated with subs_secondary_id_qual_code. See subs_secondary_id_qual_code for more information.

Column Name: subs_second_id_qual2_code
Column Type: varchar
Max Length: 50
'Property And Casualty Claim Number ID Qualifier (837 Billing)'

Column Name: subs_second_id_qual2_val
Column Type: varchar
Max Length: 50
The description associated with subs_second_id_qual2_code. See subs_second_id_qual2_code for more information.

Column Name: supplement_identifier_q4
Column Type: varchar
Max Length: 50
'Supplemental Identifier (Q4 - Prior Identifier Number)'.

Column Name: supplement_identifier_qq
Column Type: varchar
Max Length: 50
'Supplemental Identifier (QQ - Unit Number)'.

Column Name: supplement_identifier_zz
Column Type: varchar
Max Length: 50
'Supplemental Identifier (ZZ - Mutually Defined)'.

Column Name: title_XX_area_assigned_code
Column Type: varchar
Max Length: 12
'Title XX Area Assigned'.

Column Name: title_XX_area_assigned_value
Column Type: varchar
Max Length: 40
The description associated with title_XX_area_assigned_code. See title_XX_area_assigned_code for more information.

Column Name: title_XX_date_verified
Column Type: date
'Title XX Date Verified'.

Column Name: title_XX_elig_criteria_code

Column Type: varchar

Max Length: 12

'Title XX Eligibility Criteria'.

Column Name: title_XX_elig_criteria_value

Column Type: varchar

Max Length: 40

The description associated with title_XX_elig_criteria_code. See title_XX_elig_criteria_code for more information.

Column Name: tmhp_waiver_ref_num

Column Type: varchar

Max Length: 50

'TMHP Waiver Reference Number'

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Fast_Financial_Eligibility

Table Name: SYSTEM.billing_guar_emp_data

Table Description: This table returns subscriber employer information stored in the 'Financial Eligibility' form.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: S_INDEX

Column Type: varchar

Max Length: 15

Unique ID for this row of guarantor coverage information.

Column Name: date_benefits_terminated
Column Type: date
'Date Benefits Terminated'

Column Name: date_benefits_denied
Column Type: date
'Date Benefits Denied'

Column Name: denial_code
Column Type: varchar
Max Length: 10
'Denial Code'

Column Name: denial_value
Column Type: varchar
Max Length: 40
The description associated with denial_code. See denial_code for more information.

Column Name: lifetime_reserve_days
Column Type: varchar
Max Length: 5
'Lifetime Reserve Days'

Column Name: GUARANTOR_ID
Column Type: varchar
Max Length: 40
'Guarantor #'

Column Name: cov_effective_date
Column Type: date
'Coverage Effective Date'

Column Name: cov_expiration_date
Column Type: date
'Coverage Expiration Date'

Column Name: contract_effective_date
Column Type: date
'Effective Date Of Contract'

Column Name: contract_expiration_date
Column Type: date
'Expiration Date Of Contract'

Column Name: managed_care_contract_code
Column Type: varchar
Max Length: 5
'Is This A Managed Care Contract'

Column Name: managed_care_contract_value

Column Type: varchar

Max Length: 40

The description associated with managed_care_contract_code. See managed_care_contract_code for more information.

Column Name: ins_code_mcaid_tape

Column Type: varchar

Max Length: 40

'Insurance Code/Medicaid Tape'

Column Name: eligibility_verified_code

Column Type: varchar

Max Length: 5

'Eligibility Verified'

Column Name: eligibility_verified_value

Column Type: varchar

Max Length: 40

The description associated with eligibility_verified_code. See eligibility_verified_code for more information.

Column Name: coordination_benefits_code

Column Type: varchar

Max Length: 5

'Coordination Of Benefits'

Column Name: coordination_benefits_value

Column Type: varchar

Max Length: 40

The description associated with coordination_benefits_code. See coordination_benefits_code for more information.

Column Name: date_of_accident

Column Type: date

'Date Of Accident'

Column Name: interim_billing_days

Column Type: numeric

'Number Of Days For Interim Billing'

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: subs_employer

Column Type: varchar

Max Length: 50

'Subscriber Employer Name'

Column Name: subs_emp_address_city
Column Type: varchar
Max Length: 40
'Subscriber Employer 's Add - City'

Column Name: subs_emp_address_county_code
Column Type: varchar
Max Length: 2
'Subscriber Employer Add - County'

Column Name: subs_emp_address_street
Column Type: varchar
Max Length: 40
'Subscriber Employer 's Add - Street'

Column Name: subs_emp_address_zip
Column Type: varchar
Max Length: 10
'Subscriber Employer Add - Zip'

Column Name: subs_employee_id_number
Column Type: varchar
Max Length: 20
'Subscriber Employee ID #'

Column Name: subs_emp_address_state
Column Type: varchar
Max Length: 2
'Subscriber Employer 's Add - State'

Column Name: subs_emp_status_code
Column Type: varchar
Max Length: 5
'Subscriber's Employment Status'

Column Name: subs_emp_status_value
Column Type: varchar
Max Length: 40
The description associated with subs_emp_status_code. See subs_emp_status_code for more information.

Column Name: subs_emp_address_county_value
Column Type: varchar
Max Length: 40
The description associated with subs_emp_address_county_code. See subs_emp_address_county_code for more information.

Column Name: subs_employer_id_number
Column Type: varchar
Max Length: 20
'Subscriber Employer ID Number'

Column Name: inquiry_270_status_code

Column Type: varchar

Max Length: 50

'Eligibility Inquiry (270) Status'

Column Name: inquiry_270_status_value

Column Type: varchar

Max Length: 50

The description associated with inquiry_270_status_code. See inquiry_270_status_code for more information.

Column Name: resp_271_rej_rea_code

Column Type: varchar

Max Length: 50

'Eligibility Response (271) Reject Reason Code'

Column Name: resp_271_rej_rea_value

Column Type: varchar

Max Length: 50

The description associated with resp_271_rej_rea_code. See resp_271_rej_rea_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission

Table Name: SYSTEM.admission_data

Table Description: This table returns information filed in 'Admission', 'Admission (Outpatient)', 'Back Dated Admission/Discharge', and 'Pre Admit' forms.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

Facility

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: AH_uniqueid

Column Type: varchar

Max Length: 12

AH Unique ID

Column Name: type_of_admission_code

Column Type: varchar

Max Length: 5

Type Of Admission

Column Name: type_of_admission_value

Column Type: varchar

Max Length: 40

The description for the type_of_admission_code. See type_of_admission_code for more information.

Column Name: EPISODE_NUMBER

Column Type: integer

Episode Number

Column Name: data_entry_date

Column Type: date

Data Entry Date

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

Data Entry By

Column Name: admission_time

Column Type: varchar

Max Length: 10

Preadmit/Admission Time

Column Name: admission_date

Column Type: date

Preadmit/Admission Date

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

Data Entry Time

Column Name: military_related_dis_code

Column Type: varchar

Max Length: 10

Military Related Disability

Column Name: military_related_dis_value

Column Type: varchar

Max Length: 40

The description for the military_related_dis_code. See military_related_dis_code for more information.

Column Name: military_branch_code

Column Type: varchar

Max Length: 10

Military Branch Of Service

Column Name: military_service_from_date

Column Type: date

Military Service From

Column Name: military_service_through_date

Column Type: date

Military Service To

Column Name: veteran_code

Column Type: varchar

Max Length: 10

Veteran

Column Name: veteran_value

Column Type: varchar

Max Length: 40

The description for the veteran_code. See veteran_code for more information.

Column Name: military_branch_value

Column Type: varchar

Max Length: 40

The description for the military_branch_code. See military_branch_code for more information.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

Data Entry By (Option)

Column Name: decision_to_admit_date

Column Type: date

Decision To Admit Date

Column Name: decision_to_admit_time

Column Type: varchar

Max Length: 26

Decision To Admit Time

Column Name: GUID

Column Type: varchar

Max Length: 50

GUID

Column Name: UTCTimeStamp
Column Type: timestamp
UTCTimestamp

Column Name: client_name
Column Type: varchar
Max Length: 100
Client Name

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: expected_discharge_date
Column Type: date
Expected Discharge Date

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 20
Option Identifier

Column Name: program_code
Column Type: varchar
Max Length: 10
Program

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: provid
Column Type: varchar
Max Length: 50
PROVID

Column Name: provider_name
Column Type: varchar
Max Length: 50
Provider Name

Column Name: source_of_admission_code
Column Type: varchar
Max Length: 50
Source of Admission

Column Name: source_of_admission_value
Column Type: varchar
Max Length: 50
The description for the source_of_admission_code. See source_of_admission_code for more information.

Column Name: type_of_adm_X_ub92_code
Column Type: varchar
Max Length: 50
Admission Type (2300-CL1-01/UB92-FL 19/UB04-FL 14)

Column Name: type_of_adm_X_ub92_value
Column Type: varchar
Max Length: 50
The description for the type_of_adm_X_ub92_code. See type_of_adm_X_ub92_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission

Table Name: SYSTEM.episode_history

Table Description: This table returns Episode History.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

EPN_uniqueid

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode

Column Name: program_code

Column Type: varchar

Max Length: 10

Program

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with the program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date

Preadmit/Admission Date

Column Name: date_of_discharge
Column Type: date
Date Of Discharge

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: episode_select_for_query
Column Type: varchar
Max Length: 70
The field to use to select episodes in queries.

Column Name: v_patient_name
Column Type: varchar
Max Length: 100
Client name associated with the PATID.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 10
Program Treatment Setting

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 10
Program RRG Code

Column Name: program_X_type_code
Column Type: varchar
Max Length: 10
Program Type Code

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 40
Program Tax ID

Column Name: program_X_street_address
Column Type: varchar
Max Length: 40
Program Street Address

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 40
Place Of Service (HCFA 24-B)

Column Name: program_X_location_code
Column Type: varchar
Max Length: 40
Program Location

Column Name: program_X_location_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_type_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: JOIN_TO_Enrollment
Column Type: integer
Join to Enrollment

Column Name: alert_access_options
Column Type: varchar

Max Length: 50

The description associated with the alert_access. See alert_access for more information.

Column Name: alert_access_type

Column Type: varchar

Max Length: 50

Alert Access Type

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: fill_gaps_code

Column Type: varchar

Max Length: 5

Program Fill gaps in service entry record for duration of service?

Column Name: fill_gaps_service_code
Column Type: varchar
Max Length: 50
Service Code to use to fill gaps

Column Name: fill_gaps_service_value
Column Type: varchar
Max Length: 50
The description associated with the fill_gaps_service_code. See fill_gaps_service_code for more information.

Column Name: fill_gaps_staff_id
Column Type: varchar
Max Length: 10
Program Service Practitioner to use to fill gaps

Column Name: fill_gaps_staff_name
Column Type: varchar
Max Length: 50
The description associated with the fill_gaps_staff_id. See fill_gaps_staff_id for more information.

Column Name: fill_gaps_value
Column Type: varchar
Max Length: 10
The description associated with the fill_gaps_code. See fill_gaps_code for more information.

Column Name: last_date_of_service
Column Type: date
Last Date Of Service

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 40
Program City, State Zip

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
Program HCO ID

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 40
Program Phone Number

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission

Table Name: SYSTEM.history_partial_hosp

Table Description: This table returns partial hospitalization history.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The facility of the service.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID of the service.

Column Name: PAH_uniqueid

Column Type: varchar

Max Length: 12

The PAH_uniqueid.

Column Name: days_code

Column Type: varchar

Max Length: 5

The partial hospitalization days (1200).

Column Name: partial_SERVICE_CODE

Column Type: varchar

Max Length: 40

Partial hospital billing code (1208).

Column Name: admission_charge_SERVICE_CODE
Column Type: varchar
Max Length: 40
Default service code for admission Charge Code (200).

Column Name: hours
Column Type: varchar
Max Length: 10
Partial hospitalization hours (1166).

Column Name: data_entry_date
Column Type: date
The date when this data row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode of the service.

Column Name: effective_date
Column Type: date
The partial hospitalization effective date (1199).

Column Name: program_transferred_from
Column Type: varchar
Max Length: 6
Program transferred from (10059).

Column Name: expected_monday
Column Type: varchar
Max Length: 5
Expected in program monday (1231).

Column Name: expected_tuesday
Column Type: varchar
Max Length: 5
Expected in program tuesday (1232).

Column Name: expected_wednesday
Column Type: varchar
Max Length: 5
Expected in program wednesday (1233).

Column Name: expected_thursday
Column Type: varchar

Max Length: 5
Expected in program thursday (1234).

Column Name: expected_friday
Column Type: varchar
Max Length: 5
Expected in program friday (1235).

Column Name: expected_saturday
Column Type: varchar
Max Length: 5
Expected in program saturday (1236).

Column Name: expected_sunday
Column Type: varchar
Max Length: 5
Expected in program sunday (1237).

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time when this data row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user id that last updated this data row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name that last updated this data row.

Column Name: partial_SERVICE_CODE_2
Column Type: varchar
Max Length: 50
Partial hospital billing code 2.

Column Name: user_row_access_code
Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: join_to_admission_data
Column Type: varchar
Max Length: 12
Joins table to admission data.

Column Name: join_to_discharge_data
Column Type: varchar
Max Length: 12
Joins table to discharge data.

Column Name: join_to_leave_history
Column Type: varchar
Max Length: 12
Joins table to leaves history out on.

Column Name: join_to_program_transfer
Column Type: varchar
Max Length: 50

Joins table to program transfer.

Column Name: join_to_return_from_leave

Column Type: varchar

Max Length: 12

Joins table to leaves history return.

Column Name: movement_date

Column Type: date

'Movement Date'

Column Name: movement_time

Column Type: varchar

Max Length: 10

'Movement Time'

Column Name: movement_type_code

Column Type: varchar

Max Length: 50

'Movement Type'

Column Name: movement_type_value

Column Type: varchar

Max Length: 20

The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid

Column Type: varchar

Max Length: 12

A unique ID used to identify a row of data.

Column Name: program_from

Column Type: varchar

Max Length: 20

'Program From'

Column Name: program_from_value

Column Type: varchar

Max Length: 40

The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to

Column Type: varchar

Max Length: 40

'Program To'

Column Name: program_to_value

Column Type: varchar

Max Length: 40

The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Client Alias 10

Column Name: client_alias_2

Column Type: varchar

Max Length: 80

Client Alias 2

Column Name: client_alias_3

Column Type: varchar

Max Length: 80

Client Alias 3

Column Name: client_alias_4

Column Type: varchar

Max Length: 80

Client Alias 4

Column Name: client_alias_5

Column Type: varchar

Max Length: 80

Client Alias 5

Column Name: client_alias_6

Column Type: varchar

Max Length: 80

Client Alias 6

Column Name: client_alias_7

Column Type: varchar

Max Length: 80

Client Alias 7

Column Name: client_alias_8
Column Type: varchar
Max Length: 80
Client Alias 8

Column Name: client_alias_9
Column Type: varchar
Max Length: 80
Client Alias 9

Column Name: client_conf_city
Column Type: varchar
Max Length: 50
Client Confidential Address - City

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Code

Column Name: client_conf_cntry_value
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Value

Column Name: client_conf_phone
Column Type: varchar
Max Length: 50
Client Confidential Address - Phone Number

Column Name: client_conf_state_code
Column Type: varchar
Max Length: 50
Client Confidential Address - State Code

Column Name: client_conf_state_value
Column Type: varchar
Max Length: 50
Client Confidential Address - State Value

Column Name: client_conf_street
Column Type: varchar
Max Length: 50
Client Confidential Address - Street

Column Name: client_conf_street2
Column Type: varchar
Max Length: 50

Client Confidential Address - Street 2

Column Name: client_conf_zipcode
Column Type: varchar
Max Length: 50
Client Confidential Address - Zip code

Column Name: client_email_addr
Column Type: varchar
Max Length: 50
Client's Email Address

Column Name: client_mail_city
Column Type: varchar
Max Length: 50
Client's Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_state_code
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50
Client's Address - Street 1

Column Name: client_mail_street2
Column Type: varchar
Max Length: 50
Client's Address - Street 2

Column Name: client_mail_zipcode
Column Type: varchar
Max Length: 50

Client's Address - Zip Code

Column Name: communication_pref_code
Column Type: varchar
Max Length: 50
Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar
Max Length: 4096
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short
Column Type: varchar
Max Length: 255
Client Declined To Provide Information On The Following

Column Name: education_value
Column Type: varchar
Max Length: 255
education - Value (625)

Column Name: ethnic_origin_X_NRI_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI

Column Name: ethnic_origin_X_NRI_value
Column Type: varchar
Max Length: 255

Ethnic Origin X NRI

Column Name: eth_orig_X_NRI_2014_value

Column Type: varchar

Max Length: 255

Ethnic Origin X NRI 2014

Column Name: eth_orig_X_NRI_2014_code

Column Type: varchar

Max Length: 10

Ethnic Origin X NRI 2014

Column Name: expected_due_date

Column Type: date

Expected Due Date

Column Name: external_mpi_id

Column Type: varchar

Max Length: 50

External MPI ID

Column Name: fam_agric_worker_code

Column Type: varchar

Max Length: 5

'Do you have family members that are agricultural workers?'

Column Name: fam_agric_worker_value

Column Type: varchar

Max Length: 40

description for 'Do you have family members that are agricultural workers?'

Column Name: family_name

Column Type: varchar

Max Length: 50

Family name

Column Name: former_agric_worker_code

Column Type: varchar

Max Length: 5

'Are you an aged and disabled former migratory agricultural worker?'

Column Name: former_agric_worker_value

Column Type: varchar

Max Length: 40

description for 'Are you an aged and disabled former migratory agricultural worker?'

Column Name: gender_identity_code

Column Type: varchar

Max Length: 5

Patient's Gender Identity code

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
Patient's Gender Identity value

Column Name: guarantor_1
Column Type: varchar
Max Length: 10
Guarantor 1

Column Name: guarantor_10
Column Type: varchar
Max Length: 10
Guarantor 10

Column Name: guarantor_2
Column Type: varchar
Max Length: 10
Guarantor 2

Column Name: guarantor_3
Column Type: varchar
Max Length: 10
Guarantor 3

Column Name: guarantor_4
Column Type: varchar
Max Length: 10
Guarantor 4

Column Name: guarantor_5
Column Type: varchar
Max Length: 10
Guarantor 5

Column Name: guarantor_6
Column Type: varchar
Max Length: 10
Guarantor 6

Column Name: guarantor_7
Column Type: varchar
Max Length: 10
Guarantor 7

Column Name: guarantor_8
Column Type: varchar
Max Length: 10
Guarantor 8

Column Name: guarantor_9
Column Type: varchar
Max Length: 10
Guarantor 9

Column Name: guarantor_name_1
Column Type: varchar
Max Length: 40
Guarantor Name 1

Column Name: guarantor_name_10
Column Type: varchar
Max Length: 40
Guarantor Name 10

Column Name: guarantor_name_2
Column Type: varchar
Max Length: 40
Guarantor Name 2

Column Name: guarantor_name_3
Column Type: varchar
Max Length: 40
Guarantor Name 3

Column Name: guarantor_name_4
Column Type: varchar
Max Length: 40
Guarantor Name 4

Column Name: guarantor_name_5
Column Type: varchar
Max Length: 40
Guarantor Name 5

Column Name: guarantor_name_6
Column Type: varchar
Max Length: 40
Guarantor Name 6

Column Name: guarantor_name_7
Column Type: varchar
Max Length: 40
Guarantor Name 7

Column Name: guarantor_name_8
Column Type: varchar
Max Length: 40
Guarantor Name 8

Column Name: guarantor_name_9
Column Type: varchar
Max Length: 40
Guarantor Name 9

Column Name: lactating_status_code
Column Type: varchar
Max Length: 50
Lactating Status

Column Name: lactating_status_value
Column Type: varchar
Max Length: 50

Column Name: marital_status_X_NRI_code
Column Type: varchar
Max Length: 10
Marital Status X NRI

Column Name: marital_status_X_NRI_value
Column Type: varchar
Max Length: 40
Marital Status X NRI

Column Name: medicaid_number
Column Type: varchar
Max Length: 20
Medicaid Number

Column Name: medi_cal_policy_number
Column Type: varchar
Max Length: 20
'Medi-Cal Policy Number' used by the 'LA Provider Integration' module

Column Name: mothers_maiden_name
Column Type: varchar
Max Length: 100
Mother's Maiden Name

Column Name: name_qualifier_code
Column Type: varchar
Max Length: 50
Name Qualifier

Column Name: name_qualifier_value
Column Type: varchar
Max Length: 50
Name Qualifier

Column Name: other_eth_org_code

Column Type: varchar

Max Length: 50

Other Ethnic Origin

Column Name: other_eth_org_value_long

Column Type: varchar

Max Length: 4096

Other Ethnic Origin

Column Name: other_eth_org_value_short

Column Type: varchar

Max Length: 255

Other Ethnic Origin

Column Name: other_lang_code

Column Type: varchar

Max Length: 50

Other Language Code

Column Name: other_lang_shval

Column Type: varchar

Max Length: 255

Other Language Code

Column Name: other_lang_val

Column Type: varchar

Max Length: 4096

Other Language Code

Column Name: other_race_code

Column Type: varchar

Max Length: 50

Other Race Code

Column Name: other_race_value_long

Column Type: varchar

Max Length: 4096

Other Race Code

Column Name: other_race_value_short

Column Type: varchar

Max Length: 255

Other Race Code

Column Name: patient_add_country_code

Column Type: varchar

Max Length: 20

Patient Address Country Code

Column Name: patient_add_country_value
Column Type: varchar
Max Length: 40
Patient Address Country Value

Column Name: patient_cell_phone
Column Type: varchar
Max Length: 60
Patient cell phone

Column Name: patient_name_first
Column Type: varchar
Max Length: 40
Patient Name First

Column Name: patient_name_last
Column Type: varchar
Max Length: 40
Patient Last Name

Column Name: patient_name_middle
Column Type: varchar
Max Length: 40
Patient Middle Name

Column Name: patient_name_prefix_code
Column Type: varchar
Max Length: 40
Patient Name Prefix Code

Column Name: patient_name_prefix_value
Column Type: varchar
Max Length: 40
Patient Name Prefix Value

Column Name: patient_name_suffix_code
Column Type: varchar
Max Length: 40
Patient Name Suffix Code

Column Name: patient_name_suffix_value
Column Type: varchar
Max Length: 40
Patient Name Suffix Value

Column Name: patient_sex_X_NRI_code
Column Type: varchar
Max Length: 10
Patient Sex X NRI

Column Name: patient_sex_X_NRI_value
Column Type: varchar
Max Length: 40
Patient Sex X NRI

Column Name: patient_ssn_2
Column Type: varchar
Max Length: 15
Patient's social security number 2

Column Name: patient_ssn_3
Column Type: varchar
Max Length: 15
Patient's social security number 3

Column Name: patient_ssn_4
Column Type: varchar
Max Length: 15
Patient's social security number 4

Column Name: personal_pronouns
Column Type: varchar
Max Length: 40
'Personal Pronouns'

Column Name: policy_number_1
Column Type: varchar
Max Length: 20
policy number 1

Column Name: policy_number_10
Column Type: varchar
Max Length: 20
policy number 10

Column Name: policy_number_2
Column Type: varchar
Max Length: 20
policy number 2

Column Name: policy_number_3
Column Type: varchar
Max Length: 20
policy number 3

Column Name: policy_number_4
Column Type: varchar
Max Length: 20
policy number 4

Column Name: policy_number_5
Column Type: varchar
Max Length: 20
policy number 5

Column Name: policy_number_6
Column Type: varchar
Max Length: 20
policy number 6

Column Name: policy_number_7
Column Type: varchar
Max Length: 20
policy number 7

Column Name: policy_number_8
Column Type: varchar
Max Length: 20
policy number 8

Column Name: policy_number_9
Column Type: varchar
Max Length: 20
policy number 9

Column Name: preferred_name
Column Type: varchar
Max Length: 40
'Preferred Name'

Column Name: pref_prov_eth_org_code
Column Type: varchar
Max Length: 5
Preferred Provider's Ethnic origin

Column Name: pref_prov_eth_org_value
Column Type: varchar
Max Length: 255
Preferred Provider's Ethnic Origin value

Column Name: pref_prov_sex_code
Column Type: varchar
Max Length: 5
Preferred provider's sex

Column Name: pref_prov_sex_value
Column Type: varchar
Max Length: 15
Preferred provider's sex value

Column Name: pregnancy_status_code
Column Type: varchar
Max Length: 50
Pregnancy Status

Column Name: pregnancy_status_value
Column Type: varchar
Max Length: 50
Pregnancy Status

Column Name: primary_language_code
Column Type: varchar
Max Length: 50
Primary Language

Column Name: primary_language_value
Column Type: varchar
Max Length: 50
Primary Language

Column Name: protection_indicator_code
Column Type: varchar
Max Length: 50
Protection Indicator

Column Name: protection_indicator_date
Column Type: date
Protection Indicator Effective Date

Column Name: protection_indicator_val
Column Type: varchar
Max Length: 50
Protection Indicator

Column Name: sex_orientation_code
Column Type: varchar
Max Length: 5
Patients Sexual Orientation code

Column Name: sex_orientation_value
Column Type: varchar
Max Length: 40
Patient's Sexual Orientation value

Column Name: smoker_code
Column Type: varchar
Max Length: 50
Patient's Smoker Status

Column Name: smoker_value
Column Type: varchar
Max Length: 50
Patient's Smoker Status

Column Name: smoking_stat_assess_date
Column Type: date
Smoking Status Assessment Date

Column Name: ss_demographics_date_1
Column Type: date
SS Demographics Date 1

Column Name: ss_demographics_date_2
Column Type: date
SS Demographics Date 2

SS Demographics Multiple Select Dictionary 10 Code

Column Name: ss_demographics_mult_10_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 10 Short Value

Column Name: ss_demographics_mult_10_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 10 Value

Column Name: ss_demographics_mult_11_code
Column Type: varchar
Max Length: 50
'SS Demographics Multiple Select Dictionary 11' Code

Column Name: ss_demographics_mult_11_shval
Column Type: varchar
Max Length: 255
The description associated with ss_demographics_mult_11_code limited to 255 characters. See ss_demographics_mult_11_code for more information.

Column Name: ss_demographics_mult_11_value
Column Type: varchar
Max Length: 4096
The description associated with ss_demographics_mult_11_code. See ss_demographics_mult_11_code for more information.

Column Name: ss_demographics_mult_12_code
Column Type: varchar
Max Length: 50
'SS Demographics Multiple Select Dictionary 12' Code

Column Name: ss_demographics_mult_12_shval
Column Type: varchar
Max Length: 255

The description associated with `ss_demographics_mult_12_code` limited to 255 characters. See `ss_demographics_mult_12_code` for more information.

Column Name: `ss_demographics_mult_12_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_12_code`. See `ss_demographics_mult_12_code` for more information.

Column Name: `ss_demographics_mult_13_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 13' Code

Column Name: `ss_demographics_mult_13_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_13_code` limited to 255 characters. See `ss_demographics_mult_13_code` for more information.

Column Name: `ss_demographics_mult_13_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_13_code`. See `ss_demographics_mult_13_code` for more information.

Column Name: `ss_demographics_mult_14_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 14' Code

Column Name: `ss_demographics_mult_14_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_14_code` limited to 255 characters. See `ss_demographics_mult_14_code` for more information.

Column Name: `ss_demographics_mult_14_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_14_code`. See `ss_demographics_mult_14_code` for more information.

Column Name: `ss_demographics_mult_15_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 15' Code

Column Name: `ss_demographics_mult_15_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_15_code` limited to 255 characters. See `ss_demographics_mult_15_code` for more information.

Column Name: `ss_demographics_mult_15_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_15_code`. See `ss_demographics_mult_15_code` for more information.

Column Name: `ss_demographics_mult_1_code`

Column Type: `varchar`

Max Length: 50

SS Demographics Multiple Select Dictionary 1 Code

Column Name: `ss_demographics_mult_1_shval`

Column Type: `varchar`

Max Length: 255

SS Demographics Multiple Select Dictionary 1 Short Value

Column Name: `ss_demographics_mult_1_value`

Column Type: `varchar`

Max Length: 4096

SS Demographics Multiple Select Dictionary 1 Value

Column Name: `ss_demographics_mult_2_code`

Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 7 Code

Column Name: ss_demographics_mult_7_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 7 Short Value

Column Name: ss_demographics_mult_7_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 7 Value

Column Name: ss_demographics_mult_8_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 8 Code

Column Name: ss_demographics_mult_8_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 8 Short Value

Column Name: ss_demographics_mult_8_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 8 Value

Column Name: ss_demographics_mult_9_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 9 Code

Column Name: ss_demographics_mult_9_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 9 Short Value

Column Name: ss_demographics_mult_9_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 9 Value

Column Name: ss_demographics_phone_1
Column Type: varchar
Max Length: 50
Site Specific Phone Number 1

Column Name: ss_demographics_phone_2
Column Type: varchar
Max Length: 50
Site Specific Phone Number 2

Column Name: ss_demographics_phone_3
Column Type: varchar
Max Length: 50
Site Specific Phone Number 3

Column Name: ss_demographics_phone_4
Column Type: varchar
Max Length: 50
Site Specific Phone Number 4

Column Name: ss_demographics_phone_5
Column Type: varchar
Max Length: 50
Site Specific Phone Number 5

Column Name: ss_demographics_staff_1
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 1

Column Name: ss_demographics_staff_2
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 2

Column Name: ss_demographics_staff_3
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 3

Column Name: ss_demographics_staff_4
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 4

Column Name: ss_demographics_staff_5
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 5

Column Name: ss_demographics_time_1
Column Type: varchar
Max Length: 10
SS Demographics Time 1

Column Name: ss_demographics_time_2
Column Type: varchar
Max Length: 10
SS Demographics Time 2

Column Name: ss_demographics_time_3
Column Type: varchar
Max Length: 10
SS Demographics Time 3

Column Name: ss_demographics_time_4
Column Type: varchar
Max Length: 10
SS Demographics Time 4

Column Name: ss_demographics_time_5
Column Type: varchar
Max Length: 10
SS Demographics Time 5

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission

Table Name: SYSTEM.patient_demographic_history

Table Description: Patient Demographic History

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: MPI_uniqueid

Column Type: varchar
Max Length: 12
MPI unique ID

Column Name: patient_name
Column Type: varchar
Max Length: 40
Patient Name

Column Name: sex_code
Column Type: varchar
Max Length: 5
Sex

Column Name: sex_value
Column Type: varchar
Max Length: 40
Sex

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
Ethnic Origin

Column Name: ethnic_origin_value
Column Type: varchar
Max Length: 255
Ethnic Origin

Column Name: date_of_birth
Column Type: date
Date Of Birth

Column Name: patient_street_1
Column Type: varchar
Max Length: 40
Patient's Address - Street

Column Name: patient_city
Column Type: varchar
Max Length: 20
Patients Address - City

Column Name: patient_state
Column Type: varchar
Max Length: 40
Patient's Address - State

Column Name: patient_county_code
Column Type: varchar

Max Length: 5
Patient's Address - County

Column Name: patient_county_value
Column Type: varchar
Max Length: 40
patient's Address - County

Column Name: patient_zipcode
Column Type: varchar
Max Length: 60
Patient's Address - Zipcode

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient's Home Phone

Column Name: patient_street_2
Column Type: varchar
Max Length: 40
Patient's Address - Street 2

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: social_security_number
Column Type: varchar
Max Length: 15
SS Number (6)

Column Name: religion_code
Column Type: varchar
Max Length: 5

Client Religion (9)

Column Name: religion_value
Column Type: varchar
Max Length: 255
Religion Value (9)

Column Name: marital_status_code
Column Type: varchar
Max Length: 10
Marital status code (10)

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Marital Status Value (10)

Column Name: client_work_phone
Column Type: varchar
Max Length: 60
Work Phone

Column Name: maiden_name
Column Type: varchar
Max Length: 40
Maiden Name

Column Name: client_race_Code
Column Type: varchar
Max Length: 10
Client Race - Code (116)

Column Name: client_race_value
Column Type: varchar
Max Length: 40
Client Race - Value (116)

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility Chart Number

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10

Employment Status - Code (517)

Column Name: employment_status_value

Column Type: varchar

Max Length: 255

Employment Status - Value (517)

Column Name: occupation_code

Column Type: varchar

Max Length: 10

Occupation - Code (610)

Column Name: occupation_value

Column Type: varchar

Max Length: 255

Occupation - Value (610)

Column Name: education_code

Column Type: varchar

Max Length: 10

Education - Code (625)

Column Name: education_value

Column Type: varchar

Max Length: 255

education - Value (625)

Column Name: place_of_birth

Column Type: varchar

Max Length: 40

Place of Birth

Column Type: varchar
Max Length: 50
Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp

the UTC date and time the data was saved.

Column Name: decline_prov_code

Column Type: varchar

Max Length: 50

Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long

Column Type: varchar

Max Length: 4096

Client Declined To Provide Information On The Following

Documentation for form: Admission

Table Name: [SYSTEM.pce_client_mapping](#)

Table Description: This table returns information on ProviderConnect Enterprise client mappings.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: external_PATID
Column Type: varchar
Max Length: 20
The client ID used at the external system

Column Name: local_PATID
Column Type: varchar
Max Length: 20
The client ID used on the local system

Column Name: managing_organization_ID
Column Type: integer
The external PCE organization

Documentation for form: Admission

Table Name: [SYSTEM.pce_episode_mapping](#)

Table Description: This table returns information on ProviderConnect Enterprise episode mappings.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: external_EPISODE_NUMBER
Column Type: varchar
Max Length: 20
The episode number used in the external PCE system.

Column Name: external_PATID

Column Type: varchar
Max Length: 20
The client ID used in the external PCE system.

Column Name: external_discharge_ID
Column Type: varchar
Max Length: 20
The movement ID associated with the discharge movement of the external episode.

Column Name: external_movement_ID
Column Type: varchar
Max Length: 20
The movement ID associated with the external episode admission.

Column Name: local_EPISODE_NUMBER
Column Type: integer
The episode number used in the local system.

Column Name: local_PATID
Column Type: varchar
Max Length: 20
The client ID used in the local system.

Column Name: managing_organization_ID
Column Type: integer
The external PCE organization.

Column Name: secondary_mapping
Column Type: bit
The local episode is the second or later episode mapped to this external episode. Prevents sending this episode data and overwriting the primary.

Documentation for form: Admission

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM

Column Type: varchar

Max Length: 10

The program code in which the patient is active in.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODENUMBER

Column Type: integer

'Episode Number'

Documentation for form: Admission

Table Name: [SYSTEM.view_episode_summary_admit](#)

Table Description: This table returns client episode admission information.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

Unique ID for the episode record.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: program_code

Column Type: varchar

Max Length: 10

The program code associated with the data.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date

'Pre-Admit/Admission Date'

Column Name: date_of_discharge

Column Type: date

'Date Of Discharge'

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 10

'Admission Program Treatment Setting'

Column Name: program_X_tx_service_code

Column Type: varchar

Max Length: 10

'Admission Program Treatment Service'

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 10

'Admission Program RRG'

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Admission Program Tax ID'

Column Name: program_X_street_address

Column Type: varchar

Max Length: 40

'Admission Program Street Address'

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 40

'Admission Program Place Of Service'

Column Name: program_X_dflt_location_code

Column Type: varchar

Max Length: 10

'Admission Program Default Location'

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_tx_service_value

Column Type: varchar

Max Length: 40

The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_dflt_location_value

Column Type: varchar

Max Length: 40

The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: c_zip

Column Type: varchar

Max Length: 60

'Client Address - ZIP'

Column Name: c_ethnicity_code

Column Type: varchar

Max Length: 10

'Client Ethnicity'

Column Name: c_ethnicity_value

Column Type: varchar

Max Length: 40

The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_race_code

Column Type: varchar

Max Length: 10

'Client Race'

Column Name: c_county_code

Column Type: varchar
Max Length: 10
'Client Address - County'

Column Name: c_religion_code
Column Type: varchar
Max Length: 10
'Client Religion'

Column Name: c_marital_status_code
Column Type: varchar
Max Length: 10
'Client Marital Status'

Column Name: c_date_of_birth
Column Type: date
'Client Date Of Birth'

Column Name: patient_name
Column Type: varchar
Max Length: 100
'Client Name'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 10
'Client Gender'

Column Name: c_county_value
Column Type: varchar
Max Length: 40
The description associated with c_county_code. See c_county_code for more information.

Column Name: c_marital_status_value
Column Type: varchar
Max Length: 40
The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_race_value
Column Type: varchar
Max Length: 40
The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_value
Column Type: varchar
Max Length: 40
The description associated with c_religion_code. See c_religion_code for more information.

Column Name: patient_gender_value
Column Type: varchar

Max Length: 40

The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: admit_legal_status_code

Column Type: varchar

Max Length: 10

'Admission Legal Status'

Column Name: admit_principal_diag_code

Column Type: varchar

Max Length: 10

'Admission Principal Diagnosis'

Column Name: admit_practitioner_id

Column Type: varchar

Max Length: 10

'Admitting Practitioner ID'

Column Name: admit_unit_code

Column Type: varchar

Max Length: 10

'Admission Unit'

Column Name: admit_source_of_code

Column Type: varchar

Max Length: 10

'Source Of Admission'

Column Name: admit_legal_status_value

Column Type: varchar

Max Length: 40

The description associated with admit_legal_status_code. See admit_legal_status_code for more information.

Column Name: admit_practitioner_name

Column Type: varchar

Max Length: 40

'Admitting Practitioner Name'

Column Name: admit_principal_diag_value

Column Type: varchar

Max Length: 200

The description associated with admit_principal_diag_code. See admit_principal_diag_code for more information.

Column Name: admit_source_of_value

Column Type: varchar

Max Length: 40

The description associated with admit_source_of_code. See admit_source_of_code for more information.

Column Name: admit_unit_value

Column Type: varchar

Max Length: 40

The description associated with admit_unit_code. See admit_unit_code for more information.

Column Name: c_city

Column Type: varchar

Max Length: 40

'Client Address - City'

Column Name: program_X_type_code

Column Type: varchar

Max Length: 10

'Admission Program Type'

Column Name: c_ss_number

Column Type: varchar

Max Length: 15

'Client Social Security Number'

Column Name: c_age

Column Type: numeric

'Client current age'

Column Name: admit_age_at

Column Type: numeric

'Client Age At Admission'

Column Name: admit_time_of

Column Type: varchar

Max Length: 10

'Time Of Admission'

Column Name: admit_attend_prac_id

Column Type: varchar

Max Length: 10

'Admission Attending Practitioner ID'

Column Name: admit_attend_prac_name

Column Type: varchar

Max Length: 40

'Admission Attending Practitioner Name'

Column Name: admit_detail_age_at

Column Type: varchar

Max Length: 50

'Detail Age on Date of Admission'

Column Name: admit_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10
'Admission Legal Status (NRI)'

Column Name: admit_legal_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with admit_legal_status_X_NRI_code. See admit_legal_status_X_NRI_code for more information.

Column Name: admit_type_of_code
Column Type: varchar
Max Length: 10
'Type Of Admission'

Column Name: admit_type_of_value
Column Type: varchar
Max Length: 40
The description associated with admit_type_of_code. See admit_type_of_code for more information.

Column Name: admit_unit_X_NRI_code
Column Type: varchar
Max Length: 10
'Admission Unit (NRI)'

Column Name: admit_unit_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with admit_unit_X_NRI_code. See admit_unit_X_NRI_code for more information.

Column Name: adm_legal_status_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Admission Legal Status (NRI 2014)'

Column Name: adm_legal_status_X_NRI_2014_value
Column Type: varchar
Max Length: 40
The description associated with adm_legal_status_X_NRI_2014_code. See adm_legal_status_X_NRI_2014_code for more information.

Column Name: c_country_code
Column Type: varchar
Max Length: 20
'Client Address - Country'

Column Name: c_country_value
Column Type: varchar
Max Length: 40
The description associated with c_country_code. See c_country_code for more information.

Column Name: c_detail_age
Column Type: varchar
Max Length: 50
'Detailed Current Client Age'

Column Name: c_ethnicity_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value
Column Type: varchar
Max Length: 255
The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_marital_status_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date

Column Type: date
The date the row was last updated.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar

Max Length: 40
'Admission Program City, State ZIP'

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 40
'Admission Program Phone Number'

Column Name: sex_orientation_code
Column Type: varchar
Max Length: 20
The patient's sexual orientation code

Column Name: sex_orientation_value
Column Type: varchar
Max Length: 40
The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission

Table Name: SYSTEM.view_episode_summary_current

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID

Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: preadmit_admission_date
Column Type: date
'Preadmit/Admission Date'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_date_of_birth
Column Type: date
'Date Of Birth'

Column Name: c_age
Column Type: numeric
'Client Age'

Column Name: c_ss_number
Column Type: varchar
Max Length: 15
'Social Security Number'

Column Name: EPN_uniqueid

Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: c_address_state_code
Column Type: varchar
Max Length: 50
'Client's Address - State'

Column Name: c_address_state_value
Column Type: varchar
Max Length: 50
The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1
Column Type: varchar
Max Length: 50
'Client's Address - Street 1'

Column Name: c_address_str_2
Column Type: varchar
Max Length: 50
'Client's Address - Street 2'

Column Name: c_admit_practitioner_id
Column Type: varchar
Max Length: 50
'Admitting Practitioner'

Column Name: c_admit_practitioner_name
Column Type: varchar
Max Length: 50
The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code
Column Type: varchar
Max Length: 50
'Source of Admission'

Column Name: c_admit_source_of_value
Column Type: varchar
Max Length: 50
The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of
Column Type: varchar
Max Length: 50
'Preadmit/Admission Time'

Column Name: c_admit_type_of_code
Column Type: varchar
Max Length: 50
'Type Of Admission'

Column Name: c_admit_type_of_value
Column Type: varchar
Max Length: 50
The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id
Column Type: varchar
Max Length: 50
'Attending Practitioner'

Column Name: c_attend_practitioner_name
Column Type: varchar
Max Length: 50
The name associated with c_attend_practitioner_id.

Column Name: c_city
Column Type: varchar
Max Length: 50
'Client's Address - City'

Column Name: c_country_code
Column Type: varchar
Max Length: 50
'Client's Address - Country'

Column Name: c_country_value
Column Type: varchar
Max Length: 50
The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code
Column Type: varchar
Max Length: 50
'Client's Address - County'

Column Name: c_county_value
Column Type: varchar
Max Length: 50
The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age
Column Type: varchar
Max Length: 50
'Client Detail Age'

Column Name: c_ethnicity_code
Column Type: varchar
Max Length: 50
'Client Ethnicity'

Column Name: c_ethnicity_value
Column Type: varchar
Max Length: 50
The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value
Column Type: varchar
Max Length: 255
The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code
Column Type: varchar
Max Length: 50
'Client Legal Status'

Column Name: c_legal_status_value
Column Type: varchar
Max Length: 50
The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value
Column Type: varchar
Max Length: 40
The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code
Column Type: varchar

Max Length: 10
'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code
Column Type: varchar
Max Length: 50
'Client Marital Status'

Column Name: c_marital_status_value
Column Type: varchar
Max Length: 50
The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code
Column Type: varchar
Max Length: 50
'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value
Column Type: varchar
Max Length: 200
The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code
Column Type: varchar
Max Length: 50
'Client Race'

Column Name: c_race_value

Column Type: varchar

Max Length: 50

The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code

Column Type: varchar

Max Length: 50

'Client Religion'

Column Name: c_religion_value

Column Type: varchar

Max Length: 50

The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code

Column Type: varchar

Max Length: 10

'Unit'

Column Name: c_unit_value

Column Type: varchar

Max Length: 50

The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip

Column Type: varchar

Max Length: 60

'Client's Address - Zip'

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
'Facility Chart Number (148)'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 50
'Gender'

Column Name: patient_gender_value
Column Type: varchar
Max Length: 50
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
'Home Phone'

Column Name: patient_name
Column Type: varchar
Max Length: 100
'Client Name'

Column Name: patient_name_first
Column Type: varchar
Max Length: 50
'Client First Name'

Column Name: patient_name_last
Column Type: varchar
Max Length: 50
'Client Last Name'

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 50
'HCFA'

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 50
'RRG'

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 50
The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 50
'City, State, Zip Code'

Column Name: program_X_dflt_location_code
Column Type: varchar
Max Length: 50
'Location'

Column Name: program_X_dflt_location_value
Column Type: varchar
Max Length: 50
The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40

'HCO ID'

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 50

'Phone Number'

Column Name: program_X_street_address

Column Type: varchar

Max Length: 50

'Street Address'

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 50

'Tax ID'

Column Name: program_X_tx_service_code

Column Type: varchar

Max Length: 50

'Treatment Service'

Column Name: program_X_tx_service_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 50

'Treatment Setting'

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 50

'Type'

Column Name: program_X_type_value

Column Type: varchar

Max Length: 50

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission_(OutPatient)

Table Name: SYSTEM.admission_data

Table Description: This table returns information filed in 'Admission', 'Admission (Outpatient)', 'Back Dated Admission/Discharge', and 'Pre Admit' forms.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

Facility

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: AH_uniqueid

Column Type: varchar

Max Length: 12

AH Unique ID

Column Name: type_of_admission_code

Column Type: varchar
Max Length: 5
Type Of Admission

Column Name: type_of_admission_value
Column Type: varchar
Max Length: 40
The description for the type_of_admission_code. See type_of_admission_code for more information.

Column Name: EPISODE_NUMBER
Column Type: integer
Episode Number

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: admission_time
Column Type: varchar

Column Name: military_related_dis_code
Column Type: varchar
Max Length: 10
Military Related Disability

Column Name: military_related_dis_value
Column Type: varchar
Max Length: 40
The description for the military_related_dis_code. See military_related_dis_code for more information.

Column Name: military_branch_code
Column Type: varchar
Max Length: 10
Military Branch Of Service

Column Name: military_service_from_date
Column Type: date
Military Service From

Column Name: military_service_through_date
Column Type: date
Military Service To

Column Name: veteran_code
Column Type: varchar
Max Length: 10
Veteran

Column Name: veteran_value
Column Type: varchar
Max Length: 40
The description for the veteran_code. See veteran_code for more information.

Column Name: military_branch_value
Column Type: varchar
Max Length: 40
The description for the military_branch_code. See military_branch_code for more information.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: decision_to_admit_date
Column Type: date
Decision To Admit Date

Column Name: decision_to_admit_time
Column Type: varchar
Max Length: 26
Decision To Admit Time

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: UTCTimeStamp
Column Type: timestamp
UTCTimestamp

Column Name: client_name
Column Type: varchar
Max Length: 100

Client Name

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

Data Entry User ID

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

Data Entry User Name

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: expected_discharge_date

Column Type: date

Expected Discharge Date

Column Name: option_desc

Column Type: varchar

Max Length: 80

Option Description

Column Name: option_id

Column Type: varchar

Max Length: 20
Option Identifier

Column Name: program_code
Column Type: varchar
Max Length: 10
Program

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: provid
Column Type: varchar
Max Length: 50
PROVID

Column Name: provider_name
Column Type: varchar
Max Length: 50
Provider Name

Column Name: source_of_admission_code
Column Type: varchar
Max Length: 50
Source of Admission

Column Name: source_of_admission_value
Column Type: varchar
Max Length: 50
The description for the source_of_admission_code. See source_of_admission_code for more information.

Column Name: type_of_adm_X_ub92_code
Column Type: varchar
Max Length: 50
Admission Type (2300-CL1-01/UB92-FL 19/UB04-FL 14)

Column Name: type_of_adm_X_ub92_value
Column Type: varchar
Max Length: 50
The description for the type_of_adm_X_ub92_code. See type_of_adm_X_ub92_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission_(OutPatient)

Table Name: SYSTEM.episode_history

Table Description: This table returns Episode History.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

EPN_uniqueid

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode

Column Name: program_code

Column Type: varchar

Max Length: 10

Program

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with the program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date

Preadmit/Admission Date

Column Name: date_of_discharge

Column Type: date

Date Of Discharge

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: episode_select_for_query

Column Type: varchar

Max Length: 70

The field to use to select episodes in queries.

Column Name: v_patient_name

Column Type: varchar

Max Length: 100

Client name associated with the PATID.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 10

Program Treatment Setting

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 10

Program RRG Code

Column Name: program_X_type_code

Column Type: varchar

Max Length: 10

Program Type Code

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

Program Tax ID

Column Name: program_X_street_address

Column Type: varchar

Max Length: 40
Program Street Address

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 40
Place Of Service (HCFA 24-B)

Column Name: program_X_location_code
Column Type: varchar
Max Length: 40
Program Location

Column Name: program_X_location_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_type_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: JOIN_TO_Enrollment
Column Type: integer
Join to Enrollment

Column Name: alert_access_options
Column Type: varchar
Max Length: 50
The description associated with the alert_access. See alert_access for more information.

Column Name: alert_access_type
Column Type: varchar
Max Length: 50
Alert Access Type

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: fill_gaps_code
Column Type: varchar
Max Length: 5
Program Fill gaps in service entry record for duration of service?

Column Name: fill_gaps_service_code
Column Type: varchar
Max Length: 50
Service Code to use to fill gaps

Column Name: fill_gaps_service_value
Column Type: varchar
Max Length: 50

The description associated with the fill_gaps_service_code. See fill_gaps_service_code for more information.

Column Name: fill_gaps_staff_id

Column Type: varchar

Max Length: 10

Program Service Practitioner to use to fill gaps

Column Name: fill_gaps_staff_name

Column Type: varchar

Max Length: 50

The description associated with the fill_gaps_staff_id. See fill_gaps_staff_id for more information.

Column Name: fill_gaps_value

Column Type: varchar

Max Length: 10

The description associated with the fill_gaps_code. See fill_gaps_code for more information.

Column Name: last_date_of_service

Column Type: date

Last Date Of Service

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 40

Program City, State Zip

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

Program HCO ID

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 40

Program Phone Number

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Admission_(OutPatient)

Table Name: SYSTEM.pce_client_mapping

Table Description: This table returns information on ProviderConnect Enterprise client mappings.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: external_PATID
Column Type: varchar
Max Length: 20
The client ID used at the external system

Column Name: local_PATID
Column Type: varchar
Max Length: 20
The client ID used on the local system

Column Name: managing_organization_ID
Column Type: integer
The external PCE organization

Documentation for form: Admission_(OutPatient)

Table Name: SYSTEM.pce_episode_mapping
Table Description: This table returns information on ProviderConnect Enterprise episode mappings.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: external_EPISODE_NUMBER
Column Type: varchar
Max Length: 20
The episode number used in the external PCE system.

Column Name: external_PATID
Column Type: varchar
Max Length: 20
The client ID used in the external PCE system.

Column Name: external_discharge_ID
Column Type: varchar
Max Length: 20
The movement ID associated with the discharge movement of the external episode.

Column Name: external_movement_ID
Column Type: varchar
Max Length: 20
The movement ID associated with the external episode admission.

Column Name: local_EPISODE_NUMBER
Column Type: integer
The episode number used in the local system.

Column Name: local_PATID
Column Type: varchar
Max Length: 20
The client ID used in the local system.

Column Name: managing_organization_ID
Column Type: integer
The external PCE organization.

Column Name: secondary_mapping
Column Type: bit
The local episode is the second or later episode mapped to this external episode. Prevents sending this episode data and overwriting the primary.

Documentation for form: Admission_(OutPatient)

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM

Column Type: varchar

Max Length: 10

The program code in which the patient is active in.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODENUMBER

Column Type: integer

'Episode Number'

Documentation for form: Admission_(OutPatient)

Table Name: [SYSTEM.view_episode_summary_admit](#)

Table Description: This table returns client episode admission information.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

Unique ID for the episode record.

Column Name: EPISODE_NUMBER

Column Type: integer

The episode number associated with PATID.

Column Name: program_code

Column Type: varchar

Max Length: 10

The program code associated with the data.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date

'Pre-Admit/Admission Date'

Column Name: date_of_discharge

Column Type: date

'Date Of Discharge'

Column Name: program_X_tx_setting_code

The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value
Column Type: varchar
Max Length: 255
The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_marital_status_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date

The date the row was last updated.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 50

The time the row was last updated.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: gender_identity_code

Column Type: varchar

Max Length: 20

'Gender Identity'

Column Name: gender_identity_value

Column Type: varchar

Max Length: 40

The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service

Column Type: date

'Last Date Of Service'

Column Name: patient_gender_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Gender (NRI)'

Column Name: patient_gender_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 40

'Admission Program City, State ZIP'

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 40
'Admission Program Phone Number'

Column Name: sex_orientation_code
Column Type: varchar
Max Length: 20
The patient's sexual orientation code

Column Name: sex_orientation_value
Column Type: varchar
Max Length: 40
The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
Data Entry User ID

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
Data Entry User Name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: expected_discharge_date
Column Type: date
Expected Discharge Date

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 20
Option Identifier

Column Name: program_code
Column Type: varchar
Max Length: 10
Program

Column Name: program_value
Column Type: varchar
Max Length: 50
The description for the program_code. See program_code for more information.

Column Name: provid
Column Type: varchar
Max Length: 50
PROVID

Column Name: provider_name
Column Type: varchar
Max Length: 50
Provider Name

Column Name: source_of_admission_code
Column Type: varchar
Max Length: 50
Source of Admission

Column Name: source_of_admission_value
Column Type: varchar
Max Length: 50
The description for the source_of_admission_code. See source_of_admission_code for more information.

Column Name: type_of_adm_X_ub92_code
Column Type: varchar
Max Length: 50
Admission Type (2300-CL1-01/UB92-FL 19/UB04-FL 14)

Column Name: type_of_adm_X_ub92_value
Column Type: varchar
Max Length: 50
The description for the type_of_adm_X_ub92_code. See type_of_adm_X_ub92_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Back_Dated_Admission/Discharge

Table Name: SYSTEM.episode_history

Table Description: This table returns Episode History.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

EPN_uniqueid

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode

Column Name: program_code

Column Type: varchar

Max Length: 10

Program

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with the program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date
Preadmit/Admission Date

Column Name: date_of_discharge
Column Type: date
Date Of Discharge

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: episode_select_for_query
Column Type: varchar
Max Length: 70
The field to use to select episodes in queries.

Column Name: v_patient_name
Column Type: varchar
Max Length: 100
Client name associated with the PATID.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 10
Program Treatment Setting

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 10
Program RRG Code

Column Name: program_X_type_code
Column Type: varchar
Max Length: 10

Program Type Code

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

Program Tax ID

Column Name: program_X_street_address

Column Type: varchar

Max Length: 40

Program Street Address

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 40

Place Of Service (HCFA 24-B)

Column Name: program_X_location_code

Column Type: varchar

Max Length: 40

Program Location

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: JOIN_TO_Enrollment

Column Type: integer

Join to Enrollment

Column Name: alert_access_options

Column Type: varchar

Max Length: 50

The description associated with the alert_access. See alert_access for more information.

Column Name: alert_access_type

Column Type: varchar

Max Length: 50

Alert Access Type

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: fill_gaps_code

Column Type: varchar

Max Length: 5

Program Fill gaps in service entry record for duration of service?

Column Name: fill_gaps_service_code

Column Type: varchar

Max Length: 50

Service Code to use to fill gaps

Column Name: fill_gaps_service_value

Column Type: varchar

Max Length: 50

The description associated with the fill_gaps_service_code. See fill_gaps_service_code for more information.

Column Name: fill_gaps_staff_id

Column Type: varchar

Max Length: 10

Program Service Practitioner to use to fill gaps

Column Name: fill_gaps_staff_name

Column Type: varchar

Max Length: 50

The description associated with the fill_gaps_staff_id. See fill_gaps_staff_id for more information.

Column Name: fill_gaps_value

Column Type: varchar

Max Length: 10

The description associated with the fill_gaps_code. See fill_gaps_code for more information.

Column Name: last_date_of_service

Column Type: date

Last Date Of Service

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 40

Program City, State Zip

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

Program HCO ID

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 40

Program Phone Number

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Back_Dated_Admission/Discharge

Table Name: SYSTEM.history_bed_assignment

Table Description: This table returns information about client bed assignments.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: notesstream
Column Type: longvarchar
Max Length: 2147483647

Documentation for form: Back_Dated_Admission/Discharge

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: join_to_admission_data
Column Type: varchar
Max Length: 12

Joins table to admission data.

Column Name: join_to_discharge_data

Column Type: varchar

Max Length: 12

Joins table to discharge data.

Column Name: join_to_leave_history

Column Type: varchar

Max Length: 12

Joins table to leaves history out on.

Column Name: join_to_program_transfer

Column Type: varchar

Max Length: 50

Joins table to program transfer.

Column Name: join_to_return_from_leave

Column Type: varchar

Max Length: 12

Joins table to leaves history return.

Column Name: movement_date

Column Type: date

'Movement Date'

Column Name: movement_time

Column Type: varchar

Max Length: 10

'Movement Time'

Column Name: movement_type_code

Column Type: varchar

Max Length: 50

'Movement Type'

Column Name: movement_type_value

Column Type: varchar

Max Length: 20

The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid

Column Type: varchar

Max Length: 12

A unique ID used to identify a row of data.

Column Name: program_from

Column Type: varchar

Max Length: 20

'Program From'

Column Name: program_from_value

Column Type: varchar

Max Length: 40

The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to

Column Type: varchar

Max Length: 40

'Program To'

Column Name: program_to_value

Column Type: varchar

Max Length: 40

The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Back_Dated_Admission/Discharge

Table Name: SYSTEM.view_episode_summary_current

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode Number'

Column Name: preadmit_admission_date
Column Type: date
'Preadmit/Admission Date'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_date_of_birth
Column Type: date
'Date Of Birth'

Column Name: c_age
Column Type: numeric
'Client Age'

Column Name: c_ss_number
Column Type: varchar
Max Length: 15
'Social Security Number'

Column Name: EPN_uniqueid
Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: c_address_state_code
Column Type: varchar
Max Length: 50

'Client's Address - State'

Column Name: c_address_state_value

Column Type: varchar

Max Length: 50

The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1

Column Type: varchar

Max Length: 50

'Client's Address - Street 1'

Column Name: c_address_str_2

Column Type: varchar

Max Length: 50

'Client's Address - Street 2'

Column Name: c_admit_practitioner_id

Column Type: varchar

Max Length: 50

'Admitting Practitioner'

Column Name: c_admit_practitioner_name

Column Type: varchar

Max Length: 50

The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code

Column Type: varchar

Max Length: 50

'Source of Admission'

Column Name: c_admit_source_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of

Column Type: varchar

Max Length: 50

'Preadmit/Admission Time'

Column Name: c_admit_type_of_code

Column Type: varchar

Max Length: 50

'Type Of Admission'

Column Name: c_admit_type_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id

Column Type: varchar

Max Length: 50

'Attending Practitioner'

Column Name: c_attend_practitioner_name

Column Type: varchar

Max Length: 50

The name associated with c_attend_practitioner_id.

Column Name: c_city

Column Type: varchar

Max Length: 50

'Client's Address - City'

Column Name: c_country_code

Column Type: varchar

Max Length: 50

'Client's Address - Country'

Column Name: c_country_value

Column Type: varchar

Max Length: 50

The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code

Column Type: varchar

Max Length: 50

'Client's Address - County'

Column Name: c_county_value

Column Type: varchar

Max Length: 50

The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age

Column Type: varchar

Max Length: 50

'Client Detail Age'

Column Name: c_ethnicity_code

Column Type: varchar

Max Length: 50

'Client Ethnicity'

Column Name: c_ethnicity_value

Column Type: varchar

Max Length: 50

The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code

Column Type: varchar

Max Length: 50

'Client Legal Status'

Column Name: c_legal_status_value

Column Type: varchar

Max Length: 50

The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value

Column Type: varchar

Max Length: 40

The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code

Column Type: varchar

Max Length: 50

'Client Marital Status'

Column Name: c_marital_status_value

Column Type: varchar

Max Length: 50

The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value

Column Type: varchar

Max Length: 200

The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code

Column Type: varchar

Max Length: 50

'Client Race'

Column Name: c_race_value

Column Type: varchar

Max Length: 50

The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code
Column Type: varchar
Max Length: 50
'Client Religion'

Column Name: c_religion_value
Column Type: varchar
Max Length: 50
The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code
Column Type: varchar
Max Length: 10
'Unit'

Column Name: c_unit_value
Column Type: varchar
Max Length: 50
The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip
Column Type: varchar
Max Length: 60
'Client's Address - Zip'

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
'Facility Chart Number (148)'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 50
'Gender'

Column Name: patient_gender_value
Column Type: varchar
Max Length: 50
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
'Home Phone'

Column Name: patient_name
Column Type: varchar
Max Length: 100
'Client Name'

Column Name: patient_name_first
Column Type: varchar
Max Length: 50
'Client First Name'

Column Name: patient_name_last
Column Type: varchar
Max Length: 50
'Client Last Name'

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 50
'HCFA'

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 50
'RRG'

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 50
The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 50
'City, State, Zip Code'

Column Name: program_X_dflt_location_code
Column Type: varchar
Max Length: 50
'Location'

Column Name: program_X_dflt_location_value
Column Type: varchar
Max Length: 50
The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 50
'Phone Number'

Column Name: program_X_street_address
Column Type: varchar
Max Length: 50
'Street Address'

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 50
'Tax ID'

Column Name: program_X_tx_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'

Column Name: program_X_tx_service_value
Column Type: varchar
Max Length: 50
The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 50
'Treatment Setting'

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 50
The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code
Column Type: varchar
Max Length: 50
'Type'

Column Name: program_X_type_value
Column Type: varchar
Max Length: 50
The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value
Column Type: varchar
Max Length: 50
The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code
Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Discharge

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode Number'

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: join_to_admission_data

Column Type: varchar

Max Length: 12

Joins table to admission data.

Column Name: join_to_discharge_data

Column Type: varchar

Max Length: 12
Joins table to discharge data.

Column Name: join_to_leave_history
Column Type: varchar
Max Length: 12
Joins table to leaves history out on.

Column Name: join_to_program_transfer
Column Type: varchar
Max Length: 50
Joins table to program transfer.

Column Name: join_to_return_from_leave
Column Type: varchar
Max Length: 12
Joins table to leaves history return.

Column Name: movement_date
Column Type: date
'Movement Date'

Column Name: movement_time
Column Type: varchar
Max Length: 10
'Movement Time'

Column Name: movement_type_code
Column Type: varchar
Max Length: 50
'Movement Type'

Column Name: movement_type_value
Column Type: varchar
Max Length: 20
The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid
Column Type: varchar
Max Length: 12
A unique ID used to identify a row of data.

Column Name: program_from
Column Type: varchar
Max Length: 20
'Program From'

Column Name: program_from_value
Column Type: varchar
Max Length: 40

The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to
Column Type: varchar
Max Length: 40
'Program To'

Column Name: program_to_value
Column Type: varchar
Max Length: 40
The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Discharge

Table Name: SYSTEM.patient_current_demographics

Table Description: Patient Current Demographics

Column Name: patient_current_demographics
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: date_of_birth
Column Type: date
Patient Date of birth

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
Patient Ethnic origin

Column Name: patient_add_city

Column Type: varchar
Max Length: 40
Patient address city

Column Name: patient_add_county_code
Column Type: varchar
Max Length: 5
Patient address county

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient home phone

Column Name: patient_name
Column Type: varchar
Max Length: 100
Patient Name

Column Name: patient_add_state_code
Column Type: varchar
Max Length: 10
Patient address state code

Column Name: patient_add_street_1
Column Type: varchar
Max Length: 40
Patient street address 1

Column Name: patient_add_street_2
Column Type: varchar
Max Length: 40
Patients address street 2

Column Name: patient_add_zipcode
Column Type: varchar
Max Length: 60
Patients address zipcode

Column Name: patient_sex_code
Column Type: varchar
Max Length: 5
Patients sex

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code

Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: patient_ssn
Column Type: varchar
Max Length: 15
Patient's social security number

Column Name: religion_code
Column Type: varchar
Max Length: 20
Patient's religion code

Column Name: marital_status_code
Column Type: varchar
Max Length: 15
Patient's marital status

Column Name: patient_work_phone
Column Type: varchar
Max Length: 60
Patient's work phone

Column Name: patient_maiden_name
Column Type: varchar
Max Length: 40
Patient's maiden name

Column Name: race_code

Column Type: varchar
Max Length: 20
Patient's race code

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility chart number

Column Name: patient_place_of_birth
Column Type: varchar
Max Length: 40
Patient's place of birth

Column Name: patient_sex_value
Column Type: varchar
Max Length: 40
Patient's sex value

Column Name: ethnic_origin_value
Column Type: varchar
Max Length: 255
Ethnic Origin

Column Name: religion_value
Column Type: varchar
Max Length: 255
Patient's Religion

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Patient's Marital Status

Column Name: race_value
Column Type: varchar
Max Length: 255
Patient's Race

Column Name: patient_add_county_value
Column Type: varchar
Max Length: 20
Patients address - County

Column Name: patient_add_state_value
Column Type: varchar
Max Length: 40
Patient Address - State - Value

Column Name: FAMID

Column Type: integer
Family ID

Column Name: address_start_date
Column Type: date
Address Start Date

Column Name: alert_access_options
Column Type: varchar
Max Length: 50
Alert Access Options

Column Name: alert_access_type
Column Type: varchar
Max Length: 50
Alert Access Type

Column Name: citizenship_code
Column Type: varchar
Max Length: 50
Citizenship

Column Type: varchar
Max Length: 80
Client Alias 9

Column Name: client_conf_city
Column Type: varchar
Max Length: 50
Client Confidential Address - City

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Code

Column Name: client_conf_cntry_value
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Value

Column Name: client_conf_phone
Column Type: varchar
Max Length: 50
Client Confidential Address - Phone Number

Column Name: client_conf_state_code
Column Type: varchar
Max Length: 50
Client Confidential Address - State Code

Column Name: client_conf_state_value
Column Type: varchar
Max Length: 50

Client Confidential Address - State Value

Column Name: client_conf_street
Column Type: varchar
Max Length: 50
Client Confidential Address - Street

Column Name: client_conf_street2
Column Type: varchar
Max Length: 50
Client Confidential Address - Street 2

Column Name: client_conf_zipcode
Column Type: varchar
Max Length: 50
Client Confidential Address - Zip code

Column Name: client_email_addr
Column Type: varchar
Max Length: 50
Client's Email Address

Column Name: client_mail_city
Column Type: varchar
Max Length: 50
Client's Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_state_code
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50

Client's Address - Street 1

Column Name: client_mail_street2

Column Type: varchar

Max Length: 50

Client's Address - Street 2

Column Name: client_mail_zipcode

Column Type: varchar

Max Length: 50

Client's Address - Zip Code

Column Name: communication_pref_code

Column Type: varchar

Max Length: 50

Communication Preference Code

Column Name: communication_pref_value

Column Type: varchar

Max Length: 50

Communication Preference Value

Column Name: country_of_origin_code

Column Type: varchar

Max Length: 50

Country of Origin

Column Name: country_of_origin_value

Column Type: varchar

Max Length: 50

Country of Origin

Column Name: decline_prov_code

Column Type: varchar

Max Length: 50

Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long

Column Type: varchar

Max Length: 4096

Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short

Column Type: varchar

Max Length: 255

Client Declined To Provide Information On The Following

Column Name: education_value

Column Type: varchar

Max Length: 255

education - Value (625)

Column Name: ethnic_origin_X_NRI_code

Column Type: varchar

Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar

Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar

Max Length: 4096
SS Demographics Multiple Select Dictionary 1 Value

Column Name: ss_demographics_mult_2_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 2 Code

Column Name: ss_demographics_mult_2_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 2 Short Value

Column Name: ss_demographics_mult_2_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 2 Value

Column Name: ss_demographics_mult_3_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 3 Code

Column Name: ss_demographics_mult_3_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 3 Short Value

Column Name: ss_demographics_mult_3_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 3 Value

Column Name: ss_demographics_mult_4_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 4 Code

Column Name: ss_demographics_mult_4_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 4 Short Value

Column Name: ss_demographics_mult_4_value

Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 4 Value

Column Name: ss_demographics_mult_5_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 5 Code

Column Name: ss_demographics_mult_5_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 5 Short Value

Column Name: ss_demographics_mult_5_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 5 Value

Column Name: ss_demographics_mult_6_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 6 Code

Column Name: ss_demographics_mult_6_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 6 Short Value

Column Name: ss_demographics_mult_6_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 6 Value

Column Name: ss_demographics_mult_7_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 7 Code

Column Name: ss_demographics_mult_7_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 7 Short Value

Column Name: ss_demographics_mult_7_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 7 Value

Column Name: ss_demographics_mult_8_code

Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 8 Code

Column Name: ss_demographics_mult_8_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 8 Short Value

Column Name: ss_demographics_mult_8_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 8 Value

Column Name: ss_demographics_mult_9_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 9 Code

Column Name: ss_demographics_mult_9_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 9 Short Value

Column Name: ss_demographics_mult_9_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 9 Value

Column Name: ss_demographics_phone_1
Column Type: varchar
Max Length: 50
Site Specific Phone Number 1

Column Name: ss_demographics_phone_2
Column Type: varchar
Max Length: 50
Site Specific Phone Number 2

Column Name: ss_demographics_phone_3
Column Type: varchar
Max Length: 50
Site Specific Phone Number 3

Column Name: ss_demographics_phone_4
Column Type: varchar
Max Length: 50
Site Specific Phone Number 4

Column Name: ss_demographics_phone_5

Column Type: varchar
Max Length: 50
Site Specific Phone Number 5

Column Name: ss_demographics_staff_1
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 1

Column Name: ss_demographics_staff_2
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 2

Column Name: ss_demographics_staff_3
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 3

Column Name: ss_demographics_staff_4
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 4

Column Name: ss_demographics_staff_5
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 5

Column Name: ss_demographics_time_1
Column Type: varchar
Max Length: 10
SS Demographics Time 1

Column Name: ss_demographics_time_2
Column Type: varchar
Max Length: 10
SS Demographics Time 2

Column Name: ss_demographics_time_3
Column Type: varchar
Max Length: 10
SS Demographics Time 3

Column Name: ss_demographics_time_4
Column Type: varchar
Max Length: 10
SS Demographics Time 4

Column Name: ss_demographics_time_5

Column Type: varchar
Max Length: 10
SS Demographics Time 5

Documentation for form: Discharge

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM
Column Type: varchar
Max Length: 10
The program code in which the patient is active in.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODENUMBER
Column Type: integer
'Episode Number'

Documentation for form: Discharge

Table Name: SYSTEM.view_episode_summary_current

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: preadmit_admission_date
Column Type: date
'Preadmit/Admission Date'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_date_of_birth
Column Type: date
'Date Of Birth'

Column Name: c_age
Column Type: numeric
'Client Age'

Column Name: c_ss_number

Column Type: varchar

Max Length: 15

'Social Security Number'

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 50

A unique ID used to identify a row of data.

Column Name: c_address_state_code

Column Type: varchar

Max Length: 50

'Client's Address - State'

Column Name: c_address_state_value

Column Type: varchar

Max Length: 50

The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1

Column Type: varchar

Max Length: 50

'Client's Address - Street 1'

Column Name: c_address_str_2

Column Type: varchar

Max Length: 50

'Client's Address - Street 2'

Column Name: c_admit_practitioner_id

Column Type: varchar

Max Length: 50

'Admitting Practitioner'

Column Name: c_admit_practitioner_name

Column Type: varchar

Max Length: 50

The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code

Column Type: varchar

Max Length: 50

'Source of Admission'

Column Name: c_admit_source_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of

Column Type: varchar

Max Length: 50

'Preadmit/Admission Time'

Column Name: c_admit_type_of_code

Column Type: varchar

Max Length: 50

'Type Of Admission'

Column Name: c_admit_type_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id

Column Type: varchar

Max Length: 50

'Attending Practitioner'

Column Name: c_attend_practitioner_name

Column Type: varchar

Max Length: 50

The name associated with c_attend_practitioner_id.

Column Name: c_city

Column Type: varchar

Max Length: 50

'Client's Address - City'

Column Name: c_country_code

Column Type: varchar

Max Length: 50

'Client's Address - Country'

Column Name: c_country_value

Column Type: varchar

Max Length: 50

The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code

Column Type: varchar

Max Length: 50

'Client's Address - County'

Column Name: c_county_value

Column Type: varchar

Max Length: 50

The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age

Column Type: varchar

Max Length: 50

'Client Detail Age'

Column Name: c_ethnicity_code

Column Type: varchar

Max Length: 50

'Client Ethnicity'

Column Name: c_ethnicity_value

Column Type: varchar

Max Length: 50

The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code

Column Type: varchar

Max Length: 50

'Client Legal Status'

Column Name: c_legal_status_value

Column Type: varchar

Max Length: 50

The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value

Column Type: varchar

Max Length: 40

The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code

Column Type: varchar

Max Length: 50

'Client Marital Status'

Column Name: c_marital_status_value

Column Type: varchar

Max Length: 50

The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value

Column Type: varchar

Max Length: 200

The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code

Column Type: varchar

Max Length: 50

'Client Race'

Column Name: c_race_value

Column Type: varchar

Max Length: 50

The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code

Column Type: varchar

Max Length: 50

'Client Religion'

Column Name: c_religion_value

Column Type: varchar

Max Length: 50

The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code

Column Type: varchar

Max Length: 10

'Unit'

Column Name: c_unit_value

Column Type: varchar

Max Length: 50

The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip

Column Type: varchar

Max Length: 60

'Client's Address - Zip'

Column Name: data_entry_source

Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
'Facility Chart Number (148)'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 50
'Gender'

Column Name: patient_gender_value
Column Type: varchar
Max Length: 50
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar

Max Length: 40

The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone

Column Type: varchar

Max Length: 60

'Home Phone'

Column Name: patient_name

Column Type: varchar

Max Length: 100

'Client Name'

Column Name: patient_name_first

Column Type: varchar

Max Length: 50

'Client First Name'

Column Name: patient_name_last

Column Type: varchar

Max Length: 50

'Client Last Name'

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 50

'HCFA'

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 50

'RRG'

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 50

The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 50

'City, State, Zip Code'

Column Name: program_X_dflt_location_code

Column Type: varchar

Max Length: 50

'Location'

Column Name: program_X_dflt_location_value

Column Type: varchar

Max Length: 50

The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

'HCO ID'

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 50

'Phone Number'

Column Name: program_X_street_address

Column Type: varchar

Max Length: 50

'Street Address'

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 50

'Tax ID'

Column Name: program_X_tx_service_code

Column Type: varchar

Max Length: 50

'Treatment Service'

Column Name: program_X_tx_service_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 50

'Treatment Setting'

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 50

'Type'

Column Name: program_X_type_value

Column Type: varchar

Max Length: 50

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Discharge

Table Name: [SYSTEM.view_episode_summary_discharge](#)

Table Description: This table returns client episode discharge information.

Column Name: episode_summary_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: date_of_discharge

Column Type: date

'Date Of Discharge'

Column Name: EPISODE_NUMBER
Column Type: integer
The episode number associated with PATID.

Column Name: EPN_uniqueid
Column Type: varchar
Max Length: 10
Unique ID for the episode record.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: preadmit_admission_date
Column Type: date
'Pre-Admit/Admission Date'

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_ethnicity_code
Column Type: varchar
Max Length: 40
'Client Ethnicity'

Column Name: c_race_code
Column Type: varchar
Max Length: 10
'Client Race'

Column Name: c_zip
Column Type: varchar
Max Length: 60
'Client Address - ZIP'

Column Name: c_city
Column Type: varchar
Max Length: 40
'Client Address - City'

Column Name: c_county_code
Column Type: varchar
Max Length: 40
'Client Address - County'

Column Name: c_religion_code
Column Type: varchar

Max Length: 10
'Client Religion'

Column Name: c_marital_status
Column Type: varchar
Max Length: 10
'Client Marital Status'

Column Name: patient_name
Column Type: varchar
Max Length: 100
'Client Name'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 10
'Client Gender'

Column Name: c_ethnicity_value
Column Type: varchar
Max Length: 40
The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_race_value
Column Type: varchar
Max Length: 40
The description associated with c_race_code. See c_race_code for more information.

Column Name: c_county_value
Column Type: varchar
Max Length: 40
The description associated with c_county_code. See c_county_code for more information.

Column Name: c_religion_value
Column Type: varchar
Max Length: 40
The description associated with c_religion_code. See c_religion_code for more information.

Column Name: patient_gender_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: disc_legal_status_code
Column Type: varchar
Max Length: 10
'Discharge Legal Status'

Column Name: disc_principal_diagnosis_code
Column Type: varchar

Max Length: 10
'Discharge Principal Diagnosis'

Column Name: disc_practitioner_staff_id
Column Type: varchar
Max Length: 10
'Discharge Practitioner ID'

Column Name: disc_unit_code
Column Type: varchar
Max Length: 10
'Discharge Unit'

Column Name: disc_type_of_code
Column Type: varchar
Max Length: 10
'Type Of Discharge'

Column Name: disc_legal_status_value
Column Type: varchar
Max Length: 40
The description associated with disc_legal_status_code. See disc_legal_status_code for more information.

Column Name: disc_type_of_value
Column Type: varchar
Max Length: 50
The description associated with disc_type_of_code. See disc_type_of_code for more information.

Column Name: disc_unit_value
Column Type: varchar
Max Length: 40
The description associated with disc_unit_code. See disc_unit_code for more information.

Column Name: c_marital_status_value
Column Type: varchar
Max Length: 40
The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: disc_practitioner_staff_name
Column Type: varchar
Max Length: 40
'Discharge Practitioner Name'

Column Name: disc_principal_diagnosis_value
Column Type: varchar
Max Length: 200
The description associated with disc_principal_diagnosis_code. See disc_principal_diagnosis_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with program_code. See program_code for more information.

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 40

'Discharge Program Place Of Service'

Column Name: program_X_dflt_location_code

Column Type: varchar

Max Length: 10

'Discharge Program Default Location'

Column Name: program_X_type_code

Column Type: varchar

Max Length: 10

'Discharge Program Type'

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 10

'Discharge Program RRG'

Column Name: program_X_street_address

Column Type: varchar

Max Length: 40

'Discharge Program Street Address'

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

'Discharge Program Tax ID'

Column Name: program_X_tx_service_code

Column Type: varchar

Max Length: 10

'Discharge Program Treatment Service'

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 10

'Discharge Program Treatment Setting'

Column Name: program_X_dflt_location_value

Column Type: varchar

Max Length: 40

The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_tx_service_value

Column Type: varchar

Max Length: 40

The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: episode_length_of_stay

Column Type: numeric

'Episode Length Of Stay'

Column Name: c_date_of_birth

Column Type: date

'Client Date Of Birth'

Column Name: c_age

Column Type: numeric

'Client Age'

Column Name: c_ss_number

Column Type: varchar

Max Length: 15

'Client Social Security Number'

Column Name: disc_age_at

Column Type: numeric

'Client Age At Discharge'

Column Name: disc_time_of

Column Type: varchar

Max Length: 10

'Time Of Discharge'

Column Name: c_country_code

Column Type: varchar

Max Length: 20

'Client Address - Country'

Column Name: c_country_value

Column Type: varchar

Max Length: 40

The description associated with c_country_code. See c_country_code for more information.

Column Name: c_detail_age

Column Type: varchar

Max Length: 50

'Detail Current Client Age'

Column Name: c_ethnicity_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 50
The time the row was last updated.

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp

the UTC date and time the data was saved.

Column Name: disc_detail_age_at
Column Type: varchar
Max Length: 50
'Detail Age at Date of Discharge'

Column Name: disc_leg_stat_X_NRI_2014_value
Column Type: varchar
Max Length: 40
The description associated with disc_leg_stat_X_NRI_2014_code. See disc_leg_stat_X_NRI_2014_code for more information.

Column Name: disc_legal_status_X_NRI_code
Column Type: varchar
Max Length: 10
'Discharge Legal Status (NRI)'

Column Name: disc_legal_status_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with disc_legal_status_X_NRI_code. See disc_legal_status_X_NRI_code for more information.

Column Name: disc_leg_stat_X_NRI_2014_code
Column Type: varchar
Max Length: 10
'Discharge Legal Status (NRI 2014)'

Column Name: disc_unit_X_NRI_code
Column Type: varchar
Max Length: 10
'Discharge Unit (NRI)'

Column Name: disc_unit_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with disc_unit_X_NRI_code. See disc_unit_X_NRI_code for more information.

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service

Column Type: date
'Last Date Of Service'

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 40
'Discharge Program City, State ZIP'

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 40
'Discharge Program Phone Number'

Column Name: sex_orientation_code
Column Type: varchar
Max Length: 20
The patient's sexual orientation code

Column Name: sex_orientation_value
Column Type: varchar
Max Length: 40
The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Program_Transfer

Table Name: SYSTEM.episode_history

Table Description: This table returns Episode History.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPN_uniqueid

Column Type: varchar

Max Length: 10

EPN_uniqueid

Column Name: EPISODE_NUMBER

Column Type: integer

The client episode

Column Name: program_code

Column Type: varchar

Max Length: 10

Program

Column Name: program_value

Column Type: varchar

Max Length: 40

The description associated with the program_code. See program_code for more information.

Column Name: preadmit_admission_date

Column Type: date

Preadmit/Admission Date

Column Name: date_of_discharge

Column Type: date

Date Of Discharge

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: episode_select_for_query

Column Type: varchar

Max Length: 70

The field to use to select episodes in queries.

Column Name: v_patient_name

Column Type: varchar

Max Length: 100

Client name associated with the PATID.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 10

Program Treatment Setting

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 10

Program RRG Code

Column Name: program_X_type_code

Column Type: varchar

Max Length: 10

Program Type Code

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 40

Program Tax ID

Column Name: program_X_street_address

Column Type: varchar

Max Length: 40
Program Street Address

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 40
Place Of Service (HCFA 24-B)

Column Name: program_X_location_code
Column Type: varchar
Max Length: 40
Program Location

Column Name: program_X_location_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_type_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: JOIN_TO_Enrollment
Column Type: integer
Join to Enrollment

Column Name: alert_access_options
Column Type: varchar
Max Length: 50
The description associated with the alert_access. See alert_access for more information.

Column Name: alert_access_type
Column Type: varchar
Max Length: 50
Alert Access Type

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: fill_gaps_code
Column Type: varchar
Max Length: 5
Program Fill gaps in service entry record for duration of service?

Column Name: fill_gaps_service_code
Column Type: varchar
Max Length: 50
Service Code to use to fill gaps

Column Name: fill_gaps_service_value
Column Type: varchar
Max Length: 50

The description associated with the fill_gaps_service_code. See fill_gaps_service_code for more information.

Column Name: fill_gaps_staff_id

Column Type: varchar

Max Length: 10

Program Service Practitioner to use to fill gaps

Column Name: fill_gaps_staff_name

Column Type: varchar

Max Length: 50

The description associated with the fill_gaps_staff_id. See fill_gaps_staff_id for more information.

Column Name: fill_gaps_value

Column Type: varchar

Max Length: 10

The description associated with the fill_gaps_code. See fill_gaps_code for more information.

Column Name: last_date_of_service

Column Type: date

Last Date Of Service

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 40

Program City, State Zip

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

Program HCO ID

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 40

Program Phone Number

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Column Name: notesstream
Column Type: longvarchar
Max Length: 2147483647

Documentation for form: Program_Transfer

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: join_to_admission_data
Column Type: varchar
Max Length: 12
Joins table to admission data.

Column Name: join_to_discharge_data
Column Type: varchar
Max Length: 12
Joins table to discharge data.

Column Name: join_to_leave_history
Column Type: varchar
Max Length: 12
Joins table to leaves history out on.

Column Name: join_to_program_transfer
Column Type: varchar
Max Length: 50
Joins table to program transfer.

Column Name: join_to_return_from_leave
Column Type: varchar
Max Length: 12
Joins table to leaves history return.

Column Name: movement_date
Column Type: date
'Movement Date'

Column Name: movement_time
Column Type: varchar
Max Length: 10
'Movement Time'

Column Name: movement_type_code
Column Type: varchar
Max Length: 50
'Movement Type'

Column Name: movement_type_value
Column Type: varchar
Max Length: 20
The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid
Column Type: varchar
Max Length: 12
A unique ID used to identify a row of data.

Column Name: program_from
Column Type: varchar
Max Length: 20
'Program From'

Column Name: program_from_value
Column Type: varchar
Max Length: 40
The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to

Column Type: varchar
Max Length: 40
'Program To'

Column Name: program_to_value
Column Type: varchar
Max Length: 40
The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Program_Transfer

Table Name: SYSTEM.program_active_clients

Table Description: This table returns active clients in each program code.

Column Name: ID
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PROGRAM
Column Type: varchar
Max Length: 10
The program code in which the patient is active in.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODENUMBER
Column Type: integer
'Episode Number'

Documentation for form: Program_Transfer

Table Name: SYSTEM.view_episode_summary_current

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode Number'

Column Name: preadmit_admission_date

Column Type: date

'Preadmit/Admission Date'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

The time the row was last updated.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_date_of_birth
Column Type: date
'Date Of Birth'

Column Name: c_age
Column Type: numeric
'Client Age'

Column Name: c_ss_number
Column Type: varchar
Max Length: 15
'Social Security Number'

Column Name: EPN_uniqueid
Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: c_address_state_code
Column Type: varchar
Max Length: 50
'Client's Address - State'

Column Name: c_address_state_value
Column Type: varchar
Max Length: 50
The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1
Column Type: varchar
Max Length: 50
'Client's Address - Street 1'

Column Name: c_address_str_2
Column Type: varchar
Max Length: 50
'Client's Address - Street 2'

Column Name: c_admit_practitioner_id
Column Type: varchar
Max Length: 50
'Admitting Practitioner'

Column Name: c_admit_practitioner_name
Column Type: varchar

Max Length: 50

The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code

Column Type: varchar

Max Length: 50

'Source of Admission'

Column Name: c_admit_source_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of

Column Type: varchar

Max Length: 50

'Preadmit/Admission Time'

Column Name: c_admit_type_of_code

Column Type: varchar

Max Length: 50

'Type Of Admission'

Column Name: c_admit_type_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id

Column Type: varchar

Max Length: 50

'Attending Practitioner'

Column Name: c_attend_practitioner_name

Column Type: varchar

Max Length: 50

The name associated with c_attend_practitioner_id.

Column Name: c_city

Column Type: varchar

Max Length: 50

'Client's Address - City'

Column Name: c_country_code

Column Type: varchar

Max Length: 50

'Client's Address - Country'

Column Name: c_country_value

Column Type: varchar

Max Length: 50

The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code

Column Type: varchar

Max Length: 50

'Client's Address - County'

Column Name: c_county_value

Column Type: varchar

Max Length: 50

The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age

Column Type: varchar

Max Length: 50

'Client Detail Age'

Column Name: c_ethnicity_code

Column Type: varchar

Max Length: 50

'Client Ethnicity'

Column Name: c_ethnicity_value

Column Type: varchar

Max Length: 50

The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code

Column Type: varchar

Max Length: 50

'Client Legal Status'

Column Name: c_legal_status_value

Column Type: varchar

Max Length: 50

The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value

Column Type: varchar

Max Length: 40

The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code

Column Type: varchar

Max Length: 50

'Client Marital Status'

Column Name: c_marital_status_value

Column Type: varchar

Max Length: 50

The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value

Column Type: varchar

Max Length: 200

The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code

Column Type: varchar

Max Length: 50

'Client Race'

Column Name: c_race_value

Column Type: varchar

Max Length: 50

The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code

Column Type: varchar

Max Length: 50

'Client Religion'

Column Name: c_religion_value

Column Type: varchar

Max Length: 50

The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code

Column Type: varchar

Max Length: 10

'Unit'

Column Name: c_unit_value

Column Type: varchar

Max Length: 50

The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip

Column Type: varchar

Max Length: 60

'Client's Address - Zip'

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: facility_chart_number

Column Type: varchar

Max Length: 40

'Facility Chart Number (148)'

Column Name: gender_identity_code

Column Type: varchar

Max Length: 20

'Gender Identity'

Column Name: gender_identity_value

Column Type: varchar

Max Length: 40

The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service

Column Type: date

'Last Date Of Service'

Column Name: patient_gender_code

Column Type: varchar

Max Length: 50

'Gender'

Column Name: patient_gender_value

Column Type: varchar

Max Length: 50

The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code

Column Type: varchar

Max Length: 10

'Gender (NRI)'

Column Name: patient_gender_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone

Column Type: varchar

Max Length: 60

'Home Phone'

Column Name: patient_name

Column Type: varchar

Max Length: 100

'Client Name'

Column Name: patient_name_first

Column Type: varchar

Max Length: 50

'Client First Name'

Column Name: patient_name_last

Column Type: varchar

Max Length: 50

'Client Last Name'

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 50

'HCFA'

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 50

'RRG'

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 50

The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 50
'City, State, Zip Code'

Column Name: program_X_dflt_location_code
Column Type: varchar
Max Length: 50
'Location'

Column Name: program_X_dflt_location_value
Column Type: varchar
Max Length: 50
The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 50
'Phone Number'

Column Name: program_X_street_address
Column Type: varchar
Max Length: 50
'Street Address'

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 50
'Tax ID'

Column Name: program_X_tx_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'

Column Name: program_X_tx_service_value
Column Type: varchar
Max Length: 50
The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 50

'Treatment Setting'

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 50

'Type'

Column Name: program_X_type_value

Column Type: varchar

Max Length: 50

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Leaves

Max Length: 40

Data Entry By (Option)

Column Name: decision_to_admit_date

Column Type: date

Decision To Admit Date

Column Name: decision_to_admit_time

Column Type: varchar

Max Length: 26

Decision To Admit Time

Column Name: GUID

Column Type: varchar

Max Length: 50

GUID

Column Name: UTCTimeStamp

Column Type: timestamp

UTCTimestamp

Column Name: client_name

Column Type: varchar

Max Length: 100

Client Name

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

Data Entry User ID

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

Data Entry User Name

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: expected_discharge_date

Column Type: date

Expected Discharge Date

Column Name: option_desc

Column Type: varchar

Max Length: 80

Option Description

Column Name: option_id

Column Type: varchar

Max Length: 20

Option Identifier

Column Name: program_code

Column Type: varchar

Max Length: 10

Program

Column Name: program_value

Column Type: varchar

Max Length: 50

The description for the program_code. See program_code for more information.

Column Name: provid

Column Type: varchar

Max Length: 50

PROVID

Column Name: provider_name

Column Type: varchar

Max Length: 50

Provider Name

Column Name: source_of_admission_code

Column Type: varchar

Max Length: 50

Source of Admission

Column Name: source_of_admission_value

Column Type: varchar

Max Length: 50

The description for the source_of_admission_code. See source_of_admission_code for more information.

Column Name: type_of_adm_X_ub92_code

Column Type: varchar

Max Length: 50

Admission Type (2300-CL1-01/UB92-FL 19/UB04-FL 14)

Column Name: type_of_adm_X_ub92_value

Column Type: varchar

Max Length: 50

The description for the type_of_adm_X_ub92_code. See type_of_adm_X_ub92_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Pre_Admit

Table Name: SYSTEM.episode_history

Table Description: This table returns Episode History.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPN_uniqueid
Column Type: varchar
Max Length: 10
EPN_uniqueid

Column Name: EPISODE_NUMBER
Column Type: integer
The client episode

Column Name: program_code
Column Type: varchar
Max Length: 10
Program

Column Name: program_value
Column Type: varchar
Max Length: 40
The description associated with the program_code. See program_code for more information.

Column Name: preadmit_admission_date
Column Type: date
Preadmit/Admission Date

Column Name: date_of_discharge
Column Type: date
Date Of Discharge

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: episode_select_for_query
Column Type: varchar
Max Length: 70
The field to use to select episodes in queries.

Column Name: v_patient_name
Column Type: varchar
Max Length: 100
Client name associated with the PATID.

Column Name: program_X_tx_setting_code
Column Type: varchar
Max Length: 10
Program Treatment Setting

Column Name: program_X_tx_setting_value
Column Type: varchar
Max Length: 40
The description associated with the program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 10
Program RRG Code

Column Name: program_X_type_code
Column Type: varchar
Max Length: 10
Program Type Code

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 40
Program Tax ID

Column Name: program_X_street_address
Column Type: varchar
Max Length: 40
Program Street Address

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 40
Place Of Service (HCFA 24-B)

Column Name: program_X_location_code
Column Type: varchar
Max Length: 40

Program Location

Column Name: program_X_location_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_location_code. See program_X_location_code for more information.

Column Name: program_X_type_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_type_code. See program_X_type_code for more information.

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 40

The description associated with the program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

The user name that last updated the row.

Column Name: JOIN_TO_Enrollment

Column Type: integer

Join to Enrollment

Column Name: alert_access_options

Column Type: varchar

Max Length: 50

The description associated with the alert_access. See alert_access for more information.

Column Name: alert_access_type

Column Type: varchar

Max Length: 50

Alert Access Type

Column Name: data_entry_offset

Column Type: numeric

the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: fill_gaps_code
Column Type: varchar
Max Length: 5
Program Fill gaps in service entry record for duration of service?

Column Name: fill_gaps_service_code
Column Type: varchar
Max Length: 50
Service Code to use to fill gaps

Column Name: fill_gaps_service_value
Column Type: varchar
Max Length: 50
The description associated with the fill_gaps_service_code. See fill_gaps_service_code for more information.

Column Name: fill_gaps_staff_id
Column Type: varchar
Max Length: 10
Program Service Practitioner to use to fill gaps

Column Name: fill_gaps_staff_name
Column Type: varchar
Max Length: 50
The description associated with the fill_gaps_staff_id. See fill_gaps_staff_id for more information.

Column Name: fill_gaps_value

Column Type: varchar

Max Length: 10

The description associated with the fill_gaps_code. See fill_gaps_code for more information.

Column Name: last_date_of_service

Column Type: date

Last Date Of Service

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 40

Program City, State Zip

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

Program HCO ID

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 40

Program Phone Number

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Pre_Admit

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: join_to_admission_data
Column Type: varchar
Max Length: 12
Joins table to admission data.

Column Name: join_to_discharge_data
Column Type: varchar
Max Length: 12
Joins table to discharge data.

Column Name: join_to_leave_history
Column Type: varchar
Max Length: 12
Joins table to leaves history out on.

Column Name: join_to_program_transfer
Column Type: varchar
Max Length: 50
Joins table to program transfer.

Column Name: join_to_return_from_leave
Column Type: varchar
Max Length: 12
Joins table to leaves history return.

Column Name: movement_date
Column Type: date
'Movement Date'

Column Name: movement_time
Column Type: varchar
Max Length: 10
'Movement Time'

Column Name: movement_type_code
Column Type: varchar
Max Length: 50
'Movement Type'

Column Name: movement_type_value

Column Type: varchar

Max Length: 20

The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid

Column Type: varchar

Max Length: 12

A unique ID used to identify a row of data.

Column Name: program_from

Column Type: varchar

Max Length: 20

'Program From'

Column Name: program_from_value

Column Type: varchar

Max Length: 40

The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to

Column Type: varchar

Max Length: 40

'Program To'

Column Name: program_to_value

Column Type: varchar

Max Length: 40

The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Pre_Admit

Table Name: SYSTEM.patient_current_demographics

Table Description: Patient Current Demographics

Column Name: patient_current_demographics

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer
Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: date_of_birth
Column Type: date
Patient Date of birth

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
Patient Ethnic origin

Column Name: patient_add_city
Column Type: varchar
Max Length: 40
Patient address city

Column Name: patient_add_county_code
Column Type: varchar
Max Length: 5
Patient address county

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient home phone

Column Name: patient_name
Column Type: varchar
Max Length: 100
Patient Name

Column Name: patient_add_state_code
Column Type: varchar
Max Length: 10
Patient address state code

Column Name: patient_add_street_1
Column Type: varchar
Max Length: 40
Patient street address 1

Column Name: patient_add_street_2
Column Type: varchar
Max Length: 40

Patients address street 2

Column Name: patient_add_zipcode
Column Type: varchar
Max Length: 60
Patients address zipcode

Column Name: patient_sex_code
Column Type: varchar
Max Length: 5
Patients sex

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: patient_ssn
Column Type: varchar
Max Length: 15
Patient's social security number

Column Name: religion_code
Column Type: varchar
Max Length: 20

Patient's religion code

Column Name: marital_status_code

Column Type: varchar

Max Length: 15

Patient's marital status

Column Name: patient_work_phone

Column Type: varchar

Max Length: 60

Patient's work phone

Column Name: patient_maiden_name

Column Type: varchar

Max Length: 40

Patient's maiden name

Column Name: race_code

Column Type: varchar

Max Length: 20

Patient's race code

Column Name: facility_chart_number

Column Type: varchar

Max Length: 40

Facility chart number

Column Name: patient_place_of_birth

Column Type: varchar

Max Length: 40

Patient's place of birth

Column Name: patient_sex_value

Column Type: varchar

Max Length: 40

Patient's sex value

Column Name: ethnic_origin_value

Column Type: varchar

Max Length: 255

Ethnic Origin

Column Name: religion_value

Column Type: varchar

Max Length: 255

Patient's Religion

Column Name: marital_status_value

Column Type: varchar

Max Length: 40

Patient's Marital Status

Column Name: race_value

Column Type: varchar

Max Length: 255

Patient's Race

Column Name: patient_add_county_value

Column Type: varchar

Max Length: 20

Patients address - County

Column Name: patient_add_state_value

Column Type: varchar

Max Length: 40

Patient Address - State - Value

Column Name: FAMID

Column Type: integer

Familij ID

Column Name: address_start_date

Column Type: date

Address Start Date

Column Type: varchar
Max Length: 60
Patient's Address - Zipcode

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient's Home Phone

Column Name: patient_street_2
Column Type: varchar
Max Length: 40
Patient's Address - Street 2

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: social_security_number
Column Type: varchar
Max Length: 15
SS Number (6)

Column Name: religion_code
Column Type: varchar
Max Length: 5
Client Religion (9)

Column Name: religion_value
Column Type: varchar
Max Length: 255
Religion Value (9)

Column Name: marital_status_code
Column Type: varchar
Max Length: 10
Marital status code (10)

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Marital Status Value (10)

Column Name: client_work_phone
Column Type: varchar
Max Length: 60
Work Phone

Column Name: maiden_name
Column Type: varchar
Max Length: 40
Maiden Name

Column Name: client_race_Code
Column Type: varchar
Max Length: 10
Client Race - Code (116)

Column Name: client_race_value
Column Type: varchar
Max Length: 40
Client Race - Value (116)

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility Chart Number

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: education_value
Column Type: varchar
Max Length: 255
education - Value (625)

Column Name: place_of_birth
Column Type: varchar
Max Length: 40
Place of Birth

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: InfoScribLegacyID
Column Type: varchar
Max Length: 50
InfoScribLegacyID

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_start_date
Column Type: date
Address Start Date

Column Name: citizenship_code
Column Type: varchar
Max Length: 50
Citizenship

Column Name: citizenship_value
Column Type: varchar
Max Length: 50
Citizenship

Column Name: client_alias_10
Column Type: varchar
Max Length: 80
Client Alias 10

Column Name: client_alias_2
Column Type: varchar
Max Length: 80
Client Alias 2

Column Name: client_alias_3
Column Type: varchar

Max Length: 80
Client Alias 3

Column Name: client_alias_4
Column Type: varchar
Max Length: 80
Client Alias 4

Column Name: client_alias_5
Column Type: varchar
Max Length: 80
Client Alias 5

Column Name: client_alias_6
Column Type: varchar
Max Length: 80
Client Alias 6

Column Name: client_alias_7
Column Type: varchar
Max Length: 80
Client Alias 7

Column Name: client_alias_8
Column Type: varchar
Max Length: 80
Client Alias 8

Column Name: client_alias_9
Column Type: varchar
Max Length: 80
Client Alias 9

Column Name: client_conf_city
Column Type: varchar
Max Length: 50
Client Confidential Address - City

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Code

Column Name: client_conf_cntry_value
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Value

Column Name: client_conf_phone
Column Type: varchar

Max Length: 50
Client Confidential Address - Phone Number

Column Name: client_conf_state_code
Column Type: varchar
Max Length: 50
Client Confidential Address - State Code

Column Name: client_conf_state_value
Column Type: varchar
Max Length: 50
Client Confidential Address - State Value

Column Name: client_conf_street
Column Type: varchar
Max Length: 50
Client Confidential Address - Street

Column Name: client_conf_street2
Column Type: varchar
Max Length: 50
Client Confidential Address - Street 2

Column Name: client_conf_zipcode
Column Type: varchar
Max Length: 50
Client Confidential Address - Zip code

Column Name: client_email_addr
Column Type: varchar
Max Length: 50
Client's Email Address

Column Name: client_mail_city
Column Type: varchar
Max Length: 50
Client's Mailing Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Mailing Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Mailing Address - Country

Column Name: client_mail_state_code
Column Type: varchar

Max Length: 50
Client's Mailing Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Mailing Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50
Client's Mailing Address - Street 1

Column Name: client_mail_street2
Column Type: varchar
Max Length: 50
Client's Mailing Address - Street 2

Column Name: client_mail_zipcode
Column Type: varchar
Max Length: 50
Client's Mailing Address - Zip Code

Column Name: communication_pref_code
Column Type: varchar
Max Length: 50
Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255

Data Entry Source (30015)

Column Name: data_entry_time_j

Column Type: time

the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all

Column Type: varchar

Max Length: 255

the time zone information for when the data was saved.

Column Name: data_entry_timezone_short

Column Type: varchar

Max Length: 8

the short abbreviation for the timezone

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

data entry user id

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

data entry user name

Column Name: data_entry_utc

Column Type: timestamp

the UTC date and time the data was saved.

Column Name: decline_prov_code

Column Type: varchar

Max Length: 50

Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long

Column Type: varchar

Max Length: 4096

Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short

Column Type: varchar

Max Length: 255

Client Declined To Provide Information On The Following

Column Name: ethnic_origin_X_NRI_code

Column Type: varchar

Max Length: 10

Ethnic Origin X NRI

Column Name: ethnic_origin_X_NRI_value
Column Type: varchar
Max Length: 255
Ethnic Origin X NRI

Column Name: eth_orig_X_NRI_2014_value
Column Type: varchar
Max Length: 255
Ethnic Origin X NRI 2014

Column Name: eth_orig_X_NRI_2014_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI 2014

Column Name: expected_due_date
Column Type: date
Expected Due Date

Column Name: external_mpi_id
Column Type: varchar
Max Length: 50
External MPI ID

Column Name: fam_agric_worker_code
Column Type: varchar
Max Length: 5
'Do you have family members that are agricultural workers?'

Column Name: fam_agric_worker_value
Column Type: varchar
Max Length: 40
description for 'Do you have family members that are agricultural workers?'

Column Name: former_agric_worker_code
Column Type: varchar
Max Length: 5
'Are you an aged and disabled former migratory agricultural worker?'

Column Name: former_agric_worker_value
Column Type: varchar
Max Length: 40
description for 'Are you an aged and disabled former migratory agricultural worker?'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 5
Gender Identity code

Column Name: gender_identity_value

Column Type: varchar
Max Length: 40
Gender Identity value

Column Name: guarantor_1
Column Type: varchar
Max Length: 10
Guarantor 1

Column Name: guarantor_10
Column Type: varchar
Max Length: 10
Guarantor 10

Column Name: ss_pre_adm_mult_1_code
Column Type: varchar
Max Length: 255
'SS Pre Adm Multiple Select Dictionary 1 Code'

Column Name: ss_pre_adm_mult_1_shval
Column Type: varchar
Max Length: 255
The description associated with ss_pre_adm_mult_1_code limited to 255 characters. See ss_pre_adm_mult_1_code for more information.

Column Name: ss_pre_adm_mult_1_value
Column Type: varchar
Max Length: 4096
The description associated with ss_pre_adm_mult_1_code. See ss_pre_adm_mult_1_code for more information.

Column Name: ss_pre_adm_mult_2_code
Column Type: varchar
Max Length: 255
'SS Pre Adm Multiple Select Dictionary 2 Code'

Column Name: ss_pre_adm_mult_2_shval
Column Type: varchar
Max Length: 255
The description associated with ss_pre_adm_mult_2_code limited to 255 characters. See ss_pre_adm_mult_2_code for more information.

Column Name: ss_pre_adm_mult_2_value
Column Type: varchar
Max Length: 4096
The description associated with ss_pre_adm_mult_2_code. See ss_pre_adm_mult_2_code for more information.

Column Name: ss_pre_adm_mult_3_code
Column Type: varchar
Max Length: 20
'SS Pre Adm Multiple Select Dictionary 3'
Column Name: ss_pre_adm_mult_3_shval
Column Type: varchar
Max Length: 40
The description associated with ss_pre_adm_mult_3_code limited to 255 characters. See ss_pre_adm_mult_3_code for more information.

Column Name: ss_pre_adm_mult_3_value
Column Type: varchar
Max Length: 4096
The description associated with ss_pre_adm_mult_3_code. See ss_pre_adm_mult_3_code for more information.

Column Name: ss_pre_adm_mult_4_code
Column Type: varchar
Max Length: 20
'SS Pre Adm Multiple Select Dictionary 4'

Column Name: ss_pre_adm_mult_4_shval
Column Type: varchar
Max Length: 40
The description associated with ss_pre_adm_mult_4_code limited to 255 characters. See ss_pre_adm_mult_4_code for more information.

Column Name: ss_pre_adm_mult_4_value
Column Type: varchar
Max Length: 4096
The description associated with ss_pre_adm_mult_4_code. See ss_pre_adm_mult_4_code for more information.

Column Name: ss_pre_adm_mult_5_code

Column Type: varchar

Max Length: 20

'SS Pre Adm Multiple Select Dictionary 5'

Column Name: ss_pre_adm_mult_5_shval

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_mult_5_code limited to 255 characters. See ss_pre_adm_mult_5_code for more information.

Column Name: ss_pre_adm_mult_5_value

Column Type: varchar

Max Length: 4096

The description associated with ss_pre_adm_mult_5_code. See ss_pre_adm_mult_5_code for more information.

Column Name: ss_pre_adm_mult_6_code

Column Type: varchar

Max Length: 20

'SS Pre Adm Multiple Select Dictionary 6'

Column Name: ss_pre_adm_mult_6_shval

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_mult_6_code limited to 255 characters. See ss_pre_adm_mult_6_code for more information.

Column Name: ss_pre_adm_mult_6_value

Column Type: varchar

Max Length: 4096

The description associated with ss_pre_adm_mult_6_code. See ss_pre_adm_mult_6_code for more information.

Column Name: ss_pre_adm_mult_7_code

Column Type: varchar

Max Length: 20

'SS Pre Adm Multiple Select Dictionary 7'

Column Name: ss_pre_adm_mult_7_shval

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_mult_7_code limited to 255 characters. See ss_pre_adm_mult_7_code for more information.

Column Name: ss_pre_adm_mult_7_value

Column Type: varchar

Max Length: 4096

The description associated with ss_pre_adm_mult_7_code. See ss_pre_adm_mult_7_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Pre_Admit

Table Name: SYSTEM.view_episode_summary_current

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20

The client ID associated with the data.

Column Name: EPISODE_NUMBER

Column Type: integer

'Episode Number'

Column Name: preadmit_admission_date

Column Type: date

'Preadmit/Admission Date'

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

The user who last updated the row.

Column Name: data_entry_date

Column Type: date

The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_date_of_birth
Column Type: date
'Date Of Birth'

Column Name: c_age
Column Type: numeric
'Client Age'

Column Name: c_ss_number
Column Type: varchar
Max Length: 15
'Social Security Number'

Column Name: EPN_uniqueid
Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: c_address_state_code
Column Type: varchar
Max Length: 50
'Client's Address - State'

Column Name: c_address_state_value
Column Type: varchar
Max Length: 50
The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1
Column Type: varchar
Max Length: 50
'Client's Address - Street 1'

Column Name: c_address_str_2
Column Type: varchar

Max Length: 50
'Client's Address - Street 2'

Column Name: c_admit_practitioner_id
Column Type: varchar
Max Length: 50
'Admitting Practitioner'

Column Name: c_admit_practitioner_name
Column Type: varchar
Max Length: 50
The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code
Column Type: varchar
Max Length: 50
'Source of Admission'

Column Name: c_admit_source_of_value
Column Type: varchar
Max Length: 50
The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of
Column Type: varchar
Max Length: 50
'Preadmit/Admission Time'

Column Name: c_admit_type_of_code
Column Type: varchar
Max Length: 50
'Type Of Admission'

Column Name: c_admit_type_of_value
Column Type: varchar
Max Length: 50
The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id
Column Type: varchar
Max Length: 50
'Attending Practitioner'

Column Name: c_attend_practitioner_name
Column Type: varchar
Max Length: 50
The name associated with c_attend_practitioner_id.

Column Name: c_city

Column Type: varchar
Max Length: 50
'Client's Address - City'

Column Name: c_country_code
Column Type: varchar
Max Length: 50
'Client's Address - Country'

Column Name: c_country_value
Column Type: varchar
Max Length: 50
The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code
Column Type: varchar
Max Length: 50
'Client's Address - County'

Column Name: c_county_value
Column Type: varchar
Max Length: 50
The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age
Column Type: varchar
Max Length: 50
'Client Detail Age'

Column Name: c_ethnicity_code
Column Type: varchar
Max Length: 50
'Client Ethnicity'

Column Name: c_ethnicity_value
Column Type: varchar
Max Length: 50
The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code
Column Type: varchar
Max Length: 10
'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code

Column Type: varchar

Max Length: 50

'Client Legal Status'

Column Name: c_legal_status_value

Column Type: varchar

Max Length: 50

The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value

Column Type: varchar

Max Length: 40

The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code

Column Type: varchar

Max Length: 50

'Client Marital Status'

Column Name: c_marital_status_value

Column Type: varchar

Max Length: 50

The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value

Column Type: varchar

Max Length: 200

The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code

Column Type: varchar

Max Length: 50

'Client Race'

Column Name: c_race_value

Column Type: varchar

Max Length: 50

The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code

Column Type: varchar

Max Length: 50

'Client Religion'

Column Name: c_religion_value

Column Type: varchar

Max Length: 50

The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code

Column Type: varchar

Max Length: 10

'Unit'

Column Name: c_unit_value

Column Type: varchar

Max Length: 50

The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip

Column Type: varchar

Max Length: 60

'Client's Address - Zip'

Column Name: data_entry_source

Column Type: varchar

Max Length: 255

The name of the form that last updated the row.

Column Name: data_entry_user_id

Column Type: varchar

Max Length: 40

The user ID who last updated the row.

Column Name: data_entry_user_name

Column Type: varchar

Max Length: 40

The user name who last updated the row.

Column Name: facility_chart_number

Column Type: varchar

Max Length: 40

'Facility Chart Number (148)'

Column Name: gender_identity_code

Column Type: varchar

Max Length: 20

'Gender Identity'

Column Name: gender_identity_value

Column Type: varchar

Max Length: 40

The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 50
'Gender'

Column Name: patient_gender_value
Column Type: varchar
Max Length: 50
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Gender (NRI)'

Column Name: patient_gender_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
'Home Phone'

Column Name: patient_name
Column Type: varchar
Max Length: 100
'Client Name'

Column Name: patient_name_first
Column Type: varchar
Max Length: 50
'Client First Name'

Column Name: patient_name_last
Column Type: varchar
Max Length: 50
'Client Last Name'

Column Name: program_X_HCFA_POS
Column Type: varchar
Max Length: 50
'HCFA'

Column Name: program_X_RRG_code
Column Type: varchar
Max Length: 50
'RRG'

Column Name: program_X_RRG_value
Column Type: varchar
Max Length: 50
The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip
Column Type: varchar
Max Length: 50
'City, State, Zip Code'

Column Name: program_X_dflt_location_code
Column Type: varchar
Max Length: 50
'Location'

Column Name: program_X_dflt_location_value
Column Type: varchar
Max Length: 50
The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID
Column Type: varchar
Max Length: 40
'HCO ID'

Column Name: program_X_phone_number
Column Type: varchar
Max Length: 50
'Phone Number'

Column Name: program_X_street_address
Column Type: varchar
Max Length: 50
'Street Address'

Column Name: program_X_tax_id
Column Type: varchar
Max Length: 50
'Tax ID'

Column Name: program_X_tx_service_code
Column Type: varchar
Max Length: 50
'Treatment Service'

Column Name: program_X_tx_service_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 50

'Treatment Setting'

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 50

'Type'

Column Name: program_X_type_value

Column Type: varchar

Max Length: 50

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Pre_Admit_Discharge_

Table Name: SYSTEM.history_patient_movement

Table Description: This table returns client episode movement information filed via the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: join_to_admission_data
Column Type: varchar
Max Length: 12
Joins table to admission data.

Column Name: join_to_discharge_data
Column Type: varchar
Max Length: 12
Joins table to discharge data.

Column Name: join_to_leave_history
Column Type: varchar
Max Length: 12
Joins table to leaves history out on.

Column Name: join_to_program_transfer
Column Type: varchar
Max Length: 50
Joins table to program transfer.

Column Name: join_to_return_from_leave
Column Type: varchar
Max Length: 12

Joins table to leaves history return.

Column Name: movement_date
Column Type: date
'Movement Date'

Column Name: movement_time
Column Type: varchar
Max Length: 10
'Movement Time'

Column Name: movement_type_code
Column Type: varchar
Max Length: 50
'Movement Type'

Column Name: movement_type_value
Column Type: varchar
Max Length: 20
The description associated with movement_type_code. See movement_type_code for more information.

Column Name: movementuniqueid
Column Type: varchar
Max Length: 12
A unique ID used to identify a row of data.

Column Name: program_from
Column Type: varchar
Max Length: 20
'Program From'

Column Name: program_from_value
Column Type: varchar
Max Length: 40
The description associated with program_from_code. See program_from_code for more information.

Column Name: program_to
Column Type: varchar
Max Length: 40
'Program To'

Column Name: program_to_value
Column Type: varchar
Max Length: 40
The description associated with program_to_code. See program_to_code for more information.

Column Name: user_row_access_code
Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Pre_Admit_Discharge_

Table Name: SYSTEM.patient_current_demographics

Table Description: Patient Current Demographics

Column Name: patient_current_demographics
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: date_of_birth
Column Type: date
Patient Date of birth

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
Patient Ethnic origin

Column Name: patient_add_city
Column Type: varchar
Max Length: 40
Patient address city

Column Name: patient_add_county_code
Column Type: varchar
Max Length: 5
Patient address county

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient home phone

Column Name: patient_name
Column Type: varchar
Max Length: 100
Patient Name

Column Name: patient_add_state_code
Column Type: varchar
Max Length: 10
Patient address state code

Column Name: patient_add_street_1
Column Type: varchar
Max Length: 40
Patient street address 1

Column Name: patient_add_street_2
Column Type: varchar
Max Length: 40
Patients address street 2

Column Name: patient_add_zipcode
Column Type: varchar
Max Length: 60
Patients address zipcode

Column Name: patient_sex_code
Column Type: varchar
Max Length: 5
Patients sex

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: patient_ssn
Column Type: varchar
Max Length: 15
Patient's social security number

Column Name: religion_code
Column Type: varchar
Max Length: 20
Patient's religion code

Column Name: marital_status_code
Column Type: varchar
Max Length: 15
Patient's marital status

Column Name: patient_work_phone
Column Type: varchar
Max Length: 60
Patient's work phone

Column Name: patient_maiden_name
Column Type: varchar
Max Length: 40
Patient's maiden name

Column Name: race_code
Column Type: varchar
Max Length: 20
Patient's race code

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility chart number

Column Name: patient_place_of_birth
Column Type: varchar
Max Length: 40
Patient's place of birth

Column Name: patient_sex_value
Column Type: varchar
Max Length: 40
Patient's sex value

Column Name: ethnic_origin_value
Column Type: varchar
Max Length: 255
Ethnic Origin

Column Name: religion_value
Column Type: varchar
Max Length: 255
Patient's Religion

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Patient's Marital Status

Column Name: race_value
Column Type: varchar
Max Length: 255
Patient's Race

Column Name: patient_add_county_value
Column Type: varchar
Max Length: 20
Patients address - County

Column Name: patient_add_state_value
Column Type: varchar
Max Length: 40
Patient Address - State - Value

Column Name: FAMID
Column Type: integer
Family ID

Column Name: address_start_date
Column Type: date
Address Start Date

Column Name: alert_access_options
Column Type: varchar
Max Length: 50
Alert Access Options

Column Name: alert_access_type

Column Type: varchar
Max Length: 50
Alert Access Type

Column Name: citizenship_code
Column Type: varchar
Max Length: 50
Citizenship

Column Name: citizenship_value
Column Type: varchar
Max Length: 50
Citizenship

Column Name: client_alias_10
Column Type: varchar
Max Length: 80
Client Alias 10

Column Name: client_alias_2
Column Type: varchar
Max Length: 80
Client Alias 2

Column Name: client_alias_3
Column Type: varchar
Max Length: 80
Client Alias 3

Column Name: client_alias_4
Column Type: varchar
Max Length: 80
Client Alias 4

Column Name: client_alias_5
Column Type: varchar
Max Length: 80
Client Alias 5

Column Name: client_alias_6
Column Type: varchar
Max Length: 80
Client Alias 6

Column Name: client_alias_7
Column Type: varchar
Max Length: 80
Client Alias 7

Column Name: client_alias_8

Column Type: varchar
Max Length: 80
Client Alias 8

Column Name: client_alias_9
Column Type: varchar
Max Length: 80
Client Alias 9

Column Name: client_conf_city
Column Type: varchar
Max Length: 50
Client Confidential Address - City

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Code

Column Name: client_conf_cntry_value
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Value

Column Name: client_conf_phone
Column Type: varchar
Max Length: 50
Client Confidential Address - Phone Number

Column Name: client_conf_state_code
Column Type: varchar
Max Length: 50
Client Confidential Address - State Code

Column Name: client_conf_state_value
Column Type: varchar
Max Length: 50
Client Confidential Address - State Value

Column Name: client_conf_street
Column Type: varchar
Max Length: 50
Client Confidential Address - Street

Column Name: client_conf_street2
Column Type: varchar
Max Length: 50
Client Confidential Address - Street 2

Column Name: client_conf_zipcode

Column Type: varchar
Max Length: 50
Client Confidential Address - Zip code

Column Name: client_email_addr
Column Type: varchar
Max Length: 50
Client's Email Address

Column Name: client_mail_city
Column Type: varchar
Max Length: 50
Client's Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_state_code
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50
Client's Address - Street 1

Column Name: client_mail_street2
Column Type: varchar
Max Length: 50
Client's Address - Street 2

Column Name: client_mail_zipcode
Column Type: varchar
Max Length: 50
Client's Address - Zip Code

Column Name: communication_pref_code

Column Type: varchar
Max Length: 50
Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar
Max Length: 4096
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short
Column Type: varchar
Max Length: 255
Client Declined To Provide Information On The Following

Column Name: education_value
Column Type: varchar
Max Length: 255
education - Value (625)

Column Name: ethnic_origin_X_NRI_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI

Column Name: ethnic_origin_X_NRI_value
Column Type: varchar
Max Length: 255
Ethnic Origin X NRI

Column Name: eth_orig_X_NRI_2014_value

Column Type: varchar
Max Length: 255
Ethnic Origin X NRI 2014

Column Name: eth_orig_X_NRI_2014_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI 2014

Column Name: expected_due_date
Column Type: date
Expected Due Date

Column Name: external_mpi_id
Column Type: varchar
Max Length: 50
External MPI ID

Column Name: fam_agric_worker_code
Column Type: varchar
Max Length: 5
'Do you have family members that are agricultural workers?'

Column Name: fam_agric_worker_value
Column Type: varchar
Max Length: 40
description for 'Do you have family members that are agricultural workers?'

Column Name: family_name
Column Type: varchar
Max Length: 50
Family name

Column Name: former_agric_worker_code
Column Type: varchar
Max Length: 5
'Are you an aged and disabled former migratory agricultural worker?'

Column Name: former_agric_worker_value
Column Type: varchar
Max Length: 40
description for 'Are you an aged and disabled former migratory agricultural worker?'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 5
Patient's Gender Identity code

Column Name: gender_identity_value
Column Type: varchar

Max Length: 40
Patient's Gender Identity value

Column Name: guarantor_1
Column Type: varchar
Max Length: 10
Guarantor 1

Column Name: guarantor_10
Column Type: varchar
Max Length: 10
Guarantor 10

Column Name: guarantor_2
Column Type: varchar
Max Length: 10
Guarantor 2

Column Name: guarantor_3
Column Type: varchar
Max Length: 10
Guarantor 3

Column Name: guarantor_4
Column Type: varchar
Max Length: 10
Guarantor 4

Column Name: guarantor_5
Column Type: varchar
Max Length: 10
Guarantor 5

Column Name: guarantor_6
Column Type: varchar
Max Length: 10
Guarantor 6

Column Name: guarantor_7
Column Type: varchar
Max Length: 10
Guarantor 7

Column Name: guarantor_8
Column Type: varchar
Max Length: 10
Guarantor 8

Column Name: guarantor_9
Column Type: varchar

Max Length: 10
Guarantor 9

Column Name: guarantor_name_1
Column Type: varchar
Max Length: 40
Guarantor Name 1

Column Name: guarantor_name_10
Column Type: varchar
Max Length: 40
Guarantor Name 10

Column Name: guarantor_name_2
Column Type: varchar
Max Length: 40
Guarantor Name 2

Column Name: guarantor_name_3
Column Type: varchar
Max Length: 40
Guarantor Name 3

Column Name: guarantor_name_4
Column Type: varchar
Max Length: 40
Guarantor Name 4

Column Name: guarantor_name_5
Column Type: varchar
Max Length: 40
Guarantor Name 5

Column Name: guarantor_name_6
Column Type: varchar
Max Length: 40
Guarantor Name 6

Column Name: guarantor_name_7
Column Type: varchar
Max Length: 40
Guarantor Name 7

Column Name: guarantor_name_8
Column Type: varchar
Max Length: 40
Guarantor Name 8

Column Name: guarantor_name_9
Column Type: varchar

Max Length: 40
Guarantor Name 9

Column Name: lactating_status_code
Column Type: varchar
Max Length: 50
Lactating Status

Column Name: lactating_status_value
Column Type: varchar
Max Length: 50

Column Name: marital_status_X_NRI_code
Column Type: varchar
Max Length: 10
Marital Status X NRI

Column Name: marital_status_X_NRI_value
Column Type: varchar
Max Length: 40
Marital Status X NRI

Column Name: medicaid_number
Column Type: varchar
Max Length: 20
Medicaid Number

Column Name: medi_cal_policy_number
Column Type: varchar
Max Length: 20
'Medi-Cal Policy Number' used by the 'LA Provider Integration' module

Column Name: mothers_maiden_name
Column Type: varchar
Max Length: 100
Mother's Maiden Name

Column Name: name_qualifier_code
Column Type: varchar
Max Length: 50
Name Qualifier

Column Name: name_qualifier_value
Column Type: varchar
Max Length: 50
Name Qualifier

Column Name: other_eth_org_code
Column Type: varchar

Max Length: 50
Other Ethnic Origin

Column Name: other_eth_org_value_long
Column Type: varchar
Max Length: 4096
Other Ethnic Origin

Column Name: other_eth_org_value_short
Column Type: varchar
Max Length: 255
Other Ethnic Origin

Column Name: other_lang_code
Column Type: varchar
Max Length: 50
Other Language Code

Column Name: other_lang_shval
Column Type: varchar
Max Length: 255
Other Language Code

Column Name: other_lang_val
Column Type: varchar
Max Length: 4096
Other Language Code

Column Name: other_race_code
Column Type: varchar
Max Length: 50
Other Race Code

Column Name: other_race_value_long
Column Type: varchar
Max Length: 4096
Other Race Code

Column Name: other_race_value_short
Column Type: varchar
Max Length: 255
Other Race Code

Column Name: patient_add_country_code
Column Type: varchar
Max Length: 20
Patient Address Country Code

Column Name: patient_add_country_value
Column Type: varchar

Max Length: 40
Patient Address Country Value

Column Name: patient_cell_phone
Column Type: varchar
Max Length: 60
Patient cell phone

Column Name: patient_name_first
Column Type: varchar
Max Length: 40
Patient Name First

Column Name: patient_name_last
Column Type: varchar
Max Length: 40
Patient Last Name

Column Name: patient_name_middle
Column Type: varchar
Max Length: 40
Patient Middle Name

Column Name: patient_name_prefix_code
Column Type: varchar
Max Length: 40
Patient Name Prefix Code

Column Name: patient_name_prefix_value
Column Type: varchar
Max Length: 40
Patient Name Prefix Value

Column Name: patient_name_suffix_code
Column Type: varchar
Max Length: 40
Patient Name Suffix Code

Column Name: patient_name_suffix_value
Column Type: varchar
Max Length: 40
Patient Name Suffix Value

Column Name: patient_sex_X_NRI_code
Column Type: varchar
Max Length: 10
Patient Sex X NRI

Column Name: patient_sex_X_NRI_value
Column Type: varchar

Max Length: 40
Patient Sex X NRI

Column Name: patient_ssn_2
Column Type: varchar
Max Length: 15
Patient's social security number 2

Column Name: patient_ssn_3
Column Type: varchar
Max Length: 15
Patient's social security number 3

Column Name: patient_ssn_4
Column Type: varchar
Max Length: 15
Patient's social security number 4

Column Name: personal_pronouns
Column Type: varchar
Max Length: 40
'Personal Pronouns'

Column Name: policy_number_1
Column Type: varchar
Max Length: 20
policy number 1

Column Name: policy_number_10
Column Type: varchar
Max Length: 20
policy number 10

Column Name: policy_number_2
Column Type: varchar
Max Length: 20
policy number 2

Column Name: policy_number_3
Column Type: varchar
Max Length: 20
policy number 3

Column Name: policy_number_4
Column Type: varchar
Max Length: 20
policy number 4

Column Name: policy_number_5
Column Type: varchar

Max Length: 20
policy number 5

Column Name: policy_number_6
Column Type: varchar
Max Length: 20
policy number 6

Column Name: policy_number_7
Column Type: varchar
Max Length: 20
policy number 7

Column Name: policy_number_8
Column Type: varchar
Max Length: 20
policy number 8

Column Name: policy_number_9
Column Type: varchar
Max Length: 20
policy number 9

Column Name: preferred_name
Column Type: varchar
Max Length: 40
'Preferred Name'

Column Name: pref_prov_eth_org_code
Column Type: varchar
Max Length: 5
Preferred Provider's Ethnic origin

Column Name: pref_prov_eth_org_value
Column Type: varchar
Max Length: 255
Preferred Provider's Ethnic Origin value

Column Name: pref_prov_sex_code
Column Type: varchar
Max Length: 5
Preferred provider's sex

Column Name: pref_prov_sex_value
Column Type: varchar
Max Length: 15
Preferred provider's sex value

Column Name: pregnancy_status_code
Column Type: varchar

Max Length: 50
Pregnancy Status

Column Name: pregnancy_status_value
Column Type: varchar
Max Length: 50
Pregnancy Status

Column Name: primary_language_code
Column Type: varchar
Max Length: 50
Primary Language

Column Name: primary_language_value
Column Type: varchar
Max Length: 50
Primary Language

Column Name: protection_indicator_code
Column Type: varchar
Max Length: 50
Protection Indicator

Column Name: protection_indicator_date
Column Type: date
Protection Indicator Effective Date

Column Name: protection_indicator_val
Column Type: varchar
Max Length: 50
Protection Indicator

Column Name: sex_orientation_code
Column Type: varchar
Max Length: 5
Patients Sexual Orientation code

Column Name: sex_orientation_value
Column Type: varchar
Max Length: 40
Patient's Sexual Orientation value

Column Name: smoker_code
Column Type: varchar
Max Length: 50
Patient's Smoker Status

Column Name: smoker_value
Column Type: varchar
Max Length: 50

Patient's Smoker Status

Column Name: smoking_stat_assess_date
Column Type: date
Smoking Status Assessment Date

Column Name: ss_demographics_date_1
Column Type: date
SS Demographics Date 1

Column Name: ss_demographics_date_2
Column Type: date
SS Demographics Date 2

Column Name: ss_demographics_date_3
Column Type: date
SS Demographics Date 3

Column Name: ss_demographics_date_4
Column Type: date
SS Demographics Date 4

Column Name: ss_demographics_date_5
Column Type: date
SS Demographics Date 5

Column Name: ss_demographics_dict_10_code
Column Type: varchar
Max Length: 50
SS Demographics Single Select Dictionary 10 Code

Column Name: ss_demographics_dict_10_value
Column Type: varchar
Max Length: 255
SS Demographics Single Select Dictionary 10 Value

Column Name: ss_demographics_dict_11_code
Column Type: varchar
Max Length: 50
SS Demographics Single Select Dictionary 11 Code

Column Name: ss_demographics_dict_11_value
Column Type: varchar
Max Length: 255
SS Demographics Single Select Dictionary 11 Value

Column Name: ss_demographics_dict_12_code
Column Type: varchar
Max Length: 50
SS Demographics Single Select Dictionary 12 Code

Column Name: ss_demographics_dict_12_value
Column Type: varchar
Max Length: 255
SS Demographics Single Select Dictionary 12 Value

Column Name: ss_demographics_dict_13_code
Column Type: varchar
Max Length: 50
SS Demographics Single Select Dictionary 13 Code

Column Name: ss_demographics_dict_13_value
Column Type: varchar
Max Length: 255
SS Demographics Single Select Dictionary 13 Value

Column Name: ss_demographics_dict_14_code
Column Type: varchar
Max Length: 50
SS Demographics Single Select Dictionary 14 Code

Column Name: ss_demographics_dict_14_value
Column Type: varchar
Max Length: 255
SS Demographics Single Select Dictionary 14 Value

Column Name: ss_demographics_dict_15_code
Column Type: varchar
Max Length: 50
SS Demographics Single Select Dictionary 15 Code

Column Name: ss_demographics_dict_15_value
Column Type: varchar
Max Length: 255
SS Demographics Single Select Dictionary 15 Value

Column Name: ss_demographics_dict_16_code
Column Type: varchar
Max Length: 50
'SS Demographics Single Select Dictionary 16' Code

Column Name: ss_demographics_dict_16_value
Column Type: varchar
Max Length: 255
The description associated with ss_demographics_dict_16_code. See ss_demographics_dict_16_code for more information.

Column Name: ss_demographics_dict_17_code
Column Type: varchar
Max Length: 50

'SS Demographics Single Select Dictionary 17' Code

Column Name: ss_demographics_dict_17_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_17_code. See ss_demographics_dict_17_code for more information.

Column Name: ss_demographics_dict_18_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 18' Code

Column Name: ss_demographics_dict_18_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_18_code. See ss_demographics_dict_18_code for more information.

Column Name: ss_demographics_dict_19_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 19' Code

Column Name: ss_demographics_dict_19_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_19_code. See ss_demographics_dict_19_code for more information.

Column Name: ss_demographics_dict_1_code

Column Type: varchar

Max Length: 50

SS Demographics Single Select Dictionary 1 Code

Column Name: ss_demographics_dict_1_value

Column Type: varchar

Max Length: 255

SS Demographics Single Select Dictionary 1 Value

Column Name: ss_demographics_dict_20_code

Column Type: varchar

Max Length: 50

'SS Demographics Single Select Dictionary 20' Code

Column Name: ss_demographics_dict_20_value

Column Type: varchar

Max Length: 255

The description associated with ss_demographics_dict_20_code. See ss_demographics_dict_20_code for more information.

Column Name: ss_demographics_dict_2_code
Column Type: varchar
Max Length: 50

Ethnic Origin

Column Name: date_of_birth
Column Type: date
Date Of Birth

Column Name: patient_street_1
Column Type: varchar
Max Length: 40
Patient's Address - Street

Column Name: patient_city
Column Type: varchar
Max Length: 20
Patients Address - City

Column Name: patient_state
Column Type: varchar
Max Length: 40
Patient's Address - State

Column Name: patient_county_code
Column Type: varchar
Max Length: 5
Patient's Address - County

Column Name: patient_county_value

Column Type: varchar
Max Length: 40
patient's Address - County

Column Name: patient_zipcode
Column Type: varchar
Max Length: 60
Patient's Address - Zipcode

Column Name: patient_home_phone
Column Type: varchar
Max Length: 60
Patient's Home Phone

Column Name: patient_street_2
Column Type: varchar
Max Length: 40
Patient's Address - Street 2

Column Name: data_entry_date
Column Type: date
Data Entry Date

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
Data Entry By

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
Data Entry Time

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
Data Entry By (Option)

Column Name: social_security_number
Column Type: varchar

Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Documentation for form: Pre_Admit_Discharge_

Table Name: [SYSTEM.view_episode_summary_current](#)

Table Description: This table returns the information stored in the 'Admission', 'Back Dated Admission/Discharge', 'Discharge', 'Program Transfer', 'Pre-Admit', 'Pre-Admit Discharge', and 'Program Transfer (Outpatient)' forms.

Column Name: episode_active_only
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
The system code in which the data was stored.

Column Name: PATID
Column Type: varchar
Max Length: 20
The client ID associated with the data.

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: preadmit_admission_date
Column Type: date
'Preadmit/Admission Date'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code associated with the data.

Column Name: c_date_of_birth
Column Type: date
'Date Of Birth'

Column Name: c_age
Column Type: numeric
'Client Age'

Column Name: c_ss_number
Column Type: varchar
Max Length: 15
'Social Security Number'

Column Name: EPN_uniqueid
Column Type: varchar
Max Length: 50
A unique ID used to identify a row of data.

Column Name: c_address_state_code
Column Type: varchar
Max Length: 50
'Client's Address - State'

Column Name: c_address_state_value
Column Type: varchar
Max Length: 50
The description associated with c_address_state_code. See c_address_state_code for more information.

Column Name: c_address_str_1
Column Type: varchar
Max Length: 50
'Client's Address - Street 1'

Column Name: c_address_str_2
Column Type: varchar
Max Length: 50
'Client's Address - Street 2'

Column Name: c_admit_practitioner_id
Column Type: varchar
Max Length: 50
'Admitting Practitioner'

Column Name: c_admit_practitioner_name
Column Type: varchar
Max Length: 50
The admitting practitioner name associated with c_admit_practitioner_id.

Column Name: c_admit_source_of_code
Column Type: varchar
Max Length: 50
'Source of Admission'

Column Name: c_admit_source_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_source_of_code. See c_admit_source_of_code for more information.

Column Name: c_admit_time_of

Column Type: varchar

Max Length: 50

'Preadmit/Admission Time'

Column Name: c_admit_type_of_code

Column Type: varchar

Max Length: 50

'Type Of Admission'

Column Name: c_admit_type_of_value

Column Type: varchar

Max Length: 50

The description associated with c_admit_type_of_code. See c_admit_type_of_code for more information.

Column Name: c_attend_practitioner_id

Column Type: varchar

Max Length: 50

'Attending Practitioner'

Column Name: c_attend_practitioner_name

Column Type: varchar

Max Length: 50

The name associated with c_attend_practitioner_id.

Column Name: c_city

Column Type: varchar

Max Length: 50

'Client's Address - City'

Column Name: c_country_code

Column Type: varchar

Max Length: 50

'Client's Address - Country'

Column Name: c_country_value

Column Type: varchar

Max Length: 50

The description associated with c_country_code. See c_country_code for more information.

Column Name: c_county_code

Column Type: varchar

Max Length: 50

'Client's Address - County'

Column Name: c_county_value

Column Type: varchar

Max Length: 50

The description associated with c_county_code. See c_county_code for more information.

Column Name: c_detail_age

Column Type: varchar

Max Length: 50

'Client Detail Age'

Column Name: c_ethnicity_code

Column Type: varchar

Max Length: 50

'Client Ethnicity'

Column Name: c_ethnicity_value

Column Type: varchar

Max Length: 50

The description associated with c_ethnicity_code. See c_ethnicity_code for more information.

Column Name: c_ethnicity_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI)'

Column Name: c_ethnicity_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_ethnicity_X_NRI_code. See c_ethnicity_X_NRI_code for more information.

Column Name: c_ethnic_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Ethnicity (NRI 2014)'

Column Name: c_ethnic_X_NRI_2014_value

Column Type: varchar

Max Length: 255

The description associated with c_ethnic_X_NRI_2014_code. See c_ethnic_X_NRI_2014_code for more information.

Column Name: c_legal_status_code

Column Type: varchar

Max Length: 50

'Client Legal Status'

Column Name: c_legal_status_value

Column Type: varchar

Max Length: 50

The description associated with c_legal_status_code. See c_legal_status_code for more information.

Column Name: c_leg_stat_X_NRI_2014_value

Column Type: varchar

Max Length: 40

The description associated with c_leg_stat_X_NRI_2014_code. See c_leg_stat_X_NRI_2014_code for more information.

Column Name: c_legal_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI)'

Column Name: c_legal_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_legal_status_X_NRI_code. See c_legal_status_X_NRI_code for more information.

Column Name: c_leg_stat_X_NRI_2014_code

Column Type: varchar

Max Length: 10

'Client Legal Status (NRI 2014)'

Column Name: c_marital_status_code

Column Type: varchar

Max Length: 50

'Client Marital Status'

Column Name: c_marital_status_value

Column Type: varchar

Max Length: 50

The description associated with c_marital_status_code. See c_marital_status_code for more information.

Column Name: c_marital_status_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Marital Status (NRI)'

Column Name: c_marital_status_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_marital_status_X_NRI_code. See c_marital_status_X_NRI_code for more information.

Column Name: c_principal_diagnosis_code

Column Type: varchar

Max Length: 50

'Client Principal Diagnosis'

Column Name: c_principal_diagnosis_value

Column Type: varchar

Max Length: 200

The description associated with c_principal_diagnosis_code. See c_principal_diagnosis_code for more information.

Column Name: c_race_code

Column Type: varchar

Max Length: 50

'Client Race'

Column Name: c_race_value

Column Type: varchar

Max Length: 50

The description associated with c_race_code. See c_race_code for more information.

Column Name: c_religion_code

Column Type: varchar

Max Length: 50

'Client Religion'

Column Name: c_religion_value

Column Type: varchar

Max Length: 50

The description associated with c_religion_code. See c_religion_code for more information.

Column Name: c_unit_code

Column Type: varchar

Max Length: 10

'Unit'

Column Name: c_unit_value

Column Type: varchar

Max Length: 50

The description associated with c_unit_code. See c_unit_code for more information.

Column Name: c_unit_X_NRI_code

Column Type: varchar

Max Length: 10

'Client Unit (NRI)'

Column Name: c_unit_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with c_unit_X_NRI_code. See c_unit_X_NRI_code for more information.

Column Name: c_zip

Column Type: varchar

Max Length: 60

'Client's Address - Zip'

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The name of the form that last updated the row.

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The user ID who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The user name who last updated the row.

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
'Facility Chart Number (148)'

Column Name: gender_identity_code
Column Type: varchar
Max Length: 20
'Gender Identity'

Column Name: gender_identity_value
Column Type: varchar
Max Length: 40
The description associated with gender_identity_code. See gender_identity_code for more information.

Column Name: last_date_of_service
Column Type: date
'Last Date Of Service'

Column Name: patient_gender_code
Column Type: varchar
Max Length: 50
'Gender'

Column Name: patient_gender_value
Column Type: varchar
Max Length: 50
The description associated with patient_gender_code. See patient_gender_code for more information.

Column Name: patient_gender_X_NRI_code
Column Type: varchar
Max Length: 10
'Gender (NRI)'

Column Name: patient_gender_X_NRI_value

Column Type: varchar

Max Length: 40

The description associated with patient_gender_X_NRI_code. See patient_gender_X_NRI_code for more information.

Column Name: patient_home_phone

Column Type: varchar

Max Length: 60

'Home Phone'

Column Name: patient_name

Column Type: varchar

Max Length: 100

'Client Name'

Column Name: patient_name_first

Column Type: varchar

Max Length: 50

'Client First Name'

Column Name: patient_name_last

Column Type: varchar

Max Length: 50

'Client Last Name'

Column Name: program_X_HCFA_POS

Column Type: varchar

Max Length: 50

'HCFA'

Column Name: program_X_RRG_code

Column Type: varchar

Max Length: 50

'RRG'

Column Name: program_X_RRG_value

Column Type: varchar

Max Length: 50

The description associated with program_X_RRG_code. See program_X_RRG_code for more information.

Column Name: program_X_city_state_zip

Column Type: varchar

Max Length: 50

'City, State, Zip Code'

Column Name: program_X_dflt_location_code

Column Type: varchar

Max Length: 50

'Location'

Column Name: program_X_dflt_location_value

Column Type: varchar

Max Length: 50

The description associated with program_X_dflt_location_code. See program_X_dflt_location_code for more information.

Column Name: program_X_HCO_ID

Column Type: varchar

Max Length: 40

'HCO ID'

Column Name: program_X_phone_number

Column Type: varchar

Max Length: 50

'Phone Number'

Column Name: program_X_street_address

Column Type: varchar

Max Length: 50

'Street Address'

Column Name: program_X_tax_id

Column Type: varchar

Max Length: 50

'Tax ID'

Column Name: program_X_tx_service_code

Column Type: varchar

Max Length: 50

'Treatment Service'

Column Name: program_X_tx_service_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_service_code. See program_X_tx_service_code for more information.

Column Name: program_X_tx_setting_code

Column Type: varchar

Max Length: 50

'Treatment Setting'

Column Name: program_X_tx_setting_value

Column Type: varchar

Max Length: 50

The description associated with program_X_tx_setting_code. See program_X_tx_setting_code for more information.

Column Name: program_X_type_code

Column Type: varchar

Max Length: 50
'Type'

Column Name: program_X_type_value

Column Type: varchar

Max Length: 50

The description associated with program_X_type_code. See program_X_type_code for more information.

Column Name: program_value

Column Type: varchar

Max Length: 50

The description associated with program_code. See program_code for more information.

Column Name: sex_orientation_code

Column Type: varchar

Max Length: 20

The patient's sexual orientation code

Column Name: sex_orientation_value

Column Type: varchar

Max Length: 40

The description associated with sex_orientation_code. See sex_orientation_code for more information.

Column Name: user_row_access_code

Column Type: integer

If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Call_Intake

Table Name: SYSTEM.call_intake_financial_inv

Table Description: This table returns the information stored in the 'Call Intake' and 'Financial Investigation' forms.

Column Name: blank_row_id

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

The system code in which the data was stored.

Column Name: PATID

Column Type: varchar

Max Length: 20
The client ID associated with the data.

Column Name: IBE_uniqueid
Column Type: varchar
Max Length: 12
A unique ID used to identify a row of data.

Column Name: income_resp_income
Column Type: varchar
Max Length: 40
'Income-Responsible Party Annual Income'

Column Name: household_gannual_inc
Column Type: varchar
Max Length: 40
'Income-Household Gross Annual Income'

Column Name: incomevalidation_code
Column Type: varchar
Max Length: 5
'Income-Validation'

Column Name: incomevalidation_value
Column Type: varchar
Max Length: 40
The description associated with incomevalidation_code. See incomevalidation_code for more information.

Column Name: medicare_number
Column Type: varchar
Max Length: 20
'Financial Investigation Medicare Number'

Column Name: medicaid_number
Column Type: varchar
Max Length: 14
'Financial Investigation Medicaid Number'

Column Name: rec_ssi_ben_code
Column Type: varchar
Max Length: 5
'Receiving SSI Benefits'

Column Name: rec_ssi_ben_value
Column Type: varchar
Max Length: 40
The description associated with rec_ssi_ben_code. See rec_ssi_ben_code for more information.

Column Name: rec_ssdi_ben_code
Column Type: varchar

Max Length: 5
'Receiving SSDI Benefits'

Column Name: rec_ssdi_ben_value
Column Type: varchar
Max Length: 40
The description associated with rec_ssdi_ben_code. See rec_ssdi_ben_code for more information.

Column Name: rec_afdc_ben_code
Column Type: varchar
Max Length: 5
'Receiving AFDC Benefits'

Column Name: rec_afdc_ben_value
Column Type: varchar
Max Length: 40
The description associated with rec_afdc_ben_code. See rec_afdc_ben_code for more information.

Column Name: rec_foodstamps_ben_code
Column Type: varchar
Max Length: 5
'Receiving Food Stamps Benefits '

Column Name: rec_foodstamps_ben_value
Column Type: varchar
Max Length: 40
The description associated with rec_foodstamps_ben_code. See rec_foodstamps_ben_code for more information.

Column Name: cash_ben_socsec_code
Column Type: varchar
Max Length: 5
'Cash Benefits - Social Security '

Column Name: cash_ben_socsec_value
Column Type: varchar
Max Length: 40
The description associated with cash_ben_socsec_code. See cash_ben_socsec_code for more information.

Column Name: rec_mil_va_ben_code
Column Type: varchar
Max Length: 5
'Receiving Military V/A Benefits'

Column Name: rec_mil_va_ben_value
Column Type: varchar
Max Length: 40
The description associated with rec_mil_va_ben_code. See rec_mil_va_ben_code for more information.

Column Name: other_benefits_code

Column Type: varchar
Max Length: 5
'Other Benefits'

Column Name: other_benefits_value
Column Type: varchar
Max Length: 40
The description associated with other_benefits_code. See other_benefits_code for more information.

Column Name: bho_code
Column Type: varchar
Max Length: 5
'Behavioral Health Organization'

Column Name: bho_value
Column Type: varchar
Max Length: 40
The description associated with bho_code. See bho_code for more information.

Column Name: mco_code
Column Type: varchar
Max Length: 5
'Managed Care Organization'

Column Name: mco_value
Column Type: varchar
Max Length: 40
The description associated with mco_code. See mco_code for more information.

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
The user who last updated the row.

Column Name: fin_invest_eff_date
Column Type: date
'Financial Investigation Effective Date'

Column Name: number_of_dependents
Column Type: varchar
Max Length: 10
'Number Of Dependents'

Column Name: value_of_allowable_assets
Column Type: varchar
Max Length: 12
'Value Of Allowable Assets'

Column Name: annual_valid_expenses
Column Type: varchar

Max Length: 12
'Annual Valid Expenses'

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
The time the row was last updated.

Column Name: data_entry_date
Column Type: date
The date the row was last updated.

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
The user name that last updated the row.

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
The form the service was last edited on.
Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
The 'User ID' who last updated the row.

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
The 'User Description' of the 'User ID'

Column Name: data_entry_utc

Column Type: timestamp
The UTC date and time the data was saved.

Column Name: family_size
Column Type: integer
'Family Size'

Column Name: program_code
Column Type: varchar
Max Length: 10
The program code information associated with the 'SYSTEM.billing_tx_history' table.

Column Name: program_shval
Column Type: varchar
Max Length: 255
The description associated with program_code limited to 255 characters. See program_code for more information.

Column Name: program_val
Column Type: varchar
Max Length: 4096
The description associated with program_code limited to 4096 characters. See program_code for more information.

Column Name: sliding_fee_family_size
Column Type: varchar
Max Length: 50
'Sliding Fee Family Size'

Column Name: sliding_fee_fmsizerec_code
Column Type: varchar
Max Length: 50
Divide Sliding Fee Scale Amount by Number of Family Members Receiving Services

Column Name: sliding_fee_fmsizerec_num
Column Type: varchar
Max Length: 50
Sliding Fee Scale - Number of Family Members Receiving Services

Column Name: sliding_fee_fmsizerec_value
Column Type: varchar
Max Length: 40
The description associated with the column 'sliding_fee_fmsizerec_code'.

Column Name: sliding_fee_income
Column Type: numeric
'Sliding Fee Income'

Column Name: sliding_fee_num_of_depend
Column Type: integer

'Sliding Fee Number Of Dependents'

Documentation for form: Call_Intake

Table Name: SYSTEM.patient_current_demographics

Table Description: Patient Current Demographics

Column Name: patient_current_demographics

Column Type: varchar

Max Length: 254

Column Name: FACILITY

Column Type: integer

Facility

Column Name: PATID

Column Type: varchar

Max Length: 20

Patient ID

Column Name: date_of_birth

Column Type: date

Patient Date of birth

Column Name: ethnic_origin_code

Column Type: varchar

Max Length: 5

Patient Ethnic origin

Column Name: patient_add_city

Column Type: varchar

Max Length: 40

Patient address city

Column Name: patient_add_county_code

Column Type: varchar

Max Length: 5

Patient address county

Column Name: patient_home_phone

Column Type: varchar

Max Length: 60

Patient home phone

Column Name: patient_name

Column Type: varchar
Max Length: 100
Patient Name

Column Name: patient_add_state_code
Column Type: varchar
Max Length: 10
Patient address state code

Column Name: patient_add_street_1
Column Type: varchar
Max Length: 40
Patient street address 1

Column Name: patient_add_street_2
Column Type: varchar
Max Length: 40
Patients address street 2

Column Name: patient_add_zipcode
Column Type: varchar
Max Length: 60
Patients address zipcode

Column Name: patient_sex_code
Column Type: varchar
Max Length: 5
Patients sex

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Client Confidential Address - Street

Column Name: client_conf_street2

Column Type: varchar

Max Length: 50

Client Confidential Address - Street 2

Column Name: client_conf_zipcode

Column Type: varchar

Max Length: 50

Client Confidential Address - Zip code

Column Name: client_email_addr
Column Type: varchar
Max Length: 50
Client's Email Address

Column Name: client_mail_city
Column Type: varchar
Max Length: 50
Client's Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Address - Country

Column Name: client_mail_state_code
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50
Client's Address - Street 1

Column Name: client_mail_street2
Column Type: varchar
Max Length: 50
Client's Address - Street 2

Column Name: client_mail_zipcode
Column Type: varchar
Max Length: 50
Client's Address - Zip Code

Column Name: communication_pref_code
Column Type: varchar
Max Length: 50

Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar
Max Length: 4096
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short
Column Type: varchar
Max Length: 255
Client Declined To Provide Information On The Following

Column Name: education_value
Column Type: varchar
Max Length: 255
education - Value (625)

Column Name: ethnic_origin_X_NRI_code
Column Type: varchar
Max Length: 10
Ethnic Origin X NRI

Column Name: ethnic_origin_X_NRI_value
Column Type: varchar
Max Length: 255
Ethnic Origin X NRI

Column Name: eth_orig_X_NRI_2014_value
Column Type: varchar
Max Length: 255

Ethnic Origin X NRI 2014

Column Name: eth_orig_X_NRI_2014_code

Column Type: varchar

Max Length: 10

Ethnic Origin X NRI 2014

Column Name: expected_due_date

Column Type: date

Expected Due Date

Column Name: external_mpi_id

Column Type: varchar

Max Length: 50

External MPI ID

Column Name: fam_agric_worker_code

Column Type: varchar

Max Length: 5

'Do you have family members that are agricultural workers?'

Column Name: fam_agric_worker_value

Column Type: varchar

Max Length: 40

description for 'Do you have family members that are agricultural workers?'

Column Name: family_name

Column Type: varchar

Max Length: 50

Family name

Column Name: former_agric_worker_code

Column Type: varchar

Max Length: 5

'Are you an aged and disabled former migratory agricultural worker?'

Column Name: former_agric_worker_value

Column Type: varchar

Max Length: 40

description for 'Are you an aged and disabled former migratory agricultural worker?'

Column Name: gender_identity_code

Column Type: varchar

Max Length: 5

Patient's Gender Identity code

Column Name: gender_identity_value

Column Type: varchar

Max Length: 40

Patient's Gender Identity value

Column Name: guarantor_1
Column Type: varchar
Max Length: 10
Guarantor 1

Other Race Code

Column Name: other_race_value_short
Column Type: varchar
Max Length: 255
Other Race Code

Column Name: patient_add_country_code
Column Type: varchar
Max Length: 20
Patient Address Country Code

Column Name: patient_add_country_value
Column Type: varchar
Max Length: 40
Patient Address Country Value

Column Name: patient_cell_phone
Column Type: varchar
Max Length: 60
Patient cell phone

Column Name: patient_name_first
Column Type: varchar
Max Length: 40
Patient Name First

Column Name: patient_name_last
Column Type: varchar
Max Length: 40
Patient Last Name

Column Name: patient_name_middle
Column Type: varchar
Max Length: 40
Patient Middle Name

Column Name: patient_name_prefix_code
Column Type: varchar
Max Length: 40
Patient Name Prefix Code

Column Name: patient_name_prefix_value
Column Type: varchar
Max Length: 40
Patient Name Prefix Value

Column Name: patient_name_suffix_code
Column Type: varchar
Max Length: 40
Patient Name Suffix Code

Column Name: patient_name_suffix_value
Column Type: varchar
Max Length: 40
Patient Name Suffix Value

Column Name: patient_sex_X_NRI_code
Column Type: varchar
Max Length: 10
Patient Sex X NRI

Column Name: patient_sex_X_NRI_value
Column Type: varchar
Max Length: 40
Patient Sex X NRI

Column Name: patient_ssn_2
Column Type: varchar
Max Length: 15
Patient's social security number 2

Column Name: patient_ssn_3
Column Type: varchar
Max Length: 15
Patient's social security number 3

Column Name: patient_ssn_4
Column Type: varchar
Max Length: 15
Patient's social security number 4

Column Name: personal_pronouns
Column Type: varchar
Max Length: 40
'Personal Pronouns'

Column Name: policy_number_1
Column Type: varchar

Column Type: varchar
Max Length: 20
policy number 9

Column Name: preferred_name
Column Type: varchar
Max Length: 40
'Preferred Name'

Column Name: pref_prov_eth_org_code
Column Type: varchar
Max Length: 5
Preferred Provider's Ethnic origin

Column Name: pref_prov_eth_org_value
Column Type: varchar
Max Length: 255
Preferred Provider's Ethnic Origin value

Column Name: pref_prov_sex_code
Column Type: varchar
Max Length: 5
Preferred provider's sex

Column Name: pref_prov_sex_value
Column Type: varchar
Max Length: 15
Preferred provider's sex value

Column Name: pregnancy_status_code
Column Type: varchar
Max Length: 50
Pregnancy Status

Column Name: pregnancy_status_value
Column Type: varchar
Max Length: 50
Pregnancy Status

Column Name: primary_language_code
Column Type: varchar
Max Length: 50
Primary Language

Column Name: primary_language_value
Column Type: varchar
Max Length: 50
Primary Language

Column Name: protection_indicator_code
Column Type: varchar
Max Length: 50
Protection Indicator

Column Name: protection_indicator_date
Column Type: date
Protection Indicator Effective Date

Column Name: protection_indicator_val
Column Type: varchar
Max Length: 50
Protection Indicator

Column Name: sex_orientation_code
Column Type: varchar
Max Length: 5
Patients Sexual Orientation code

Column Name: sex_orientation_value
Column Type: varchar
Max Length: 40
Patient's Sexual Orientation value

Column Name: smoker_code
Column Type: varchar
Max Length: 50
Patient's Smoker Status

Column Name: smoker_value
Column Type: varchar
Max Length: 50
Patient's Smoker Status

Column Name: smoking_stat_assess_date

Column Type: date
Smoking Status Assessment Date

Column Name: ss_demographics_mult_11_value
Column Type: varchar
Max Length: 4096
The description associated with ss_demographics_mult_11_code. See ss_demographics_mult_11_code for more information.

Column Name: ss_demographics_mult_12_code
Column Type: varchar
Max Length: 50
'SS Demographics Multiple Select Dictionary 12' Code

Column Name: ss_demographics_mult_12_shval
Column Type: varchar
Max Length: 255
The description associated with ss_demographics_mult_12_code limited to 255 characters. See ss_demographics_mult_12_code for more information.

Column Name: ss_demographics_mult_12_value
Column Type: varchar
Max Length: 4096

The description associated with `ss_demographics_mult_12_code`. See `ss_demographics_mult_12_code` for more information.

Column Name: `ss_demographics_mult_13_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 13' Code

Column Name: `ss_demographics_mult_13_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_13_code` limited to 255 characters. See `ss_demographics_mult_13_code` for more information.

Column Name: `ss_demographics_mult_13_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_13_code`. See `ss_demographics_mult_13_code` for more information.

Column Name: `ss_demographics_mult_14_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 14' Code

Column Name: `ss_demographics_mult_14_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_14_code` limited to 255 characters. See `ss_demographics_mult_14_code` for more information.

Column Name: `ss_demographics_mult_14_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_14_code`. See `ss_demographics_mult_14_code` for more information.

Column Name: `ss_demographics_mult_15_code`

Column Type: `varchar`

Max Length: 50

'SS Demographics Multiple Select Dictionary 15' Code

Column Name: `ss_demographics_mult_15_shval`

Column Type: `varchar`

Max Length: 255

The description associated with `ss_demographics_mult_15_code` limited to 255 characters. See `ss_demographics_mult_15_code` for more information.

Column Name: `ss_demographics_mult_15_value`

Column Type: `varchar`

Max Length: 4096

The description associated with `ss_demographics_mult_15_code`. See `ss_demographics_mult_15_code` for more information.

Column Name: `ss_demographics_mult_1_code`

Column Type: `varchar`

Max Length: 50

SS Demographics Multiple Select Dictionary 1 Code

Column Name: `ss_demographics_mult_1_shval`

Column Type: `varchar`

Max Length: 255

SS Demographics Multiple Select Dictionary 1 Short Value

Column Name: `ss_demographics_mult_1_value`

Column Type: `varchar`

Max Length: 4096

SS Demographics Multiple Select Dictionary 1 Value

Column Name: `ss_demographics_mult_2_code`

Column Type: `varchar`

Max Length: 50

SS Demographics Multiple Select Dictionary 2 Code

Column Name: `ss_demographics_mult_2_shval`

Column Type: `varchar`

Max Length: 255

SS Demographics Multiple Select Dictionary 2 Short Value

Column Name: `ss_demographics_mult_2_value`

Column Type: `varchar`

Max Length: 4096

SS Demographics Multiple Select Dictionary 2 Value

Column Name: `ss_demographics_mult_3_code`

Column Type: `varchar`

Max Length: 50

SS Demographics Multiple Select Dictionary 3 Code

Column Name: `ss_demographics_mult_3_shval`

Column Type: `varchar`

Max Length: 255

SS Demographics Multiple Select Dictionary 3 Short Value

Column Name: `ss_demographics_mult_3_value`

Column Type: `varchar`

Max Length: 4096

SS Demographics Multiple Select Dictionary 3 Value

Column Name: `ss_demographics_mult_4_code`

Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 4 Code

Column Name: ss_demographics_mult_4_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 4 Short Value

Column Name: ss_demographics_mult_4_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 4 Value

Column Name: ss_demographics_mult_5_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 5 Code

Column Name: ss_demographics_mult_5_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 5 Short Value

Column Name: ss_demographics_mult_5_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 5 Value

Column Name: ss_demographics_mult_6_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 6 Code

Column Name: ss_demographics_mult_6_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 6 Short Value

Column Name: ss_demographics_mult_6_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 6 Value

Column Name: ss_demographics_mult_7_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 7 Code

Column Name: ss_demographics_mult_7_shval

Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 7 Short Value

Column Name: ss_demographics_mult_7_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 7 Value

Column Name: ss_demographics_mult_8_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 8 Code

Column Name: ss_demographics_mult_8_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 8 Short Value

Column Name: ss_demographics_mult_8_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 8 Value

Column Name: ss_demographics_mult_9_code
Column Type: varchar
Max Length: 50
SS Demographics Multiple Select Dictionary 9 Code

Column Name: ss_demographics_mult_9_shval
Column Type: varchar
Max Length: 255
SS Demographics Multiple Select Dictionary 9 Short Value

Column Name: ss_demographics_mult_9_value
Column Type: varchar
Max Length: 4096
SS Demographics Multiple Select Dictionary 9 Value

Column Name: ss_demographics_phone_1
Column Type: varchar
Max Length: 50
Site Specific Phone Number 1

Column Name: ss_demographics_phone_2
Column Type: varchar
Max Length: 50
Site Specific Phone Number 2

Column Name: ss_demographics_phone_3

Column Type: varchar
Max Length: 50
Site Specific Phone Number 3

Column Name: ss_demographics_phone_4
Column Type: varchar
Max Length: 50
Site Specific Phone Number 4

Column Name: ss_demographics_phone_5
Column Type: varchar
Max Length: 50
Site Specific Phone Number 5

Column Name: ss_demographics_staff_1
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 1

Column Name: ss_demographics_staff_2
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 2

Column Name: ss_demographics_staff_3
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 3

Column Name: ss_demographics_staff_4
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 4

Column Name: ss_demographics_staff_5
Column Type: varchar
Max Length: 20
SS Demographics Practitioner 5

Column Name: ss_demographics_time_1
Column Type: varchar
Max Length: 10
SS Demographics Time 1

Column Name: ss_demographics_time_2
Column Type: varchar
Max Length: 10
SS Demographics Time 2

Column Name: ss_demographics_time_3

Column Type: varchar
Max Length: 10
SS Demographics Time 3

Column Name: ss_demographics_time_4
Column Type: varchar
Max Length: 10
SS Demographics Time 4

Column Name: ss_demographics_time_5
Column Type: varchar
Max Length: 10
SS Demographics Time 5

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Call_Intake

Table Name: SYSTEM.patient_demographic_history

Table Description: Patient Demographic History

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
Facility

Column Name: PATID
Column Type: varchar
Max Length: 20
Patient ID

Column Name: MPI_uniqueid
Column Type: varchar
Max Length: 12
MPI unique ID

Column Name: patient_name
Column Type: varchar

Max Length: 40
Patient Name

Column Name: sex_code
Column Type: varchar
Max Length: 5
Sex

Column Name: sex_value
Column Type: varchar
Max Length: 40
Sex

Column Name: ethnic_origin_code
Column Type: varchar
Max Length: 5
Ethnic Origin

Column Name: ethnic_origin_value
Column Type: varchar
Max Length: 255
Ethnic Origin

Column Name: date_of_birth
Column Type: date
Date Of Birth

Column Name: patient_street_1
Column Type: varchar
Max Length: 40
Patient's Address - Street

Column Name: patient_city
Column Type: varchar
Max Length: 20
Patients Address - City

Column Name: patient_state
Column Type: varchar
Max Length: 40
Patient's Address - State

Column Name: patient_county_code
Column Type: varchar
Max Length: 5
Patient's Address - County

Column Name: patient_county_value
Column Type: varchar
Max Length: 40

patient's Address - County

Column Name: patient_zipcode

Column Type: varchar

Max Length: 60

Patient's Address - Zipcode

Column Name: patient_home_phone

Column Type: varchar

Max Length: 60

Patient's Home Phone

Column Name: patient_street_2

Column Type: varchar

Max Length: 40

Patient's Address - Street 2

Column Name: data_entry_date

Column Type: date

Data Entry Date

Column Name: data_entry_by

Column Type: varchar

Max Length: 40

Data Entry By

Column Name: data_entry_time

Column Type: varchar

Max Length: 10

Data Entry Time

Column Name: data_entry_by_option

Column Type: varchar

Max Length: 40

Data Entry By (Option)

Column Name: social_security_number

Column Type: varchar

Max Length: 15

SS Number (6)

Column Name: religion_code

Column Type: varchar

Max Length: 5

Client Religion (9)

Column Name: religion_value

Column Type: varchar

Max Length: 255

Religion Value (9)

Column Name: marital_status_code
Column Type: varchar
Max Length: 10
Marital status code (10)

Column Name: marital_status_value
Column Type: varchar
Max Length: 40
Marital Status Value (10)

Column Name: client_work_phone
Column Type: varchar
Max Length: 60
Work Phone

Column Name: maiden_name
Column Type: varchar
Max Length: 40
Maiden Name

Column Name: client_race_Code
Column Type: varchar
Max Length: 10
Client Race - Code (116)

Column Name: client_race_value
Column Type: varchar
Max Length: 40
Client Race - Value (116)

Column Name: facility_chart_number
Column Type: varchar
Max Length: 40
Facility Chart Number

Column Name: client_alias
Column Type: varchar
Max Length: 80
Client Alias

Column Name: employment_status_code
Column Type: varchar
Max Length: 10
Employment Status - Code (517)

Column Name: employment_status_value
Column Type: varchar
Max Length: 255
Employment Status - Value (517)

Column Name: occupation_code
Column Type: varchar
Max Length: 10
Occupation - Code (610)

Column Name: occupation_value
Column Type: varchar
Max Length: 255
Occupation - Value (610)

Column Name: education_code
Column Type: varchar
Max Length: 10
Education - Code (625)

Column Name: education_value
Column Type: varchar
Max Length: 255
education - Value (625)

Column Name: place_of_birth
Column Type: varchar
Max Length: 40
Place of Birth

Column Name: GUID
Column Type: varchar
Max Length: 50
GUID

Column Name: InfoScribLegacyID
Column Type: varchar
Max Length: 50
InfoScribLegacyID

Column Name: UTCTimestamp
Column Type: timestamp
UTCTimestamp

Column Name: address_start_date
Column Type: date
Address Start Date

Column Name: citizenship_code
Column Type: varchar
Max Length: 50
Citizenship

Column Name: citizenship_value

Column Type: varchar
Max Length: 50
Citizenship

Column Name: client_alias_10
Column Type: varchar
Max Length: 80
Client Alias 10

Column Type: varchar
Max Length: 80
Client Alias 8

Column Name: client_alias_9
Column Type: varchar
Max Length: 80
Client Alias 9

Column Name: client_conf_city

Column Type: varchar
Max Length: 50
Client Confidential Address - City

Column Name: client_conf_cntry_code
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Code

Column Name: client_conf_cntry_value
Column Type: varchar
Max Length: 50
Client Confidential Address - Country Value

Column Name: client_conf_phone
Column Type: varchar
Max Length: 50
Client Confidential Address - Phone Number

Column Name: client_conf_state_code
Column Type: varchar
Max Length: 50
Client Confidential Address - State Code

Column Name: client_conf_state_value
Column Type: varchar
Max Length: 50
Client Confidential Address - State Value

Column Name: client_conf_street
Column Type: varchar
Max Length: 50
Client Confidential Address - Street

Column Name: client_conf_street2
Column Type: varchar
Max Length: 50
Client Confidential Address - Street 2

Column Name: client_conf_zipcode
Column Type: varchar
Max Length: 50
Client Confidential Address - Zip code

Column Name: client_email_addr
Column Type: varchar
Max Length: 50
Client's Email Address

Column Name: client_mail_city

Column Type: varchar
Max Length: 50
Client's Mailing Address - City

Column Name: client_mail_cntry_code
Column Type: varchar
Max Length: 50
Client's Mailing Address - Country

Column Name: client_mail_cntry_value
Column Type: varchar
Max Length: 50
Client's Mailing Address - Country

Column Name: client_mail_state_code
Column Type: varchar
Max Length: 50
Client's Mailing Address - State

Column Name: client_mail_state_value
Column Type: varchar
Max Length: 50
Client's Mailing Address - State

Column Name: client_mail_street
Column Type: varchar
Max Length: 50
Client's Mailing Address - Street 1

Column Name: client_mail_street2
Column Type: varchar
Max Length: 50
Client's Mailing Address - Street 2

Column Name: client_mail_zipcode
Column Type: varchar
Max Length: 50
Client's Mailing Address - Zip Code

Column Name: communication_pref_code
Column Type: varchar
Max Length: 50
Communication Preference Code

Column Name: communication_pref_value
Column Type: varchar
Max Length: 50
Communication Preference Value

Column Name: country_of_origin_code

Column Type: varchar
Max Length: 50
Country of Origin

Column Name: country_of_origin_value
Column Type: varchar
Max Length: 50
Country of Origin

Column Name: data_entry_offset
Column Type: numeric
the offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
Data Entry Source (30015)

Column Name: data_entry_time_j
Column Type: time
the time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
the time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
the short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
data entry user id

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
data entry user name

Column Name: data_entry_utc
Column Type: timestamp
the UTC date and time the data was saved.

Column Name: decline_prov_code
Column Type: varchar
Max Length: 50
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_long
Column Type: varchar
Max Length: 4096
Client Declined To Provide Information On The Following

Column Name: decline_prov_value_short
Column Type: varchar
Max Length: 255
Client Declined To Provide Information On The Following

Column Name: ethnic_origin_X_NRI_code
Column Type: varchar

'Data Entry Time'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
'Data Entry By Option'

Column Name: JOIN_TO_SSL_HISTORY
Column Type: varchar
Max Length: 40
'JOIN_TO_SSL_HISTORY'

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
'Data Entry Source (30015)'

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
'Data Entry User ID'

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
'Data Entry User Name'

Column Name: data_entry_utc

Column Type: timestamp
The UTC date and time the data was saved.

Column Name: option_desc
Column Type: varchar
Max Length: 80
Option Description

Column Name: option_id
Column Type: varchar
Max Length: 50
Option Identifier

Column Name: reason_for_leave_X_NRI_code
Column Type: varchar
Max Length: 10
'NRI Reason for Leave' Code

Column Name: reason_for_leave_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with reason_for_leave_X_NRI_code. See reason_for_leave_X_NRI_code for more information.

Column Name: type_of_leave_X_NRI_code
Column Type: varchar
Max Length: 10
'NRI Type of Leave' Code

Column Name: type_of_leave_X_NRI_value
Column Type: varchar
Max Length: 40
The description associated with type_of_leave_X_NRI_code. See type_of_leave_X_NRI_code for more information.

Column Name: user_row_access_code
Column Type: integer
If sub system codes are enabled this will be either a 0, 1, or 2. 0 for no access, 1 for access to row and user that is logged into the same sub-system code, and 2 for access to row and user that is logged into different sub-system code.

Documentation for form: Leave_Status_Change

Table Name: SYSTEM.site_specific_leave

Table Description: Site Specific Leave

Column Name: blank_row_id
Column Type: varchar
Max Length: 254

Column Name: FACILITY
Column Type: integer
'Facility'

Column Name: EPISODE_NUMBER
Column Type: integer
'Episode Number'

Column Name: data_entry_date
Column Type: date
'Data Entry Date'

Column Name: JOIN_TO_LEA_HISTORY
Column Type: varchar
Max Length: 40
'JOIN_TO_LEA_HISTORY'

Column Name: PATID
Column Type: varchar
Max Length: 20
'Patient ID'

Column Name: SSL_uniqueid
Column Type: varchar
Max Length: 20
'SSL unique ID'

Column Name: data_entry_by
Column Type: varchar
Max Length: 40
'Data Entry By'

Column Name: data_entry_by_option
Column Type: varchar
Max Length: 40
'Data Entry By'

Column Name: data_entry_offset
Column Type: numeric
The offset in hours from UTC on when the data was saved.

Column Name: data_entry_source
Column Type: varchar
Max Length: 255
'Data Entry Source (30015)'

Column Name: data_entry_time
Column Type: varchar
Max Length: 10
'Data Entry Time'

Column Name: data_entry_time_j
Column Type: time
The time with fractional seconds when the data was saved.

Column Name: data_entry_timezone_info_all
Column Type: varchar
Max Length: 255
The time zone information for when the data was saved.

Column Name: data_entry_timezone_short
Column Type: varchar
Max Length: 8
The short abbreviation for the timezone

Column Name: data_entry_user_id
Column Type: varchar
Max Length: 40
'Data Entry User ID'

Column Name: data_entry_user_name
Column Type: varchar
Max Length: 40
'Data Entry User Name'

Column Name: data_entry_utc
Column Type: timestamp
The UTC date and time the data was saved.

Column Name: ss_leave_date_1
Column Type: date
'SS Leave Date 1'

Column Name: ss_leave_date_2
Column Type: date
'SS Leave Date 2'

Column Name: ss_leave_date_3
Column Type: date
'SS Leave Date 3'

Column Name: ss_leave_date_4
Column Type: date
'SS Leave Date 4'

Column Name: ss_leave_date_5

Column Type: date
'SS Leave Date 5'

Column Name: ss_leave_dict_10_code
Column Type: varchar
Max Length: 20
'SS Leave Dictionary 10' Code

Column Name: ss_leave_dict_10_value
Column Type: varchar
Max Length: 40
The description associated with ss_pre_adm_dict_10_code. See ss_leave_dict_10_code for more information.

Column Name: ss_leave_dict_1_code
Column Type: varchar
Max Length: 20
'SS Leave Dictionary 1' Code

Column Name: ss_leave_dict_1_value
Column Type: varchar
Max Length: 40
The description associated with ss_leave_dict_1_code. See ss_leave_dict_1_code for more information.

Column Name: ss_leave_dict_2_code
Column Type: varchar
Max Length: 20
'SS Leave Dictionary 2' Code

Column Name: ss_leave_dict_2_value
Column Type: varchar
Max Length: 40
The description associated with ss_pre_adm_dict_2_code. See ss_leave_dict_2_code for more information.

Column Name: ss_leave_dict_3_code
Column Type: varchar
Max Length: 20
'SS Leave Dictionary 3' Code

Column Name: ss_leave_dict_3_value
Column Type: varchar
Max Length: 40
The description associated with ss_pre_adm_dict_3_code. See ss_leave_dict_3_code for more information.

Column Name: ss_leave_dict_4_code
Column Type: varchar
Max Length: 20
'SS Leave Dictionary 4' Code

Column Name: ss_leave_dict_4_value

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_dict_4_code. See ss_leave_dict_4_code for more information.

Column Name: ss_leave_dict_5_code

Column Type: varchar

Max Length: 20

'SS Leave Dictionary 5' Code

Column Name: ss_leave_dict_5_value

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_dict_5_code. See ss_leave_dict_5_code for more information.

Column Name: ss_leave_dict_6_code

Column Type: varchar

Max Length: 20

'SS Leave Dictionary 6' Code

Column Name: ss_leave_dict_6_value

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_dict_6_code. See ss_leave_dict_6_code for more information.

Column Name: ss_leave_dict_7_code

Column Type: varchar

Max Length: 20

'SS Leave Dictionary 7' Code

Column Name: ss_leave_dict_7_value

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_dict_7_code. See ss_leave_dict_7_code for more information.

Column Name: ss_leave_dict_8_code

Column Type: varchar

Max Length: 20

'SS Leave Dictionary 8' Code

Column Name: ss_leave_dict_8_value

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_dict_8_code. See ss_leave_dict_8_code for more information.

Column Name: ss_leave_dict_9_code

Column Type: varchar

Max Length: 20

'SS Leave Dictionary 9' Code

Column Name: ss_leave_dict_9_value

Column Type: varchar

Max Length: 40

The description associated with ss_pre_adm_dict_9_code. See ss_leave_dict_9_code for more information.

Column Name: ss_leave_free_txt_1

Column Type: varchar

Max Length: 32766

'SS Leave Scrolling Free Text 1'

Column Name: ss_leave_free_txt_2

Column Type: varchar

Max Length: 32766

'SS Leave Scrolling Free Text 2'

Column Name: ss_leave_free_txt_3

Column Type: varchar

Max Length: 32766

'SS Leave Scrolling Free Text 3'

Column Name: ss_leave_free_txt_4

Column Type: varchar

Max Length: 32766

'SS Leave Scrolling Free Text 4'

Column Name: ss_leave_free_txt_5

Column Type: varchar

Max Length: 32766

'SS Leave Scrolling Free Text 5'

Column Name: ss_leave_mult_10_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 10' Code

Column Name: ss_leave_mult_10_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_10_code limited to 255 characters. See ss_leave_mult_10_code for more information.

Column Name: ss_leave_mult_10_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_10_code. See ss_leave_mult_10_code for more information.

Column Name: ss_leave_mult_1_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 1' Code

Column Name: ss_leave_mult_1_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_1_code limited to 255 characters. See ss_leave_mult_1_code for more information.

Column Name: ss_leave_mult_1_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_1_code. See ss_leave_mult_1_code for more information.

Column Name: ss_leave_mult_2_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 2' Code

Column Name: ss_leave_mult_2_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_2_code limited to 255 characters. See ss_leave_mult_2_code for more information.

Column Name: ss_leave_mult_2_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_2_code. See ss_leave_mult_2_code for more information.

Column Name: ss_leave_mult_3_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 3' Code

Column Name: ss_leave_mult_3_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_3_code limited to 255 characters. See ss_leave_mult_3_code for more information.

Column Name: ss_leave_mult_3_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_3_code. See ss_leave_mult_3_code for more information.

Column Name: ss_leave_mult_4_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 4' Code

Column Name: ss_leave_mult_4_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_4_code limited to 255 characters. See ss_leave_mult_4_code for more information.

Column Name: ss_leave_mult_4_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_4_code. See ss_leave_mult_4_code for more information.

Column Name: ss_leave_mult_5_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 5' Code

Column Name: ss_leave_mult_5_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_5_code limited to 255 characters. See ss_leave_mult_5_code for more information.

Column Name: ss_leave_mult_5_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_5_code. See ss_leave_mult_5_code for more information.

Column Name: ss_leave_mult_6_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 6' Code

Column Name: ss_leave_mult_6_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_6_code limited to 255 characters. See ss_leave_mult_6_code for more information.

Column Name: ss_leave_mult_6_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_6_code. See ss_leave_mult_6_code for more information.

Column Name: ss_leave_mult_7_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 7' Code

Column Name: ss_leave_mult_7_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_7_code limited to 255 characters. See ss_leave_mult_7_code for more information.

Column Name: ss_leave_mult_7_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_7_code. See ss_leave_mult_7_code for more information.

Column Name: ss_leave_mult_8_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 8' Code

Column Name: ss_leave_mult_8_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_8_code limited to 255 characters. See ss_leave_mult_8_code for more information.

Column Name: ss_leave_mult_8_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_8_code. See ss_leave_mult_8_code for more information.

Column Name: ss_leave_mult_9_code

Column Type: varchar

Max Length: 255

'SS Leave Multiple Select Dictionary 9' Code

Column Name: ss_leave_mult_9_shval

Column Type: varchar

Max Length: 255

The description associated with ss_leave_mult_9_code limited to 255 characters. See ss_leave_mult_9_code for more information.

Column Name: ss_leave_mult_9_value

Column Type: varchar

Max Length: 4096

The description associated with ss_leave_mult_9_code. See ss_leave_mult_9_code for more information.

Column Name: ss_leave_name_1

Column Type: varchar

Max Length: 60

'SS Leave Name 1'

Column Name: ss_leave_name_2

Column Type: varchar

Max Length: 60

'SS Leave Name 2'

Column Name: ss_leave_name_3
Column Type: varchar
Max Length: 60
'SS Leave Name 3'

Column Name: ss_leave_name_4
Column Type: varchar
Max Length: 60
'SS Leave Name 4'

Column Name: ss_leave_name_5
Column Type: varchar
