

Version 1.0

This document describes how to access patient data using KanTime Patient API. Registered users can use this API to query the EHR for patient data. The API returns a JSON object with status and embedded CCDA XML. API examples below show how to access the API using curl.

User must be an authorized user of the KanTime EHR or user must have access to the patient portal
Access to REST client (use curl, or any other programmatic REST client)
Ability to parse JSON and CCDA

<https://staging.kantimehealth.net/phx/api/papi/api>

Username and password have to be encoded in Base64 with the call to curl. Use Basic authorization header for curl.

```

Store the value Token. That Token will be used for all further calls to API

Search for a patient

Search for a patient from EHR using one or more parameters list below

- MRN
- Date of birth
- First name
- Last name

API will search for patients that match one or more these criteria and return up to 30 patients.

Endpoint:

POST <https://staging.kantimehealth.net/phx/api/papi/api/v1/Patient/patientsearch?mrn={mrn}>

Examples:

Search using MRN:

```
curl --location --request POST
'https://staging.kantimehealth.net/phx/api/papi/api/v1/Patient/patientsearch?mrn=
114751' \
--header 'Authorization: Bearer

Find the correct patient. Use that patient's MRN returned from these calls for remaining API

In case of Patient/patient representative login:

Patient or Patient representative can see only mapped patient details. If more than one patient found, then user should pass more parameters in search criteria

```

curl --location --request POST

Get Clinical Sections

Request specific clinical sections from a patient's CCDA using the following command format

Endpoint:

POST
<https://staging.kantimehealth.net/phx/api/papi/api/v1/Patient/patientdata/{sectionname}>

In the endpoint above, “sectionName for API” can be one of the following

sectionName value provided to API	Clinical Section returned by API
all	All
demographics	Patient Demographics
careteam	Care Team
allergies	Allergies and Intolerances
assessments	Assessment
encounters	Encounters
functionalstatus	Functional Status
goals	Goals
healthconcerns	Health Concerns
immunizations	Immunizations
medicalequipment	Medical Equipment
medications	Medications
mentalstatus	Mental Status
planoftreatment	Plan of Treatment
problem	Problem
procedures	Procedures
reasonforreferral	Reason for Referral
results	Results
socialhistory	Social History
vitalsigns	Vital Signs
consultationnote	Consultation Note
progressnote	Progress Note
historyandphysicalnote	History and Physical Note

```
curl --location --request POST
'https://staging.kantimehealth.net/phx/api/papi/api/v1/Patient/patientdata/careteam?mrn=114751' \

```

Start and end date are formatted as YYYY-MM-DD. The command above queries for data between Jan 1 2016 (2016-01-01) and Jan 1 2018 (2018-01-01)

Response will be the same CCDAs as above, except all clinical data will be restricted to date of service between Jan 1 2016 and Jan 1 2018.

Error Codes

- **Unauthorized access:**

If the user credentials are invalid, following error will be generated with code: 401

```
{ "message": "Unauthorized token request. Invalid Credentials provided" }
```

If token is invalid/expired, following error will be generated with code: 401

```
{ Invalid token provided }
```

- **Patient not found:**

If the patient record does not exist for the patient being requested, following error will be generated

```
{
  "patients": [],
  "StatusCode": 0,
  "StatusDescription": "Patient not found"
}
```

- **User no rights to access patient:**

If user has no rights to access patient, following error will be generated

```
{
  "patients": null,
  "StatusCode": -1,
  "StatusDescription": "Invalid input, Patient/representative should have access to search
his mapped patient data only."
}
```

- **More than one patient found with search criteria and logged in user is patient/patient representative**

If more than one patient is found when logged in with patient/patient representative credentials, following error will be generated

```
{
  "patients": null,
  "StatusCode": -1,
  "StatusDescription": "Invalid input, Patient/representative should have access to search
his mapped patient data only."
}
```

- **CCDA Section not found:**

If the user calls service patientData with invalid section name, following error will be generated

```
<Message>Invalid section name: careteams</Message>
```
