Version: 1.0

§170.315(b)(10) Electronic Health Information Export

Overview

The HealUs EHR which store electronic health information (EHI), supports the ability to export that EHI in an electronic and computable format by privileged users in ambulatory settings. This includes both a single patient export capability intended for fulfilling a patient's right of access request and a patient population export intended for the purpose of facilitating data transitions when providers switch health IT systems.

The following are the detailed format and structure supported by HealUs for exporting data:

- Clinical Data (Single Patient Export and Bulk Export) via CCDa export as per the standards specified in § 170.205(a)(3) HL7® Implementation Guide for CDA® Release 2: IHE Health Story Consolidation, DSTU Release 1.1 (US Realm) Draft Standard for Trial Use July 2012
- Clinical Data (Single Patient Export and Bulk Export) via FHIR as per the standards specified in § 170.215(a)(2) HL7® FHIR® US Core Implementation Guide STU 4.0.0, June 2021, § 170.215(a)(4) HL7® FHIR® Bulk Data Access (Flat FHIR®) (V1.0.1: STU 1)
- Lab Results, Encounters, Appointments, Imaging Results, Documents, Procedure Results, Referrals, and Advance Directives in interpretable, machine-readable PDF.
- Patient Demographics and Appointments in CSV.

Clinical Data – Single Patient Export

Steps to export EHI for Single Patient:

- After logging in successfully to the HealUs EHR, navigate to the quick links section where you'll find the 'Data Export' option.
- Locate and select the patient in the relevant field.
- Specify the desired date range for exporting the data.
- Check the 'Confidential' checkbox to generate a password-protected export if needed.
- Click the 'Process' button to initiate the export file generation.
- Choose specific sections to include in the export as per your requirements.
- Proceed by clicking the 'Proceed' button to finalize the export file.
- Once the status of the export is marked as completed in the grid, you can proceed to download or share the generated export.
- If the export is password protected, provide the necessary password upon downloading or sharing to access the export.

Clinical Data – Bulk Patient Export

Steps to export EHI for Patient Population:

- After logging in successfully to the HealUs EHR, navigate to the quick links section where you'll find the 'Data Export' option.
- Select the multiple patients or all patients in the relevant field.
- Specify the desired date range for exporting the data.
- Check the 'Confidential' checkbox to generate a password-protected export if needed.
- Click the 'Process' button to initiate the export file generation.
- Choose specific sections to include in the export as per your requirements.
- Proceed by clicking the 'Proceed' button to finalize the export file.
- Once the status of the export is marked as completed in the grid, you can proceed to download or share the generated export.
- If the export is password protected, provide the necessary password upon downloading or sharing to access the export.

Patient Demographics

CSV format – This file offers a comprehensive view of patient demographics, structured for clarity and ease of access.

Appointments

PDF and CSV format – This file offers a comprehensive view of appointments in both formats, structured for clarity and ease of access.

Lab, Imaging and Procedure Results

PDF format – This file offers a comprehensive view of laboratory, imaging and procedure results separately, structured for clarity and ease of access.

Encounters

PDF format – This file offers a comprehensive view of all data that is associated with the encounters of the patients, structured for clarity and ease of access.

Referrals

PDF format – This file offers a comprehensive view of referral, structured for clarity and ease of access.

Advance Directives

PDF format – This file offers a comprehensive view of advance directives, structured for clarity and ease of access.

Documents

This includes available lab results, imaging reports and any other scanned or uploaded documents in the patient's record. These can be exported in **PDF format**.

➤ Organizational Structure

All documents are meticulously sorted and indexed within the Documents module for each patient. Should there be specific categories or types for these documents (such as Lab Reports, Imaging Reports, Consents, etc.), they will be displayed in their corresponding category subfolders within the primary patient document folder.

FHIR Data Export

The HealUs FHIR server facilitates both individual patient clinical data export and bulk data EHI export for patient populations, compliant with the specifications outlined in § 170.315(b)(10)(ii).

Export files are created in a timely fashion

Practice administrator can approve the requests for the users to export electronic health information. The user can perform the Electronic Health Information (EHI) export at any time without the developer assistance and the files will be exported in real time.
