

b10 EHI Export - CCDA

Document Information

Document Name: b.10 EHI Export - Patient Data via CCDA

Specifications

Document The Backend Design

Version: v1.0

Description:

Introduction

- **Overview:**

This document describes the structure and syntax of the exported Electronic Health Information (EHI) as per the **b.10 EHI Export** requirement. It provides details on the export format, file type, data structure, and instructions for accessing the data.

- **Objectives:**

- Define the format and structure of exported EHI.
- Provide a detailed data dictionary of exported elements.
- Outline authentication and access instructions.

API Endpoint Details

File Type Details

- **Format:** XML
- **Schema:** Consolidated Clinical Document Architecture (C-CDA) 2.1

- **Encoding:** UTF-8
- **File Extension:** .xml
- **Schema Reference:** Based on the HL7 CDA R2 standard

Basic Information

HTTP Method: POST

URL: /patient/:idPatient/getPatientCCDADData

Description: Retrieves Continuity of Care Document Architecture (CCDA) data for a specific patient

Authentication & Authorization

Authentication Required: Yes

Type: JWT Bearer Token

Guard: JwtAuthGuard

Request Parameters

Path Parameters

- **idPatient (number):** Patient ID

Request Body

- **Type:** PatientCCDADTO

Data Dictionary

The following table provides an overview of key fields included in the exported C-CDA document:

Field	Description	Data Type	Required?
patient_name	Full name of the patient	String	Yes
dob	Date of birth of the patient	Date (YYYY-MM-DD)	Yes
gender	Patient's gender	String (M/F/Other)	Yes
race	Race of the patient	String	No
ethnicity	Ethnicity of the patient	String	No
language	Preferred language of communication	String	No
address	Patient's home address	String	No
phone	Contact number	String	No
emergency_contact	Emergency contact name and phone	String	No
smoking_status	Patient's smoking habits	String	No
problem_list	List of active and past medical problems	Array (Structured)	Yes
medications	Active and past medications	Array (Structured)	Yes
allergies	Patient allergies	Array (Structured)	Yes
lab_results	Laboratory test results	Array (Structured)	No
procedures	Medical procedures performed	Array (Structured)	No
encounters	Clinical encounters and visits	Array (Structured)	Yes
vital_signs	Blood pressure, heart rate, temperature, etc.	Array (Structured)	No

Note: Additional fields may be included depending on the data available for the patient.

Response Structure

Success Response (200 OK)

```
{
  "patientData": {
    "demographics": {
      "name": string,
      "dob": date,
      "gender": string,
      // ... other demographic fields
    },
    "clinicalData": {
      // Clinical information
    },
    "monitors": [
      // Patient monitoring data
    ]
  }
}
```

```
]
}
}
```

Error Responses

401 Unauthorized

```
{
  "statusCode": 401,
  "message": "You are not Scope authorized to perform the operation"
}
```

403 Forbidden

When JWT authentication fails

404 Not Found

When patient data is not found

500 Internal Server Error

For unexpected server errors

Download & Access Instructions

1. **Authentication:** Ensure a valid JWT Bearer Token is provided in the request headers.
2. **API Call:** Send a POST request to the specified endpoint with the required parameters.
3. **Download File:** If successful, the response will contain a link to download the CCDA .xml file.
4. **Open in a Viewer:** Use a compatible CCDA viewer or parse using an XML library.
