SMARTMD Palliative EHI Export

Introduction

EHI means “electronic protected health information” (ePHI) as defined in [45 CFR 160.103](#) to the extent that it would be included in a designated record set as defined in [45 CFR 164.501](#), regardless of whether the group of records are used or maintained by or for a covered entity. EHR (electronic health record) systems provide means for exporting PHI (protected health information) that allows healthcare clinicians to share information while maintaining the privacy and security of patient data.

SMARTMD’s EHR offers credentialed and authorized users the ability to export patient EHI in a format that it can be processed by another system. This feature is available from the Patients tab, selecting one or more patients, and tapping the **Export** button.

Export File

An export file contains one patient. The result will be a JSON file that contains the following information, broken out in sections:

- Patient– demographic details regarding the patient
- Kin list – a set of caregivers or relatives of the patient, along with their contact details.
- Medications – a list of medications the patient is actively taking.
- Allergies – a list of the patient allergies (drug, food and environmental).
- Problems – a list of active diseases diagnosed by the provider.

Patient Section

Field Name	Type	Description
PatientId	string	Universally unique identifier for this patient
PatientName	string	Formatted as lastname, firstname middle initial
ChartID	string	Human readable unique identifier for the patient chart
DOB	Date	Patient's date of birth "m/d/yyyy"
Case	string	Service line (ex: hospice, palliative)
Address1	string	Patient's residence
City	string	Patient's residence
State	string	Patient's residence
Zip	string	Either 5 or 9 digit zip code (with "-" separator)
Country	string	Country of patient's residence (typically "USA")
HomePhone	string	Formatted patient's home number (ex: 888-555-1212)
WorkPhone	string	Formatted patient's work number (ex: 888-555-1212)
MobilePhone	string	Formatted patient's mobile number (ex: 888-555-1212)
Email	string	Patient's email address

KinList Section

Field Name	Type	Description
PatientId	string	Universally unique identifier for this patient
KinId	string	Universally unique identifier for this kin
FirstName	string	Kin's first name
LastName	Date	Kin's last name
MobilePhone	string	Formatted contact mobile number (ex: 888-555-1212)
Email	string	Kin's email address
DeceasedFlag	bool	Flag that indicates alive or dead
Decisional	bool	Flag that indicates if this kin can make healthcare decisions on behalf of the patient
Country	string	Not used
RelationshipList	string	Comma separated list of relationship descriptors between kin and patient. For example, "caregiver, spouse".

Meds Section

Field Name	Type	Description
Strength	string	Drug strength (without units)
StrengthUnit	string	Relevant drug strength unit
Form	string	Packaging of the drug (ex: tablet, capsule, etc)
DoseQuantity	string	Amount of the drug given per dose
StrengthForm	string	Concatenation of strength, strength units and form. Typically used for human readability.
StartDate	date	Date patient started taking drug
EndDate	date	(optional) Date patient was ordered to discontinue taking drug
DoseUnit	string	Units for dosage
Drug	string	Name of drug. (ex: "Lipitor")
DrugId	Int	Unique internal serial number for the drug
DrugInstructions	string	Patient instructions for taking the drug (ex: "with meal")
WrittenAs	string	Human readable description of the medication order
Status	string	Current status (active or inactive)

Allergies Section

Field Name	Type	Description
Allergen	string	Drug, food, or environmental factor the patient is allergic to
Reaction	string	Patient's reaction to allergen
WrittenAs	string	Human readable description of allergy
Status	string	Current status (active or inactive)

Problems Section (also known as "ClinicalSummaryProblemDetailsList")

Field Name	Type	Description
DictionaryCode	string	ICD10 code of the disease
Problems	string	ICD10 description of the disease
ActiveDate	date	Date on onset for the disease
ResolvedDate	Date	Date disease was resolved (optional)
ProblemId	string	Universally unique identifier for this problem related to this patient
isResolved	bool	Indicator of whether the disease is resolved (true or false)
isPrimaryDx	bool	Indicator of whether this disease is the primary reason for treatment (true or false)

General Information

The export function meets the requirements of the Electronic Health Information export criterion §170.315(b)(10).
