

Export File Format – Single Patient Export

Any ReLiMed EMR user with the privilege of “Medical Record Request” granted can perform a single patient export of EHI (Electronic Health Information) using the Patient Export feature in the EMR.

From any patient chart, access this feature from the Patient Chart -> Patient Export menu option:

Once you are presented with the Export Patient Data Selection window, you have the option to select or un-select parts of the health information for the patient. Simply check off the items you wish to include in the export and then select the “Export” button.

Total Records : 9			Total Records : 12				

This will generate one file in PDF format that will contain all the selected sections of health information. Once generated, the user has the option to Save, Print or Fax the document.

Export File Format – All Patient Export

The ReLi Med Solutions support team will provide an All Patients File Export when requested from practices. What is provided is a password protected zip file (which contains all patient records from the ReLi Med Solutions EMR) which can be securely downloaded from one of our SFTP servers. The practice contact will be provided the login Host, Port, and Username along with instructions to retrieve a secure password to download the file.

We also provide the following instructions to download an SFTP client program if the practice contact needs to do that. Those instructions are below to download the FileZilla client:

FileZilla - https://dl2.cdn.filezilla-project.org/client/FileZilla_3.55.1_win32-setup.exe?h=nC4wqlvDloRxFgpyFkg6yg&x=1632852683

Once connected through the SFTP client, the user can download the file **Files.zip**

NOTE : The practice contact will also be given an expiration date, after which the file will not be available.

Once the file has been successfully downloaded, please follow the instructions below to extract the files:

1. Right-click on the file and select Extract All...
2. Specify where the files should be extracted to and then click Extract
3. To begin the extraction process, enter the password and then click OK

NOTE : Instructions for retrieving the ZIP password are described below

Once the extraction process has completed, you will see the following files and folder within the directory:

patient-data-export.xlsx

This file contains the following worksheets which organizes the patient and practice data:

Locations

License Providers

Referring Providers

Master Insurances

Resources/staff members

Patient Employers

Patient Demographics

Patient Guarantors

Patient Contacts

Patient Export File Format

Patient Pharmacies

Patient Insurances

Past Appointments

Patient Notes

Patient Alerts (Billing etc.)

Patient Medications

Patient Allergies

Patient Diagnosis

Future Appointments

Medical Records

This folder contains a sub-folder for each patient listed within the patient-date-export.xlsx -> Patient Demographics spreadsheet.

The sub-folders are organized by the patient's MR Number and contain all documentation associated with the patient:

CCD.xml

Used for viewing/importing patient information within supported EMR systems.

CCD.html

A human readable version of the CCD

Demographics_*_MedicalHistory.pdf

A report that contains a snapshot summary of the patient's demographic and insurance information.

MedicalHx_*_MedicalHistory.pdf

A report that contains a snapshot summary of the patient's active medications, chronic problems, and active allergies.

Encounter_<yyyyMMdd>_<hhmm>_<type>.pdf

Patient Export File Format

One or more files that contain the generated summary for the associated encounter.

Document_<type>_<name>.pdf

One or more files that contain a document that was uploaded to the patient's chart.

LabResult_<yyyyMMdd>_<hhmm>_<guid>.pdf

One or more files that contain the e-lab results that were received for the patient.

Form_<yyyyMMdd>_<hhmm>_<type>_<name>.rtf

One or more files that contain a custom user form that was generated for the patient.

Passwords

The passwords for downloading and extracting the data are different.

This will allow the opportunity for a non-HIPAA compliant user to assist with downloading the data without the worry of sensitive patient information being exposed.

To receive the passwords, please reply to this email and include the following information :

SFTP Password : <email address for recipient(s)>

ZIP Password : <email address for recipient(s)>

Each recipient listed above will receive a secure email containing the associated password.
