

170.315(b)(10) Electronic Health information export

170.315(b)(10)(i-ii)

The Tenzing VistA Electronic Health Information Export menu options were developed to meet the requirements specified in 170.315(b)(10) Electronic Health Information Export in Office of the National Coordinator for Health Information Technology (ONC)'s 2015 Edition Cures Update Test Method.

The options allow users to export patient encounter information to a user designated file/folder location using the Consolidated-Clinical Document Architecture (C-CDA) CDA R2.1 format.

There are two options available for use.

- I. The first (VGTM EHI EXPORT) is a user facing option allowing the user to select locations, latest encounter, specific encounter (single patient) or date-range, and file/folder location for CCDA export. This option runs in real time on the user's attached console. Below is an example of a session.

```
Select OPTION NAME: VGTM EHI EXPORT    VGTM EHI EXPORT
VGTM EHI EXPORT
*** Electronic Health Information Utility (batch export of patient CCD-CDAs) ***

Select HOSPITAL LOCATION NAME: GET WELL CLINIC

Select HOSPITAL LOCATION NAME:

Select one of the following:

L    Latest
S    Specific Encounter
R    Date Range

(L)atest encounter, (S)pecific encounter, or Date (R)ange: I Latest.....
...FINISHED.
15 records found.
Do you wish to proceed? Y// y YES
Export Destination
Enter export path: shares/dataexport/
```

Oroville Hospital

- II. The second (VGTM AUTO CCDA EXPORT) is a scheduled option allowing users to schedule one-time or recurring CDA exports.

The Electronic Health Information export task, VGTM AUTO CCDA EXPORT, is scheduled using standard Schedule/Unschedule Options. The Schedule/Unschedule Options option [XUTM SCHEDULE] is a straightforward VA ScreenMan edit option and allows a user to schedule and unschedule options. After a user selects the option to schedule, the user is prompted for information about the task being set up.

For more information on the option see Section 25.3.1.3, Schedule/Unschedule Options, in Kernel Systems Management Guide

In VistA menu select

SYSTEMS MANAGER MENU ...	[EVE]
Taskman Management ...	[XUTM MGR]
Schedule/Unschedule Options	[XUTM SCHEDULE]

Select OPTION NAME: **XUTM SCHEDULE** Schedule/Unschedule Options
Schedule/Unschedule Options

Select OPTION to schedule or reschedule: **VGTM AUTO CCDA EXPORT** VGTM AUTO C
CDA EXPORT
...OK? Yes//<Enter>

Edit Option Schedule

Option Name: VGTM AUTO CCDA EXPORT

Menu Text: VGTM AUTO CCDA EXPORT

TASK ID: 6797388

QUEUED TO RUN AT WHAT TIME: OCT 12,2022@09:45

DEVICE FOR QUEUED JOB OUTPUT: GTM/UNIX NULL;P-OTHER;132;64

QUEUED TO RUN ON VOLUME SET: PLA

RESCHEDULING FREQUENCY: 1M

TASK PARAMETERS: M56|S3|shares/dataexport

SPECIAL QUEUEING:

COMMAND: Press <PF1>H for help Insert

Tab down to the following fields and enter values:

1. QUEUED TO RUN AT WHAT TIME: OCT 12,2022@09:45 (which means start running it on OCT 12,2022 at 09:45)
2. DEVICE FOR QUEUED JOB OUTPUT: GTM/UNIX NULL;P-OTHER;132;64 (which means null device)
3. QUEUED TO RUN ON VOLUME SET: PLA
4. RESCHEDULING FREQUENCY: 1M (which means run it monthly)
5. TASK PARAMETERS: M56|S3|shares/dataexport

1st | piece – the from data of the export

YYMMDD-n	e.g. 3221231-30 start thirty days before 12/31/2022
YYMMDD+n	e.g. 3221231+30 start thirty days after 12/31/2022
YYMMDD	e.g. 3221231 start on 12/31/2022
Mn	e.g. M56 start 56 months before the running date of the export
Wn	e.g. W4 start 4 weeks before the running date of the export
Dn	e.g. D30 start 30 days before the running date of the export

Oroville Hospital

2nd | piece- Location IEN or Location Name
e.g. S3

3rd | piece- Export file path
e.g. shares/dataexport

6. At the "COMMAND:" prompt, enter Save.
7. At the "COMMAND:" prompt, enter Exit.

170.315(b)(10)(i)(B-C)

User assigned appropriate access can create EHI exports at any time without further developer assistance.

Users assigned the VGTM DP-EHI EXPORT option can create data exports from the option.

Users assigned # Fileman Access and the XUTM SCHEDULE menu option can configure a scheduled EHI export from Option VGTM AUTO CCDA EXPORT.

170.315(b)(iii)

EHI exported files are formatted as Consolidated-Clinical Document Architecture (C-CDA) document(s). Current Version: CCDA R2.1 and USFDA v2. SVAP is used to update the format to maintain current standards.
